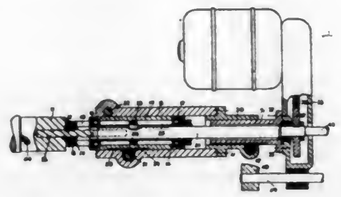
1. A fuse for projectiles having a time train and an escapement and firing pin releasable by the time train, a pair of centrifugal drive weights pivotally mounted symmetrically in respect to the longitudinal axis of the projectile, a pair of drive springs symmetrically mounted in respect to the longitudinal axis of the projectile one adjacent each of said centrifugal weights, each of said symmetrically mounted springs having one end in engagement with the frame of the mechanism and having its other end in driving engagement with the corresponding pivotally mounted centrifugal weight, said centrifugal drive weights comprising disc members each having a mass mounted thereon so placed as to determine the maximum value of the centrifugal drive force and to determine the point in the time sequence at which the maximum will be exerted, said centrifugal weight discs being pivoted substantially centrally thereof, said symmetrical drive springs comprising coil springs mounted at the central pivots of said centrifugal weight discs.

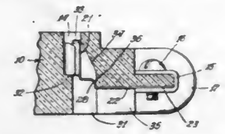
2,453,823
MULTIPLE STAGE REFRIGERATION
Burdell S. Williams, Oakwood, Ohio, assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 21, 1946, Serial No. 656,009
2 Claims. (Cl. 62—115)

1. The method of achieving abnormally low temperatures through the use of a plurality of mechanical condensing units requiring lubrication, comprising passing a gaseous refrigerant through a high stage cycle, employing water to condense the high stage refrigerant and to cool the lubricant of at least one condensing unit, employing the high stage refrigerant to condense the refrigerant of a succeeding condensing unit



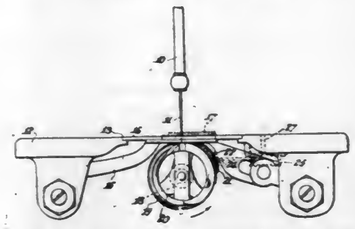
and to cool the lubricant of a final low stage condensing unit, passing a second volume of gaseous refrigerant through an intermediate refrigeration cycle, employing the intermediate cycle refrigerant to condense the refrigerant of the low stage condensing unit, and employing a third volume of gaseous refrigerant in the final low-stage refrigeration cycle.

2,453,824
ALPHA-ACETOXYMETHYL ACRYLONITRILE POLYMERS
Thomas F. Wood, Clifton, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 9, 1946, Serial No. 660,864
3 Claims. (Cl. 260—83)



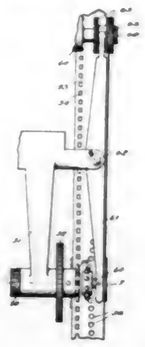
2. A polymeric mass comprising a polymerized alpha-acetoxymethyl acrylonitrile.

2,453,825
TAILSTOCK LATHE FOR DRILLING
Samuel Bailey Wright, Coventry, England
Application June 20, 1945, Serial No. 600,527
In Great Britain April 5, 1945
12 Claims. (Cl. 77—60)



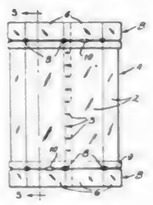
1. An arrangement for a tail-stock lathe, for enabling a workpiece to be drilled axially at the same time as a peripheral surface thereof is being turned, comprising a tail-stock, a hollow center for supporting that end of a workpiece which is adjacent said tail-stock, means associated with said tail-stock for supporting said hollow center rotatively and for locating it axially, a tool-holder, rotatable within said tail-stock, for carrying a tool adapted to be fed through said hollow center, and means for feeding said tool-holder.

2,453,826
CONTACT FOR VACUUM TUBE SOCKETS
Charles J. Adams, Park Ridge, Ill.
Application November 12, 1946, Serial No. 709,345
5 Claims. (Cl. 173—328)



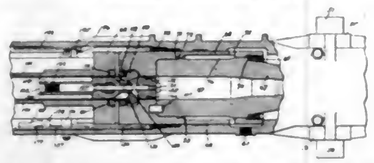
1. In a socket or the like comprising a base member with one or more cavities to receive the contact pins of a tube or plug, and contact elements for said pins adapted to be inserted in said cavities, the combination of cavities each including a vertical contact portion extending downwardly from a generally circular pin orifice, with a lower abutment shoulder at the bottom of the contact portion, but on one side of the cavity and extending only partially across the area thereof; an upper abutment shoulder at the top of the contact portion and on the opposite side thereof with a broad flat surface extending around at least three sides of the cavity; with an offset entrance channel extending from the lower surface of the base to the contact portion of the cavity to permit the insertion of a metallic contact into the cavity from the bottom of the socket; a metallic contact including a hollow sleeve adapted to surround a contact pin and bear against the pin on at least two sides, the sleeve being of uniform cross section throughout its length, and adapted to be positioned in the cavity between and in engagement with the upper and lower abutment shoulders; a cam surface within the entrance channel to guide the upper end of the sleeve into engagement with the abutment shoulder and locate it in vertical position below the pin orifice during insertion of the contact, and a soldering lug including a metal strip extending outwardly from the contact sleeve and engaging the wall of the entrance channel to maintain the lower end of the contact sleeve in position on the lower abutment shoulder.

2,453,827
MEANS FOR COOLING AND LUBRICATING SEWING MACHINE NEEDLES
Andrew Albero, Delaware Gardens, N. J.
Application August 8, 1945, Serial No. 609,570
5 Claims. (Cl. 112—256)



1. A needle cooling and lubricating means for use in a sewing machine of the type in which a needle moves up and down through an opening in a work support and said machine includes a rotary sewing hook having a needle clearance notch, an applicator mounted on said sewing hook and spaced from the clearance notch, and means to fasten said applicator on said sewing hook.

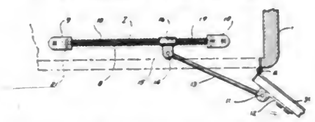
2,453,828
TORPEDO
Louis J. Barry and William S. Hegamyer, Middletown, R. I., assignors to the United States of America as represented by the Secretary of the Navy
Application April 8, 1925, Serial No. 21,706
17 Claims. (Cl. 114—24)



1. In combination with the gyro and steering engine of a torpedo, a figure run device comprising pattern means for disconnecting the gyro from the steering engine at intervals according to the pattern of said means.

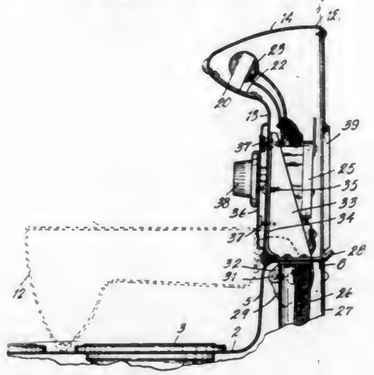
2,453,829
SHIPPING CARTON
Smith A. Blackman, Kirkwood, Mo., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application September 26, 1946, Serial No. 699,577
1 Claim. (Cl. 229—23)

A shipping carton comprising a tubular body of uniform inside width from end to end having flaps at one end thereof bent to lie alongside the outer side face thereof, a main end closure seated against said end of said body and having marginal flaps that are bent to overlie said body flaps and are thence rebent to lie therebeneath and removably interlock therewith, a removable auxiliary end closure snugly fitting entirely within said end of said tubular body adjacent to said body and end closure flaps in spaced relation to said main end closure to provide a chamber between said end closures, said auxiliary end closure having marginal flaps that lie against the inner side face of said tubular body and terminate substantially flush with said end thereof in endwise abutting relation to said main end closure, and a band tightly encircling said body and end closure flaps at substantially the level of said auxiliary end closure for locking said main and auxiliary and end closures to said tubular body member in a substantially immovable, reinforcing and dustproof manner.



2,453,830
MACHINE GUN
George A. Chadwick and Paul W. Burk, Washington, D. C.
Application December 21, 1932, Serial No. 648,296
22 Claims. (Cl. 89—190)

1. In a machine gun, a barrel having in it a cartridge chamber, a slide in which said barrel is slidably mounted, a breech housing connected to the rear end of said barrel and having spaced apart portions extending rearwardly, a feed plate secured to said slide having in it a slot disposed above the space between said portions, upwardly concave ribs on each side of said feed plate tilted toward said slot to guide a cartridge toward said slot, the forwardmost of said ribs on each side of the slot being higher than the other, there being a groove in the inner face of each of said portions to guide the rim of a cartridge toward said chamber and a groove connected to each of the aforesaid grooves to guide a spent case out of the under side of the gun, a rib on each of said portions to guide the nose of a cartridge toward said chamber, a magazine cradle swingably mounted above said feed plate, two magazines supported by said cradle, cartridges contained within said magazines, means to lock said cradle in position to feed the cartridges from one of said magazines into said slot, the lowermost cartridge in the other magazine bearing on said ribs adjacent thereto and means automatically to release said lock when the one magazine is empty whereby the pressure of the cartridge in the other magazine against said ribs can swing said other magazine into feeding position over said slot.



9. In a machine gun, a barrel, a breech block movable toward and away from said barrel, an extractor carried by said breech block having legs extending down the sides of the block and a portion over the top of said block, there being a backwardly sloping face on the forward side of the lower end of each of said legs, a cam in the path of each of said extractor legs adapted to be moved out of said path by said legs during backward movement but not during forward movement of said legs and having a rearwardly sloping face over which said face on the extractor leg is adapted to ride in normal operation, means to position cartridges to be rammed into said barrel, a detent disposed to be movable into the path of a cartridge in said means and to be displaceable therefrom by a cartridge in said means, a rotatably mounted shaft upon which said dentent is carried, a sear mounted on said shaft, a stop lever pivotally mounted above said cams having an arm disposed to be raised by said extractor as the extractor rises over said cams in normal operation, said sear being movable to prevent rotation of said arm of the stop lever when no cartridge is in position to move said detent out of said path whereby the extractor is prevented from rising over said cams and the breech block is prevented from moving into the closed position against said barrel.

2,453,831
DOOR CHECK
Earl H. Croskey and Victor M. Hackman, Cedar Rapids, Iowa, assignors of one-third to Clayton W. Mossman, Cedar Rapids, Iowa
Application December 8, 1945, Serial No. 633,710
6 Claims. (Cl. 16—49)

1. A door check for a door hinged to means serving as a frame, comprising a pair of brackets fixed to said door frame means, a rod carried thereby, a slide mounted on said rod and having an apertured lug, a spring carried by said rod and disposed between the said slide and the one of said brackets most remote from the door hinges, a second apertured lug, a link connecting said lugs, and means fixing said second lug to said door in a position relative to the hinge axis thereof such that, in the closed position of the door, said second lug moves into an overcenter position whereby said spring acts through said slide and link to yieldably hold said door in a closed position.

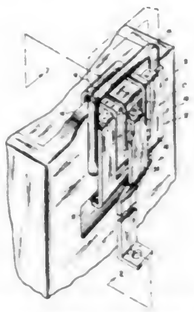
2,453,832
ELECTRIC STOVE OR RANGE
Thomas E. Dadson, Detroit, Mich., assignor of one-half to Kalamazoo Stove & Furnace Company, Kalamazoo, Mich., a corporation of Michigan, and one-half to Admiral Corporation, Chicago, Ill.
Application August 3, 1945, Serial No. 608,738
6 Claims. (Cl. 219—37)

6. A stove or range including a top having downwardly projecting end flanges and an upwardly projecting fixed fence bottom member integral therewith, said bottom fence member having rearwardly projecting end flanges integrally merging into said end flanges of said top, and a rearwardly projecting top flange integrally merging into its said end flanges, a top fence member comprising a front and integral top and rearwardly projecting end flanges, the front and end flange of said top fence member when it is erected complementing the front and end flanges of said bottom fence member, said top fence member being hingedly mounted on the bottom fence member to be swung forwardly to a substantially horizontal position above the stove top, said top fence member constituting a mounting plate and housing for fixtures, wiring or the like which are accessible when the top fence member is swung to its said collapsed position above the stove top, and means for holding said top fence member in its erected position on said bottom fence member.

2,453,833
CORROSION PREVENTIVE
William S. Davis, Jr., Pittsburgh, Pa., and Donald L. Wright, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 5, 1944, Serial No. 548,321
1 Claim. (Cl. 260—23)

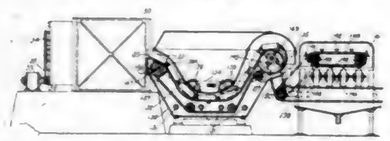
A rust preventing composition consisting of (1) a mineral oil base which vaporizes completely below 750° F., (2) a partially volatile corrosion inhibitor consisting of sodium petroleum sulfonates and degras in a ratio of one to two parts of degras to one part of sulfonates, the quantity of such corrosion inhibitor being so proportioned that it is sufficient to prevent corrosion but is not so great that the unvolatilized residue remaining after being subjected to a temperature of 750° F. exceeds 10% by weight of the total composition, and (3) a polybutene of 60,000 to 80,000 molecular weight, the quantity of said polybutene being so proportioned as to impart to the total composition a viscosity of 350 to 1000 seconds Saybolt at 210° F.

2,453,834
COMBINATION CORSET AND STOCKING RETAINER
Lola Monica Deegan, Melbourne, Victoria, Australia
Application November 26, 1947, Serial No. 788,171
In Australia January 25, 1946
3 Claims. (Cl. 2—313)



1. A combination corset and stocking retainer comprising an endless retainer band composed of a molded elastic material and adapted to form a close fit on the wearer's thigh and which is adapted for connection to a plurality of corset suspenders or the like, said endless band having anti-slipping means formed on its inner surface for opposing creeping of the band along the wearer's leg, said anti-slipping means being comprised of a plurality of spaced projections forming a roughened surface on the inside of said band.

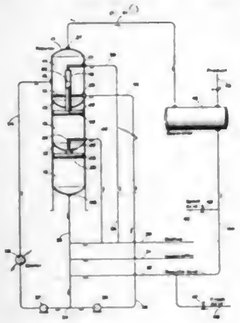
2,453,835
BATTERY HANDLE AND HOLD-DOWN BRACKET
William F. Donkin, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application August 21, 1946, Serial No. 691,973
5 Claims. (Cl. 180—68.5)



2. A handle assembly for a storage battery container having a side wall with an upstanding shoulder at the top and a recess in the outer face thereof, comprising a clamping member having a flange portion at its lower end adapted to be engaged in the said recess, the body of said clamping member being adapted to extend upwardly adjacent the outer face of the said side

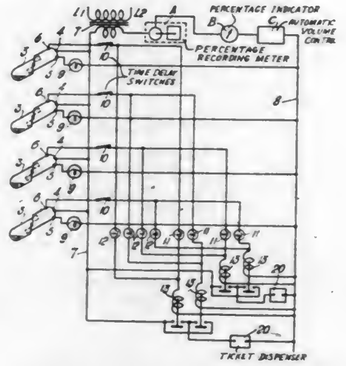
wall and spaced therefrom, the body of said clamping member having a substantially rectangular opening therein, a second clamping member having two angularly extending portions, one of said angularly extending portions being adapted to be engaged over said shoulder at the top of the side wall and the other of said angularly extending portions having a flange at the lower end adapted to extend through the said opening in the first-mentioned clamping member, a bail-like handle member having a grip portion adapted to be disposed above the first of said angularly extending portions of the second-mentioned clamping member and a lower portion of said handle member being adapted to be slidably received in the space between said side wall and the said clamping members, and means for detachably securing the said flanges together.

3. An assembly as defined in claim 2 and further comprising a hold-down bracket, the second-mentioned clamping member and the said hold-down bracket being provided with interlocking means for detachably securing the hold-down bracket to the handle assembly.



2,453,836
MACHINE FOR FORMING CONTAINERS FROM FLEXIBLE MATERIAL
Paul C. Elliott, Dayton, Ohio, assignor to Luther K. Funkhouser, Dayton, Ohio
Application November 7, 1941, Serial No. 418,273
27 Claims. (Cl. 93—39.1)

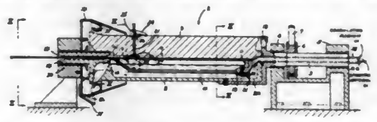
4. In a machine for forming tubular structures from flexible material, a mandrel, means for rotating said mandrel, said mandrel having means for gripping a strip of material and causing the same to be wound about said mandrel to form a tube, a plurality of receptacles mounted adjacent one end of said mandrel and movable successively into alinement with said mandrel, means for moving a tube from said mandrel into that receptacle which is alined therewith, means for intermittently actuating said receptacles, and means for applying a closure to the outer end of said tube after its receptacle has been moved out of line with said mandrel, said closed tube remaining in said receptacle until the latter is again moved into alinement with said mandrel, whereby a succeeding tube moved from said mandrel into said receptacle will eject the closed tube therefrom.



24. In a machine for forming tubular structures from flexible material, a mandrel, means for rotating said mandrel, means for feeding a strip of flexible material to said mandrel, said mandrel having means to grip the end of said strip and cause the latter to be wound about said mandrel to form a tube, a receptacle adjacent to said mandrel adapted to receive the wound tube from said mandrel, means for applying a closure to one end of the tube in said receptacle while a succeeding tube is being wound on said mandrel, a container for a bath of molten wax, means for moving the closed tube from said receptacle into said container and for moving a succeeding tube from said mandrel into said receptacle, a conveyor for moving said closed tube in the direction of its length through said bath and then upwardly out of said bath with its closed end uppermost to drain the tube, a second conveyor to receive the tube from the first mentioned conveyor and support the same in an upright position with its open end uppermost, means for spraying a cooling medium on said tube as it is advanced by said second conveyor, and operable means for closing the open end of said tube during the spraying operation.

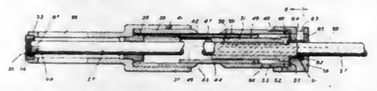
2,453,837
APPARATUS FOR ALKYLATION
Edward J. Fisher and William B. Franklin, Baytown, Tex., and Delmas A. Smith, Washington, D. C., assignors to Standard Oil Development Company, a corporation of Delaware
Application October 15, 1943, Serial No. 506,316
2 Claims. (Cl. 23—285)

1. An apparatus for conducting reactions between a plurality of liquid reactants while maintaining a circulating stream of reactants in the form of an emulsion which comprises a closed vessel, horizontal spaced partitions disposed within said vessel and dividing it into an upper compartment, at least one intermediate compartment, and a lower compartment, a down pipe having an open upper end extending from an intermediate point in said upper compartment through the first partition and into a distributor having a plurality of restricted downwardly directed openings below said first partition, and in said lower compartment another distributor having a plurality of restricted downwardly directed openings, and being constructed and arranged so that it is in communication with the intermediate compartment, a conduit arranged to discharge a liquid reactant downwardly into the top of said down pipe, a distributor located below the opening of said down pipe in said upper compartment having a plurality of upwardly directed restricted openings, a conduit connecting said last named distributor with the lower compartment for recirculation of the liquid therein back through said openings into said upper compartment, and an outlet located in the upper end of said upper compartment.



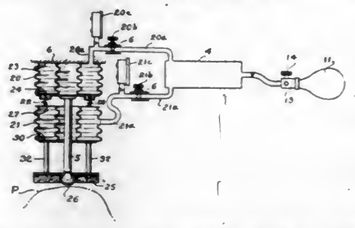
2,453,838
APPARATUS FOR INDICATING THE AVAILABLE SEATING ACCOMMODATION AT PLACES OF ENTERTAINMENT
Roy Alan Fletcher and Leslie Harold Bevan, London, England
Application February 19, 1946, Serial No. 648,680
In Great Britain September 9, 1943
8 Claims. (Cl. 177—311)

1. In places of entertainment or the like, a plurality of seats of the tip-up kind, electric switches associated with said seats respectively, each of said switches including an envelope mounted on the tip-up portion of the respective seat, a body of mercury in said envelope, contacts exposed in said envelope and means whereby, in response to said envelope being tilted by said seat being operated from the tipped-down to the tipped-up position, said mercury runs through a restricted orifice to a position in said envelope such that, when a sufficient amount of mercury has passed through said orifice, it bridges said contacts, and, in response to said envelope being tilted back by said seat being operated to the tipped-down position, said mercury unbridges said contacts substantially instantaneously, remote indicators associated with said seats respectively, and means whereby in response to the contacts of a switch being bridged, the corresponding remote indicator gives indication that the corresponding seat is vacant, and, in response to said contacts being unbridged, said remote indicator gives indication that said seat is occupied.



2,453,839
METHOD AND APPARATUS FOR SPINNING ARTIFICIAL FILAMENTS
William H. Furness, Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application December 13, 1945, Serial No. 634,752
19 Claims. (Cl. 18—8)

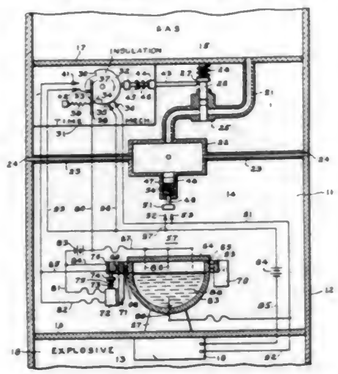
13. Apparatus for spinning artificial filaments comprising a rotatable support, a receptacle carried by said support for rotation therewith, a spinneret in the receptacle, a supply duct connected to the spinneret and carried by the support for rotation therewith, said receptacle comprising two complementary members each extending longitudinally from a position adjacent the spinneret to a position away from the spinneret, a longitudinal channel provided in one of



the members and the other having one surface facing the channel and enclosing one side of it, said latter member being pivotally mounted about an axis transverse of the rotational axis of the receptacle.

2,453,840
INSERT COIL SETTING TOOL
Kenneth B. Geertsema, Valley Stream, N. Y., assignor to Heli-Coil Corporation, a corporation of New York
Application July 25, 1945, Serial No. 606,957
6 Claims. (Cl. 10—1)

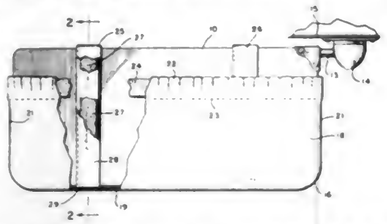
1. A tool for setting an insert coil in the threading of a tapped hole comprising a tubular member with an interior threading at one of its ends and a coil-receiving chamber in the rear of said threading, a rod-like member movable in said tubular member and having an end shaped to grip, from the inside, a coil charged into said chamber and to screw it through said threading, two interengaging screw threaded elements between said members, one of said elements being non-rotatable in relation to one of said members, and the other element being non-rotatable in relation to the other one of said members, the threadings of said elements having a pitch equal to that of said threading of said tubular member, and means in engagement with one of said screw means and said rod-like member so as to permit a limited axial shift of the latter in relation to the former.



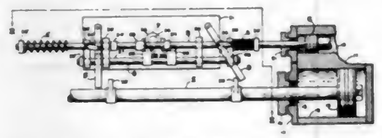
2,453,841
MEDICAL DIAGNOSTIC DEVICE
Lorand J. B. Gluzek, Parma, Ohio, assignor to Dolorimeter, Inc., Cleveland, Ohio, a corporation of Ohio
Application December 26, 1944, Serial No. 569,850
1 Claim. (Cl. 128—2)

In a dolormeter instrument, a fluid pressure operated spring bellows having an applicator arranged to apply pain producing pressure over a relatively small body area, a second fluid pressure operated spring bellows with an applicator adapt-

ed to apply a pain neutralizing pressure to a larger body area adjacent said first body area, and abutment means between relatively adjacent but normally spaced walls of respective bellows and operative to cause the second bellows to act automatically on the first bellows to cause it to move bodily in a direction away from said small body area whereby to lessen the actual pressure applied thereby to said small body area during application of said neutralizing pressure.



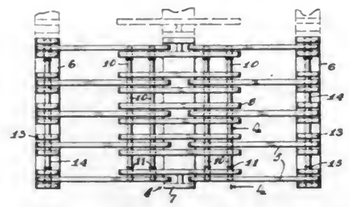
2,453,842
GAS BOMB
John Hays Hammond, Jr., Gloucester, Mass.
Application January 28, 1944, Serial No. 520,053
6 Claims. (Cl. 102—6)



4. A gas bomb comprising a source of gas and an exposive charge, a detonator for said charge including a detonating circuit to actuate said detonator when energized, a passage for releasing said gas, a normally open valve controlling the flow of gas through said passage, a latch member latching said valve in closed position, timed means to release said latch member for opening said valve to release said gas, a pressure switch actuated in response to excessive gas pressure in said passage, said switch being connected to close said detonating circuit so as to explode said charge when discharge of said gas is prevented to an extent to build up pressure in said passage, timed means to close said detonating circuit at the end of a predetermined time for destroying said bomb, a liquid contact gravity controlled switch, means mounting said gravity switch for universal movement to assume a horizontal position with its contacts open when the bomb comes to rest, and timed means locking said gravity switch in its position of rest so that tilting movement of said bomb thereafter will close its contacts, said timed means also connecting said gravity switch in said detonating circuit.

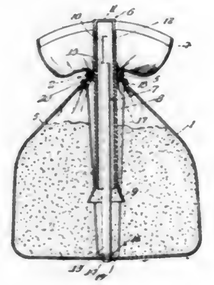
2,453,843
ARTICLE HOLDER FOR ATTACHMENT TO AUTOMOBILE VISORS
Kenneth Lyle Hanson, Minneapolis, Minn.
Application September 6, 1947, Serial No. 772,547
7 Claims. (Cl. 224—42.42)

7. An article holder for application to a glare shield, said holder comprising an elongated envelope having a front wall and a rear wall, connections between said walls along the end and bottom edges of the envelope, said envelope being open at the top for the reception of the glare shield and forming therewith pockets between said walls and said glare shield, an elastic band encircling said envelope at the upper edge thereof and secured to said front and rear walls, said band serving to close said pockets and to retain therein articles placed within the same, and attaching means for attaching the envelope to the glare shield, said attaching means comprising an elastic strap encircling said glare shield and disposed within said envelope, said strap being secured to said envelope upon the interior thereof.



2,453,844
SNAP ACTING MECHANISM ADAPTED FOR OPERATING VALVES OF STEAM ENGINES
William Hungate, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application April 12, 1946, Serial No. 661,826
2 Claims. (Cl. 121—164)

1. In a steam engine having a piston and a piston rod and valves covering the inlet and exhaust ports carried by a valve rod, a pair of spaced springs mounted on the valve rod, a cam roller adapted to assume a first position to engage with said valve rod and lock it against longitudinal movement and to assume a second position to release the valve rod for longitudinal movement, a first linkage arranged to compress one of the springs when the piston rod is moving in a first direction, a second linkage arranged to compress the second spring when the piston rod is moving in the opposite direction, a pair of cam surfaces longitudinally movable with respect to the valve rod mechanically connected to said first and second linkages whereby one of the cam surfaces moves the cam roller from its first to its second position as the piston rod is at a predetermined point near the end of its stroke in the first direction and the second cam surface engages the cam roller to move it from its first to its second position as the piston rod is at a predetermined point near the end of its stroke in the opposite direction.

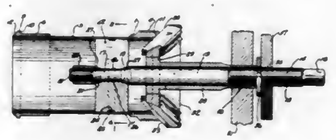


2,453,845
FLEXIBLE WORK TRAY FOR HEAT-TREATING FURNACES
Harold F. Jackson, Springfield, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a corporation of Ohio
Application May 8, 1946, Serial No. 668,116
4 Claims. (Cl. 263—47)

2. In a work tray for furnaces, a center runner and side runners for riding respectively on center and side support rails, a center set of cross bars mounted on and rigidly attached to said center member in spaced relation lengthwise of the member with their ends projecting beyond the respective sides thereof, a side set of cross bars at each side of the center runner lapping the

adjacent ends of some at least of said center set of bars and having multiple longitudinally spaced lost motion connection therewith for relative vertical movements and having their outer ends in flexible joint connection with the respective side member.

2,453,846
COMBINED TOBACCO POUCH AND CIGARETTE ROLLING DEVICE
Michael J. Kehoe, Springfield, Ohio, assignor of forty-nine per cent to Fred J. Topp, Springfield, Ohio
Application December 20, 1944, Serial No. 568,950
5 Claims. (Cl. 131—73)

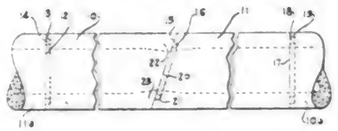


1. A combined tobacco container and cigarette rolling device comprising a container for holding loose tobacco, said container being provided with an opening, a tubular member extending from the inside of said container through said opening adapted to hold a tubular rolled cigarette paper against its inner wall, and a plunger held by said container and extending into said tubular member, the plunger being fastened to the bottom of the pouch and the sides of the pouch adjacent to the lower edge of the plunger being secured together to form flattened areas readily grasped between the fingers to permit movement of the plunger longitudinally with respect to the tubular member, said plunger being adapted for movement longitudinally of said tubular member to pack tobacco within said rolled cigarette paper positioned against the inner wall of said tubular member.

2,453,847
PROCESS FOR ACCELERATING ALUMINA HYDROSOL FORMATION BY AERATION
Charles N. Kimberlin, Jr., Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application March 14, 1946, Serial No. 654,502
4 Claims. (Cl. 252—313)

1. In the process for the production of alumina hydrosols by contacting amalgamated aluminum with a dilute aqueous solution of an organic acid, the improvement which comprises blowing the reaction mixture of amalgamated aluminum and acid with an oxygen-containing gas thereby substantially increasing the rate at which the alumina hydrosol is formed.

2,453,848
FACING TOOL
Francis G. Livingston and Charles L. Livingston, Algona, Iowa
Application March 18, 1946, Serial No. 655,283
1 Claim. (Cl. 90—12)

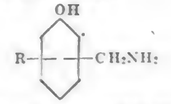


A facing tool for operating on a tubular member comprising a stem having an annular wedging surface spaced from an end, a nut threaded on said end and having its end which faces the annular wedging surface of the stem formed with an annular wedging surface, said stem having its opposite end formed with a relatively long threaded section, a supporting member in which said stem is centered surrounding the portion of the stem between said two annular wedging surfaces, said supporting member being formed of a plurality of sector-shaped sections and said stem being rotatable to cause movement of said nut and annular wedging surface thereof toward the annular wedging surface of the stem and expansion of the sections into tight engagement with the interior wall of the tubular member to be faced, a relatively long sleeve slidably and rotatably mounted on an intermediate portion of said stem, a cutter rigidly connected to one end of said sleeve and rotatable in response to rotation of the latter, a handle at the opposite end of the sleeve, a feed wheel threaded on the relatively long threaded section of the stem outwardly of the sleeve, and a washer slidably and non-rotatably surrounding the stem between the feed wheel and sleeve and engaged by the feed wheel to feed the cutter toward the work when the feed wheel is turned, the portion of the stem outwardly of the feed wheel being accessible for manipulation to cause rotation of the stem.

2,453,849
PIPE JOINT
John L. Merriam, Yucaipa, Calif.
Application March 8, 1947, Serial No. 733,291
3 Claims. (Cl. 285—112)

3. A pipe made up of sections having mutually engageable male and female end formations, some of said end formations being on end faces perpendicular to the axes of their respective sections

and others being on end faces which are oblique thereto but all of the male and female end formations respectively being circular and interchangeable.



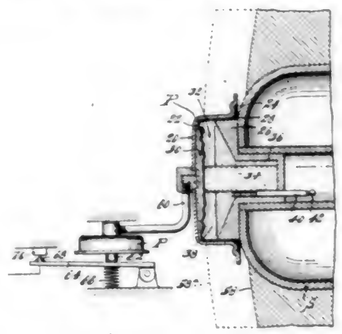
2,453,850

LUBRICATING COMPOSITIONS

Louis A. Mikeska and Allen R. Kittleson, Westfield, N. J., and Warren M. Smith, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 3, 1941, Serial No. 421,454
3 Claims. (Cl. 252—51.5)

1. Improved lubricant composition comprising a mineral lubricating oil and a small proportion of an oil-soluble resinous auto-condensation product of an alkyl hydroxy benzyl amine having the general compositional formula



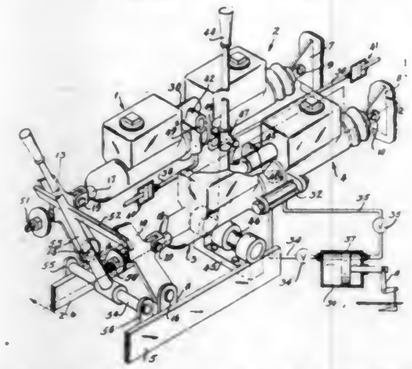
in which R represents an alkyl group of at least 4 carbon atoms.

2,453,851

THERMOSTATIC POWER ELEMENT

Julian P. Miller, Goshen, Ind., assignor to Penn Electric Switch Co., Goshen, Ind., a corporation of Iowa

Application August 10, 1945, Serial No. 610,151
10 Claims. (Cl. 297—3)



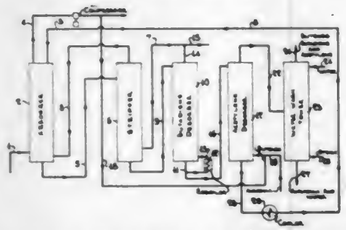
1. In a power element, a housing having opposed stationary and movable walls, a control device operable in response to movement of said movable wall, a freezable liquid in said housing, and means for effecting movement of said movable wall in response to freezing of the liquid comprising a displaceable element in said housing having its ends contacting said walls, said element being capable of diametric contraction due to the freezing of the liquid around its diameter, said displaceable element thereby expanding linearly to effect movement of said movable wall ahead of the freezing liquid behind it.

2,453,852

MECHANISM FOR SELECTIVE OPERATION OF A PLURALITY OF MASTER CYLINDERS

Arthur N. Milster, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application January 24, 1947, Serial No. 724,056
5 Claims. (Cl. 60—54.5)



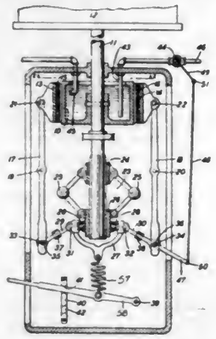
1. A mechanism comprising a plurality of pressure fluid motor means; a plurality of pressure fluid producing means; means to establish communication between each motor means and a pressure fluid producing means; a shiftable member to selectively severally actuate said pressure fluid producing means to thereby severally selectively actuate said motor means; means to selectively apply equal pressure to some of said motor means; means to selectively apply equal pressure to the other of said motor means; and means to apply equal pressure to all of said motor means.

2,453,853

SEPARATING HYDROCARBONS

Charles E. Morrell, Westfield, and Miller W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application December 28, 1944, Serial No. 570,194
3 Claims. (Cl. 260—681.5)



1. Process of separating and segregating butadiene from a mixture of hydrocarbons containing butadiene and acetylenes which comprises absorbing the acetylenes and the butadiene from the said hydrocarbon mixture by contacting with an ammoniacal cuprous salt solution in which the ammonia is maintained at a high enough concentration to maintain the copper acetylides formed in dissolved form, separating copper solution from unabsorbed hydrocarbons, heating the cuprous salt solution to a temperature range of from 40° to 100° F. to release absorbed butenes, further heating the cuprous salt solution to a temperature ranging from 140° to 170° F. while maintaining a reflux temperature ranging from 70° to 100° F., so that only butadiene will be desorbed, then separately subjecting the resulting cuprous salt solution substantially free of butadiene at temperatures ranging from 140° to 180° F. to the stripping action of said unabsorbed hydrocarbons, to remove acetylenes.

2,453,854

SPEED RESPONSIVE BRAKE FOR DECELERATION OF CENTRIFUGAL MACHINES

Charles A. Olcott, West Milford, N. J.

Application May 8, 1942, Serial No. 442,156
4 Claims. (Cl. 188—186)

1. The combination with a heavy centrifugal machine of great inertia and of the type which is adapted for operation on frequently repeated cycles during each of which it is run at high speed for a portion of the cycle free from application of braking force thereto and is then quickly decelerated to rest, of braking means, including a rotating portion attached to and rotating with the centrifugal machine at all speeds, for quickly decelerating said machine when it is desired to bring it to rest, control means for placing said braking means in a released position or in a position at which braking force is applied while said machine is rotating, and means, responsive to the speed of the centrifugal machine and effective only while said control means is in its brake applying position, for controling said braking means so that the braking effect is inversely proportional to the speed of the machine throughout at least one third of the braking period and is independent of the speed of the machine at the time the braking means is applied.

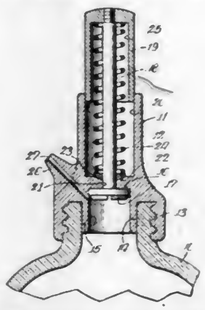
2,453,855

HYDRAULIC LOCK

Wilbur C. Oliver, Burbank, Calif., assignor to Adel Precision Products Corp., Burbank, Calif., a corporation of California

Application November 21, 1947, Serial No. 787,349
10 Claims. (Cl. 74—586)

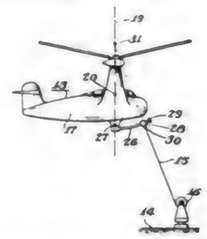
1. In an adjustment-permitting and locking device adapted to adjustably interconnect two relatively movable elements, the combination of: a fluid filled cylinder adapted to be connected to one of the elements; a piston slidable in said cylinder and provided with a rod adapted to be connected to the other of the elements, said piston having a first fluid passage therein adapted to communicate with the interior of said cylinder at opposite sides of said piston, said piston also having a port therein; a main fluid balanced valve movable in said piston and having a by-pass opening in fluid communication with said port, said by-pass and port providing a second fluid passage through which fluid can pass from one end of said cylinder to the other end thereof; spring means operable to move said main valve in one direction to close said first passage so as to lock said cylinder and said piston to prevent longitudinal contraction of the device; manually operable means for moving said main valve in the opposite direction to open said first passage so as to unlock said cylinder and said piston and permit relative movement thereof in opposite directions so as to allow longitudinal extension and contraction of the device; and an auxiliary valve in said piston between said by-pass and said port and normally operative to close said second fluid passage but adapted to be opened in response to fluid pressure in said by-pass opening, when said main valve is closed, so as to permit longitudinal extension of said device.



2,453,856

LIQUID DISPENSING DEVICE

Fred W. Opitz, Chicago, Ill.

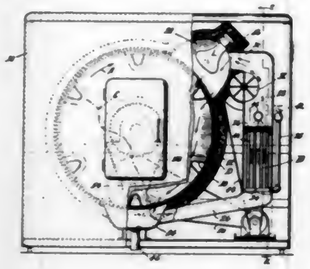


Application June 14, 1945, Serial No. 599,359
5 Claims. (Cl. 215—3)

1. A liquid dispensing device comprising a casing adapted to be mounted in threaded engagement with a bottle, said casing having a piston chamber and a spring chamber, a seat formed in said piston chamber, a plunger rod extending from said spring chamber into said piston chamber, a discharge nipple carried by said casing having an outlet duct communicating with said piston chamber, a disc-like member mounted on the inner end of said plunger rod and normally seated on the seat in said chamber, the inner end of said outlet duct communicating with said piston chamber at a point spaced from the seat of said piston member and normally in communication

with said piston chamber, and a spring mounted in said spring chamber and surrounding said plunger rod for actuating said disc-like member outwardly to discharge the liquid therefrom.

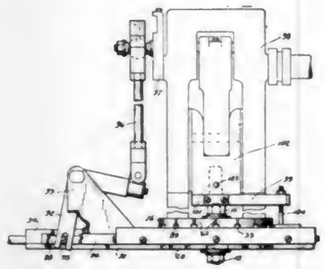
2,453,857
AIRCRAFT MOORING DEVICE
Haviland H. Platt, New York, N. Y., and Wynn Laurence Le Page, Ardmore, Pa., assignors, by mesne assignments, to McDonnell Aircraft Corporation, St. Louis, Mo., a corporation of Maryland
Application November 14, 1941, Serial No. 419,114
8 Claims. (Cl. 244—17)



1. A mooring device for an aircraft including a pair of parallel arcuate tracks secured to the lower part of said aircraft, a generally transverse carriage adapted to run in said track and having a transverse track formed thereon, and mooring line attachment means mounted upon said transverse track and freely moveable therealong.

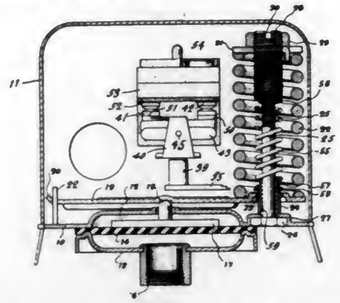
2,453,858
PROCESS FOR OBTAINING RUBBER FROM GOLDENROD LEAVES
Nandor Porges, Metairie, and Elisha F. Pollard and James J. Spadaro, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 24, 1945, Serial No. 584,680
2 Claims. (Cl. 195—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of obtaining rubber from goldenrod leaves comprising inoculating said leaves with digested sewage sludge inoculum, allowing the disintegrating microorganisms of the inoculum to act until the liquor becomes spent, draining the spent liquor, reinoculating the leaves at intervals and draining after inoculations as the liquor becomes spent, until microbiological disintegration of the non-rubber constituents of the leaves has been effected to the extent that the weight of the goldenrod leaves, on a dry-weight basis, has been reduced about by 29.6 to 41.6 percent, treating the disintegrated leaves with a resin solvent to extract the resins and then treating the leaves with a rubber solvent to extract the rubber, purifying the rubber solution by adding acetone to precipitate the rubber, and finally recovering the precipitated rubber.



2,453,859
CLOTHES DRIER
Merlin L. Pugh, Minneapolis, Minn.
Application December 13, 1944, Serial No. 567,923
1 Claim. (Cl. 34—60)

In a clothes drier, a casing having a clothes-receiving opening in the front thereof, a drum rotatable in said casing and having a clothes-receiving opening registering with the clothes-receiving opening of said casing, means for rotating said drum and for effecting circulation of air within said casing, said drum being perforated to permit such circulation of air, a source of radiant heat comprising infra-red ray lamps within said casing and in such position outside said drum that rays therefrom pass into the drum to dry clothes being

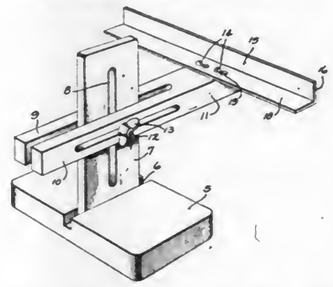


tumbled therein to evaporate the moisture therefrom, means for directing said circulating air over said source of radiant heat, cooling surfaces in the path of said circulating air exteriorly of said drum, means for cooling said surfaces to remove moisture from said circulating air and means for wetting said surfaces to remove lint from said circulating air and for washing the lint so removed from said surfaces.

2,453,860
SLIDER BENDING MACHINE
Louis M. Rabinowitz, Brooklyn, N. Y., assignor to Lamar Slide Fastener Corporation, New York, N. Y., a corporation of New York
Application March 27, 1946, Serial No. 657,482
14 Claims. (Cl. 153—21)

1. In a machine for bending preformed partially folded sliders for slide fasteners, rotatable means for transporting sliders in succession from a point of feeding to a point of bending, a reciprocable punch acting on the sliders at the point of bending to deform the same to a predetermined final shape, and anvil members mounted for movement conjointly with and relative to said rotatable means and displaceable from a retracted position at the point of feeding of the sliders to an operative position at the point of bending of the sliders in which latter position said members extend between the wings of the transported sliders to provide surfaces limiting the deformation of the sliders by the punch to the amount required to define said final shape of the sliders.

2,453,861
ADJUSTING MEANS FOR CONTROL DEVICES
John J. Rothwell, Elkhart, Ind., assignor to Penn Electric Switch Co., Goshen, Ind., a corporation of Iowa
Application August 27, 1946, Serial No. 693,299
7 Claims. (Cl. 74—469)

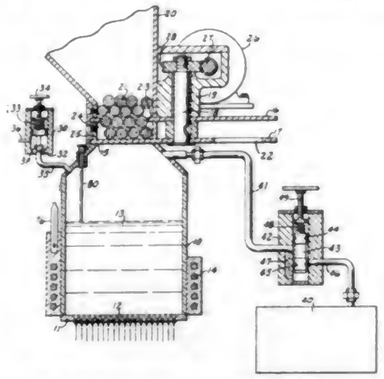


1. In adjusting means for a control device having a control arm, a range spring, a stationary threaded element, a sleeve threaded thereon, a range adjusting nut for the range spring threaded on said sleeve, a differential spring within the range spring and engaging said sleeve for adjustment thereby when the sleeve is adjusted relative to said threaded element and said range adjusting nut, an element engaged by said differential spring, a stop engaged by said element, said control arm during movement from one limit to another being effective to engage said element and move it away from said stop in opposition to said differential spring.

2,453,862
GASTROSCOPE
Peter Frederic Salisbury, Los Angeles, Calif.
Application June 2, 1947, Serial No. 751,913
7 Claims. (Cl. 128—9)

3. In a gastroscope, a tubular handle shaft having an eye piece, a flexible tubular mid-portion joined to said handle shaft, a tip portion connected to said flexible tubular mid-portion and having a viewing window, a plurality of tube sections arranged end to end in said flexible mid-portion and each having an image transmitting lens and an annular flange projecting outwardly and having bearing engagement with the inner surface of said flexible mid-portion for spacing its respective tube sections from the inner surface of said mid-section, said flanges each having a plurality of apertures therein, an operating member having a universally tiltable connection with said handle shaft, and a plurality of operating cables connecting said operating member to said tip portion and extending through the apertures in said flanges.

2,453,863
CAP STRIP GAUGE
Wallace S. Salisbury, Sharon, Wis.
Application December 4, 1944, Serial No. 566,512
3 Claims. (Cl. 29—284)



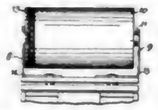
1. A combination gauge and slide device for applying to a wall a cap-strip having a downwardly opening channel on its outer face, said device comprising a base freely movable on the floor as it is progressively advanced along said wall, a standard unitarily mounted on the base, a bracket arm projecting from the standard toward the wall, and a gauge and slide member mounted at the end of the arm and extending transversely thereof and longitudinally of the cap-strip and having upstanding means sufficiently thin to enter the cap-strip channel and providing cap-strip support at least at two points spaced longitudinally of the cap-strip at opposite sides of the arm, said means being slidable within the channel and interlocked with said cap-strip when in use to be guided thereby as the cap-strip is secured to the wall behind the progressively advanced device.

2,453,864
METHOD FOR DRAWING FIBERS
Walter R. Schlehr, Toledo, Ohio, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio
Application March 20, 1946, Serial No. 655,816
9 Claims. (Cl. 49—77.5)

9. The method of producing fibers or filaments that includes, introducing materials from which the fibers or filaments are produced into a heating chamber having a plurality of orifices in one wall thereof, which materials are capable of liberating gas having low solubility in the molten material upon heating thereof, heating the materials within the heating chamber to render them viscous with consequent liberation of gas therefrom to control the atmosphere in the chamber thereby and render the material free of gas bubbles, confining the liberated gas within the heating chamber to establish and maintain a gas pressure above atmosphere upon the body of viscous material therein to exude the material through the orifices, exhausting a part of the liberated gases from the heating chamber to maintain the pressure therein constant, introducing a like gas into the heating chamber from

an external source of supply to augment the supply of gases liberated within the heating cham-

ber, and attenuating the viscous material into fibers as exuded from the orifices.



2,453,865

RESISTANCE UNIT FOR FLASHLIGHTS

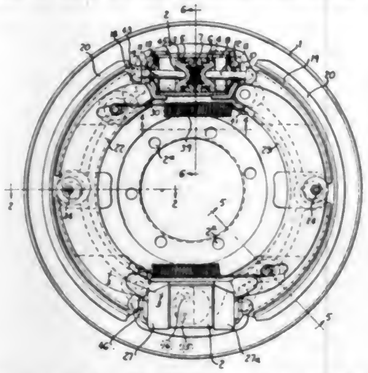
Elmer A. Schmidt, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia

Application November 13, 1944, Serial No. 563,130

8 Claims. (Cl. 201—67)

1. In a resistance unit adapted to be abutted against the end of a battery having a terminal projecting therefrom, the combination of a flat body member formed of insulating material, said body member having a shape conforming to that of the end of the battery with which it is intended to be used and a peripheral groove in its outer edge, a terminal member fixed to one face of said body member and adapted to engage the terminal of the battery when the body member is abutted against the end of the battery, a second terminal member fixed to the other face of said body member, resistance wire wound around said body member and located within said groove, means for connecting one end of said resistance wire to one of said terminal members, and means for connecting the other end of said resistance wire to the other of said terminal members.

2,453,866



BRAKE WITH TWO ANCHORING SHOES AND WEAR TAKE-UP MEANS THEREFOR

Steve Schnell, Kirkwood, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application April 27, 1945, Serial No. 590,579

19 Claims. (Cl. 188—78)

1. In a brake, a backing plate; braking means thereon; means to support said braking means on said backing plate, said braking means including a shoe and channel member and in which the shoe has movement substantially radially to said plate; a pair of abutment elements secured to said backing plate at diametrical positions, one of said abutment elements having a slot formed therein in which one end of the braking element is received, the other of said abutment elements having an abutment thereon whose surface is radial to said backing plate against which said channel is engageable; a brake cylinder supported in each of said abutment elements; piston

devices in said cylinder; push-rod elements connected between said piston and said brake means; and said slotted abutment taking up the thrust from said shoe in the forward direction and said radial abutment taking up the brake thrust in the reverse direction of operation.

2,453,867

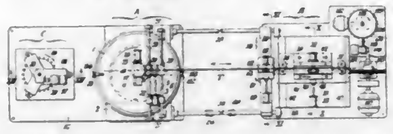
COSMETIC HOLDER

Sidney Shatkin, Long Branch, N. J., assignor to Crest Silver Mfg. Co. Inc., Matawan, N. J., a corporation of New Jersey

Application December 27, 1946, Serial No. 718,795

8 Claims. (Cl. 206—56)

1. In a cosmetic holder of the character described, a tubular casing, a tubular cover thereon in telescopic slidable relation therewith and removeable therefrom, adapted to be slid onto the casing from both ends of the casing respectively, means on said casing and cover to maintain same against axial rotation with respect to each other, a carrier for a cosmetic member, positioned within the casing, capable of being slid therealong and axially shifted therein; the wall of the casing being provided with a substantially longitudinal slot therethrough, a pin extending laterally from the carrier and exterior of the casing through said slot, a cam element on the cover, presenting an edge, adapted to contact and push said pin when the cover is slid onto either end of the casing and then along the casing; said slot having a terminal slot portion communicative therewith and lateral thereto; the pin being positioned in said slot terminal; said edge of the cam being so slanted with respect to the longitudinal axis of the cover whereby upon movement of the cover onto and along the casing in the direction from the pin towards the other end of the slot, the cam member will move the pin into the main slot and then therealong to the other end of said slot; the casing having an open end and the carrier being near such end when at one of its limit positions within the casing.



2,453,868

APPARATUS FOR AUTOMATICALLY BENDING WORK SUCH AS TUBING INTO SERPENTINE COILS

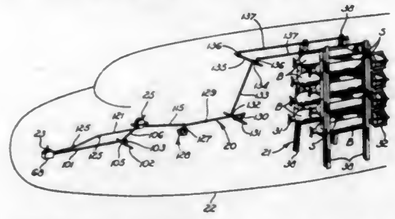
Ralph M. Shaw, Jr., Edgewater Park, N. J., assignor to Pedrick Tool & Machine Company, Philadelphia, Pa., a corporation of Pennsylvania

Application February 20, 1947, Serial No. 729,808

15 Claims. (Cl. 153—2)

1. In bar or tube bending apparatus for forming determinate shapes, a rotatable bend-effecting mechanism, means operative to shift the axis of rotation of said mechanism for directional control of its pivotal movement, an intermittently movable feeder for the bar or tube and a straightener feed-arresting device, said mechanism, feeder, and device being aligned; mechanism for timing operation of the aforesaid parts and means; and a control, synchronized with the timing mechanism, whereby the parts and means aforesaid are actuable to complete the desired bending cycle.

13. In a bending machine of the type described the combination of clamp means operative to straighten-out bar or tube lengths fed thereto; feeding-means for gripping and progressing the bar or tube lengths forwardly; means for stopping the feeding-means at predetermined intervals; means for forming relatively-reverse curved-bends in the bar or tube when the feeding-means is stopped; and a timing-device effective to selectively activate the several means aforesaid to produce a shape embodying circular bends with connecting straight runs.



2,453,869

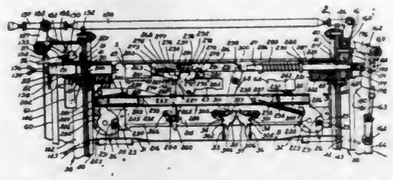
BOMB-CARRYING APPARATUS FOR AIRCRAFT

Claude C. Slate, Burbank, Calif., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware

Application August 1, 1941, Serial No. 405,010

54 Claims. (Cl. 89—1.5)

1. An aircraft apparatus for aerial bombs, comprising: a frame comprising an upwardly extending guide channel with a lower entrance end, there being a series of shackle stations spaced along said channel; a plurality of bomb shackles having projections for sliding engagement with said guide channel, whereby the shackles loaded with bombs may be carried through said stations; engagement means at said shackle stations along said channel to engage said projections for support of said shackles; means pivotally mounting said engagement means and adapting the latter to yield to upward movement of said projections; and means loading said engagement means to return the latter to position to block downward movement of said projections and support the same.



2,453,870

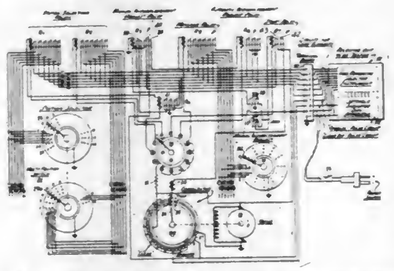
BOMBING ARMAMENT FOR AIRCRAFT

Claude C. Slate, Burbank, Calif., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware

Application February 13, 1943, Serial No. 475,719

12 Claims. (Cl. 89—1.5)

8. Bombing armament for an aircraft, including in combination: means to releasably support an aerial bomb; means to release said supporting means whereby to drop said bomb; means normally effective to engage both a first relatively movable, quick detonation, arming means, and a second relatively movable, delayed detonation, arming means in said bomb, in a manner to permit release of both said arming means automatically upon accidental or emergency release of said bomb; and control means actuable by said release means and effective to cause said engagement means to engage said two arming means selectively in a positive manner.



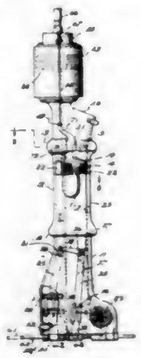
2,453,871

VARIABLE TEST TRANSMITTER

James A. Spencer, Teaneck, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 29, 1945, Serial No. 602,233

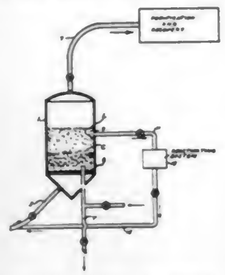
8 Claims. (Cl. 177—380)



1. A control circuit arrangement comprising in combination a continuously rotating motor driven distributor for timing a plurality of circuit closures on different individual circuits, a magnetically actuated step-by-step switch the actuating coil of which is in circuit with a first segment on said distributor, a power source, a circuit-breaking relay the normally closed contacts of which connect one terminal of said source through said coil and through said distributor to the other terminal of said source, manually adjustable means for composing different code signals to be sequentially transmitted, relays for determining a desired sequence of transmission of such signals, and circuit connections for operating said relays under joint control of said distributor and said step-by-step switch.

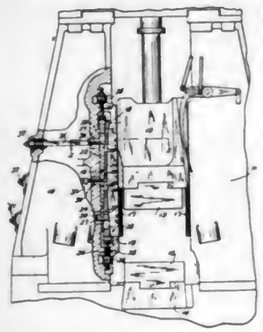
2,453,872
UPHOLSTERER'S APPLICATION TOOL
Edward J. Stauffer, Naperville, Ill., assignor to Kroehler Mfg. Co., Naperville, Ill., a corporation of Illinois
Application August 28, 1944, Serial No. 551,585
5 Claims. (Cl. 140—55)

1. A power operated clamping apparatus comprising a vertical housing member enclosing a magazine channelway for a stack of nested upholsterer's clips longitudinally thereof and enclosing also a journal for an operating rod paralleling said channelway, trackway means for supporting the lowermost of a series of clips contained in said magazine channelway for transverse shuttle movement, a set of clamping jaws for processing each clip after it has been advanced in said shuttle movement, a bell crank lever operated by said rod to shuttle each clip from its magazine channelway position to its clamping jaw position and to return for a subsequent clip.



2,453,873
TUBOCURARE PURIFICATION
Frank A. Steidt, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application May 29, 1947, Serial No. 751,457
6 Claims. (Cl. 260—236)

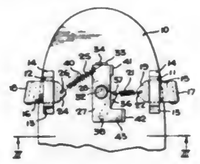
1. The process of preparing in purified form the lissive-active alkaloid of tubocurare, which comprises precipitating gummy impurities from a water solution of crude tubocurare with a monohydric, water-miscible alcohol, preparing a substantially anhydrous solution of the soluble portion of the tubocurare in a monohydric water-miscible alcohol, adsorbing the lissive-active alkaloid and concomitant impurities on activated alumina, selectively desorbing the alkaloid with a substantially anhydrous, monohydric, water-miscible alcohol, and recovering the alkaloid by evaporating the alcohol.



2,453,874
HYDROCARBON SYNTHESIS
Sumner B. Sweetser, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 1, 1946, Serial No. 644,957
9 Claims. (Cl. 260—449.6)

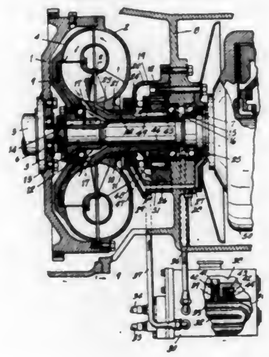
1. The method of forming normally liquid hydrocarbons, which comprises forcing a mixture of carbon monoxide and hydrogen upwardly through a dense suspension of powdered synthesis catalyst and a quantity of powdered dehydration catalyst, fluidized by the upwardly flowing gases, concentrating said dehydration catalyst in the upper portion of said suspension, permitting the carbon monoxide and hydrogen to contact both catalysts at synthesis temperatures and pressures and for

a period of time adapted to effect the formation of major proportions of normally liquid hydrocarbons and minor proportions of oxygenated compounds on said synthesis catalyst, and recovering from said dehydration catalyst a normally liquid total product of relatively low oxygen content.



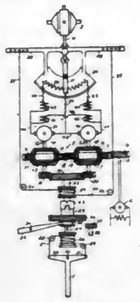
2,453,875
RAM GUIDE
Howard Terhune, Cleveland, Ohio, assignor, by mesne assignments, of one-half to Champion Forge Company, Cleveland, Ohio, a corporation of Ohio
Application May 25, 1944, Serial No. 537,278
2 Claims. (Cl. 308—3)

1. In a forging hammer, a frame standard having a vertical pocket, a ram guide held therein against vertical movement, the rear surface of said guide being curved vertically to conform with a circle of long radius, a backing plate mounted in said standard behind said guide having a guide engaging surface conforming with the same circle, means for adjusting said backing plate vertically, to tilt the guide vertically, and a vertically movable wedge behind said backing plate for moving the backing plate and guide horizontally.



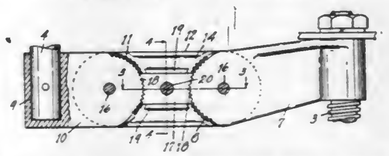
2,453,876
SKATE CLAMP
Albert A. Tolotti, Reno, Nev.
Application May 9, 1947, Serial No. 747,033
4 Claims. (Cl. 280—11.31)

3. A clamping device for attaching a skate having a bottom plate, to a shoe, comprising: a pair of clamping elements slidably mounted on said plate for engaging opposite side edges of a sole of a shoe; a lever pivotally mounted on said plate between said clamping elements; a spring connected



to the inner end of each of said clamping elements; and means connected to said pivoted lever member for varying the effective force of said springs on said clamping elements.

2,453,877
HYDRAULIC TORQUE CONVERTER OF THE CONVERTER COUPLING TYPE
Herbert H. Trail, Kalamazoo, Mich., assignor to Fuller Manufacturing Company, Kalamazoo, Mich.
Application July 10, 1944, Serial No. 544,275
1 Claim. (Cl. 60—54)



A hydraulic torque converter comprising coacting vaned driving, driven and reaction members, a main shaft to which the driven member is connected, a tubular shaft for the reaction member concentric with and spaced from said main shaft to provide a fluid passage between them, bearings for said main and reaction member shafts disposed in spaced relation at the end of the reaction member shaft to provide a fluid discharge, said reaction member having ports between the vanes thereof located in the zone of the greatest pressure of the vortex and delivering to said passage between said shafts, a one-way brake for said reaction member shaft including a housing constituting a fluid chamber, an element of said overrunning clutch having vanes thereof subject to the fluid in said chamber, a sleeve carried by the driving member and disposed in concentric relation to the reaction member shaft to provide an annular fluid passage connection from said fluid chamber to the fluid intake of the driving member, and a fluid cooling unit provided with an inlet connection opening to said fluid discharge space between said bearings and a delivery connection to said fluid chamber.

2,453,878
AUTOMATIC STEERING APPARATUS
Lev A. Trofimov, Willoughby, Ohio
Application February 5, 1944, Serial No. 521,217
5 Claims. (Cl. 318—489)

1. An automatic pilot system for dirigible vessels and the like, comprising: a movable element for controlling the direction of the vessel; a continuously running power-supplying motor; a transmission for transmitting motor power to the element; the transmission comprising differential gearing constantly driven by the motor; a pair of rotary electro-dynamic devices constantly driven by transmission-transmitted motor power; a rotary output shaft connected to the element; a pair of continuously energized electromagnetic devices, and a rheostat controlling the degree to which the electromagnetic devices are relatively energized to cause them to be balanced and unbalanced; a gyroscope compass and means associated therewith for causing operation of the rheostat to unbalance the energization of the electromagnetic devices upon deviation of the vessel from its course, and to operate the rheostat toward balancing the devices upon return of the vessel toward its course; the electrodynamic devices being responsive to unbalanced energization of the electromagnetic devices to cause the transmission to deliver power to the output shaft to rotate it and move the element; movable means moved by power delivered by the transmission and associated with the rheostat to operate it to tend to restore balanced energization of the electromagnetic devices; and the electrodynamic devices being responsive to balanced energization of the electromagnetic devices to cause the transmission to discontinue the delivery of power to the output shaft.

2,453,879
LOCKING MEANS FOR ADJUSTABLE BACK CHAIRS
Tracy H. Van Buren, Sturgis, Mich.
Application November 9, 1946, Serial No. 708,893
9 Claims. (Cl. 155—157)

5. In a chair, the combination with a seat and back, of a back supporting arm disposed below the seat and provided with a segmental serrated clutch jaw, a back supporting bracket provided with a segmental serrated clutch jaw, the serra-

tions of said jaws being transversely inclined in the same direction, a supporting link pivotally connected to said arm and bracket, the pivots being centered relative to the jaws thereof, a coacting clutch adjusting member provided with serrated clutch jaws operatively associated with the clutch jaws of said arm and bracket and transversely inclined oppositely to the jaws of said arm and bracket, means for engaging and disengaging said coupling clutch member comprising a spindle rotatably mounted on said link and having cam means associated therewith whereby the spindle is moved axially by a rotative movement thereof, said adjusting clutch member being connected to said spindle for movement axially therewith.

2,453,880

CONTAINER

Byron M. Vanderbilt, Westfield, N. J., and Paul T. Parker, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 28, 1943, Serial No. 515,980
2 Claims. (Cl. 220—64)

2. A shipping and storage container comprising a base material and a coating on said base material, for non-adherent contact with the contents of the container, said coating comprising a dry residue of an aqueous dispersion of 24 parts of a water-soluble metal soap, 12 parts of a water insoluble wax, 30 parts of zinc stearate, and 3 parts of a copolymer of the composition consisting of butadiene and acrylonitrile, the latter being present in amounts between 25 and 75%, said soap constituting at least 25% of the solids in said coating.

2,453,881

INHIBITION OF CORROSION IN WELLS

Prentiss S. Viles and Elza Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application January 24, 1946, Serial No. 643,206
4 Claims. (Cl. 252—8.55)

1. A method for reducing the corrosiveness to corrodible ferrous metal of a corrosive petroliferous well fluid including moisture and carbon dioxide which comprises introducing into said fluid a corrosion inhibiting amount of carbon disulfide.

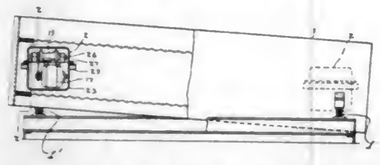
2,453,882

INHIBITING CORROSION IN WELLS

Prentiss S. Viles and Elza Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application January 24, 1946, Serial No. 643,207
6 Claims. (Cl. 252—8.55)

1. A method for reducing the corrosiveness to corrodible ferrous metal of a corrosive fluid including moisture and carbon dioxide which comprises introducing into said fluid a corrosion inhibiting amount of elemental sulfur.



2,453,883

VIBRATORY SCREEN

John L. Wettlaufer, Toronto, Ontario, Canada

Application January 4, 1945, Serial No. 571,311
3 Claims. (Cl. 209—326)

1. A vibratory screen, comprising a resiliently supported screen inclined longitudinally, a pair of rigid frame bars extending transversely of the screen and rigidly connected to the frame of the screen, journal bearings mounted centrally of the length of said bars, an individual spool-shaped vibratory member extending transversely between said rigid frame bars and having eccentric shaft extensions journalled in said journal bearings, and a motor resiliently suspended from said frame bars and operatively connected to drive said vi-

bratory member, said vibratory member having its axis extending longitudinally of the screen to impart its vibrations directly to said frame bars through said journal bearings and substantially in a direction longitudinally of said frame bars and transversely of the screen to direct the material being screened from side to side of the screen in its travel down the inclined screen surface.

2,453,884

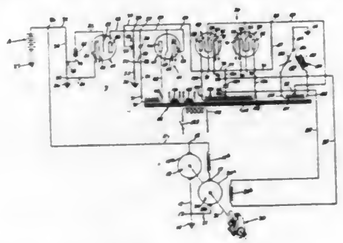
HAND SIGNAL DISCHARGER

Leon V. Whipple, Berkley, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan

Application June 16, 1943, Serial No. 491,267
3 Claims. (Cl. 42—2)

1. A discharger comprising a barrel, a breech member, a housing projecting from said breech member, and firing mechanism carried by said breech member and including a firing pin and an exposed knob connected to said firing pin in order that a blow may be imparted thereto for moving said knob toward said breech member for actuating said firing pin, said knob being provided with a shoulder on one side thereof facing said breech member and a spring member positioned in the path of movement of said shoulder upon movement of said knob for obstructing movement of said knob and firing pin, said spring member being mounted on said breech member, said knob and spring being constructed and arranged so as to be relatively rotatable about the axis of said firing pin so as to effect disalignment of said spring and shoulder in order to permit actuation of said firing pin, said spring bearing against said knob so as to bias said knob and spring against relative rotation.

2,453,885



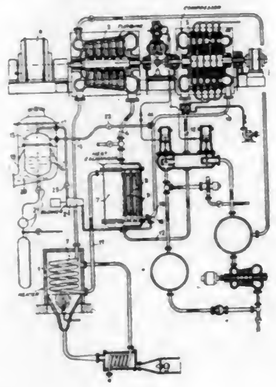
GENERATING SYSTEM

Theodore J. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application June 26, 1944, Serial No. 542,100
8 Claims. (Cl. 322—36)

1. A constant voltage direct current generating system comprising, in combination: a main generator having a main generator field; an accessory generator having an accessory generator field, said

accessory generator being connected to supply a separate excitation potential to said main generator field; motor means for mechanically operating said main and accessory generators; and a control device comprising transformer means having a primary winding and a plurality of secondary windings, means adapted to energize said transformer with alternating current, a thermionic amplifier having cathode, anode, and control electrodes, rectifier means energizing the anode circuit of said amplifier from one of said



transformer secondaries, a source of comparative potential, means adjustably connecting the output of said main generator, in opposed relation to said source of comparative potential, in the grid circuit of said thermionic amplifier, an electronic full wave grid controlled rectifier providing energization for said accessory generator field from said transformer, and adjustable means and responsive means including said thermionic amplifier controlling the operation of said grid controlled rectifier, said first named rectifier means including a resistor in said anode circuit.

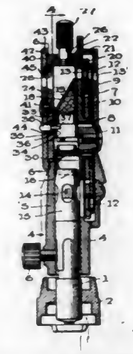
2,453,886

THERMAL POWER PLANT AND ITS WORKING MEDIUM, WITH METHOD OF OPERATION

Jakob Ackeret, Kusnacht, near Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland

Application August 31, 1944, Serial No. 552,071
In Switzerland October 11, 1943
6 Claims. (Cl. 60—59)

2. A method of converting heat into work which comprises establishing a closed circuit charged with a gaseous working medium having helium as a base and containing at least one other gas, the gases being present in such proportions that the average molecular weight of the mixture is more than 5 but less than 15, and its velocity of sound at normal temperature does not exceed 900 and is not less than 500 meters per second; heating said medium in one part of the circuit by supplying heat from an external source; then expanding the heated medium while giving up energy kinetically to at least one consumer of useful output; thereafter kinetically compressing the expanded medium; and causing the medium after said expansion to exchange heat with working medium after said compression and preparatory to supplying heat from an external source for the next cycle.



4. Thermal power plant, in which a working medium describes a closed cycle, comprising an external source of heat in which heat is supplied to the working medium; a prime mover of the turbine type in which the working medium thus heated up is allowed to expand whilst the prime mover delivers power externally; a compressor of the turbo type driven by said prime mover for compressing the expanded medium again to a higher pressure; and a heat exchanger in which the expanded part of the working medium issuing from the prime mover gives off heat to the re-compressed part of the working medium issuing from the compressor before heat is supplied to this re-compressed part; said working medium consisting of a gas mixture with helium as basis and at least one further gas, the average molecular weight of this gas mixture being more than 5 but less than 15 and its velocity of sound at normal temperature not exceeding 900 m./sec. and being not less than 500 m./sec.

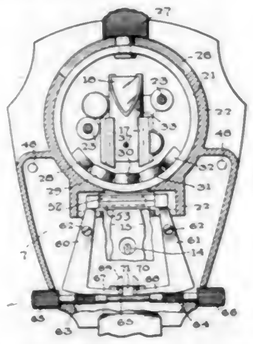
2,453,887

DIAGNOSTIC INSTRUMENT FOR EXAMINING THE EYE

William N. Allyn, Skaneateles, N. Y., assignor to Welch Allyn, Inc., Auburn, N. Y., a corporation of New York

Application March 9, 1945, Serial No. 581,752
1 Claim. (Cl. 88—20)

A diagnostic instrument, comprising a portable lamp support, a lamp mounted on said support, a light projecting prism mounted on said support in the axial path of the light beam from the lamp and rotatable in opposite directions about an axis coinciding with the axis of the lamp, said prism having a light-reflecting surface for projecting the light beam substantially perpendicular to the axis of the lamp, and means instantaneously adjustable independently of movement of the lamp support and lamp for rotating the prism about its



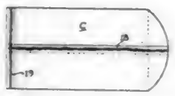
axis aforesaid for laterally shifting the projected light beam in a plane substantially perpendicular to the axis of the lamp, said last-named means comprising an actuating member rotatably mounted on said support, a laterally shiftable slide member mounted on said support, and a pin carried by said slide member, said pin being eccentrically connected to the rotatable actuating member and also operatively connected to the prism for rotatively adjusting the prism about its axis aforesaid.

2,453,888

OPTICAL INSTRUMENT FOR EXAMINING AND MEASURING CHARACTERISTICS OF THE EYE

William N. Allyn, Skaneateles, N. Y., assignor to Welch Allyn, Inc., Auburn, N. Y., a corporation of New York

Application July 1, 1946, Serial No. 680,697
10 Claims. (Cl. 88—20)



1. An optical instrument for examining the eye, comprising a support, means carried by said support for directing a light beam into the eye of a subject while permitting observation of the illuminated field of the eye, and means for measuring the dimensions of certain characteristics of the eye within the illuminated field, said last-named means comprising means for projecting shadow lines into the eye by the light beam aforesaid, and means for adjusting the shadow line projecting means aforesaid for varying the spacing of said shadow lines relative to each other independently of the position of the instrument and in proportion to the measurement being made.

2,453,889

METHOD FOR HEAT SEALING THE SEAMS OF PAPER BAGS

Albert M. Bojanower, Downey, Calif., assignor to Western Waxed Paper Company, Oakland, Calif., a corporation of California

Application March 7, 1944, Serial No. 525,430
2 Claims. (Cl. 154—116)

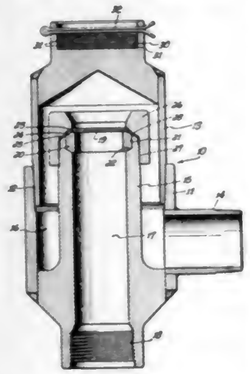
1. The improved method of heat-sealing a seam in a paper bag formed by two overlapping plies of waxed paper, which method includes heating the paper along the seam by means of a small jet of steam injected downwardly against the upper face of the upper overlapping ply, restricting the heating of the paper to the direct contact of the steam jet with the paper and keeping the paper from actual contact with any heated solid object in order to avoid excessive heating of the paper and spreading or "killing" of the wax at the seam, whereby the heat from the steam jet passing through the upper overlapping ply will soften the wax between the plies, and finally pressing the overlapping plies together with unheated pressing means while the seam is cooling.

2,453,890

PROCESS FOR THE OXIDATION OF CYCLIC ETHERS

John George Mackay Bremner and David Gwyn Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application February 13, 1947, Serial No. 728,386. In Great Britain February 26, 1946
10 Claims. (Cl. 260—344)



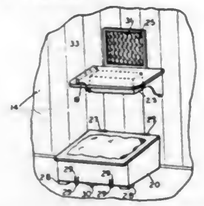
1. A process for the production of aliphatic lactones comprising oxidizing a cyclic ether of the group consisting of tetrahydrofuran, tetrahydropyran and 2,5-dihydrofuran in the liquid phase at a temperature of 70–200° C. by means of an oxygen-containing gas.

2,453,891

PRESSURE RELEASE

Clarence E. Burt, Pasadena, Calif., assignor to Grant Oil Tool Company, Los Angeles, Calif., a corporation of California

Application January 8, 1945, Serial No. 571,931
6 Claims. (Cl. 220—89)



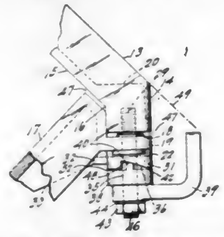
1. A pressure release device comprising a body having inlet and outlet openings, a disc within the body and normally closing communication between said openings, an annular seat against which the disc is pressed by fluid pressure communicated from said inlet opening, said seat having an inner end removably contained within a recess in the body and having an outer end surface against which the disc seats and extends radially outward and angularly in the direction of pressure application against the disc to engagement with a body surface surrounding the end of said recess, and means tightly clamping the annular portion of the disc beyond said seat against said body surface.

2,453,892

ECCLESIASTICAL EQUIPMENT

Nicholas V. Casson, Bronx, N. Y.

Original application April 11, 1944, Serial No. 530,508. Divided and this application August 29, 1945, Serial No. 613,278
2 Claims. (Cl. 240—2)



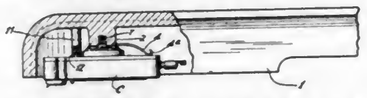
1. In a confessional, the combination of a priest's cubicle, a pair of penitents' cubicles each directly adjoining a different wall of the priest's cubicle, a closable opening between each penitent's cubicle and the priest's cubicle, a closure for each such opening under the control of the priest, means for illuminating the interior of each penitent's cubicle, and means controlled by said closure for automatically ceasing the illumination of a penitent's cubicle's interior on initiation of movement of the closure for the opening into that cubicle.

2,453,893

MOLDER'S FLASK

Angelo B. Castagnola, Oakland, Calif.

Application March 27, 1946, Serial No. 657,594
2 Claims. (Cl. 22—107)



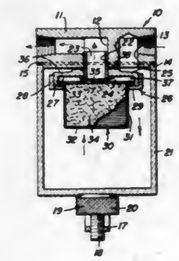
2. A molder's flask or the like comprising a rectangular frame made of two parts separable at diagonally opposed corners, each of said corners comprising opposed plane surfaces parallel to the plane of one side of the rectangle and opposed plane surfaces parallel to the direction of separating movement and contiguous with the first plane surfaces and diagonally related to the first plane surfaces.

2,453,894

MEANS FOR MOUNTING STYLUS CARTRIDGE

Creed M. Chorpening, Conneaut, Ohio, assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio

Application January 29, 1946, Serial No. 644,082
5 Claims. (Cl. 274—24)



1. In combination, a phonograph arm having a boss, a female socket member attached to said boss, a stylus cartridge having a companion male member in removable snap engagement with said female socket member, and a leaf spring anchored at its one end between said boss and female socket member and having its other end in engagement with said cartridge so as to take up any slack in said engagement.

2,453,895

FILTER FOR SEDIMENT TRAPS

Richard F. Corwin, East Hampton, N. Y., assignor to R. A. Corwin & Son, East Hampton, N. Y.

Application October 20, 1947, Serial No. 780,959
2 Claims. (Cl. 210—165)

1. A filter for a sediment trap comprising an externally screw threaded head having an axial discharge opening, a bushing extending through the discharge opening for removably supporting the head in concentric relation to and in communication with the discharge passage of a sediment trap, an externally knurled internally threaded retaining ring removably threaded on the head, an inturned annular supporting flange on the ring, a filter unit adapted to cover the discharge opening in the head and an outwardly extending annular flange on the filter unit for cooperation with the inturned supporting flange on the ring in holding the filter unit in proper position on the head.

2,453,896

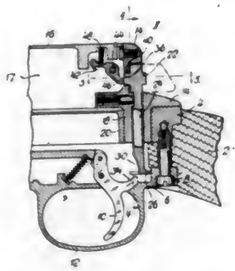
TREATMENT OF TITANIUM

Reginald S. Dean, Salt Lake City, Utah, assignor to Chicago Development Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application June 26, 1942, Serial No. 448,622
2 Claims. (Cl. 148—13.1)

1. The process of producing a hard, tough and adherent coating on objects consisting at least mainly of titanium which comprises subjecting said objects to the action of a molten alkali metal cyanide.

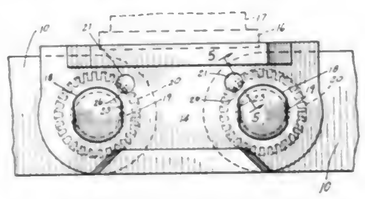
2,453,897



SAFETY FOR SELF-LOADING FIREARMS

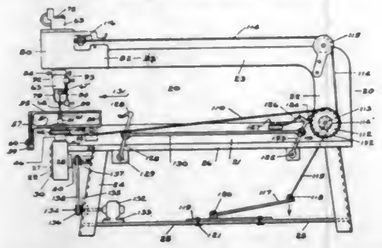
Hans Erik Eklund, Malmo, Sweden, assignor to Aktiebolaget Ljungman Verkstäder, Malmo, Sweden, a corporation of Sweden

Application July 28, 1942, Serial No. 452,642
In Sweden June 27, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires June 27, 1961
3 Claims. (Cl. 42—70)



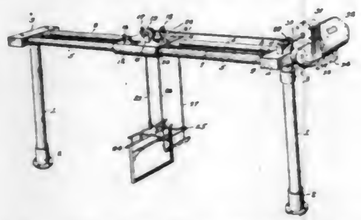
1. In a self-loading fire arm, a receiver, a bolt mechanism in said receiver, a spring pressed latch for retaining the bolt mechanism in retracted position, firing mechanism for said bolt mechanism, a rear member removably mounted in said

receiver to form a wall for the receiver back of said bolt mechanism, and a safety member rotatably mounted in the rear member; said safety member including safety means operable to block actuation of said firing mechanism upon adjustment of said safety member to one position,



means operable upon adjustment of said safety member to render said safety means inactive and to actuate said spring pressed latch to inoperative position, and means carried by said safety member and operative in both of said adjustments of the safety member to lock said rear member against removal from said receiver.

2,453,898
RING LOCK CUTTER CHAIN STRUCTURE
Charles J. Forbes, Terre Haute, Ind.
Application February 21, 1946, Serial No. 649,136
9 Claims. (Cl. 74—254)

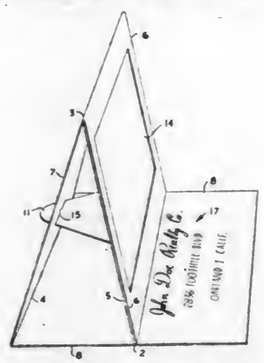


1. In a chain structure for coal cutting chains and the like having lugs and links successively and pivotally connected together, the combination with a pair of adjacent links having bores through the adjacent ends and a straddle type lug having sideplates at opposite sides of the links and lapping the adjacent ends thereof and having aligned bores for registering with the link bores, of a pin for each set of aligned bores, and independent locking means for each pin preventing axial withdrawal thereof comprising a toothed disc seatable in a counterbore coaxial with the aligned bores and in one of the confronting faces of the link end and one of the lug side plates, the latter having therethrough a radially offset opening for exposing a disc tooth, the disc having a pin receivable opening therein and an inwardly directed locking portion, the pin having a locking portion receivable arcuate groove in its periphery and coplanar with the counterbore when the pin is properly seated, the disc being normally concealed in the counterbore and exposed only at the plate hole for disc rotation to effect axial displacement locking of the pin, the tooth then exposed by the hole being bendable angularly of the plane of the disc to effect locking of the disc against casual rotation.

2,453,899
SWIVELING RECIPROCATING-SAW SAWING MACHINE
Charles Gaines, Vallejo, Calif.
Application August 16, 1946, Serial No. 691,136
1 Claim. (Cl. 143—73)

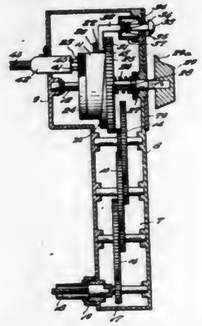
A sawing machine of the character described comprising a main frame, an upper head member revolvably mounted thereon, a lower head member fixed to the frame and positioned beneath the said upper head member, a piston rod vertically positioned in the said upper head member, a jig saw blade holder secured to the lower extremity thereof, a shaft slidably mounted in the lower head member and positioned in vertical alignment with the said piston rod, a jig saw blade holder secured to the upper extremity of the said shaft, a jig saw blade secured to the said blade holders, a resilient means for retaining the said saw blade in a taut position, a drum-wheel fixed to the upper head member, a second drum-wheel fixed to the said shaft in the lower head member, a pair of clock springs, one of which is mounted on each of the said drum-wheels and adapted to exert a winding tension against the same, a third drum-wheel pivotally secured to the said main frame, a flexible cord wound on the first mentioned drum-wheel and connecting the same to the said third mentioned drum-wheel, a second flexible cord wound on the said second drum-wheel and connecting the same to the said third drum-wheel and a foot pedal and a cord connecting the same to the said third drum-wheel for enabling the said third drum-wheel to be manually operated for unwinding the said cords from the said first and second mentioned drum-wheels, whereby the jig saw blade is adjusted to vary the cutting angle thereof while the machine is in operation.

2,453,900
FILM DEVELOPING APPARATUS
William R. Gardiner and John T. Mays, Herrin, Ill.
Application March 18, 1946, Serial No. 655,219
6 Claims. (Cl. 95—89)



1. A film developing apparatus for use with a plurality of developing solutions comprising opposed end frames, guide rods extending therebetween, a carriage slidable on the guide rods, a trip rod having its ends slidably mounted in the end frames, means tending to retain the trip rod in normal position, a trip lever on the carriage engageable with the trip rod, whereby to move the trip rod out of normal position, a circuit-breaking means carried by the trip rod adapted to open an electric circuit when the trip rod is moved out of normal position, a sheave on the carriage, a cable passing over the sheave, a film carrier on one end of the cable and below the carriage, a winding reel on one of the end frames connected to the other end of the cable, a stop on the cable engageable with the trip lever for disengagement thereof from the trip rod when the carrier is lowered, electrically controlled power means for rotating the reel, and timing switches on one of the end frames, said timing switches, circuit-breaking means, and power means being connected in circuit.

2,453,901
COMPOUND WRENCH AND SCREW DRIVER
Robert R. Gonsett and Faust Robert Gonsett, Los Angeles, Calif.
Application December 23, 1944, Serial No. 569,604
3 Claims. (Cl. 81—185)

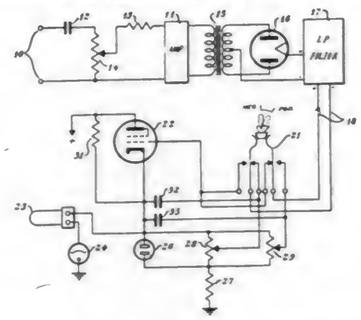


1. A tool of the character referred to comprising a tubular body provided with wrench with socket-wrench ends, an intermediate portion of said body being flattened to form oppositely disposed flat spaced walls that are wider than said socket-wrench ends, each of said walls being provided with a longitudinal slot, smaller wrench sockets fitting within said socket-wrench ends and slidable relatively thereto, and means connecting said smaller wrench sockets, said means comprising a bar having an intermediate integral loop offset from the plane of the bar and comprising a projection extended through one of said slots for operation by the thumb or other member.

2,453,902
ADVERTISING FOLDER WITH PICTURE FRAME AND EASEL
Thomas A. Graham, San Leandro, Calif.
Application August 8, 1947, Serial No. 767,486
5 Claims. (Cl. 40—152.1)

1. An advertising folder comprising a rectangular sheet of cardboard divided by three transverse scored fold lines into successive first, second, third and fourth substantially identical panels, and an easel tab hinged to said first panel with its free end extending longitudinally thereof toward the outer end of said first panel; said second panel being formed with a rectangular window and arranged to frame a pictorial illustration; said third panel being formed adjacent the said fourth panel with a transverse slot arranged to receive the free end of said tab so as to hold said panels in triangular formation with said fourth panel serving as a base therefor, and with said first panel folded over said second panel, with its outer edge accommodated within the apex formed by said second and third panels.

2,453,903
THEFT ALARM SYSTEM FOR AUTOMOBILES
Alfred R. Gray, Bronx, N. Y.
Application August 23, 1945, Serial No. 612,152
4 Claims. (Cl. 177—314)



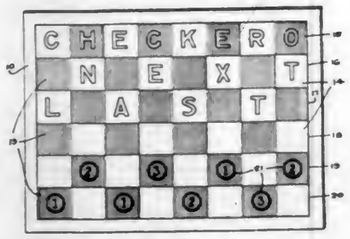
1. In a theft alarm system for automobiles in combination, an alarm circuit containing alarm signals and alarm contacts, an axially displaceable and rotatable member, means for driving said member slowly during actual travel of the automobile, including a drive gear mechanism in operative engagement with said member, a contact member carried by said slowly rotatable member, automatic means for axially displacing the said slowly driven rotatable member after a predetermined angle of rotation, thereby moving the contact member into operative engagement with the alarm contacts in the alarm circuit and moving the said member out of engagement with the driving gear, and further means for adjusting said predetermined angle during which the said member is rotated without axial displacement.

2,453,904
ELECTROLYTIC PREPARATION OF CORROSION TESTING ELEMENTS
Leo D. Grenot, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 5, 1944, Serial No. 529,874
4 Claims. (Cl. 204—53)

1. In a method of preparing a corrosion testing element of the class described, electroplating a test metal on a metal carrier having linear scorings at predetermined intervals to form a thin stepped-wedge plating of test metal thereon by immersing said carrier by predetermined increments corresponding to said linear scorings to bring said scorings successively substantially to the level of the plating bath and electrically

depositing test metal on the immersed portion of said carrier in a predetermined amount after each successive immersion, thereby forming a test metal step-wedge on said carrier, the steps of said wedge coinciding with said scorings.

2,453,905
FACSIMILE RECORDER CONTROL CIRCUIT
Boris F. Grib, Brooklyn, N. Y., assignor to Times Facsimile Corporation, New York, N. Y., a corporation of New York
Application March 15, 1946, Serial No. 654,559
6 Claims. (Cl. 178—6.7)

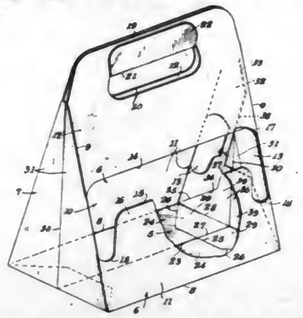


1. A facsimile recorder comprising means for rectifying an amplitude-modulated carrier, a space-discharge device provided with an anode, a cathode and a control electrode, a voltage regulator tube connected in the cathode-anode circuit of said space-discharge device, said voltage regulator tube being of the type having substantially constant voltage drop across the terminals thereof, a connection from the negative terminal of the rectifying means to the control electrode of said space-discharge device, a connection from the positive terminal of said rectifying means to said voltage regulator tube whereby the rectified carrier signals are inverted in the space-discharge device and a recording device in circuit with said space-discharge device.

2,453,906
DEVICE FOR PRESERVING OBJECTS REQUIRING LIQUID SUPPLY
Darrel Patton Hamlet, Melrose Park, Ill., assignor to Clarence Bussert, Melrose Park, Ill.
Application September 22, 1945, Serial No. 618,049
4 Claims. (Cl. 47—38)

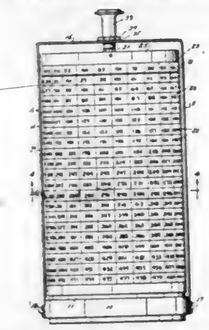
1. A device of the character described comprising, a tubular container made of waterproof material, a stopper secured to one end of said tubular container and provided with a bore adapted to receive the stem of a plant, a stopper secured to the other end and provided with a bore to admit air under atmospheric pressure into the said tubular container, and an elastic diaphragm having a skirt portion confined by the said last-mentioned stopper between the peripheral surface of the said stopper and the inner walls of the said tubular container.

2,453,907
GAME
Willis Gaston Hare and Chester B. Roebuck, Jr., Philadelphia, Pa., assignors of one-third to Walter A. Gay, Jr., Philadelphia, Pa.
Application January 16, 1945, Serial No. 573,023
1 Claim. (Cl. 273—134)



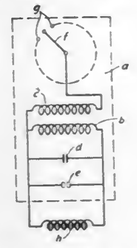
In a competitive game of the character described adapted to be played by two or more players, a plurality of playing boards corresponding in number to the number of players participating in the game, all of said boards being identically divided into a plurality of playing squares alternating with non-playing squares, the playing squares of any one board being of a color distinctively different from those of the other boards, a plurality of movable pieces adapted for play upon each board, said movable pieces being always equal in number during the entire play of the game and being individually marked with indicia dividing them into groups and a deck of cards divided into sets each consisting of a plurality of identical cards, the number of said sets of identical cards being equal to the number of boards in play multiplied by the number of differently board, said sets of identical cards being arranged marked groups of playing pieces movable on each in groups which distinguish from one another by indicia corresponding to those of the differently marked groups of playing pieces and by color corresponding to those of the differently colored playing squares, said cards being thereby adapted to simultaneously select the board upon which a playing piece is to be moved and the particular group of playing pieces, one of which is to be moved on said selected board.

2,453,908
BOTTLE CARRIER
John Harhay, Los Angeles, Calif., assignor to Los Angeles Paper Box Factory, Los Angeles, Calif., a corporation of California
Application April 27, 1946, Serial No. 665,490
4 Claims. (Cl. 229—52)



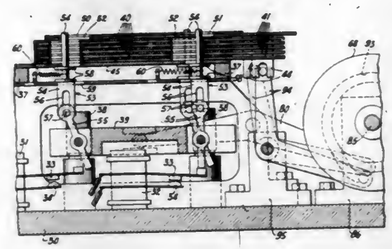
4. An article-carrying carton comprising sides that slope continuously toward each other from the bottom to the top of the carton, each side having a transverse opening to receive articles, each side along the end edges thereof having integral end portions and the end portions on each end of the carton cooperating to form triangular end walls, a central longitudinal score line in each end wall whereby the same is adapted to fold inwardly along the mentioned end edges of the sides, an outwardly foldable bottom integrally connecting the sides and formed at each end with an extension residing within and affixed to

each respective end wall, said bottom having a longitudinal score line on which the same folds, a transverse slit adjacent each end at which the ends of the latter score line terminate, and an angularly directed score line extending from



each end of each transverse slit to each respective adjacent corner of the bottom, said slits and angularly directed score lines defining trapezoidal portions that form parts of the bottom when the carton is opened to carry articles and fold inward with the end walls.

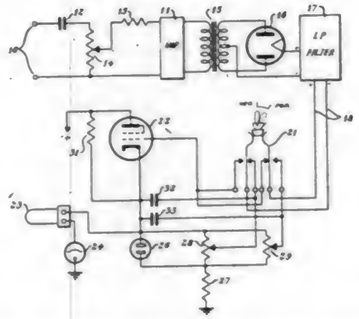
2,453,909
TAX COMPUTING DEVICE
Michael J. Harwood, Cleveland, Ohio
Application June 18, 1947, Serial No. 755,423
3 Claims. (Cl. 235—87)



2. A tax computing device of the character described, comprising a cylindrical base having an upper portion of a diameter less than the diameter of the lower portion thereof, a pair of bars secured to the lower portion of said base and extending upwardly therefrom, a transverse bar connecting the upper ends of the first named bars, a transparent drum, a closure plate for the upper end of the drum and to which the drum is secured, means carried by said closure plate and extending through suitable opening in said transverse bar to suspend the drum for rotation from said bar, the inner diameter of said drum being greater than the reduced diameter of the upper portion of the base but less than the diameter of the major portion of the base and said drum being of a length to project downwardly around the reduced portion of the base whereby the drum will be guided for rotation relative thereto, said drum being comprised of a transparent member and provided with horizontal and vertical columns of opaque indicating indicia, a vertically extending transparent index strip carried by one of said brackets and provided with a vertically extending row of opaque indicating indicia, the indicia on said strip aligning with the horizontal rows of indicia on said drum.

2,453,910
IGNITION MAGNETO
Henry Thomas Heal, London, England, assignor to Rotax Limited, London, England
Application January 4, 1945, Serial No. 571,337
In Great Britain December 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 1, 1963
9 Claims. (Cl. 315—223)

1. In a sparking apparatus of the type having a coil comprising primary and secondary windings and a make and break device connected across said primary winding, the improvement that comprises means for limiting the duration of the sparks under atmospheric conditions of relatively low pressure comprising an inductive winding and a non-inductive resistance in series, and means operable by changes in atmospheric pressure to connect the said series in parallel with the make and break device when the atmospheric pressure decreases, and to break the connection when the atmospheric pressure increases.

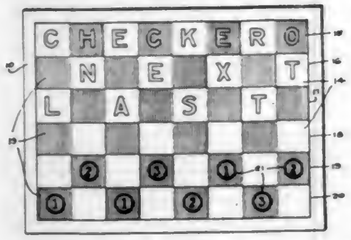


2,453,911
SELECTOR MECHANISM
Donald L. Herr, Milwaukee, Wis., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Original application September 17, 1947, Serial No. 774,613. Divided and this application May 25, 1948, Serial No. 28,975
8 Claims. (Cl. 177—353)

1. In a selector mechanism, a plurality of switch contacts to be operated, a group of selectable control elements stacked in a normally inoperative position and each individual to certain of said switch contacts, means to adjust one of said control elements in said stack to an operative position, a plurality of transfer elements normally having inoperative positions relative to said switch contacts and certain of which are movable to operative positions by the adjustment of said

depositing test metal on the immersed portion of said carrier in a predetermined amount after each successive immersion, thereby forming a test metal step-wedge on said carrier, the steps of said wedge coinciding with said scorings.

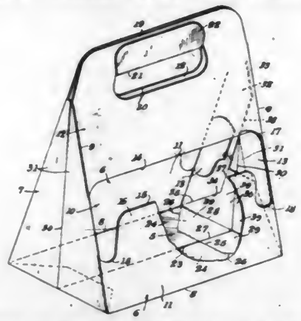
2,453,905
FACSIMILE RECORDER CONTROL CIRCUIT
Boris F. Grib, Brooklyn, N. Y., assignor to Times Facsimile Corporation, New York, N. Y., a corporation of New York
Application March 15, 1946, Serial No. 654,559
6 Claims. (Cl. 178—6.7)



1. A facsimile recorder comprising means for rectifying an amplitude-modulated carrier, a space-discharge device provided with an anode, a cathode and a control electrode, a voltage regulator tube connected in the cathode-anode circuit of said space-discharge device, said voltage regulator tube being of the type having substantially constant voltage drop across the terminals thereof, a connection from the negative terminal of the rectifying means to the control electrode of said space-discharge device, a connection from the positive terminal of said rectifying means to said voltage regulator tube whereby the rectified carrier signals are inverted in the space-discharge device and a recording device in circuit with said space-discharge device.

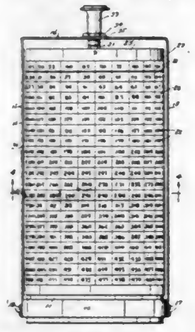
2,453,906
DEVICE FOR PRESERVING OBJECTS REQUIRING LIQUID SUPPLY
Darrel Patton Hamlet, Melrose Park, Ill., assignor to Clarence Bussert, Melrose Park, Ill.
Application September 22, 1945, Serial No. 618,049
4 Claims. (Cl. 47—38)

1. A device of the character described comprising, a tubular container made of waterproof material, a stopper secured to one end of said tubular container and provided with a bore adapted to receive the stem of a plant, a stopper secured to the other end and provided with a bore to admit air under atmospheric pressure into the said tubular container, and an elastic diaphragm having a skirt portion confined by the said last-mentioned stopper between the peripheral surface of the said stopper and the inner walls of the said tubular container.



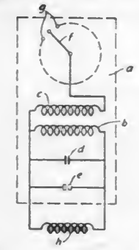
2,453,907
GAME
Willis Gaston Hare and Chester B. Roebuck, Jr., Philadelphia, Pa., assignors of one-third to Walter A. Gay, Jr., Philadelphia, Pa.
Application January 16, 1945, Serial No. 573,023
1 Claim. (Cl. 273—134)

In a competitive game of the character described adapted to be played by two or more players, a plurality of playing boards corresponding in number to the number of players participating in the game, all of said boards being identically divided into a plurality of playing squares alternating with non-playing squares, the playing squares of any one board being of a color distinctively different from those of the other boards, a plurality of movable pieces adapted for play upon each board, said movable pieces being always equal in number during the entire play of the game and being individually marked with indicia dividing them into groups and a deck of cards divided into sets each consisting of a plurality of identical cards, the number of said sets of identical cards being equal to the number of boards in play multiplied by the number of differently board, said sets of identical cards being arranged marked groups of playing pieces movable on each in groups which distinguish from one another by indicia corresponding to those of the differently marked groups of playing pieces and by color corresponding to those of the differently colored playing squares, said cards being thereby adapted to simultaneously select the board upon which a playing piece is to be moved and the particular group of playing pieces, one of which is to be moved on said selected board.



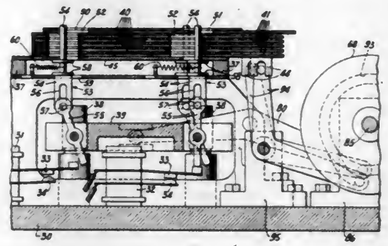
2,453,908
BOTTLE CARRIER
John Harhay, Los Angeles, Calif., assignor to Los Angeles Paper Box Factory, Los Angeles, Calif., a corporation of California
Application April 27, 1946, Serial No. 665,490
4 Claims. (Cl. 229—52)

4. An article-carrying carton comprising sides that slope continuously toward each other from the bottom to the top of the carton, each side having a transverse opening to receive articles, each side along the end edges thereof having integral end portions and the end portions on each end of the carton cooperating to form triangular end walls, a central longitudinal score line in each end wall whereby the same is adapted to fold inwardly along the mentioned end edges of the sides, an outwardly foldable bottom integrally connecting the sides and formed at each end with an extension residing within and affixed to each respective end wall, said bottom having a longitudinal score line on which the same folds, a transverse slit adjacent each end at which the ends of the latter score line terminate, and an angularly directed score line extending from



each end of each transverse slit to each respective adjacent corner of the bottom, said slits and angularly directed score lines defining trapezoidal portions that form parts of the bottom when the carton is opened to carry articles and fold inward with the end walls.

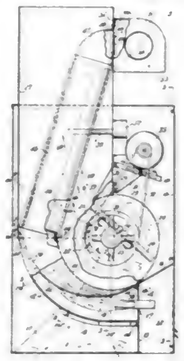
2,453,909
TAX COMPUTING DEVICE
Michael J. Harwood, Cleveland, Ohio
Application June 18, 1947, Serial No. 755,423
3 Claims. (Cl. 235—87)



2. A tax computing device of the character described, comprising a cylindrical base having an upper portion of a diameter less than the diameter of the lower portion thereof, a pair of bars secured to the lower portion of said base and extending upwardly therefrom, a transverse bar connecting the upper ends of the first named bars, a transparent drum, a closure plate for the upper end of the drum and to which the drum is secured, means carried by said closure plate and extending through suitable opening in said transverse bar to suspend the drum for rotation from said bar, the inner diameter of said drum being greater than the reduced diameter of the upper portion of the base but less than the diameter of the major portion of the base and said drum being of a length to project downwardly around the reduced portion of the base whereby the drum will be guided for rotation relative thereto, said drum being comprised of a transparent member and provided with horizontal and vertical columns of opaque indicating indicia, a vertically extending transparent index strip carried by one of said brackets and provided with a vertically extending row of opaque indicating indicia, the indicia on said strip aligning with the horizontal rows of indicia on said drum.

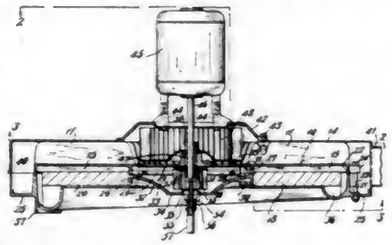
2,453,910
IGNITION MAGNETO
Henry Thomas Heal, London, England, assignor to Rotax Limited, London, England
Application January 4, 1945, Serial No. 571,337
In Great Britain December 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 1, 1963
9 Claims. (Cl. 315—223)

1. In a sparking apparatus of the type having a coil comprising primary and secondary windings and a make and break device connected across said primary winding, the improvement that comprises means for limiting the duration of the sparks under atmospheric conditions of relatively low pressure comprising an inductive winding and a non-inductive resistance in series, and means operable by changes in atmospheric pressure to connect the said series in parallel with the make and break device when the atmospheric pressure decreases, and to break the connection when the atmospheric pressure increases.



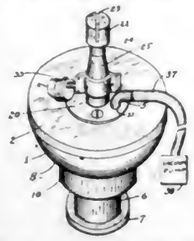
2,453,911
SELECTOR MECHANISM
Donald L. Herr, Milwaukee, Wis., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Original application September 17, 1947, Serial No. 774,613. Divided and this application May 25, 1948, Serial No. 28,975
8 Claims. (Cl. 177—353)

1. In a selector mechanism, a plurality of switch contacts to be operated, a group of selectable control elements stacked in a normally inoperative position and each individual to certain of said switch contacts, means to adjust one of said control elements in said stack to an operative position, a plurality of transfer elements normally having inoperative positions relative to said switch contacts and certain of which are movable to operative positions by the adjustment of said



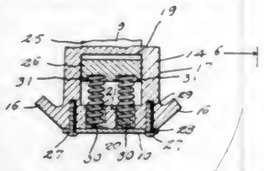
control element, and means operable subsequent to said adjustment to actuate the operated transfer elements to operate certain of said switch contacts.

2,453,912
VOLUTE TYPE AIR-HEATING FURNACE AND BLOWER
Frank R. Higley, Cleveland Heights, Ohio, assignor to Bryant Heater Company, a corporation of Ohio
Application March 20, 1943, Serial No. 479,892
5 Claims. (Cl. 126—110)



4. In a furnace of the class described, blower means for fluid to be heated, having a heat exchanger wall portion, said blower means including an impeller wheel and a casing therefor having a volute wall extending between parallel side walls to confine and direct discharge from said wheel into a stream having a path of flow leading partially about and thence away from said wheel, means for heating a segmental portion of said volute wall, said heated wall portion having a greater rate of spiral recession than the remainder of said volute wall, to compensate for thermal expansion of said stream within the corresponding portion of said casing.

2,453,913
RADIAL FLOW FORCED-AIR HEATER
Frank R. Higley, Cleveland, Ohio, assignor to Bryant Heater Company, a corporation of Ohio
Application August 28, 1943, Serial No. 500,387
6 Claims. (Cl. 126—110)

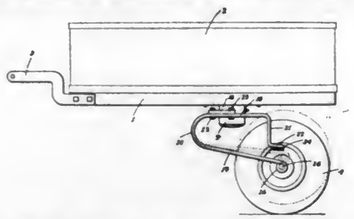


1. In a heater, a heat exchange partition, a centrifugal wheel for moving air divergently over one surface of said partition, means coaxial with said wheel for moving products of combustion divergently over the opposite surface of said partition, said partition having opposed fins on the two surfaces thereof, said fins being disposed in the direction of discharge from the wheel.

2,453,914
DEVICE FOR MIXING PLASTER COMPOUNDS AND MIXTURES
George M. Hollenback, Los Angeles, Calif.
Application April 10, 1944, Serial No. 530,298
2 Claims. (Cl. 259—8)

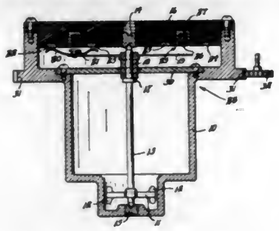
1. A device of the character described including a mixing bowl having a discharge opening and in which a relatively stiff plastic mix is placed, a cover to seal said bowl, a rotatable paddle in the bowl conforming to the interior of the same, means to smooth the mix in ribbon streams during agitation caused by rotation of the paddle, means to maintain the sealed bowl under sub-atmospheric pressure, a flask in sealing engagement with the bowl and aligned with the discharge opening, and separate means to vibrate the bowl to discharge the mixed material therefrom into the flask while the bowl is still under sub-atmospheric pressure.

2,453,915
MODEL RAILWAY VEHICLE TRUCK
Herman R. Howard, Pomona, Calif.
Application August 25, 1947, Serial No. 770,455
2 Claims. (Cl. 105—197)

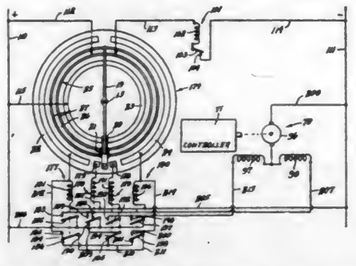


1. In a truck for model railway rolling stock, a pair of corresponding side members detachably connected by a tie bar, the ends of said side members being provided with journal boxes adapted to journal a pair of axles in the transversely aligned journal boxes, a bolster disposed between said side members and having end portions disposed for vertical sliding movement therein, and springs for yieldably supporting the ends of the bolster in the side members and extending downwardly through openings in the bottom portions of the side members, the ends of the tie bar being detachably fastened to said bottom portions of the side members to provide supports for the lower ends of the springs.

2,453,916
CASTER MOUNT FOR SINGLE-WHEEL TRAILERS
Oliver W. Inskeep, Stockton, Calif., assignor to Harris Manufacturing Company, Stockton, Calif., a corporation of California
Application March 11, 1946, Serial No. 653,612
9 Claims. (Cl. 16—44)

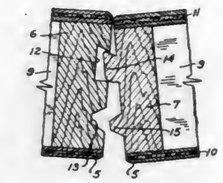


1. A caster mount for a vehicle supporting wheel, comprising a depending support adapted



to be secured to a vehicle, a normally longitudinal spring including a top leaf and a vertically spaced bottom leaf connected together at their normally forward ends, means attaching the top leaf to the support, and a wheel journaled in connection with the bottom leaf in normally rear-

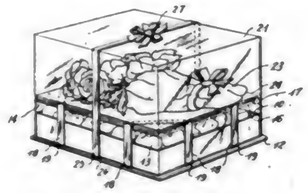
wardly offset relation to the vertical axis of the support; the top leaf including a downturned leg at its normally rear end, a foot on the leg, and a shock absorbing pad on the bottom of the foot in adjacent but normally spaced relation above the bottom leaf.



2,453,917
ELECTRIC MOTOR CONTROL APPARATUS
Siegfried G. Isserstedt, Toronto, Ontario, Canada, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application March 26, 1943, Serial No. 480,672
16 Claims. (Cl. 318—28)

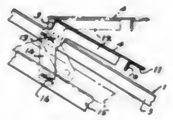
1. Electrical control apparatus, comprising in combination, relatively stationary and movable contact means, condition responsive means for moving said movable contact means through a path parallel to and spaced from said stationary contact means, time-controlled means for periodically causing engagement of said contact means, an electrical control device, means responsive to engagement of said contact means to initiate energization of said control device, and means effective to maintain energization of said control device after initiation thereof for a period longer than the time of engagement of said contacts while said condition responsive means is free to move said movable contact means.

2,453,918
JOINT FOR COMPOSITE STRUCTURAL ELEMENTS
Joseph P. Jansen, Milwaukee, Wis.
Application March 15, 1945, Serial No. 582,923
2 Claims. (Cl. 20—92)



1. A joint for uniting complementary elongated sections of a structural element, said joint comprising, two parallel projections formed integral with and extending outwardly away from a plane side face of one section of said element and snugly coacting with parallel recesses extending inwardly away from an adjacent plane side face of the complementary section of the element, said coacting projections and recesses being disposed entirely within and spaced inwardly away from the longitudinal bounding edges of said side faces and one set of said coacting projections and recesses having uniform approximately half-dovetailed transverse cross-section converging away from the plane of said faces while the other set of said coacting projections and recesses has uniform wedge-shaped transverse cross-section diverging away from said plane, and said element sections being laterally unitable only by swinging the complementary side faces thereof toward each other about their longitudinal bounding edges nearest said half-dovetailed set to cause the half-dovetailed projection to swing into its receiving recess before the wedge-shaped projection is brought into engagement with its receiving recess.

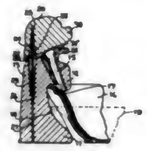
2,453,919
GARMENT HANGER SUPPORT
John P. Johnson and Leonard C. Teague, Dallas, Tex.
Application June 27, 1946, Serial No. 679,711
5 Claims. (Cl. 211—96)



1. In a device of the character described, a supporting member including a bracket, a plurality of hinges relatively offset horizontally and operatively supporting an inner and an outer complementary section each of which are longitudinally displaceable in opposite directions, said complementary sections comprising an arm displaceable in substantially the same horizontal plane as that of its normal position within a closet, said complementary sections having individual flanges at their uppermost part in which are evenly spaced recesses opposingly offset in relation to each other in normal position, said complementary sections being retained in adjacent parallel position by means of bolts inserted in elongated slots correspondingly positioned therein.

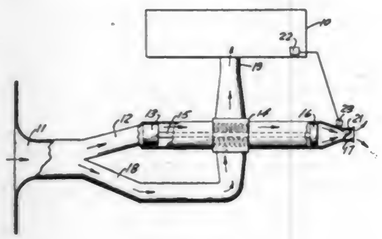
2,453,920
FLOWER AND CANDY DISPLAY PACKAGE
Rudolph Kysela, Los Angeles, Calif.
Application August 27, 1945, Serial No. 612,737
1 Claim. (Cl. 206—45.34)

A combination candy and corsage package comprising, in combination, a tray-type container having an external flange at the base thereof, a first transparent cover resting upon the flange and having the top thereof in spaced relation to the top edge of the container, a second transparent cover telescopically receivable over the first cover and likewise resting upon the flange and having the top thereof in spaced relation to the top of the first cover and forming a compartment thereabove, candy in the container and a corsage in the compartment between said covers.



2,453,921
AWNING
Mynard R. Lorenz and Clarence A. Brahm, Pittsburgh, Pa.
Application January 15, 1946, Serial No. 641,191
1 Claim. (Cl. 20—57.5)

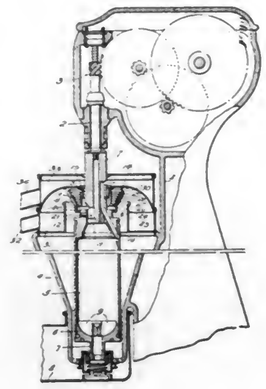
In a metal awning construction of the class described, an elongated sheet metal louver panel, a reenforcing flange formed integral with the rear edge of said panel and depending at right angles from the latter, a reenforcing front portion formed integral with the front edge of said panel and being inturned flatly against the under face of the front portion of said panel, and a reenforcing flange formed integral with the rear edge of said inturned front portion and being disposed adjacent to but spaced from the front edge of said panel, said last-mentioned flange depending at right angles to said panel and being formed by folding flatly together the rear portion of said inturned front portion to provide a flange structure of double material thickness.



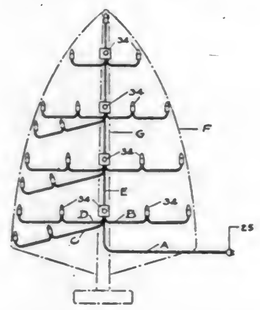
2,453,922
CHILD'S COMBINATION APPETITE-STIMULATING AND AMUSEMENT DEVICE
Ben B. Manaster, Chicago, Ill.
Application July 2, 1948, Serial No. 36,773
4 Claims. (Cl. 46—141)

1. A child's combination appetite-stimulating and amusement device comprising a body having an undercut portion formed therein for the reception of the edge portion of a dish and having a channel therein inclined downwardly and forwardly toward the dish for communication with said dish, said body having a protruding jaw portion providing a rest for the end of a spoon delivering material to said channel, a head for said body and arranged over said channel and having a jaw portion in spaced confronting relation with

respect to the jaw portion of said body and adapted to be engaged by the end of said spoon and tilted relative to said body by said spoon, and means connecting the head to the body for oscillatory movement with respect to the body when said spoon is moved from engagement with respect to said head.



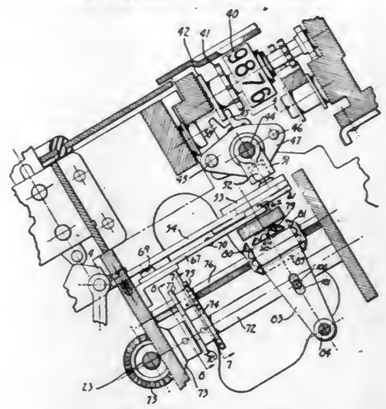
2,453,923
AIRCRAFT COOLING BY AIR TURBINE MEANS
Alfred M. Mayo, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application August 20, 1946, Serial No. 691,678
18 Claims. (Cl. 62—136)



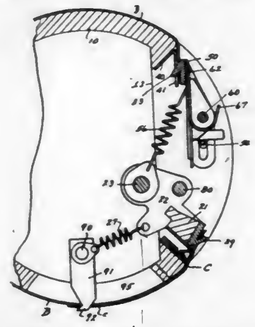
1. A system for cooling the air within an aircraft compartment, comprising: a ram inlet; means for converting energy of said ram air into mechanical energy; heat exchanging means receiving the air cooled by said last named means; a compressor for increasing the flow of air into said inlet; means for transmitting said mechanical energy to said compressor to drive the same; and duct means leading from the atmosphere through said heat exchanging means to said compartment.

2,453,924
CREAM SEPARATOR AND HOMOGENIZER
James B. McFadden, West Chester, Pa., assignor to United Dairy Equipment Company, West Chester, Pa., a corporation of Pennsylvania
Application October 17, 1944, Serial No. 559,047
5 Claims. (Cl. 233—28)

1. A cream separator and homogenizer comprising means for separating the cream from whole milk and means for receiving the cream stream, dividing said stream into small continuous streams and means for impacting the same in succession against vertical surfaces on overlapping rotating blades until the cream is thoroughly homogenized.



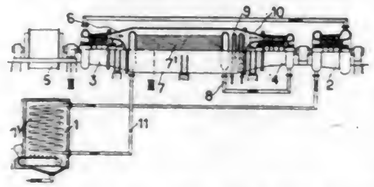
2,453,925
ELECTRIC LIGHTING SET
Edward E. Mendonca, Hayward, Calif.
Application March 4, 1946, Serial No. 651,675
1 Claim. (Cl. 240—10)



An electric lighting set of the character described for use in decorating a Christmas tree and including a terminal box molded from electric insulation material and embodying in its construction two substantially flat members, one of the said members being equipped with an electric lamp base capable of retaining an electric lamp, a plurality of pins capable of securing said members together, a cavity between said members, a pair of bus bars positioned into said cavity, means electrically connecting the bus bars to the said lamp base, a plurality of electric conductors soldered onto said bus bars and extending therefrom and forming electric lamp circuits therewith, a plurality of electric lamp bases connected in multiple relation in each of said circuits, said cavity being filled with electric sealing wax for sealing the terminal box and insulating said bus bars and electric conductors therein, and a plurality of apertured lugs fixed to the terminal box for facilitating the securing of the terminal box to the Christmas tree.

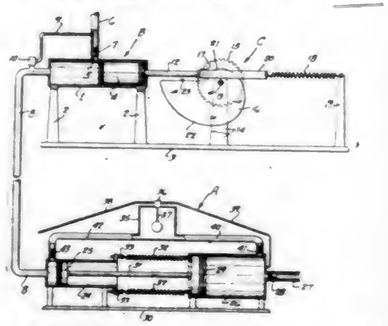
2,453,926
REVOLUTION COUNTER ACTUATOR
John L. Moody, Oakland, Calif., assignor to Friden Calculating Machine Co., Inc., a corporation of California
Application April 21, 1945, Serial No. 589,628
4 Claims. (Cl. 235—103)

1. In a revolutions counter having a series of numeral wheels, actuating means therefor mounted on a shaft, a mechanism for operating said actuating means by oscillating and reciprocating said shaft comprising a cam, a follower for said cam, a ball secured to said follower and having movement along a substantially rectangular path during each revolution of said cam, a socket secured to said shaft, said ball and socket serving as a motion-transmitting connection between said follower and said shaft, and means to revolve said cam.



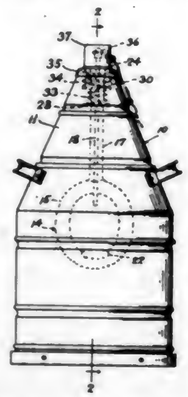
2,453,927
CLAMP FOR MASTER SHEETS OF PRINTING MACHINES
Lawrence H. Morse, Mentor, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application October 2, 1943, Serial No. 504,656
10 Claims. (Cl. 101—415.1)

1. The combination of a rotary drum having a ledge to form an anvil for a sheet, a pivoted clamping member mounted in the drum having an edge adapted to coact with the ledge to clamp a sheet between them, a sleeve threaded in the clamping member, a slidable rod mounted in the sleeve adapted to coact with the drum, and a



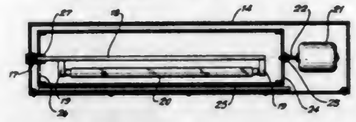
camming arm carried by the sleeve and adapted to coact with the rod to force the clamping member into idle position with reference to a clamping ledge on the drum.

2,453,928
THERMAL POWER PLANT
Konrad Oechslin, Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland
Application June 5, 1946, Serial No. 674,450
In Switzerland June 22, 1945
8 Claims. (Cl. 60—59)



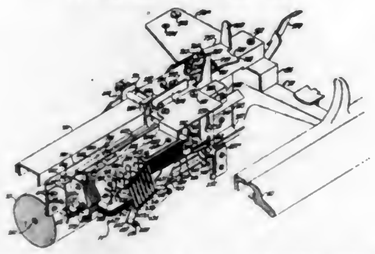
1. Thermal power plant, in which a gaseous working medium describes a circuit, said plant comprising means by which heat from an external source is supplied to the working medium; at least two turbines connected in series and in which medium heated by said means expands; means whereby one of said turbines delivers power externally; a turbo-compressor arranged to be driven by the other of said turbines and interposed in said circuit so as to compress medium expanded in said turbines, and deliver it at higher pressure to said heat supplying means; and a heat exchanger constructed for longitudinal parallel heat-exchanging flows in which medium after expansion through said turbines exchanges heat with medium flowing to said heat supplying means after compression by said turbo-compressor, the discharge end of the second one of said series connected turbines being mounted directly on an end of said exchanger, the exchanger and said second turbine having housings which merge without substantial change of cross sectional area.

2,453,929
HYDRAULIC PUMP
Alvin F. O'Harah, Erie, Pa.
Application March 11, 1947, Serial No. 733,793
1 Claim. (Cl. 103—44)



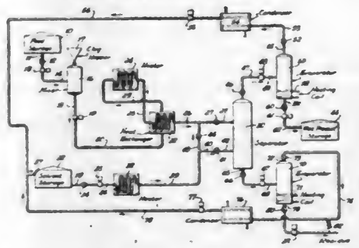
In a fluid pump, the combination of a fluid suction unit having a cylinder provided with valve controlled fluid inlet and outlet connections and a piston movable in the cylinder alternately for sucking fluid through the inlet connection and pumping the same through the outlet connection, a fluid responsive unit having a cylinder provided with a valve controlled fluid inlet connection and a piston movable in the cylinder, means operatively connecting said pistons for simultaneous movement, resilient means connected to one of said pistons for urging the piston of said suction unit to the limit of its fluid suction movement, a fluid reservoir connected between the respective fluid outlet and inlet connections of said first and second mentioned cylinders, a float controlled air admission valve in said reservoir which is operative to retain air therein such as will pressurize the reservoir fluid pumped thereinto by said suction unit, an hydraulic actuating unit connected in fluid flow relation with the cylinder of said responsive unit, said hydraulic unit being provided with a fluid delivery line, and means for actuating said hydraulic unit alternately to effect hydraulic movement of the piston in said responsive unit against said resilient means and in a direction to pump fluid into said reservoir, and to effect a rapid reversal of hydraulic actuation thereof whereby the fluid in said reservoir is suddenly released and effectively forced under reservoir pressure toward said hydraulic unit for flow through said delivery line.

2,453,930
SHIPPING CONTAINER
Richard Paul and Gerard F. Sulfrian, Newark, N. J.
Application April 1, 1946, Serial No. 658,771
2 Claims. (Cl. 220—3)



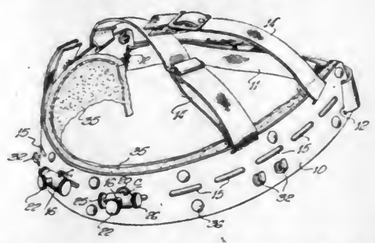
2. A shipping container for transporting gas in liquid form which includes an outer casing having a conical neck defining a closed chamber, a cup-shaped closure inserted into the reduced end of the neck, said closure having an aperture therein the axis of which aligns with the longitudinal axis of the casing, a Dewar-type flask having an elongated neck extending through the aperture in the closure, an outstanding annular flange on the neck adjacent the end remote from the flask, a compression coil spring seated on the bottom of the cup-shaped end closure and engaging the flange yieldingly to suspend the flask in spaced relation to the conical neck of the outer casing, a flange on the neck intermediate its end, a compression coil spring surrounding the neck and abutting the last named flange and the under side of the cup-shaped end closure yieldingly to hold the flask in proper place within the outer casing and a cap adapted to enter the upper open end of the cup-shaped end closure to enclose the end of the neck remote from the flask.

2,453,931
ELECTRIC VEHICLE DIRECTION INDICATOR
Clovis H. Phillips, Florence, Ala.
Application February 13, 1946, Serial No. 647,267
2 Claims. (Cl. 177—329)



1. A direction indicator comprising an elongated horizontally disposed housing adapted to be mounted on one end of a motor driven vehicle having an electrical system, said housing having an elongated longitudinally extending window in its front side, a rod fixed at one end to one end of the housing, said rod lying along the longitudinal axis of the housing, a drum of translucent material encircling said rod and rotatably supported at one end on the rod adjacent the end of the housing to which the rod is fixed, a reversible motor in the housing adjacent its opposite end, the drive shaft of the motor aligning axially with the rod and supporting the end of the drum remote from that carried by the rod, spiral stripes of contrasting color on the drum, said stripes being visible through the window and a reversing switch coupling the motor to the electrical system of the vehicle selectively to control the direction of rotation of the drum.

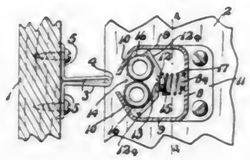
2,453,932
BUSINESS MACHINE
Richard W. Pitman, Laverock-Hillcrest, Pa., assignor to Underwood Corporation, a corporation of Delaware
Original application November 21, 1941, Serial No. 419,889. Divided and this application February 3, 1944, Serial No. 520,983
15 Claims. (Cl. 235—59)



1. In a machine of the character described, the combination with means for sensing codal representations of an amount on a record sheet in said machine, said representations corresponding to either a positive amount or the complement of a true negative amount, of means, including typing instrumentalities, a complemental transposing means and a letter-feedable carriage, cooperative with said sensing means and operative, upon sensing the representation of a positive amount, to type the positive amount digit by digit and, upon sensing the representation of the complement of a true negative amount, to type the true negative amount digit by digit.

2,453,933
REFINING OF WAX
Paul L. Polizzotto and Peter Stanley Backlund, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application February 10, 1945, Serial No. 577,183
6 Claims. (Cl. 196—17)

1. A process for decolorizing a deoiled asphalt-wax mixture obtained as tank bottoms from crude oil storage and containing more than about 5% of asphaltic and resinous material, said asphalt-wax mixture having a melting point of about 196° F., which comprises heating said asphalt-wax mixture to a temperature of about 300° F. to about 350° F. in the presence of about 10% of clay, cooling said treated mixture to a temperature above its melting point but not substantially above about 275° F. and contacting it with a normally liquid solvent of the class consisting of alcohols, ketones and ethers characterized by having less than 6 carbon atoms in their molecular structure thereby forming an upper phase of wax and solvent and a lower phase of asphaltic components, removing the upper or wax-solvent phase, evaporating the solvent therefrom to give a solvent-free wax having a melting point of about 190° F., and removing the lower or asphaltic phase containing also the clay and evaporating the solvent therefrom leaving an asphaltic-clay residue.

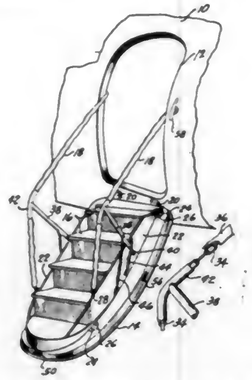


2,453,934
SURGICAL APPLIANCE FOR TREATING JAW AND OTHER FACIAL BONE FRACTURES
John L. Preston, Wichita Falls, Tex.
Application January 7, 1946, Serial No. 639,511
5 Claims. (Cl. 128—87)

1. In an instrument for the treatment of facial bone fractures, a circumferentially discontinuous head band of resilient material having intercrossing, adjustable supporting straps and further provided with longitudinally aligned slots on each side of its midsection, disposed midway between its edges, accessory rod mountings retained in said slots, said mountings consisting of a threaded pin receivable in a selected slot having a head provided with roughened undersurface, a post mounted on said pin having a head provided with a transverse rib receivable in a

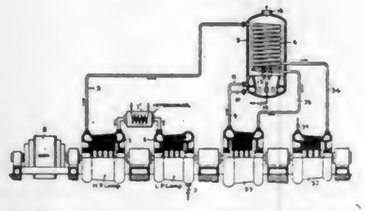
slot of said band, the heads of said pin and post opposing said band in clamping relationship, mounted on said post for rotative and longitudinal displacement thereon and receiving and retaining accessory rods, a sweat band in said head band and means releasably retaining said sweat band.

2,453,935
CUPBOARD CATCH
Herbert Quigley and Albert F. Lickteig, Grand Rapids, Mich., assignors to National Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application June 25, 1945, Serial No. 601,380
6 Claims. (Cl. 292—15)



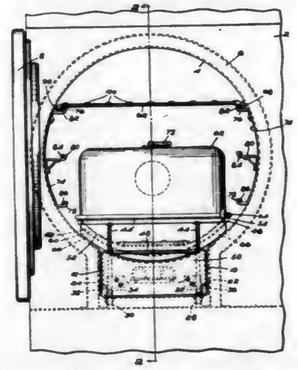
1. A catch including a housing support open at one side for receiving a keeper inserted therein, said housing support above and below said opening having inclined flanges converging outwardly toward each other, two rollers, one located to bear against the inner side of each flange, and a spring pressed shoe back of said rollers, said shoe bearing against the rollers and forcing them against said flanges and normally into contact engagement with each other.

2,453,936
TOOLHOLDER FOR ARTIFICIAL ARMS
Frederick W. Rallison, Preston, Idaho
Application August 22, 1945, Serial No. 612,055
1 Claim. (Cl. 279—79)



A tool holder for artificial arms comprising a threaded stem adapted for threading in an artificial arm, a rounded head on the outer end of the stem having a plurality of recesses, a tool socket including a yoke pivotally receiving the head of the stem, a detent slidably mounted in the socket and engaged in said recesses to secure the socket in pivotally adjusted position, said socket including a bore adapted for receiving a tool shank provided with an annular groove, and a transverse locking pin carried by the socket and engaged in said groove to releasably secure the tool in the socket.

2,453,937
AIRCRAFT DOOR
James G. Ray, West Los Angeles, Calif., assignor to Southwest Airways Company, West Los Angeles, Calif.
Application April 23, 1947, Serial No. 743,291
2 Claims. (Cl. 244—129)



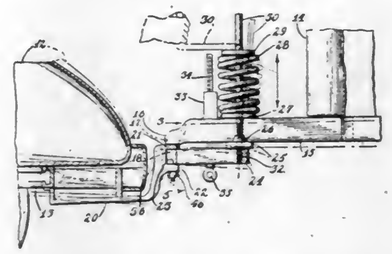
2. In an aircraft, in combination: a fuselage; means forming a passageway thru a side wall thereof; a door pivotally mounted adjacent its lower edge to said fuselage and adapted to close said passageway in its upper position and to extend outwardly and downwardly in its lower position; a series of steps formed on the inner wall of said door; a flexible element having its one end attached to the inner surface of said side wall adjacent said passageway and its other end attached to the outer portion of said door; a rigid link connected to an intermediate portion of said flexible element and pivotally connected to said door and adapted, when the latter is in its lower position, to maintain said intermediate portion spaced a substantial distance from said door; and resilient means to urge said link toward substantial parallelism with the plane of said door when the latter is in its upper position.

2,453,938
TURBINE THERMAL POWER PLANT USING HOT AIR AS MOTIVATING FLUID
David Schmidt, Zurich, Switzerland, assignor to Escher Wyss Maschinenfabriken Aktiengesellschaft, Zurich, Switzerland, a corporation of Switzerland
Application November 19, 1945, Serial No. 629,386
In Switzerland December 14, 1944
1 Claim. (Cl. 60—59)

A thermal power plant, comprising in combination, at least one compressor which draws in air from the surrounding atmosphere and brings it to a higher pressure; a heater having a combustion chamber and in which heat is given up indirectly to said compressed air; a piping connecting the outlet of said compressor directly to the compressed air inlet of said heater; two turbines in which said compressed, heated air is expanded and which are arranged in parallel as regards the flow of the air through them; a connection between a point of said heater where a lower temperature prevails than at the outlet of the latter and one of said turbines, the heated air supplied to this turbine being expanded therein down to atmospheric pressure and hereupon discharged into the atmosphere; a further connection between the outlet of said air heater and the other one of said turbines, the air supplied to the last mentioned turbine being discharged after expansion therein into said combustion chamber; a consumer of useful energy; and driving connections through which said turbines drive said consumer of energy and said compressor.

2,453,939
COOKING OVEN
Frank H. Schneider, Gardner, Mass., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application July 27, 1944, Serial No. 546,811
9 Claims. (Cl. 126—39)

1. The combination of an oven having a longitudinal opening through its bottom and a frame adapted to carry a cooking surface in said oven, said frame comprising a pair of spaced channels located below said opening, a roll in each channel, a roller alongside the front end of each channel, horizontal members each secured to one of said rolls and resting at its front end on one of said rollers, whereby said members may be longitudinally drawn along said channel, upwardly extending members passing through said opening into said oven and connected to said horizontal members and carrying on their upper ends a support, a transversely extending baffle carried by said support and located over said opening, a cooking surface carried by said support above said baffle, the said frame, baffle, and cooking surface adapted to be withdrawn as a unit from said oven.



2,453,940
FLEXIBLE CONTAINER WITH SIDE OPENING
Nathan Slobotkin, Brooklyn, N. Y.
Application November 2, 1944, Serial No. 561,549
2 Claims. (Cl. 150—10)

2. A container comprising opposite side walls secured at their peripheral edges completely therearound whereby said container is normally closed at its top as well as at its bottom and side edges, one of said side walls having a slit-like opening disposed below the top of the container and extending widthwise thereof, and a generally U-shaped spring positioned within said container with its base disposed widthwise of the container below said opening and with its arm extending transversely of said opening and upwardly from said base above said opening in position to tension said opposed side walls widthwise of the container in the region of said opening, the side wall which

is provided with said opening having an internally disposed portion below said opening forming a recess open at its bottom and closed at its top, whereby to receive at least part of the contents of the container when the container is inverted, the portions of said opposed side walls above said opening defining a second recess for part of the contents of the container when the latter is inverted, said internally disposed portion providing means to deflect the last mentioned part of the contents into said last mentioned recess when the container is inverted.

2,453,941
TRAILER HITCH
Andrew Smit, Oak Lawn, Ill.
Application January 14, 1947, Serial No. 721,999
2 Claims. (Cl. 280—33.17)

2. A tractor and trailer hitching means comprising, a stationary support secured to a tractor vehicle, a V-shaped support secured to the said first mentioned support to articulate in a horizontal plane, pivot means securing the said V-shaped support to the said first-mentioned support and provided with an exposed ball-shaped portion, an angular support secured to a trailer vehicle and having at its apex a socketed portion secured to the said ball-shaped portion affording limited universal movement to the said angular support, upper and lower strut means arranged in parallel relationship over and under the said angular support, crank means adjustably engaging the said lower strut means, and spring means confined between the said crank means and the said upper strut means normally urging the said angular support towards the said V-shaped sup-

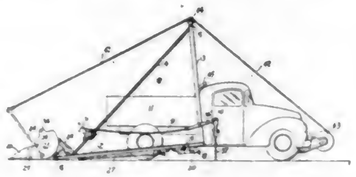
port, the said trailer vehicle being capable of limited horizontal and limited universal movements independently of the movements of the said tractor vehicle.

2,453,942

NITRATION OF ALCOHOLS

Arthur Ernest Wilder Smith, Wallingford, Charles William Scaife, Norton-on-Tees, and Harold Baldock, deceased, late of Norton-on-Tees, England; by Herbert Baldock, legal representative, Hoylake, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application October 15, 1945, Serial No. 622,487. In Great Britain October 27, 1944
8 Claims. (Cl. 260—467)



4. A process for the production of the nitric acid esters of nitro-alcohols which comprises reacting in the liquid phase a mono-nitro substituted mono-hydroxy alkanol with nitrogen tetroxide at a temperature below 20° C.

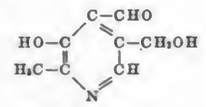
2,453,943

TRUCK LOADING MEANS

Stanley Smith, Bend, Oreg.

Application March 18, 1946, Serial No. 655,260
8 Claims. (Cl. 214—78)

1. A truck loading device of the character described comprising a frame, said frame having bottom members and upright members, said frame pivotally mounted on the truck for swinging in a vertical plane, a scoop hinged on the rear of said bottom members, a pivotally mounted scoop handle, means limiting the movement of said handle and said scoop with respect to each other, a drum mounted on the truck, a cable on said drum, one end of said cable connected to said scoop handle, said cable passing over said upright frame members, said cable arranged to tilt said scoop handle, and therewith said scoop, towards the truck, and then to elevate the scoop end of said frame as said cable is wound on said drum, a latch limiting the normal tilting of said scoop, adjustable means for releasing said latch when said scoop and frame have been raised to predetermined positions above the truck, said latter mentioned means including a lever arm pivoted on said frame, one end of said lever connected with said latch, an adjustable ground engaging element connected to said lever and adapted to operate said lever and thereupon release said latch when said frame has been tilted to a predetermined position, an auxiliary frame hinged to the bottom of said first mentioned frame, one end of said auxiliary frame adapted to contact the ground when said first mentioned frame is in lowered position, and a link connecting said scoop with said auxiliary frame and arranged to tilt said scoop in the opposite direction from the truck when said auxiliary frame is brought into contact with the ground by the lowering of said first mentioned frame and scoop.



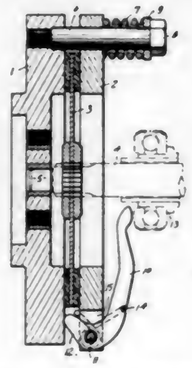
2,453,944

PHYSIOLOGICALLY ACTIVE DERIVATIVE OF PYRIDOXINE AND METHOD OF MAKING THE SAME

Esmond E. Snell, Austin, Tex., assignor to Research Corporation, New York, N. Y., a corporation of New York

No Drawing. Application May 27, 1944, Serial No. 537,741
1 Claim. (Cl. 260—297)

A physiologically active compound of the formula



2,453,945

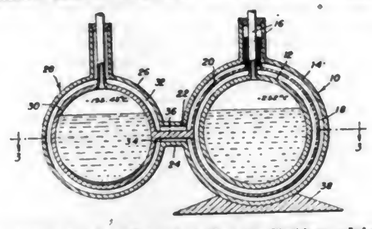
FRICTION CLUTCH

Charles B. Spase, Nedrow, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York

Application February 12, 1945, Serial No. 577,406
1 Claim. (Cl. 192—68)

A unitary friction clutch element for attachment to a complemental clutch element, the unitary element including a shiftable pressure ring, means for solely supporting and driving the pressure ring from, and attaching the same to the complemental element, springs located to thrust the pressure ring toward the complemental element and carried by the supporting means, and throw-out mechanism including throw-out levers carried solely by the pressure ring and having arms located to thrust directly against the complemental element during the throw-out operation to facilitate disengaging of the clutch, said arms frictionally and slidably coacting with the complemental element.

2,453,946



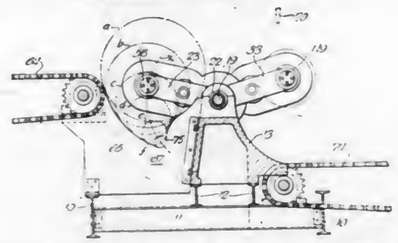
THERMALLY INSULATED CONTAINER WITH RADIATION SHIELD AND ENERGY ABSORBER

Gerard F. Sulfrian, Newark, N. J., assignor to Hofman Laboratories, Inc., Newark, N. J., a corporation of New Jersey

Application December 17, 1947, Serial No. 792,112
7 Claims. (Cl. 62—1)

1. A thermally insulated container comprising inner and outer vessels supported in spaced relation to one another, a radiation shield in the space between the vessels, a refrigerant adjacent the

container, and means extending between the radiation shield and the refrigerant to conduct



heat energy absorbed by the radiation shield to the refrigerant.

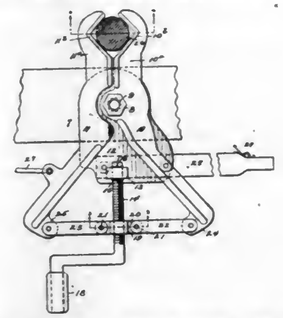
2,453,947

HYDRAULIC TYPE LOG DEBARKER HAVING PLURAL LOG-ROTATING CHUCKS INDEPENDENTLY REVOLVABLE ABOUT A COMMON AXIS

Frank H. Swift, Portland, Oreg., assignor to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada

Application December 22, 1945, Serial No. 637,002
5 Claims. (Cl. 144—208)

4. In a hydraulic barker, a pair of arms mounted for rotation about a fixed axis, means for rotating said arms in unison, said arms extending in the same plane, a chuck mounted in each arm for rotation on an axis parallel to said fixed axis, said chucks located equal distances from said fixed axis, means for rotating one of said chucks, a debarking nozzle, and a stationary support for positioning a log in said machine to facilitate engagement of the ends of the log by said chucks preparatory to the moving of the log into debarking position with respect to said nozzle, said support having curved, downwardly sloping sides, the curvature of said sides being determined by points of tangency of circles of decreasing diameter having their centers arranged in the circular path described by said chucks when said arms are rotated, whereby logs of different diameter will be properly positioned by said support for engagement by said chucks and arms.



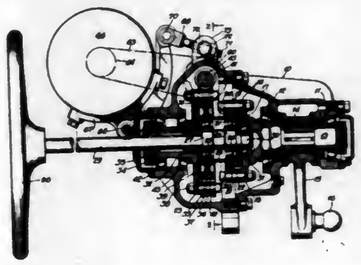
2,453,948

MOP GRIPPING UNIT FOR MOP SHAKING MACHINES

Clarence Turnepseed, Springfield, Ohio

Application April 5, 1946, Serial No. 660,015
5 Claims. (Cl. 15—94)

4. In a device of the character described, the combination with a support of a pivot carried by said support and inclined with respect to the vertical, a tong-like structure mounted for oscillation about said pivot in a plane perpendicular to the axis of said pivot and comprising a pair of jaws having rear ends and forward ends, a threaded block, toggle links connecting said block with the rear ends of said jaws, a cranked screw having threaded engagement with said block, means mounted upon one of said jaws with which the inner end of said screw is engaged and which holds said screw against endwise movement with respect to said jaw while permitting

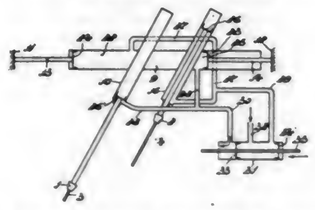


said screw to turn, and flanges carried by the forward ends of said jaws shaped to engage the handle of the mop under the combined action of the screw and toggle links, which flanges lie in substantially vertical planes at an intermediate position of the tong like structure along its path of oscillation.

2,453,949

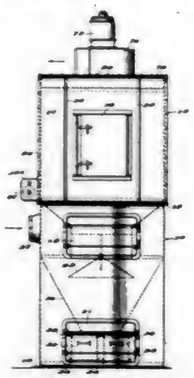
MANUALLY CONTROLLED POWER BOOSTER MECHANISM

Bronislaus Ulinski, Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut



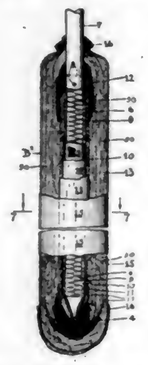
Application May 12, 1945, Serial No. 593,389
17 Claims. (Cl. 180—79.1)

10. In a combination of the class described, an epicyclic gear combination comprising a pair of independently rotatable internal ring gears and a pair of spur gears rotatable as a unit relatively to said ring gears, a steering shaft having an eccentric cam on which said spur gears are rotatably mounted, steering mechanism secured relatively to one of said ring gears for actuation thereby, a motor, a drive transmission between said motor and the other of said ring gears for rotating the said ring gear whereby through said spur gears to rotate the first ring gear when said steering shaft is held to accept the driving torque reaction through said eccentric cam, said drive transmission including a worm in driving engagement with a worm gear rotatable with said other ring gear, said worm and worm gear serving to hold said other ring gear fixed when said motor is inoperative whereby to accept the drive torque reaction incidental to manual rotation of said



steering shaft and cam, a worm shaft on which said worm is formed, means mounting said worm shaft for endwise movement, and a switch means for said motor actuated by endwise movement of said worm shaft.

2,453,950
WELDING DEVICE
Hendrik Jan van den Berge and Hendrik Pieter Hubee, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application October 24, 1946, Serial No. 705,276
In the Netherlands July 21, 1945
7 Claims. (Cl. 219—8)

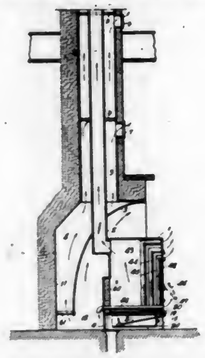


1. A welding device intended for touch-welding comprising two holders for welding rods, a common mounting for said rod holders, said two holders being mounted in parallel relationship to each other on said common mounting, supporting means for movably supporting said common mounting so that said common mounting and said two holders may be moved longitudinally of said common mounting as a unit whereby the position of one of said welding rod holders in regard to a work piece and including the angle therebetween may alternately be assumed by the other of said welding rod holders.

2,453,951
DUST COLLECTOR
Walter O. Vedder, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland
Application May 3, 1944, Serial No. 533,906
6 Claims. (Cl. 183—67)

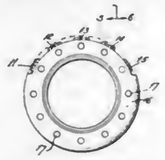
1. Dust separating apparatus which comprises a chamber having an intake compartment and an exhaust compartment, a centrifugal dust separator in said intake compartment and having a central exhaust pipe delivering into said exhaust compartment and extending into said centrifugal separator to form an annular space therein, said centrifugal separator having a tangential inlet to said annular space, a dust collecting bin in said intake compartment to receive separated dust from said centrifugal separator, a bag filter in said exhaust compartment to receive air from the exhaust pipe of said centrifugal separator and means to draw air from said intake compartment through said centrifugal separator and bag filter and into said exhaust compartment.

2,453,952
OIL-REFINING FOLDABLE PACK
Albert R. White, Glendale, Calif.
Application August 22, 1944, Serial No. 550,612
1 Claim. (Cl. 210—131)



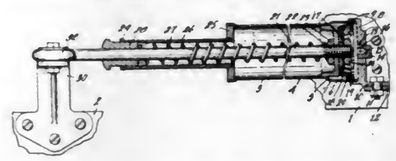
A fluid filtering pack having a flexible hollow core acting as a fluid passageway, a pipe communicating with one end of the core, flexible screening means enclosing the core, a layer of sponge enclosing said screening means, a fluid absorbent cord wrapped around the screening means, sponge and pipe for connecting them together, a second fluid absorbent cord wrapped around the free end of the screening means and sponge to close the free end of the core, a flexible pack body formed of three layers of filtering material and enclosing the screening means and cord wrappings and having a substantial depth between the screen and the outer surface of the pack, the center layer of said pack body being alkali-impregnated for neutralizing any acid condition of the oil flowing through the body, a fabric casing enclosing the entire pack assembly, said casing being wrapped at each end with string.

2,453,953
PROCESS FOR PREPARING SULFUR-CONTAINING PHTHALOCYANINE DYESTUFFS
Clifford Wood, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application March 4, 1946, Serial No. 651,973. In Great Britain March 5, 1945
5 Claims. (Cl. 260—314.5)



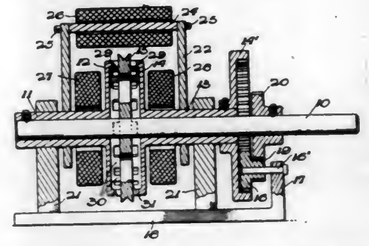
1. Process for the manufacture of vattable, sulfur-containing dyestuffs of the phthalocyanine series, which comprises heating in nitrobenzene, at a temperature between 130° and 210° C., a phthalocyanine compound selected from the group consisting of metal- and metal-free phthalocyanines containing sulphonyl-chloride groups, in the presence of a phosphorus polysulfide selected from the group consisting of phosphorus pentasulfide and the sulfides formed in situ at the specified reaction temperature from a mixture of red phosphorus and sulfur, whereby to convert the sulfonyl-chloride radicals of the phthalocyanine compound into vattable, sulfur-containing radicals.

2,453,954
FIREPLACE HEATING SYSTEM
Harry T. Wright, Richmond, Va.
Application August 10, 1944, Serial No. 548,853
3 Claims. (Cl. 237—51)



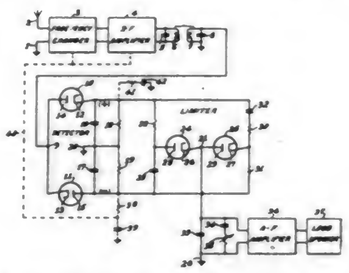
3. A fireplace heating system comprising a chimney, a fireplace, a fireplace stove, a deflector mounted to the rear of said stove, a flue evtending upwardly from said stove and passing through said deflector, said deflector being sealed to the upper interior surface of said fireplace and then extending rearwardly and downwardly, means forming an opening communicating the space in back of said deflector with the space in front of said deflector, said means being located adjacent the lower end of said deflector, said flue being mounted in said chimney and being surrounded by an air space, a partition in said chimney, mounted in said air space and an outlet from said air space to the interior of the room in which said fireplace is located.

2,453,955
REMEMBRANCER
James Leslie Younghusband, Chicago, Ill.
Application June 5, 1947, Serial No. 752,786
2 Claims. (Cl. 63—15)



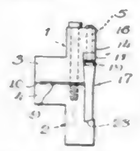
1. A remembrancer comprising a ring, five spaced stones mounted in said ring, a cover slidably mounted on said ring, said cover adapted to normally cover said stones, the stone on one end being white and followed by two white stones, one green stone and one red stone, the stone on the opposite end being red, said cover adapted to be manually moved by the user in one direction to expose first the end white stone, then successively in order two white stones, three white stones, three white stones and the green stone and finally three white stones, the green stone and the red stone, said cover adapted to be moved by the user in the opposite direction to cover all of the said five stones.

2,453,956
DOOR CHECK
Fred P. Angell, Battle Creek, Mich.
Application April 4, 1946, Serial No. 659,495
3 Claims. (Cl. 16—66)



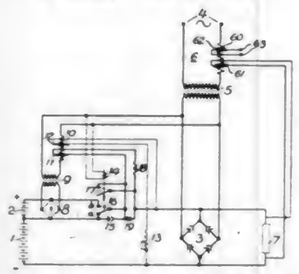
1. In a door check, the combination of a dashpot cylinder comprising a cylinder barrel portion having a cylindrical enlargement at its inner end merging into the barrel portion in a relatively abruptly tapered shoulder, a cylinder head provided with an inlet check valve, an adjustable bleed port and a pivotal mounting, an outer end member for the cylinder and provided with a tubular extension, a plunger reciprocating in said cylinder barrel, a cupped packing disposed on the inner side of said plunger to face inwardly therefrom, a plunger rod, a plunger return spring on said plunger rod extending into said tubular extension, and a combined bearing member for said plunger rod and thrust abutment for said spring at the outer end of said tubular extension, said packing entering said cylinder enlargement as the plunger approaches the end of its return stroke.

2,453,957
MAGNETIC CLUTCH
John E. Allen, Baltimore, Md.
Application August 22, 1945, Serial No. 612,063
20 Claims. (Cl. 192—84)



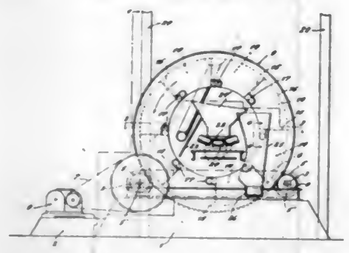
1. A magnetic clutch including a magnetic driven member, a pair of driving magnetic members cooperating with said driven member at opposite sides thereof, means for rotating said driving members constantly at or about the same speed in opposite directions, means for actuating said driven member from said driving members and determining the direction of rotation of said driven member comprising coil means for applying equal and opposite magnetic fluxes to said driving and driven members, coil means for reversibly unbalancing said fluxes, one of said two last named means including a single coil, a control circuit connected with one of said coil means and a circuit for applying a reference voltage to the other of said coil means.

2,453,958
SIGNAL AMPLITUDE LIMITING SYSTEM
Gilbert J. C. Andresen, Stow, Ohio
Application July 20, 1946, Serial No. 685,111
9 Claims. (Cl. 178—44)



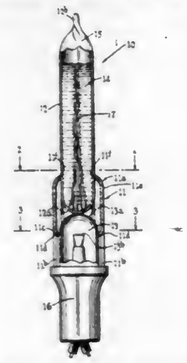
1. A signal coupling and amplitude limiting system comprising an input circuit including an element across which rectified voltage of a modulated-carrier signal appears, an output circuit, means for deriving from said input circuit two opposing modulation voltages, a direct coupling circuit for coupling one of said opposing modulation voltages from said input to said output circuit, a rectifier connected in said direct coupling circuit, a direct current circuit connected through said rectifier and across at least part of the source of rectified modulated-carrier causing said rectifier to conduct modulation the amplitude of which does not exceed a cutoff level determined by the potential of the rectified carrier, and an inverse coupling circuit for coupling the other of said modulation voltages from said input circuit to said output circuit for at least amplitudes above the cutoff level of the direct coupling circuit, the time constants of said direct and inverse coupling circuits being greater than the greatest period of single fluctuations to be reproduced and said direct and inverse coupling circuits being so proportioned that the direct coupling circuit provides the greater coupling for amplitudes below the cutoff level of the direct circuit, whereby the peak in any pulse exceeding the cutoff level in the direct coupling circuit is inverted in the output circuit.

2,453,959
TOOLHOLDER ASSEMBLY
David S. Anthony and William B. Blocker, San Antonio, Tex., assignors to Anthony Tool Company, San Antonio, Tex., a partnership
Application April 19, 1945, Serial No. 589,114
3 Claims. (Cl. 29—96)



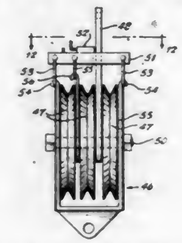
1. A cut-off tool holder adapted to be mounted in a slot provided in the tool post of a lathe, comprising a pair of sections each provided with an offset clamping jaw adapted to be received and firmly mounted in the slot, means for aligning and retaining the sections in blade holding relation, a recess provided in the adjoining inner faces of the sections and extending substantially below the slot and clamping jaws, a relatively wide blade mounted in the recess, and an elongated clamping plate carried in the upper section and having interlocking engagement between the plate and blade.

2,453,960
MEANS FOR CHARGING STORAGE BATTERIES
Algot Arvidsson, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application April 14, 1945, Serial No. 588,378
In Sweden March 23, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 23, 1964
9 Claims. (Cl. 320—15)



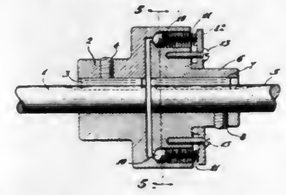
1. Charging means for storage batteries, comprising two batteries, alternating current terminals, two rectifiers each severally connected between said terminals and a corresponding one of said batteries, and means for automatically controlling the value of the charging current from one of said rectifiers to the battery charged thereby in dependence on the value of the charging current of said other battery.

2,453,961
DEWATERING APPARATUS
William F. Bankauf, East Paterson, and Harry B. Fisher, Belleville, N. J., assignors to Hewitt-Robins Incorporated, a corporation of New York
Application April 26, 1945, Serial No. 590,480
7 Claims. (Cl. 210—51)



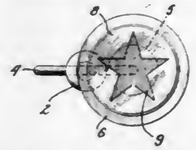
1. Sand dewatering apparatus comprising an open-center, annular wheel structure incorporating a series of circumferentially arranged buckets having their open ends directed radially inwardly toward the open center of the wheel; drive means engaging the wheel radially outwardly from the open center thereof; wet sand supply means mounted adjacent one side of the wheel and adapted to discharge into the open center of the wheel to supply wet sand by gravity to a bucket in the lower part of the wheel; water discharge means secured to the wheel and extending laterally beyond one side thereof from each bucket adjacent an inner edge thereof and at the lower side of each rising bucket; a conveyor belt extending through the open center of the wheel; a sand guiding funnel having its receiving end extending over a series of buckets in the upper part of the wheel and its discharge end directed to supply the conveyor belt and means for moving the belt.

2,453,962
HEAT AND LIGHT CONCENTRATING HOLDER FOR ILLUMINATED DECORATIVE LIGHTING DEVICES
Louis Barnett, Brooklyn, N. Y., assignor to Raylite Electric Corp., Long Island City, N. Y., a corporation of New York
Application June 9, 1945, Serial No. 598,568
5 Claims. (Cl. 240—10)



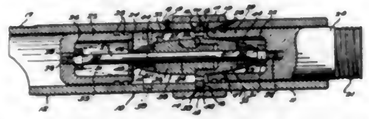
4. A device of the character described comprising a tubular structure formed of light condensing and guiding material one end of said structure having integral holder means for mounting a decorative ornament containing a vaporizing liquid, the other end of said structure having a portion turned to receive light beams from a glowing heat producing filament for transmission through said structure, said first mentioned end being turned to transmit light beams passing therethrough into said ornament.

2,453,963
PULLEY BLOCK
Henry Bruce Bercaw, Kenton, Ohio
Application July 27, 1945, Serial No. 607,303
1 Claim. (Cl. 254—193)



In a device of the class described, a yoke having sides and an open end, a spindle bolt extending cross-wise through said sides, sheaves rotatably mounted on said spindle bolt, a drawbar for suspending said device interposed between said sheaves and extending out of the open end of said yoke with said spindle bolt extending therethrough, and means to open and close said open end of the yoke upon opposite sides of said drawbar comprising a crosshead on said drawbar, terminal hooks on the sides of said yoke, shackles on the ends of the cross-bar detachably attached to said hooks, said cross-bar being slidable on said drawbar toward said yoke to provide for detaching the shackles from the hooks, and coacting latch devices on the cross-bar and drawbar, respectively, for preventing such sliding of the cross-bar.

2,453,964
COUPLING FOR SHAFTS
Albert Betz, Hamilton, Ohio
Application December 1, 1943, Serial No. 512,451
2 Claims. (Cl. 64—9)



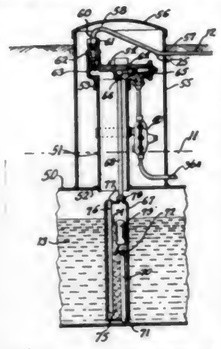
1. A flexible coupler for shafts comprising an inner member, an outer member, one rigidly secured to one shaft, the other rigidly secured to the other shaft, holes parallel to the shafts when aligned, said holes disposed partly in the inner member and partly in the outer member inclined surfaces at the bottoms of the holes, balls fitting the holes disposed in the holes, springs disposed in each hole pressing the balls inwardly against said inclined surfaces, a detachable ring and means for securing said ring to the coupler adjacent the open ends of said holes, said ring providing a seat for the ends of said springs.

2,453,965
MAGNETIC REFLECTIVE TOY
Adele L. Bewley, Buffalo, N. Y.
Application July 20, 1946, Serial No. 685,041
2 Claims. (Cl. 46—45)

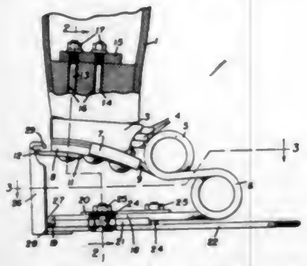
1. A toy of the character described, comprising an elongated handle adapted to be conveniently grasped by a child, a member attached to said handle and having a highly reflective plane surface, and a generally flat relatively non-reflective member having any desired shape and smaller in diameter than said reflective surface, removably applied to said highly reflective surface, one of said members being permanently magnetized and the other being of high magnetic permeability whereby detachable adherence between said members is effected by simple contact between the two by the lines of force of said permanently magnetized member, said toy being thereby capable of use in bed to reflect a beam of light from a remote source onto the bedroom ceiling to produce a shadow image of said relatively non-reflective member.

2,453,966
DOUBLE-ACTING SHOCK ABSORBER
Louis Brown and Leo Lacey, Uvalde, Tex.
Application August 23, 1946, Serial No. 692,516
7 Claims. (Cl. 188—88)

1. In a double acting shock absorber, an open ended cylinder, axially connected plungers having interior chambers opening inwardly operating therein in spaced relation, and an oppositely tapered axial body held in the cylinder in spaced relation to the bore of the cylinder and through which the connection of the plungers has a sliding fit and is designed to move or over which connection the body is adapted to move with the cylinder, to displace the fluid in the cylinder between the same and the body and to and from the chambers of the plungers around the outside of the body.



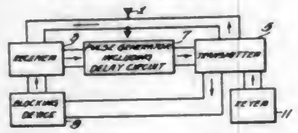
2,453,967
LAMP SUPPORT
Stewart R. Browne, Brooklyn, N. Y., assignor to Stewart R. Browne Mfg. Co. Inc., New York, N. Y., a corporation of New York
Application January 10, 1947, Serial No. 721,228
3 Claims. (Cl. 248—125)



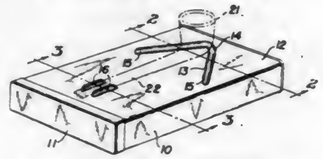
2. In a device of the class described, the combination of a telescopic mast, ball-and-socket joints at the top and bottom of the mast, a base member provided with wheels and connected to the bottom joint, a spring clip associated with the top joint, a lamp disposed in said clip, another ball-and-socket joint disposed on said base, and a second spring clip disposed on said last mentioned joint to receive the lamp when it is removed from the first clip.

2,453,968
GAS DISPENSING SYSTEM
William C. Buttner, Winnetka, and Harold L. Norway, Evanston, Ill., assignors to The Bastian Blessing Co., Chicago, Ill., a corporation of Illinois
Application January 9, 1942, Serial No. 426,206
16 Claims. (Cl. 62—1)

1. In combination, a container buried below the frost line for storing a fuel having a vapor pressure less than the vapor pressure of butane, a second container supported inside the first, porous means in the second container for dividing the container into minute passageways, means for supplying to one of the containers the vapor of a fuel having a vapor pressure in excess of butane, and means for withdrawing a mixture of said vapor and the first fuel from the other of said containers.

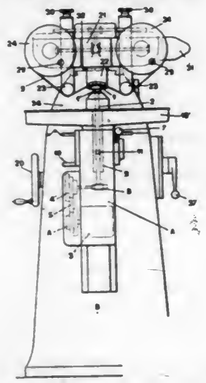


2,453,969
ARTIFICIAL LIMB
Edwin C. Carter, Rio Grande City, Tex.
Application April 3, 1947, Serial No. 739,109
8 Claims. (Cl. 3—2)



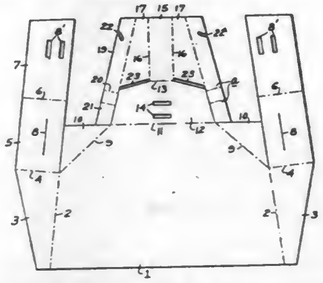
1. An artificial limb comprising a hollow leg supporting calf portion and a foot portion associated therewith, a series of substantially U-shaped laterally disposed springs having rearwardly protruding ends detachably connected between said calf portion and said foot portion, and snubber means for limiting the relative movement between said portions.

2,453,970
RECOGNITION SYSTEM FOR PULSE ECHO RADIO LOCATORS
George M. Charrier, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 31, 1941, Serial No. 395,924
6 Claims. (Cl. 343—13)



5. A recognition system for a pulse echo obstacle detection system employing a pulse transmitter including in combination a second transmitter, means for receiving the pulses from said pulse transmitter, means for applying said received pulses to said second transmitter to key same, means for varying continuously the frequency of said second transmitter, means for applying to said second transmitter modulations including an identification code, and means for radiating pulses from the thus keyed frequency varied and code modulated transmitter.

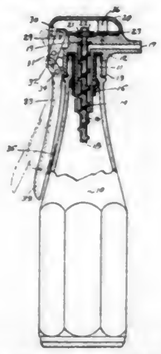
2,453,971
COMBINED PIPE STAND AND CONTAINER FOR SMOKING TOBACCO
Raymond Chemlinski, Schenectady, N. Y.
Application June 7, 1946, Serial No. 675,165
2 Claims. (Cl. 131—260)



1. In a flat tin pocket container for smoking tobacco, a V-shaped ridge on a broad surface thereof, of dimensions to embrace the lower portion of the bowl of a pipe, and a pair of ribs rising on said surface, parallel to, and straddling the bisector of the angle of said V-formation for abutment with the stem of the pipe from opposite sides.

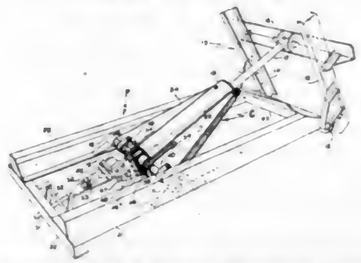
2,453,972
MACHINE FOR CUTTING AND POLISHING NONSPHERICAL OR CONICAL SURFACES BY MEANS OF ABRASIVE BAND TOOLS
Serge Clavé and Marcel Clavé, Paris, France
Application April 14, 1947, Serial No. 741,400
In France October 13, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 13, 1962
8 Claims. (Cl. 51—62)

1. Improved machine for the cutting and polishing of non-spherical surfaces of the type described, comprising in combination a main frame, a bracket movable for vertical reciprocation on said frame, means for vertically reciprocating said bracket, a workpiece support on said bracket, a movable tool-carrying and tool-driving means on said frame having a band-like abrasive tool thereon and a backing die therefor, means for moving said movable means between an active position in which said abrasive band tool may be placed in abrasive engagement with a workpiece on said workpiece support and an inactive position wherein said tool is clear of said workpiece, and means for imparting to said abrasive band both a longitudinal reciprocation and a lateral reciprocation.



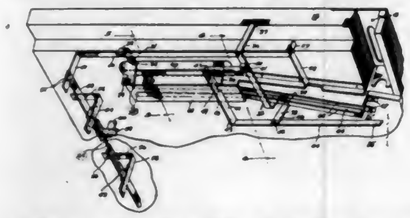
2,453,973
DUSTPAN
William E. Coats, Los Angeles, Calif.
Application October 11, 1946, Serial No. 702,697
1 Claim. (Cl. 65—20)

In a blank for forming a scoop comprising a single sheet of material having a main body section of polygonal outline formed by a top and a bottom parallel sides and end sides connecting said top and bottom sides, each said end side being formed by a first straight part joined to the bottom side and a second straight part joined to the top side, said first and second parts extending towards and joining each other and forming an obtuse angle with each other, triangular sections integral with and hinged to said main body section at said second straight parts, respectively, of said main body section whereby each said triangular section is foldable toward said main body section, a back section having a top side and a bottom side, said back section being integral with said main body section and hinged thereto at the top side thereof whereby the back section is foldable toward said main body section, said back section having parallel to the top side thereof a pair of parallel slots, said back piece having end sides connecting the top and bottom sides thereof, each said side being formed by a third straight part joined to the bottom side and a fourth straight part joined to the top side, said third and fourth parts extending towards each other and forming an obtuse angle with each other, an elongated side section integral with said main section and hinged thereto at each of said first straight parts, each said elongated side section having a side flap portion, a side corner portion and a back flap portion with the boundary lines between said portions being scored, the lengths of said side flap portion and side corner portion being substantially equal to the respective lengths of said first part and said second part, each said side corner portion having a slit and being adapted to be folded against said triangular section whereby the apex thereof may be pushed through said slit, said back flap portion having a pair of parallel slots adapted to be placed in register with the back section slots, a substantially rectangular handle section integral with and hinged to said back piece, side sections extending from and hinged to said handle section along the length thereof, and flap sections extending from said side sections and extending lengthwise beyond the same, each said flap sections terminating in a pair of tongue por-



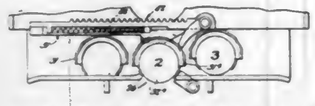
tions with the boundary lines between said tongue portions and the remainder of said flap section being scored, said tongues being adapted to be threaded through the registered slots for holding the sections in assembled scoop form.

2,453,974
KETCHUP DISPENSER
Phillip Colaluca, Youngstown, Ohio
Application March 10, 1945, Serial No. 582,057
2 Claims. (Cl. 215—3)



1. A ketchup dispenser consisting of a body member having a distortable tubular member formed thereon insertable in and removable from the neck portion of a ketchup bottle, a passageway defined by said member and a delivery passageway in said body member in communication therewith, and a screw type conveyor rotatably positioned in said passageway and a rack and pinion gear for imparting movement to said screw type conveyor, and a handle pivotally connected to said rack for imparting movement thereto, a spring in said handle engaging said bottle and normally urging said handle away therefrom.

2,453,975
PIVOTING HYDRAULIC POWER CYLINDER FOR DUMP TRUCKS
Herbert O. Day, Bowling Green, Ohio
Application August 3, 1946, Serial No. 688,386
13 Claims. (Cl. 121—63)



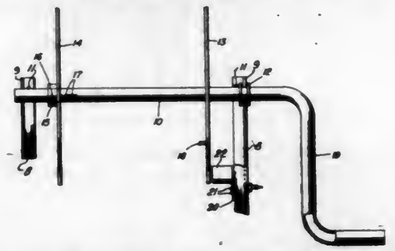
1. A hydraulic jack device comprising a hydraulic power cylinder swingable about an axis extending transversely of the longitudinal axis of the cylinder, a transverse shaft member extending at right angles to the cylinder and associated with the rear-end portion thereof, a pair of bracing members extending substantially in the plane defined by the cylinder and the shaft member, rearward means for fastening the rear-end portion of each bracing member to the shaft member, and forward means for fastening the forward end of each of said bracing members to a corresponding forward portion of the cylinder comprising means for adjusting the relative longitudinal tension between the cylinder and the bracing member.

2,453,976
BALL GATE AND ELEVATING MECHANISM
Lyndon A. Durant and Gordon Horlick, Chicago, Ill., assignors, by direct and mesne assignments, to Royal Patent Corporation
Application October 23, 1945, Serial No. 624,002
2 Claims. (Cl. 273—122)

1. The combination with a pivotally movable ball gate of an amusement apparatus and a latch member therefor, of a supporting structure, a ball elevating member pivotally carried by the structure, an operating handle pivotally carried by the supporting structure and having an end portion engaging the ball elevating member and the latch member for simultaneously operating the ball elevating member and the latch member to release the latch member from engagement with the ball gate when the ball elevating members is elevated by said operating handle.

2,453,977
CARTRIDGE FEEDING DEVICE
James Owen Eames, Washington, Conn., assignor to Roy S. Sanford, Woodbury, Conn.
Application March 28, 1946, Serial No. 657,803
8 Claims. (Cl. 89—33)

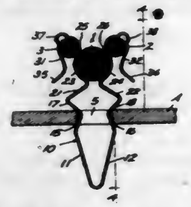
5. In an automatic gun adapted to fire cartridges carried to the gun by gripping links comprising a flexible belt, the combination comprising a feedway for the belt, said feedway having a slot defined by edges in said feedway for engagement with a portion of each link, a slide including a link feeding pawl, means for reciprocating said slide for presenting each link and its gripped cartridge successively to a position in alignment with said slot, and a member slidably supported on said slide and having link-engaging elements for forcing the link into engagement with the edges of said slot and maintaining said engagement during stripping of the cartridge from the link.



2,453,978
ELECTRODE STRUCTURE
Duryea E. Elmendorf, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application August 23, 1946, Serial No. 692,505
1 Claim. (Cl. 176—126)

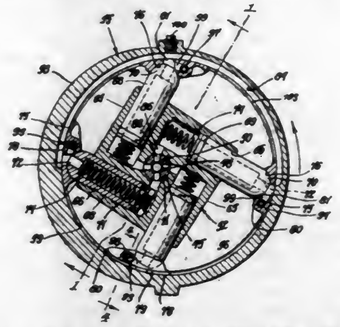
An electric glow discharge lamp comprising an enclosing envelope, a stem having a sealed press portion, an insulating vitreous hollow cylinder fused at one end to said stem press portion to constitute a unitary extension of said stem and being open at its distal end, a pair of lead-in wires having portions thereof sealed in said stem press portion, one of said lead-in wires extending through said stem press exteriorly of, and alongside, said cylinder, the other lead-in wire extending through

said stem press interiorly of said cylinder and being bent over the distal end thereof and against the outer surface of said cylinder, and a pair of electrodes comprising annular longitudinally spaced films of conductive material adherent directly to the outer surface of said cylinder and in electrical contact with respective ones of said lead-in wires.



2,453,979
PORTABLE WIRE REEL HOLDER
Le Roy Frontz, Allenwood, Pa.
Application June 6, 1945, Serial No. 597,869
1 Claim. (Cl. 242—90)

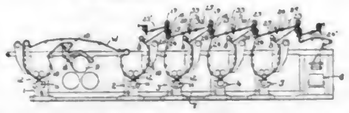
A wire reel holder comprising a carriage adapted for movement over the ground, a pair of arms rising from said carriage at opposite sides thereof and having notched upper ends, a manually operable shaft rotatably fitted in said notched ends, whereby the same is removable from said arms, said shaft being adapted to support a reel thereon between said arms, a fixed flange on said shaft adjacent one arm, means connecting the reel to said flange for rotation therewith, a drag carried by said one arm and frictionally engaging one side of said flange, and a pair of collars on said shaft straddling the notched upper end of said one arm to prevent end play of said shaft and consequent movement of said flange away from said drag.



2,453,980
FASTENING DEVICE FOR CABLES, WIRES, OR THE LIKE
Richard A. Hartman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application October 28, 1946, Serial No. 706,227
3 Claims. (Cl. 24—73)

1. A fastener for retaining a plurality of objects in separately attached and detachable relation comprising a strip of metal bent to provide a pair of spaced shank legs adapted to be compressed toward each other in fastening position in an opening in a support, cooperating spaced spring arms carried by said shank legs adapted to grip an object therebetween under the force of said shank legs in compressed condition in the opening, inwardly extending portions on said spring arms at the entrance to the space therebetween for retaining said object against removal

from between said spring arms, one of said spring arms having an outward reversely extending spring finger adjoining the inwardly extending portion thereon defining a recess for retaining another object in close overlapping relation to the first named object with said inwardly extending portion disposed between the retained objects to prevent chafing thereof.

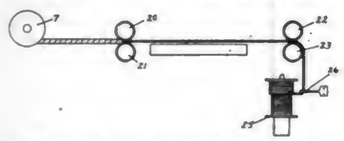


2,453,981
HYDRAULIC CLUTCH
Albert F. Hickman, Eden, N. Y., assignor to Hickman Pneumatic Seat Co. Inc., Eden, N. Y., a corporation of New York
Application November 15, 1944, Serial No. 563,488
12 Claims. (Cl. 192—60)

1. A clutch of the character described for releasably coupling a driving part and a driven part, comprising a cylinder block secured to rotate with one of said parts, a cylindrical shell enclosing said cylinder block and secured to rotate with the other of said parts with its axis parallel with but in eccentric relation to the axis of said cylinder block and forming a chamber containing a liquid surrounding said cylinder block, said cylinder block being formed to provide a plurality of cylinders open at their outer ends and each arranged with its axis in a plane at right angles to the axis of said cylinder block, a piston in each of said cylinders and projecting outwardly therefrom, a shoe secured to the outer end of each of said pistons and having a face engaging the inner cylindrical face of said cylindrical shell to reciprocate said pistons in response to the rotation of said cylindrical shell relative to said cylinder block, each of said pistons being provided with a bore communicating with the corresponding cylinder and each of said shoes being provided with an internal passage registering with the bore of the

corresponding piston, and means for admitting liquid from said chamber through each of said passages and the corresponding bore to the corresponding cylinder when the piston is moving outwardly in following the corresponding half of said inner cylindrical face and restraining the reverse movement of said fluid through said passage and bore when said piston is moving inwardly in following the other half of said inner cylindrical face.

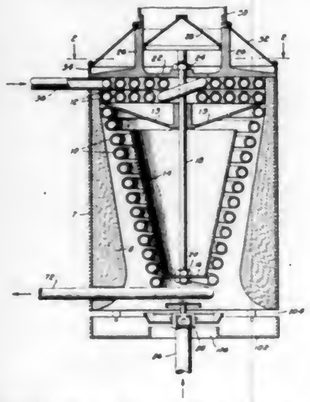
2,453,982
PRINTING PRESS COMPENSATOR
William F. Huck, Forest Hills, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application January 28, 1946, Serial No. 643,870
5 Claims. (Cl. 101—181)



1. In a multiple unit printing press, the combination with a compensating roller, an axial shaft therefor, said shaft being moveably supported, of a differential arm mounted upon said shaft and extending in each direction transversely thereof, threaded poppets moveably attached to the ends of said differential arm, rods threadably engaging said poppets, and reversible driving means connected to said rods for rotation thereof.

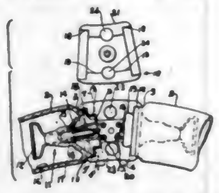
2,453,983
PREVENTION AND DESTRUCTION OF WEEDS
Wilfred Archibald Sexton, Manchester, and Roland Edgar Slade and William Gladstone Templeman, Bracknell, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 27, 1945, Serial No. 613,020. In Great Britain April 7, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 7, 1961
12 Claims. (Cl. 167—45)

3. A method for the prevention and destruction of weeds which comprises applying to a locus to be protected a compound conforming to the general formula $Ar.X.CH_2.Y$, in which Ar is selected from the group consisting of the phenyl radical, the naphthyl radical and such radicals containing also at least one substituent selected from halogen atoms, nitro groups, and alkyl radicals containing not more than 6 carbon atoms, X is selected from the group consisting of oxygen, sulphur, and —NH— radical, and Y is selected from the group consisting of the carboxy radical and carboxy radicals in which the hydrogen atom is replaced by a water-soluble salt-forming substituent, the compound being applied in amount sufficient to exert an herbicidal action.



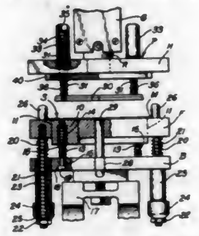
2,453,984
PRODUCTION OF THREAD
Charles E. Gardner, Hollis, N. Y., assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application October 27, 1947, Serial No. 782,383
1 Claim. (Cl. 57—157)

The method of producing twisted thread from a ribbon of a heat-sealable and heat-stretchable film material which comprises twisting the film into a filament and then heating it and pulling the twisted film so as to elongate it, and bringing contacting surfaces of overlapping portions of the twisted film into pressure contact to cause



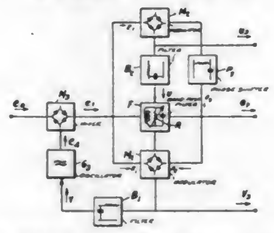
them to become permanently sealed to one another.

2,453,985
FLUID HEATER
Nelson G. Goreau, New Orleans, La.
Application June 19, 1945, Serial No. 600,365
6 Claims. (Cl. 122—250)



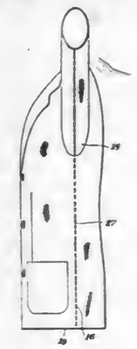
1. In combination with a fluid heater having a combustion chamber that is annular and generally of truncated cone in shape and a spiral coil having spaced convolutions, divides the chamber in a diagonal direction to form a diminishing inlet combustion chamber and an expanding outlet flue, and a fuel burner for projecting flame initially into said inlet chamber and then in succession between said spaced convolutions into said outlet flue.

2,453,986
CIRCULAR ELECTRIC LAMP
Alfred Greiner, Cleveland Heights, and August W. Seitz, Euclid, Ohio, assignors to General Electric Company, a corporation of New York
Application May 7, 1945, Serial No. 592,478
1 Claim. (Cl. 176—122)



An electric lamp comprising a tubular envelope of non-linear configuration containing electric energy translation means and having its ends disposed in spaced opposed relation, sheet metal discs fused to the said ends of the envelope, at least one of said discs having lug means projecting outwardly therefrom, a cylindrical base member extending between and embracing the ends of said envelope around said discs and providing surfaces at its interior directly engaging said lug means to orient the base member in a predetermined position on said envelope, said base member carrying contact means electrically connected to the said electric energy translation means in said envelope.

2,453,987
APPARATUS FOR SHAPING AND FORMING LEATHER
Marty Green and Irving Sheroff, Brooklyn, N. Y.
Application June 11, 1946, Serial No. 676,059
6 Claims. (Cl. 69—8)

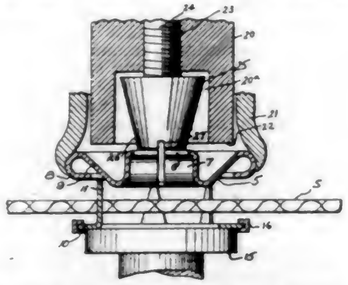


1. In an apparatus for shaping and folding non-metallic flexible stock, a base, a pad for supporting said stock and slidable relative to said base, a shaping frame normally spaced from said base and for supporting marginal portions of said stock and including an opening for slidably guiding said pad, a platen receivable in said opening for clamping said stock against said pad and for driving said marginal portions along the wall of said opening to lift said marginal portions relative to the body of said stock, a head normally spaced from said shaping frame and slidably carrying said platen and for driving the latter to depress said pad against said base, and means carried by said head for depressing said shaping frame relative to said pad when the latter is against said base and for folding said lifted marginal portions downwardly and against said stock.

2,453,988
AUTOMATIC FREQUENCY CONTROL
Gustav Guanella, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application February 26, 1944, Serial No. 524,080
In Switzerland July 10, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 10, 1962
18 Claims. (Cl. 250—20)

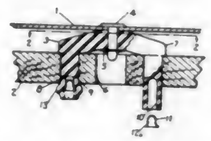
1. In a system for maintaining resonance between the natural frequency of a resonant network and the frequency of an alternating current wave, means comprising discriminating means for producing a control voltage varying in sense and magnitude according to the relative departure between the frequencies of said network and said wave, frequency control means operated by said control voltage and effective in restoring and maintaining resonance between the frequency of said network and said wave, means for producing a further control voltage varying in direct proportion to the absolute value of said frequency departure, and means for varying the effectiveness of said discriminating means in accordance with said further control voltage.

2,453,989
COAT
Leonard S. Guckert, Baltimore, Md., assignor to Mavest, Inc., New York, N. Y.
Application April 18, 1946, Serial No. 663,011
3 Claims. (Cl. 2—93)



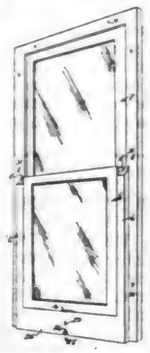
2. A coat comprising two coat fronts having each an inwardly curved side edge; a coat back composed of two back sections having each an inwardly curved side edge; side seams connecting said inwardly curved side edges of said coat back sections and said inwardly curved side edges of said coat fronts so that said coat is inwardly curved along both sides in the region of said side seams, said side seams extending from the armholes of said coat to the bottom edge thereof substantially along the central side lines of said coat extending from the undercenter points of said armholes to the hip line of the coat; one single relatively short front dart in each coat front extending substantially parallel to the corresponding side seam of said coat and the front edge of said coat front substantially parallel to said side seam and said front edge; and sleeves having underarm seams and sewn into said armholes of said coat in such a manner that said underarm seams extend from the edges of said sleeves to the undercenter points of said armholes meeting said inwardly curved side seams of said coat.

2,453,990
HOLDER FOR FASTENER ATTACHING MEANS
Walter I. Jones, Belmont, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application January 26, 1946, Serial No. 643,814
1 Claim. (Cl. 218—6)



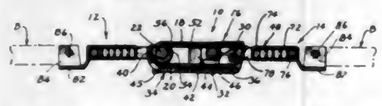
A snap fastener socket attaching means comprising a plunger having an annular portion at one end, a coaxial pin having a regular tapering frusto-conical head in combination with said plunger and extending with its small end beyond

said annular portion, and means for adjusting the position of said pin axially of said plunger



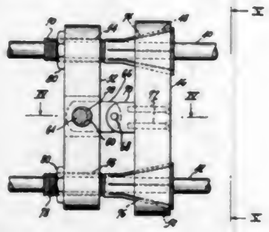
to selectively vary the plane of maximum diameter of said pin beyond the plane of the end of said annular portion.

2,453,991
RUBBER MOUNTING
Gustav H. Kaemmerling, Erie, Pa., assignor to Lord Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application December 11, 1944, Serial No. 567,547
6 Claims. (Cl. 248—22)



1. A mounting comprising a rubber arch having integral attaching arms at its ends and load attachment provisions at its center, said arms having hollow ends receivable in openings in a support, shoulders on the hollow ends for retaining the arms in the support, and retainers receivable in the hollow ends resisting collapse of the shoulders.

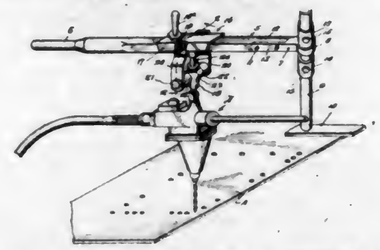
2,453,992
AUXILIARY FRAME AND SASH
John H. Kleintop, Emmaus, Pa.
Application October 20, 1943, Serial No. 507,047
8 Claims. (Cl. 160—182)



1. An auxiliary window frame unit comprising an auxiliary window frame of dimensions adapting it to fit a window frame, said auxiliary window frame having upper flanges and lower tracks along its sides and recesses across its upper and lower ends, the lower tracks being rearwardly offset with respect to the upper flanges and open at their upper ends, the upper flanges having shoulders at their lower ends, an upper sash fitting in the upper portion of said auxiliary window frame and having beads along its sides abutting the upper flanges and resting upon said shoulders, and a lower sash in the lower portion of said auxiliary window frame having beads along its sides engaged in the lower tracks and slidably mounting the lower sash for vertical shifting in said auxiliary window frame.

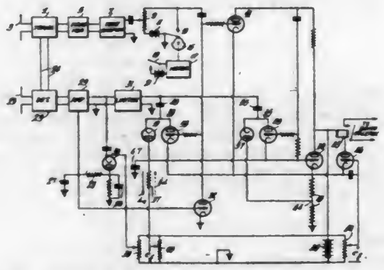
2,453,993
CONNECTOR FOR BRACELETS, WRIST WATCH STRAPS, ETC.
Jacques Kreisler, New Rochelle, N. Y., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J.
Application March 16, 1945, Serial No. 583,156
6 Claims. (Cl. 24—233)

4. In a lock of the class described comprising a holding member adapted to have an attachable part removably connected therein, inner and outer locking members pivotally connected to said holding member and turnable from locking positions in which they overlie said attachable part to prevent disengagement thereof from said holding member, to retracted positions to permit engagement with or disengagement of said attachable part from said holding member, said holding member having a bottom, and a flat spring member positioned on said bottom and secured to one end of said holding member, said flat spring member having an end portion movable toward and away from said bottom and directly engageable with said inner and outer locking members simultaneously adjacent the pivots thereof for yieldingly holding said locking members in their locking and retracted positions, respectively.



2,453,994
HIGH-FREQUENCY POWER OUTPUT CONTROL
Lester S. Lappin, Camden, and Richard P. Corporon, Haddonfield, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application May 22, 1945, Serial No. 595,214
2 Claims. (Cl. 178—44)

1. A device for electrically connecting a pair of spaced parallel conductors at selectable points comprising a pair of collets having an axial aperture adapted to slidably receive said conductors

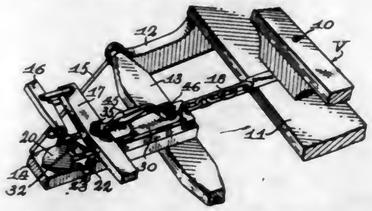


respectively, one end of each collet having spaced segments whose outer surfaces have a frusto-conical configuration; a shorting bar provided with a pair of frusto-conical apertures, the segmented ends of said collets lying within the apertures of said shorting bar; a control bar parallel to and spaced from said shorting bar and rigidly holding said collets in relatively fixed relation, a control shaft rotatably mounted in said control bar and containing an eccentric cam portion; and link means connecting said shorting bar and said control bar and movable in response to a rotation of said control shaft cam to vary the spacing between said bars.

2,453,995
PORTABLE PNEUMATIC DRILL SUPPORTING AND HANDLING RIG
Robert E. Lee, Bellflower, Calif., assignor to John Thomas, Norwalk, Calif.
Application June 9, 1945, Serial No. 598,553
2 Claims. (Cl. 77—59)

1. As a component part of the assemblage of the class described, an elongated channel-shaped clip embodying a horizontal web and vertical side flanges, an upstanding handle attached to and rising from one end portion of said web, said clip being adapted to be shiftably mounted on a horizontal supporting and maneuvering lever, hanger limbs adjustably and detachably connected to and depending from said side flanges, and means for adjustably supporting a conventional drill between the lower ends of said limbs, said means including a horizontal pin and an adjustable nut, said nut having a head adapted to ride and rest against the underside of the lever.

2,453,996
RADIO BOMB RELEASE SYSTEM
James H. Ludwig, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 24, 1944, Serial No. 546,269
4 Claims. (Cl. 343—7)

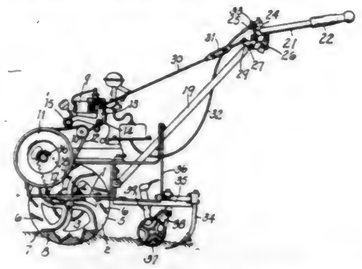


1. A system for preventing false operation of a radio bomb release system of the type including a frequency modulated transmitter, a receiver, and alternately operable differential counters connected to said receiver, including normally inoperative means for preventing operation of one of said counters, and means responsive to the amplitude of signals received by said receiver to operate said normally inoperative means upon decrease of said amplitude below a predetermined value.

2,453,997
FITTING FOR FLEXIBLE HOSE
Wallace MacWilliam, Lake Valhalla, N. J., assignor to Resistoflex Corporation, Belleville, N. J., a corporation of New York
Application May 2, 1946, Serial No. 666,645
8 Claims. (Cl. 285—84)

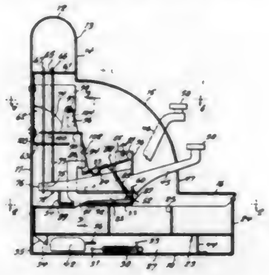
8. In a hose assembly of the type wherein a fitting is permanently secured to the end of the hose, said fitting comprising a shank inserted in the hose end and a ferrule radially compressed upon the outside of the hose end, the improvement which consists in forming said shank with a circumferential external recess intermediate its ends, a sleeve of extendable material at least as soft as the lining of the hose substantially filling and lying wholly within said recess prior to compression of said ferrule, said ferrule being radially compressed at least in the area overlying said sleeve, said sleeve being extended by said compression longitudinally of said shank.

2,453,998
DRAFT CONNECTOR
Joseph A. E. Madore, Montreal, Quebec, Canada
Application April 17, 1947, Serial No. 741,992
3 Claims. (Cl. 278—90)



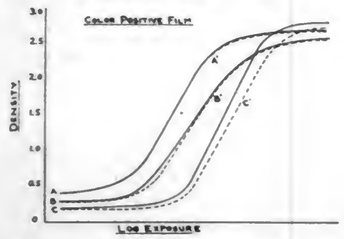
1. A traction device for vehicles having a draft pole, a doubletree and a frame, a slider movable longitudinally on the pole, a king pin secured to the slider, a bracket connecting the free end of this pin to the rear of the slider, said king pin receiving the doubletree, and a chain connecting the slider to the frame of the vehicle.

2,453,999
HANDLE BAR TRACTOR WHEEL DRIVE CONTROL
George Melling, Jackson, Mich.
Application December 29, 1945, Serial No. 638,236
15 Claims. (Cl. 180—19)



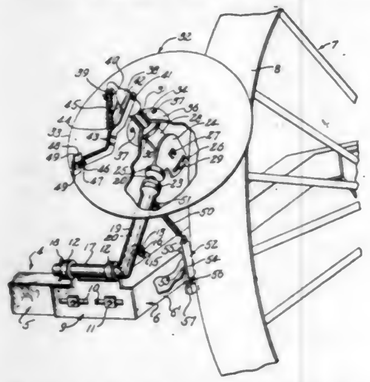
1. The combination in a tractor implement comprising a frame, a traction wheel, a motor and driving connections for the motor to the traction wheel including a belt and coacting belt tightener unit, of steering posts extending rearwardly from the frame, a cross piece on the rear ends of said steering posts, a U-shaped handle

bar, a cross bar to which the bight of said handle bar is fixedly connected, pairs of parallel links pivotally mounted on said cross piece and pivotally connected to said cross bar, the rear links being extended below the cross piece and pro-



vided with a connecting stop member coacting with the cross piece to limit the rearward movement of the handle bar, one of the front pair of links being provided with an arm, and an adjustable link connecting said arm to said belt tightener unit.

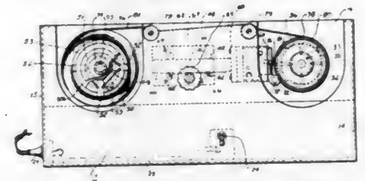
2,454,000
CASH REGISTER
Stephen P. Midouhas, Bristol, Pa., assignor to Kemline Metal Products Company, Bristol, Pa., a corporation of Pennsylvania
Application February 4, 1948, Serial No. 6,262
2 Claims. (Cl. 235—25)



1. In a cash register, the combination of a housing, plural operating keys extending from the housing, a fixed frame member providing substantially centrally disposed fulcrums for the keys, plural designating plates mounted for vertical sliding movement and having vertically spaced slots and contacting the rear terminal of the keys and arranged to be raised thereby when the forward ends of the keys are depressed, a pivoted bail overlying the keys to the rear of the fulcrums and arranged to be raised by such keys, a second bail pivotally mounted at its upper end and arranged to swing forwardly and provided with rearwardly extending fingers, each of which is normally disposed in the upper slot in one plate when the latter is in lowered position and in the lower slot when the plate is in upper position to support such plate, a spring which urges the second bail rearwardly, an upwardly projecting cam element carried by the first bail and a laterally extending lug carried by the second bail and which normally overlies the cam element and is moved thereby to swing the second bail forwardly to disengage the fingers from the slots during travel of the plates.

2,454,001
CONTROL OF CONTRAST WITH AROMATIC DIAMINE COLOR DEVELOPERS
Fritz W. H. Mueller, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application November 8, 1945, Serial No. 627,329
4 Claims. (Cl. 95—88)

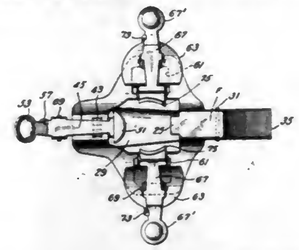
1. The process of preventing the formation of excessively contrasty dye images in the individual layers of a multi-layer color film containing silver-halide emulsions and color formers which comprises exposing the film and developing simultaneously all layers with a solution of an aromatic diamine developing agent containing a primary amino group and 5 to 15 grams per liter of said solution of a protein decomposition product of medium to high molecular weight substantially within the range of the molecular weights of lysalbinic acid and gelatose, the molecules of the said protein decomposition products being built up of at least five amino acids.



2,454,002
WHEEL SCRAPER
Nick A. Paluck, Belfield, N. Dak.
Application March 9, 1948, Serial No. 13,910
5 Claims. (Cl. 280—158)

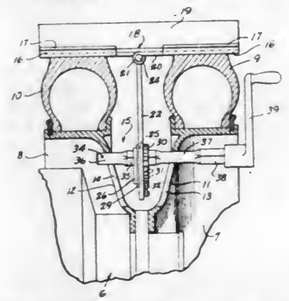
2. A scraper for the rim of a wheel of an implement having a frame positioned alongside of the wheel, said scraper comprising a mounting bracket adapted to be secured to said frame and having transversely-aligned horizontal bearing means, a vertical tubular scraper arm having a lateral stub axle journaled in said horizontal bearing means, a shank in the upper end of said tubular scraper arm, means for locking said shank in a desired longitudinally and rotatably adjusted position in said tubular scraper arm, a bracket on the upper end of said shank, a vertical spindle pivoted to said bracket on a horizontal transverse axis, means for locking said spindle in

a desired pivoted relation to said bracket, a scraper disk rotatably mounted on said spindle having a side portion thereof overlying the wheel rim in scraping relation thereto, a spring pressed auxiliary scraper mounted on said spindle having a scraper blade in contact with the edge portion of said scraper disk and operating to scrape the said scraper disk as the scraper disk is rotated by contact with the wheel rim or with accumulations on said wheel rim.



2,454,003
TAPE SLITTING MACHINE
Leon Edward Pamphilon, Yeadon, Pa., assignor to Airdesign, Incorporated, Upper Darby, Pa., a corporation of Pennsylvania
Application August 26, 1946, Serial No. 692,975
8 Claims. (Cl. 164—39)

1. A tape slitting machine having a pair of side members, a pair of end members connecting the side members and forming a rectangular housing, a partition extending lengthwise in the housing, a jack shaft mounted on the partition and one side of the housing, a take-up shaft mounted on the partition and one side of the housing, bearings for the jack shaft and take-up shaft, gears for driving the take-up shaft from the jack shaft, means including an electric motor for driving the jack shaft, a shank on the take-up shaft having a substantially square cross section, a collar surrounding said shank, a plurality of convex segments surrounding the collar and having ends extending through the collar to abut the sides of the shank, a resilient sleeve encircling the segments and compressing them radially inwards; a feed shaft journaled in the partition and a side member, a flange mounted on the feed shaft, a second flange mounted on the feed shaft, said second flange carrying a plurality of radially extendible pawls, means for extending and retracting said pawls; a cutting head slidably movable with respect to the take-up mandrel, guide means supported between the partition and a side member for the cutting head, means including a rack and pinion for moving the cutting head in the guide members, a spacer bar on the cutting head adapted to abut a layer of tape being wound on the take-up mandrel, a plurality of knife holders on the cutting head, means for locking the knife holders in any desired position on the cutting head, a knife blade in the knife holders having its cutting edge extending downwardly from the knife holder, and a pair of rollers positioned between the partition and a side member for guiding and tensioning the tape as it is fed from the feed mandrel onto the take-up mandrel.

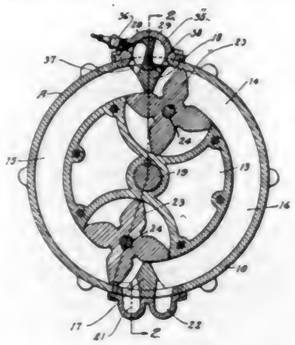


2,454,004
NAIL POLISH MASK
Norman D. Pettyjohn, Binghamton, N. Y.
Application October 22, 1946, Serial No. 704,818
12 Claims. (Cl. 132—88.5)

1. An adjustable finger mask comprising, in combination, a frame involving provision for supporting a finger of a user in a predetermined longitudinal relationship therewith, levers situated at respective sides of said frame, a lever disposed substantially longitudinally of said frame, masking structure attached to said levers, said structure suited for application to cuticle surrounding

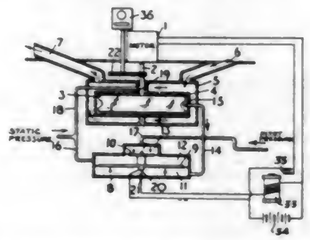
a finger nail, and mountings attached to said frame and individual to said levers, said mountings formed and arranged for enabling respectively associated levers to cooperate in effecting various placements of said structure in conformity with cuticle adjacent finger nails of a desired variety of shapes and sizes.

2,454,005
TRACTION INCREASING DEVICE FOR DUAL WHEEL VEHICLES
Earnest P. Pletch, Frankfort, Ind.
Application December 9, 1947, Serial No. 790,639
4 Claims. (Cl. 152—220)



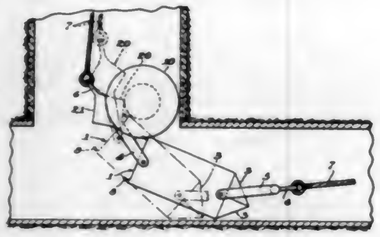
1. A traction increasing device for dual wheels including opposed wheel sections having tires mounted thereon, the device comprising spaced shoes to engage upon the tire treads, a traction bar secured to the shoes and projecting generally radially from the tires, a tension member connected to the traction bar and projecting between the wheel sections, a rotatable element carried by the tension member and having an eccentric opening, a detachable member adapted to be inserted in the eccentric opening and to engage the wheel sections, and means to turn the detachable member.

2,454,006
INTERNAL-COMBUSTION ROTARY MOTOR
Carl E. Plummer, Tulsa, Okla.
Application June 4, 1945, Serial No. 597,548
1 Claim. (Cl. 123—8)



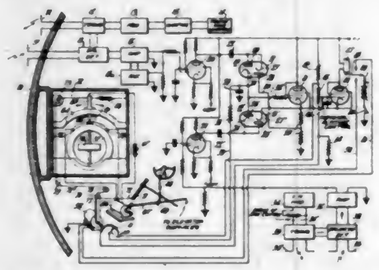
A motor of the kind described comprising a circular casing having diametrically opposed abutments therein to form opposed chambers having power firing and exhaust, compression and intake zones in the chambers at opposite sides of the abutment said power firing and ex-

haust zone being to the left of the abutments, and said compression and intake zone being to the right of the abutments, a rotor within the casing and having spider type power bladed rotatable vanes adapted to be tripped by said abutments, intake and exhaust leads to and from the respective zones in said chambers, a timing ring fixed in said casing, tripping wheels for the said



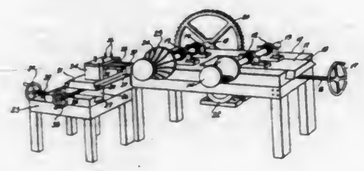
bladed vanes and controlled by said timing ring, a combined firing and compression cylinder fitted to the casing and having firing and compression cavities therein for communication with the compression zone, and the firing zone, a timing ring on the rotor, a trip operating said firing and compression cylinder and controlled by said last mentioned ring, and ignition means for the firing and compression cylinder.

2,454,007
NAVIGATIONAL INSTRUMENT
Hugh Lambert Reilly, Frank Herbert Scrimshaw, and Arthur George Bone, Farnborough, England, assignors to Henry Hughes and Son Limited, Barkingside, England
Application May 24, 1945, Serial No. 595,634
In Great Britain May 26, 1944
7 Claims. (Cl. 73—183)



1. An instrument for determining movement of an aircraft relative to the surrounding air comprising a rotary fan, means on said fan for increasing its effective radius with rotational speed, a fan chamber having an air inlet near the hub of the fan, a pressure responsive system, means for communicating the pressure at the periphery of said fan to one side of the said system, means for communicating pitot pressure to the opposite side of said system, a motor for driving said fan, means comprising contacts actuated by said system for controlling the speed of the motor and a device driven by said fan for registering movement of the aircraft relative to the surrounding air.

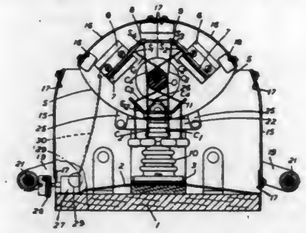
2,454,008
SEWER CLEANING BUCKET FOR PASSING AROUND SHEAVES
Lawrence R. Robinson, Mount Lebanon, Kyle I. Robinson, Glenshaw, Earl O. Berger, Bellevue, and Walter S. Lang, Pittsburgh, Pa., assignors to Pittsburgh Pipe Cleaner Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 31, 1947, Serial No. 725,586
3 Claims. (Cl. 15—104.30)



1. A sewer cleaner comprising a bucket, a bail pivotally connected to the bucket and adapted to be connected to a cable for dragging the bucket through a sewer and up around a sheave into a manhole, and a pair of plates each having its forward edge connected to the central portion of the bail and the outer ends of its rear edge adjoining the bail, said rear edge curving outwardly between said outer ends, and said plates being adapted to engage the sheave and push the bail away from it and to provide a fulcrum while the bail is circumventing the sheave, whereby upward pull of the cable causes the bail to rock like a lever on said fulcrum so that the rear end of the bail will depress the front end of the bucket and prevent it from catching on the sheave.

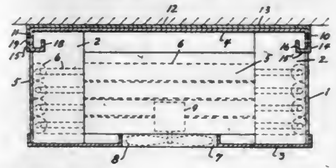
2,454,009
RADAR CONTROL SYSTEM
Royden C. Sanders, Jr., Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 30, 1944, Serial No. 542,989
4 Claims. (Cl. 343—7)

4. A control system installed in a dirigible airborne device for guiding it along a predetermined glide path, said system comprising distance measuring means which includes a frequency counter for producing an electrical quantity that is a predetermined function of the distance to said target, altitude measuring means which includes a second frequency counter for producing a second electrical quantity that is a predetermined function of the altitude of said device, said two counters being connected in differential relation to obtain a differential counter output, and a control circuit responsive to said differential output for causing said air-borne device to follow said glide path.



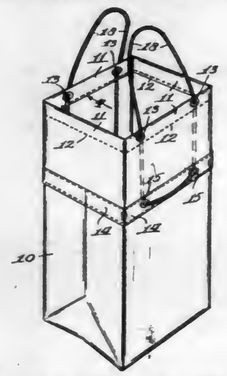
2,454,010
WIRE CORE EXTRACTING MACHINE
Enrique Sauto y Hurtado de Saracho, Mexico City, Mexico
Application December 19, 1944, Serial No. 568,924
In Mexico January 21, 1944
3 Claims. (Cl. 164—39)

1. Apparatus for the extraction of ring-like wire cores from their surrounding bodies comprising a support table, a movable carriage, a pulley rotatably supported on said carriage, means for moving said carriage reciprocally on said support table, a second pulley, means for supporting said second pulley, toothed means on said second pulley, means for rotating said second pulley, a second support table having a guideway, a reciprocally movable carriage slidable in said last-named guideway, means for reciprocally moving said last-named carriage, said last-named carriage being movable in a direction parallel with that of said first-named carriage, said second-named carriage having a guideway, a third carriage slidably supported in said last-named guideway and movable reciprocally therein in a direction transverse to the direction of motion of said first and second-named carriages, a tool support carried by said third-named carriage, and cutting means mounted from said tool support, the said ring-like cores and surrounding bodies being mountable over said pulleys and moved thereby when tensioned by movement of said first-named pulley on its carriage away from said second-named pulley and when said second-named pulley is driven, and said cutting means being adjustable both as to position relative to said so mounted ring-like cores and bodies and as to depth of cut into said bodies by appropriate movement of said second and third-named carriages.



2,454,011
SPARK TESTING APPARATUS FOR INSULATED ELECTRIC CABLES AND WIRE
John Henry Savage, Welling, England, assignor to W. T. Henley's Telegraph Works Company Limited, Dorking, England, a British company
Application May 2, 1945, Serial No. 591,517
In Great Britain May 10, 1944
12 Claims. (Cl. 175—183)

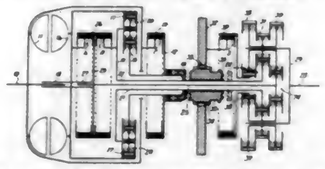
1. An electrode for apparatus for spark testing electric cable when placed within the electrode, said electrode comprising a series of electrically inner-connected chains forming a flexible curtain surrounding and conforming to the shape of a cable in position for testing, said chains extending transversely of the direction of run of the cable along the axis of the electrode and being set in sequence along this direction forming a conductor distributed around said axis, means for supporting each of said chains at one end and



means for tensioning each of said chains at the other end.

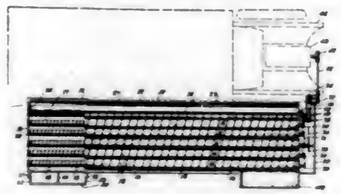
2,454,012
SUSPENSION MEANS FOR COOLING UNITS
Edward Oneal Sears, Oakland, Calif., assignor to Colvin-Templeton, Inc., Oakland, Calif., a corporation of California
Application January 12, 1945, Serial No. 572,544
6 Claims. (Cl. 248—311)

1. Means for suspending a cooling unit from a ceiling comprising a member adapted for securing to the ceiling and having a pair of downwardly projecting flanges, with a ledge on one of the flanges, and a pair of vertical rails on the cooling unit spaced to fit between the flanges in face-to-face relation therewith, whereby the cooling unit may be raised in tilted position for engagement of one of the rails over the ledge and may then be swung into horizontal position for bringing both rails into face-to-face relation with the flanges.



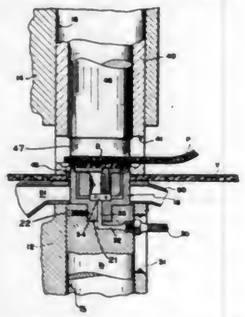
2,454,013
SHOPPING BAG WITH FOLDABLE, EXTENSIBLE TOP
Frank F. Scherzinger, Henderson, Nev.
Application March 14, 1945, Serial No. 582,616
1 Claim. (Cl. 150—1.7)

A foldable, extensible top shopping bag, having predetermined portions of its walls at the top



adapted to fold inwardly and downwardly into the bag, pairs of opposed grommets seated in the upper portions of the side walls of said bag, other pairs of opposed grommets seated in said side walls below the foldable portions thereof and in vertical alignment with the grommets in the upper portions of said side walls, an endless flexible handle arranged to slide freely through the grommets in each side wall with portions of said handles disposed on the insides of the foldable upper portions of said side walls, with portions of said handles between the lower pairs of grommets disposed on the exterior of the bag and stops on those portions of the handles on the inside of said side walls between the grommets.

2,454,014
TRANSMISSION
Frederick W. Seybold, Westfield, N. J.
Application February 21, 1945, Serial No. 579,052
27 Claims. (Cl. 74—189.5)

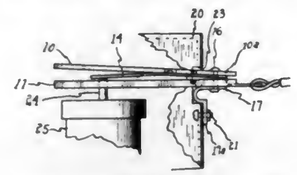


1. A variable speed transmission comprising in combination, a drive shaft, a driven shaft, a hydraulic coupling, one element of which is connected to the drive shaft, an internal gear connected to the other element of the coupling, a first reaction member including a sun gear and brake means therefor, a first planet pinion carrier, planet pinions on said carrier meshing with said internal gear and said sun gear, a pinion integral with said carrier, a feed-back pinion, clutch means for connecting the internal gear and the feed-back pinion, a second reaction member including a sun gear and brake means therefor, a second planet pinion carrier connected to the driven shaft, compound planet pinions on said second carrier meshing with said first pinion, said feed-back pinion and the sun gear of the second reaction member, stationary brake means co-operating with the brake means of the first reaction member to prevent the rotation of the sun gear in a direction opposite to that of the drive shaft and thereby cause the transmission to operate in a low gear ratio when the feed-back pinion is clutched to the internal gear.

2,454,015
ONION GRADING ROLLERS
Richard D. Sheppard, Bridgeton, N. J.
Application April 22, 1944, Serial No. 532,329
1 Claim. (Cl. 15—3.11)

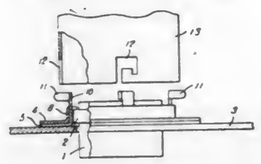
Onion cleaning and grading apparatus comprising in combination: a set of elongated cleaning and grading rollers for receiving onions to be cleaned, graded and sacked at one end and for delivering said onions in a clean state and in separate streams according to size at the other end, said rollers being supported for rotation on their respective lengthwise axes, the respective rotational axes of said rollers paralleling each other in a common plane which plane is inclined upwardly both from the receiving end to the delivery end of said set and transversely of the rotational axes of said rollers, each said roller comprising a body member of cylindrical contour having a rope wound spirally thereon from end to end for rubbing, tumbling and abrading the onions, each body member being spaced from the adjacent body member throughout the major portion of its length by substantially only the diameter of said rope thereby to form a cleaning section, each said body member additionally being of reduced diameter over the rest of its length thereby to form a sorting or grading section and the ropes on said body members being wound in the same direction with each rope having each turn equally spaced from the next by a determined amount over the entire length of the cleaning section and by a lesser equal amount over the length of the grading section; and, means for mechanically coupling said rollers for simultaneous rotation in the same direction at the same speed.

2,454,016
ART OF INLAYING SHEET MATERIAL
Per F. Skoog, Olympia, Wash.
Application April 28, 1945, Serial No. 590,929
2 Claims. (Cl. 154—104)



1. In the art of patching veneer, the method, comprising: perforating said veneer at the point to be patched to provide an opening having walls perpendicular to the faces of said veneer, unidirectionally wiping a coating of adhesive under substantial pressure on the walls of said opening in a motion withdrawing from one edge of the opening to the other, simultaneously therewith inserting a patch piece equal in size and shape to said opening thereinto by causing the same to move and follow in the same direction the wiping application of the adhesive coating in immediate sequence, and terminating said movement of the patch piece when the same is in substantial alignment with at least one face of the sheet material surrounding said opening.

2,454,017
SOCKET FOR FLUORESCENT TUBES
Carl Edward Swanson, Chicago, Ill.
Application May 9, 1946, Serial No. 668,604
4 Claims. (Cl. 173—328)

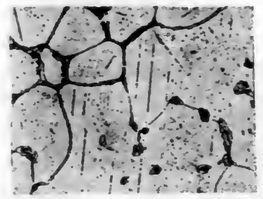


1. In a socket for fluorescent tubes; a body composed of two substantially adjacent plates

of non-conductive material, one of said plates being apertured; a flexible metal mounting bracket of angular section; means securing said plates and said bracket together; and a pair of spaced elongated flexible metal contacting members between said plates and having portions thereof accessible through said apertures of one

of said plates, said contacting members projecting beyond the rear edges of said plates to provide for electrically connecting same to a power source, said contacting members being bent, the pressure of the adjacent plates against said bent contacting members causing said members to be flexed.

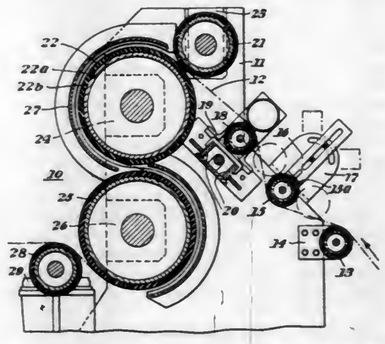
2,454,018
HOLDER FOR THERMIONIC VALVES AND OTHER ELECTRICAL DEVICES
George Wagstaff, Long Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass.
Application February 1, 1945, Serial No. 575,718
In Great Britain April 27, 1944
5 Claims. (Cl. 174—35)



1. A saddle or like member for mounting a holder for an electrical device on a supporting panel, said saddle comprising a pair of apertured plates in superposed relation, one of said plates having an upstanding portion providing a lug element extending in a plane generally parallel to said plate for engaging one side of said holder, and the other of said plates having means for engagement with a side of said holder opposite said one side and having an integral upstanding element providing an arm element adjacent its free end for fastener engagement with a shielding device adapted to be secured to said saddle in position to screen said device.

2,454,019
PURIFICATION OF HETEROCYCLIC NITROGEN COMPOUNDS
John Wesley Waldron, Muncie, Ind., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application January 27, 1943, Serial No. 473,758
7 Claims. (Cl. 260—290)

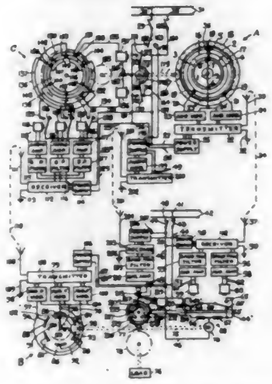
6. In a process for improving the odor and color stability of a crude pyridine free of tar acids and made by high temperature carbonization of coal, the steps which comprise mixing the crude base with aqueous caustic alkali solution, refluxing the mixture, separating the nitrogen base from the spent caustic solution, dehydrating and fractionally distilling the thus purified nitrogen base to recover a pyridine fraction of good odor and improved color stability.



2,454,020
FERROCHROME PROCESS AND PRODUCT
Lee F. Weitzenkorn, Dundalk, and George N. Goller, Baltimore, Md., assignors to Armco Steel Corporation, a corporation of Ohio
Continuation of application Serial No. 511,864, November 26, 1943. This application September 16, 1946, Serial No. 697,232
4 Claims. (Cl. 75—176)

M.L. 34233 Mag. 100X
Structure at Center of Lump of Nitrided Low Carbon Ferrochromium; Nitrogen Penetration to Center is Indicated by the Presence of the Large and Small Needles

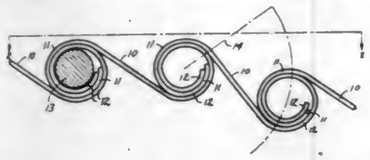
4. A pre-alloy for introducing nitrogen in producing high-nitrogen stainless steel, comprising an iron-chromium alloy of low carbon content in the form of nitrided lumps of about one-inch size and containing about 70% chromium and having nitrogen distributed thruout the same in the form of nitride needles to an average nitrogen content of 0.7% to 2.0% or more.



2,454,021
APPARATUS FOR TENSIONING STRIP MATERIAL
Abram B. Wilson, Hollidays Cove, W. Va., assignor to National Steel Corporation, a corporation of Delaware
Application September 7, 1944, Serial No. 552,974
5 Claims. (Cl. 271—2.3)

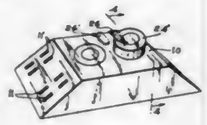
3. In metal strip processing apparatus in which metal strip is drawn lengthwise through substantial distances and tends to weave from side to side, means for controlling the movement of the strip through the apparatus and counteracting said tendency and insuring proper tracking of the strip, said means comprising a roll, means for guiding the strip as it moves through the apparatus so that it passes about and in contact with

a substantial portion of the periphery of said roll, a pressure roll cooperating with said first mentioned roll to grip the strip, said rolls being cooperatively contoured so that the strip is gripped therebetween with greater pressure adjacent the center of the strip than adjacent the edges of the strip, and means independent of the strip for controlling rotation of at least one of said rolls.



2,454,022
RADIO REMOTE-CONTROL APPARATUS
Michel N. Yardeny, New York, N. Y.
Application February 9, 1945, Serial No. 576,919
10 Claims. (Cl. 250—2)

10. In a remote control system controlled from a control point to move a load at a remote point to any desired end position, in combination, instrumentalities including a radio transmitter at the control point adapted to radiate waves having selected characteristics modified depending upon the desired load movement, a motor at the remote point for moving the load, instrumentalities including a radio receiver at the remote point adapted to pick up the radiated waves and move the load motor in accordance with the said wave modification at the control point, instrumentalities including a movable control device operatively connected with the load motor and also including a radio transmitter at the remote point adapted to radiate waves having characteristics different from that radiated by the said transmitter at the control point as modified by the movable device in dependence on the said load movement, and instrumentalities including a control motor operatively connected with the first instrumentalities and also including a radio receiver at the control point adapted to pick up the waves radiated by the transmitter at the remote point to control the control motor for coordinating the first instrumentalities at the control point with the load at the remote point in accordance with the said wave modification at the remote point.

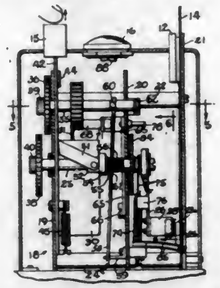


2,454,023
CONVEYER
Lewis C. Zimmermann, Youngstown, Ohio
Application March 23, 1945, Serial No. 584,423
1 Claim. (Cl. 198—193)

In a conveyor, an assembly of interconnected conveyor links each of which consists of a straight section of strip stock material having one end formed in an upturned overlapping spiral of decreasing size and the other end formed in a downturned spiral of decreasing size and forming about 315 degrees of a circle, the said downturned spiral being relatively larger than the said upturned

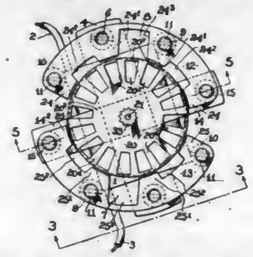
spiral and adapted, in said conveyor assembly, to partly overlie the said upturned spiral formation of an adjacent interconnected link and to extend into the said overlapping spiral thereof.

2,454,024
COMBINATION ELECTRIC RECEPTACLE AND FUSE
Peter Alemaghides, Brooklyn, N. Y.
Application April 18, 1947, Serial No. 742,428
1 Claim. (Cl. 200—115.5)



A device of the character described comprising a housing, a plurality of outlet branches mounted in the housing, a screw-type fuse mounted in the housing, a plug connection mounted in the housing and electrical wiring interconnecting the plug, fuse and outlet branches, a duplicate screw-type fuse having a flanged outer end, said fuse being mounted in the housing, means for normally holding the duplicate fuse out of contact with the electrical wiring and means for cutting said duplicate fuse into contact with the electrical wiring, said means comprising wiring adapted to connect both fuses and a resilient member secured to said housing, said resilient member having a free end portion spaced from said housing, an elongated element having a pair of ends, one of said ends being normally releasably secured between said free end of said resilient member and said housing, the other of said ends being releasably secured between said flange and said housing.

2,454,025
JOB ELAPSED TIME RECORDER
Adolph Amend, Jr., Harrington Park, and George C. Engel, Ridgewood, N. J., assignors to General Time Instruments Corporation, New York, N. Y., a corporation of Delaware
Application November 27, 1946, Serial No. 712,526
12 Claims. (Cl. 346—95)

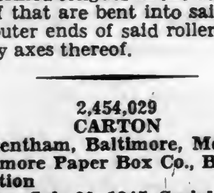


1. In a job time recorder the combination comprising a receptacle for a record card, a printing arm mounted for movement adjacent a card inserted in said receptacle and having a printing stylus thereon, a timing motor, a pair of gears coupling said timing motor and said printing arm to move said stylus progressively from an initial position upon the passage of time, means biasing said stylus toward said initial position, a manually movable member arranged to be operated upon the completion of a particular job, and means actuated by said manually movable member for

bringing said stylus and said card into marking engagement and for unmeshing said gears so that

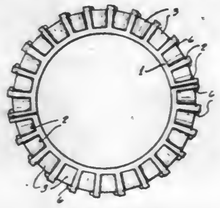
said printing arm may return to the initial position under the influence of the biasing means.

2,454,026
SYNCHRONOUS ELECTRIC MOTOR
Emra D. Bacon, Cleveland, Ohio
Application October 30, 1946, Serial No. 706,740
15 Claims. (Cl. 172—278)



1. A self-starting synchronous electric motor having a rotor formed to provide symmetrically-arranged alternate polar areas and hysteresis areas, a divided-ring stator having polar projections concentric with, surrounding and closely adjacent the rim of the rotor, non-magnetic means supported on the stator parts, an energizing coil including a laminated core, auxiliary pole pieces secured to and adjacent the ends of the core, the stator parts being mounted on the auxiliary pole pieces, and diametrically opposed shading means and alternate diametrically opposed non-shading means forming the mounting means and spacing the stator parts from the auxiliary pole pieces.

10. A rotor for self-starting synchronous electric motors comprising a disc, a bearing housing extended through the disc and having a press-fit therein and centrally thereof, bearings having a press-fit in the housing, a pin secured at one end and journaled in the bearings, and a hub having a press-fit in the housing, the hub exteriorly of the housing having a peripheral portion thereof of pinion formation, the opposite end of the pin extending into the hub.

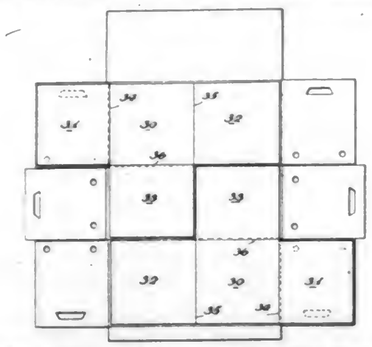


2,454,027
DOUBLE-ACTING WRENCH FOR FLANGES
Daniel Baeza, Brooklyn, N. Y.
Application August 18, 1944, Serial No. 550,049
2 Claims. (Cl. 81—55)

1. A double acting wrench for flanges, comprising a jaw-shaped member having top and bottom arms connected with a vertical back, a bottom socket for engaging one end of a bolt or nut of a flange and fixedly mounted on said bottom arm, a top socket for engaging the other end of said bolt or nut and slidably and turnably mounted through said top arm, a pressure arm slidably mounted on said vertical back and engaging said top socket for urging said top socket downwards, a spring coaxially mounted on said

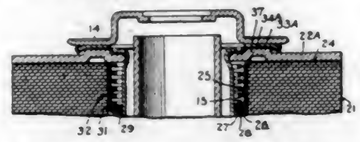
vertical back and urging said pressure arm and said bottom arm towards each other, and means for locking said pressure arm in various positions on said vertical back, and including a bushing threadedly mounted upon said pressure arm coaxially of said rod and having a tapered portion engaging a complementary tapered portion on said pressure arm.

2,454,028
SELF-CONTAINED ROLLER-BEARING CAGE
John B. Baker and Harold D. Stover, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application December 22, 1945, Serial No. 636,960
3 Claims. (Cl. 301—235)



1. A self-contained roller bearing cage and a roller unit comprising an annular cage member with an annular series of pockets leading inwardly from the outer peripheral edge of said cage member, and rollers positioned in said pockets with their outer ends terminating short of the outer ends thereof, said annular cage member having preformed tongues in the outer peripheral edge thereof that are bent into said pockets and across the outer ends of said rollers in the plane of the rotary axes thereof.

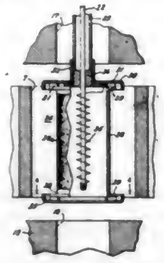
2,454,029
CARTON
Albert E. Bentham, Baltimore, Md., assignor to The Baltimore Paper Box Co., Baltimore, Md., a corporation
Application July 21, 1945, Serial No. 606,443
1 Claim. (Cl. 229—23)



A knock-down fiberboard carton ensemble, comprising a main blank provided with spaced transverse score lines dividing it into a top portion, opposite side portions and a bottom portion, the main blank having other score lines to provide an end portion at each end of each side portion and the bottom portion, overlapping substantially T-shaped partition members super-

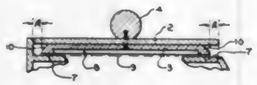
posed on the main blank in non-registering relation, each partition member including a body portion overlying a side portion and from which three wings extend, one of the extending wings of each partition overlying the bottom portion and

another wing of each partition being secured to one of the side portions in the main blank, each partition being provided with score lines to allow the wings to be folded into positions at right angles to the body portion.



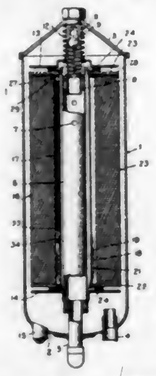
2,454,030
FILTER
Jay M. Besore, Chevy Chase, Md., assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md., a corporation of Maryland
Application September 27, 1944, Serial No. 556,009
7 Claims. (Cl. 285—1)

1. A gasket to prevent the flow of liquid between a first member and a second member from a body of liquid to which the members are exposed, comprising a strip of resilient material secured at one point to the first member and extending toward the liquid body, said strip throughout a substantial portion of its extension being unattached to the first member and normally being adapted to flex away therefrom, and a gasket material lying upon and secured to the unattached portion of the strip between the two members.



2,454,031
ELECTRIC DISCHARGE DEVICE OF THE MAGNETRON TYPE
Ralph J. Bondley, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application July 29, 1944, Serial No. 547,155
4 Claims. (Cl. 315—40)

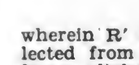
1. An electric discharge device of the magnetron type including an anode structure having an opening therein, a cathode mounted within said opening, magnetic means electrically connected to said structure including a pole face adjacent said opening for producing a magnetic field in the space between said anode structure and said cathode, a metallic shield of material which is a poor electron emitter and having a blackened surface which enhances thermal radiation, said shield being positioned transversely with respect to a path of electrons leaving said opening and conductively connected to said cath-



ode, said shield having a flanged portion extending from its periphery in a direction toward said cathode whereby voltage gradients in the vicinity of the periphery of said shield are minimized.

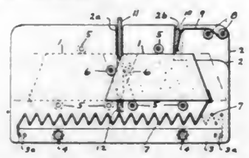
2,454,032
PHOTOGRAPHIC BORDER DEVICE
William A. Boulais, Jr., Jersey City, N. J.
Application October 29, 1947, Serial No. 782,787
3 Claims. (Cl. 88—24)

1. In a mask for forming a white border on sensitized color photographic emulsion of the reversal type, a photographic easel, upwardly extending lips on said easel, a sheet of clear transparent material adapted to cover said easel inside said lips, means to attach an opaque member to said sheet, said opaque member having a sharp photographic border edge for engaging the sensitized sheet between its periphery and the edge of said sheet.



2,454,033
FILTER
Southwick W. Briggs, Washington, D. C.
Application August 12, 1944, Serial No. 549,242
6 Claims. (Cl. 210—187)

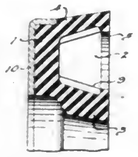
1. In a fluid filter device, a filter cartridge comprising a tube, a disc-like plate secured to each end of the tube, a third disc-like plate intermediate the end plates slidable upon the tube in a fluid tight fit, a cylindrical mass of filtering material intermediate one of the end plates and the slidable plate, tension means tending to urge the floating plate against the cylinder, the inner periphery of said filter mass being spaced from the tube, and a hole in the tube located adjacent the end plate engaged by the filter mass.



2,454,034
PROCESS FOR PREPARING SULFURIZED LUBRICATING COMPOSITION
Dayton P. Clark, Jr., Pittsburgh, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application July 20, 1945, Serial No. 606,271
3 Claims. (Cl. 260—399)

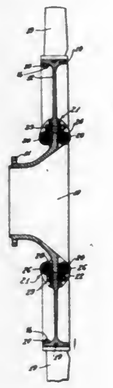
1. A process of preparing a sulfurized oil which comprises reacting sulfur with oil in the presence of a catalyst having the general formula

wherein R′ and R″ represent substituents selected from the class consisting of hydrogen, lower aliphatic radicals and monocyclic aromatic radicals and AR is a benzene ring with a lower alkoxy or monocyclic aryloxy group attached to the ortho or para position.



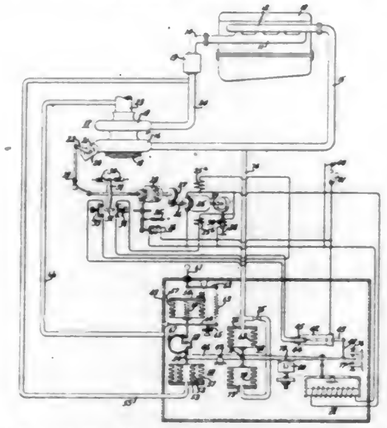
2,454,035
KNIFE AND SCISSORS SHARPENING DEVICE
Earl W. Clark, Stuart, Fla.
Application April 4, 1946, Serial No. 659,493
6 Claims. (Cl. 51—214)

1. In a knife sharpener: a frame comprising a base having a plurality of upwardly extending portions, said upwardly extending portions having transversely aligned vertical knife guiding slots; a plurality of abrasive members disposed between adjacent pairs of said portions, said members having guiding surfaces and inclined abrasive ends, and adjacent members disposed respectively with their abrasive ends in opposite oblique relation to the guide slots and in planes which intersect at the plane of said slots; a plurality of rollers pivotally journaled in and between adjacent pairs of said portions and said rollers disposed to contact the guiding surfaces of said abrasive members to form roller supports and guides for said abrasive members for reciprocating movement thereon.



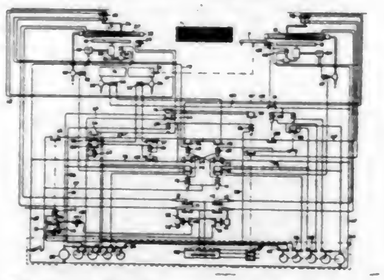
2,454,036
FLUID SEAL FOR SHAFTS
Howard Clayton-Wright, Stratford-on-Avon, England, assignor to Simpson Catherwood Leonard, Detroit, Mich.
Application January 31, 1945, Serial No. 575,380
In Great Britain May 16, 1944
2 Claims. (Cl. 288—3)

1. A packing ring which is fixed between a stationary member and a rotating member, comprising an annular ring of rubber or rubber like material having an annular groove in one face, annular sealing lips on the inner and outer periphery of the ring formed by the sides of the said groove, a series of independent springs arranged at intervals in the said groove and trans-



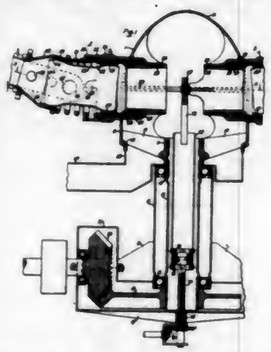
versely thereof for pressing each lip outwardly, each spring comprising a plate spring having an arm bearing against each sealing lip, and partitions provided in the said annular groove to circumferentially position the springs and an annular inturned spring positioning rib around each sealing lip.

2,454,037
ENGINE COOLING FAN
Gilmoure N. Cole, Manchester, and Chester R. Wells, Rocky Hill, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 29, 1944, Serial No. 551,678
4 Claims. (Cl. 170—177)



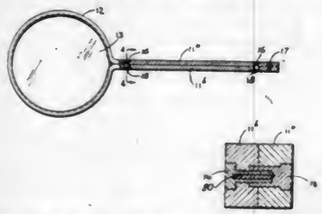
1. A blower including a hub and fan blades, said hub comprising an inner hub member adapted to be driven by a source of power, an outer hub member carrying said fan blades, said inner hub member having a substantially radially extending flange, said outer hub member having an inwardly extending portion mechanically engaging and cooperating with said flange so as positively to prevent relative radial movement therebetween, resilient connections between said inner and outer hub members, each including a cylinder carried by said outer hub member, a cylindrical bushing of resilient material in said cylinder, and a rod in said cylindrical bushing having its ends projecting beyond said bushing and secured to said inner hub member, each of said cylindrical bushings and its associated rod being arranged with a common axis tangential with the axis of rotation of said hub members.

2,454,038
CONTROL SYSTEM FOR AIRCRAFT TURBOSUPERCHARGERS
Frederick E. Crever, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application October 14, 1942, Serial No. 461,969
11 Claims. (Cl. 230—114)



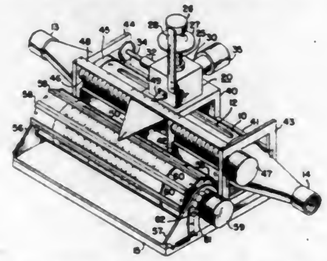
1. In combination, a turbine driven compressor actuated by exhaust gases, valve means for regulating the flow of exhaust gases to the turbine, means responsive to the pressure of the air discharged from the compressor for positioning said valve means to maintain the pressure of the air from said compressor at a constant value over a predetermined range of operation, and means responsive to the rate of change of pressure of said exhaust gases in the turbine for modifying the effective action of said last mentioned means to prevent hunting.

2,454,039
HIGH-FREQUENCY INDUCTION HEATING APPARATUS
Ralph E. Cox, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 28, 1947, Serial No. 757,884
10 Claims. (Cl. 219—47)



1. Electric high frequency heating apparatus comprising a supporting structure, two upwardly movable work supports mounted on said structure in spaced relation with each other, article holding means for securing a plurality of articles to be heated in substantially vertical stacked relation midway between said work supports and arranged to provide for downward feeding movement of the stack of articles, a pusher movable between said work supports from one side to the other of said article holding means to engage and move the then lowermost one of said articles alternately onto said work supports, operating means for said pusher, high frequency electric heating means mounted above each of said work supports, operating means for elevating each of said work supports to bring an article into heating relation with its heating means, current supply means for said heating means, and switching means for connecting said current supply means to one or the other of said heating means.

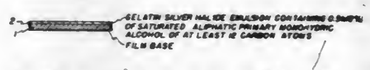
2,454,040
AIRCRAFT PROPELLER
William Dalton, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 7, 1944, Serial No. 543,771
17 Claims. (Cl. 170—135.6)



16. An aircraft propeller blade having, in combination, a pair of spaced apart longitudinal blade tension beams, articulate pivotal and rotational blade pitch control means at the inner ends of said beams including a separate pivot pin for each beam and a rotatable blade pitch control shaft having means for removably mounting said pivot pins in alignment, and a blade surface envelope substantially enclosing said beams and secured thereto.

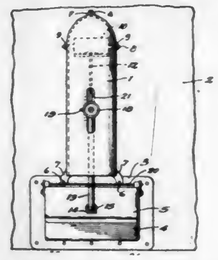
2,454,041
REINFORCED PLASTIC SECURING MEANS IN A FRAME FOR INTERCHANGEABLE HAND MIRRORS
Attilio De Meo, New York, N. Y.
Application December 8, 1945, Serial No. 633,583
2 Claims. (Cl. 88—101)

1. In an article of the class described having a split frame encircling a viewing member and continuing on opposite sides of the split into parallel longitudinal handle members in facial contact with each other, means for securing the handle members together so as to hold the split frame in a position rigidly encircling the viewing member, comprising an internally threaded insert of resinous plastic material extended through an opening formed in one of the handle members and extended into a complementary aligned recess formed in the other of the handle members, the other handle member being formed with a threaded opening continuing from said recess and of a size corresponding to the internal thread of said insert and in axial alignment with the internal thread of said insert, a screw of resinous plastic material threadedly engaged with the threaded opening of the other handle and the internal thread of said insert, said screw being formed with a recess extended in from its inner end, and means within the recess of said screw reinforcing said screw against longitudinal stretching.



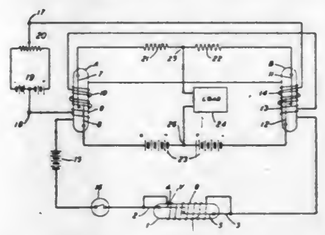
2,454,042
STANDING-WAVE MEASURING APPARATUS
David Dettinger, Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application January 18, 1945, Serial No. 573,436
9 Claims. (Cl. 171—95)

1. A standing-wave measuring apparatus comprising, a guide for electromagnetic waves effective to establish a standing electric wave along its length in accordance with the load condition and operating wave-length of said guide, a pick-up device electrically coupled to and supported for axial movement with reference to said guide for deriving a voltage indicative of the amplitude of the standing wave at any selected point along the length of said guide, an arrangement for providing in the vicinity of said guide a plurality of scales each of which is individually movable for longitudinal adjustment thereof and is calibrated in terms of a different operating wave length of said guide, and means for so positioning and orienting said arrangement with reference to said guide that any selected one of said scales is positioned for movement during adjustment thereof in a predetermined path parallel to that of said pick-up device.



2,454,043
GELATINO-SILVER HALIDE PHOTOGRAPHIC ELEMENTS CONTAINING HIGHER FATTY ALCOHOLS
Wilfrid Hampden Dimsdale and Kenneth John Challis, Ilford, England, assignors to Ilford Limited, Ilford, England, a British company
Application March 24, 1945, Serial No. 584,724
In Great Britain April 4, 1944
7 Claims. (Cl. 95—7)

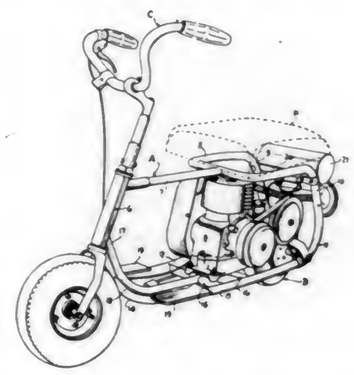
1. A photographic element comprising a support bearing a light-sensitive gelatino-silver halide emulsion layer and having in an outer layer of said element a single film-forming polymer consisting of gelatin which has uniformly dispersed therethrough from 0.5 to 10.0% by weight of an unsubstituted, saturated, aliphatic, primary



monohydric alcohol of at least 12 carbon atoms and which is solid at ordinary temperatures based on the gelatin.

2,454,044
DRAFT REGULATOR
Herbert A. Eggert, Oak Park, Ill.
Application March 7, 1945, Serial No. 581,415
1 Claim. (Cl. 236—96)

In a regulator device for stoves and furnaces having a draft door and an outer housing, a regulator unit cover secured to said housing and having an elongated slot therein, a stationary shaft secured in the upper end of said cover, a thermostatic coil having one end thereof secured to said shaft, a rigid telescoping linkage means secured at one end to the free end of said coil and at the other end to said draft door, and locking means extending through said slot in the cover and movable therealong and secured to one of said telescoping linkage means whereby the length of said telescoping linkage is variable at the will of the operator and a scale along said slot to indicate the adjustment of the linkage.

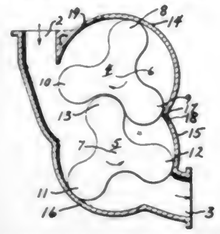


2,454,045
AMPLIFIER
Walter B. Ellwood, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 16, 1945, Serial No. 594,050
6 Claims. (Cl. 171—222)

1. In an amplifier circuit, two relays, means for applying a current of periodically varying amplitude in the same phase relationship to said relays whereby said relays are caused to operate in phase, an input circuit for applying a biasing current in opposite phase relationship to said relays

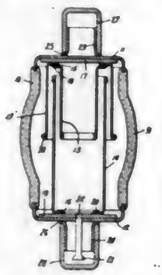
respectively, means for varying the direction of said biasing current, a source of power, a load device, and means controlled in response to the operation of said relays for applying power from said source to said load device, the application of said biasing current to said relays being effective to shift the phase relationship between the operating times of said relays whereby the direction of the impulses transmitted from said source to said load device is made dependent upon the direction of the phase shift.

2,454,046
MOTOR SCOOTER
George C. Fields, Wilmette, Ill., assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Application October 5, 1945, Serial No. 620,427
2 Claims. (Cl. 280—274)



1. In a motor vehicle frame, a lower section comprising transversely spaced, longitudinally extending, horizontal bars forming an engine support near their rear ends and a foot support mounting at their forward ends, the forward extremities of said bars being connected by an integral bight portion, the rear ends of said bars extending upwardly at the rear of the vehicle and thence forwardly in upper horizontal sections so as to form a protecting frame about the engine on its support, and rigidly connected single forward frame bar means extending medially of the vehicle from said protecting frame and from upper and lower points thereof to form a front wheel support for the vehicle, said forward frame bar means including a curved lower bar extending in part coextensive with and between said lower horizontal bars and thence forwardly and upwardly therefrom.

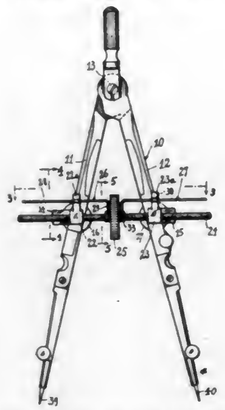
2,454,047
CONVERSION OF ALICYCLIC ALDEHYDES
Harry de V. Finch, El Cerrito, Seaver A. Ballard, Orinda, and Theodore W. Evans, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 9, 1947, Serial No. 747,128
20 Claims. (Cl. 260—514)



1. A process for converting an alicylic aldehyde to an alicyclic acid which comprises contacting said alicyclic aldehyde with a molten alkali metal hydroxide at a temperature not greater than about 470° C.

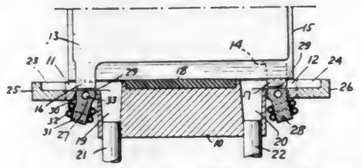
2,454,048
ROTARY AIR COMPRESSOR
Robert Flanagan, Glen Rock, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of New Jersey
Application July 30, 1943, Serial No. 496,798
2 Claims. (Cl. 230—141)

1. A rotary air compressor comprising, in combination, a first rotor, a second rotor, first impeller lobes formed on said first rotor, second impeller lobes formed on said second rotor, said first and second impeller lobes intermeshing in sealing relation, a first wall partially encircling the first rotor and forming a compression chamber, a second wall and a third wall partially encircling the second rotor and forming another compression chamber, an air inlet conduit from atmosphere opening between the first and second walls and into the compression chambers, and an air outlet conduit to atmosphere opening from said other compression chamber and between the second and third walls only, said first lobes moving in sealing relation along the first wall toward said third wall, said second lobes moving in sealing relation along said second wall toward said outlet conduit for forcing a supply of air at a relatively low pressure to said outlet conduit, and said second lobes moving in sealing relation along the third wall toward said first wall and cooperating in sealing engagement with said first lobes in such a manner as to compress between said first and third walls and said first and second lobes a supply of air at a relatively high pressure, said first and second lobes so arranged as to release said high pressure air supply to said outlet conduit after said low pressure air supply and in such a manner as to prevent a back rush of air into said compressor.



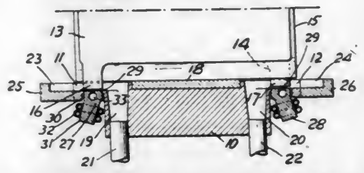
2,454,049
ELECTRIC CAPACITOR
George H. Floyd, Jr., Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 4, 1944, Serial No. 521,079
2 Claims. (Cl. 175—41)

1. An electric capacitor including a pair of concentrically arranged overlapping cylindrical electrodes, an envelope for said capacitor including a cylinder of insulating material and



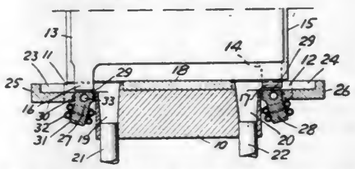
conductive means sealed to opposite ends of said cylindrical member and connected respectively with said cylindrical electrodes, said electrodes being of substantially different axial lengths with the longer of said electrodes arranged within the shorter electrode, said shorter electrode terminating substantially midway between the ends of said cylindrical insulator.

2,454,050
DIVIDER AND THE LIKE WITH MEASURING SCALES
Hugo Friedmann, Astoria, N. Y.
Application October 9, 1943, Serial No. 505,613
5 Claims. (Cl. 33—148)



1. In an instrument having legs pivoted at one end, the distance between the other end of said legs to be set for the use of the instrument, a pivoted nut in each leg, the two nuts being oppositely threaded, a rod passing through said nuts and being oppositely threaded from about the center thereof to the respective ends whereby a rotation of the rod will cause said legs to close upon one another or to open up, as desired, a projection on one of the nuts, an elongated scale member along which said projection may slide, said scale member being secured at about the center of said rod against axial movement thereon, but rotatably with reference to said rod.

2,454,051
MOLD FOR THE MANUFACTURE OF STORAGE BATTERIES
Charles Douglas Galloway, Wyndmoor, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application June 3, 1944, Serial No. 538,564
2 Claims. (Cl. 22—74)

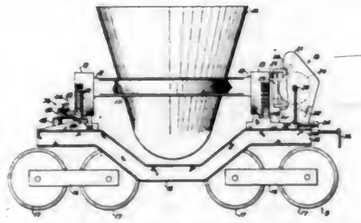


1. A mold for casting straps on the plate lugs of a storage battery element provided with an open mold cavity adapted to receive the plate lugs of the storage battery element and characterized by the provision of a heat-conducting refractory metal extension which projects externally from and beyond the outer surface of the wall of the mold cavity adjacent the tip-ends of the lugs when positioned in said cavity, and is longitudinally substantially coextensive therewith and laterally substantially corresponding with the dimension of the lugs lengthwise of said plates, said outwardly projecting extension forming a core to receive and to be heated by an induction heating coil for rapid localized heating of the mold in close proximity with the tips of the plate lugs for fusion of their end portions with the cast metal.

2,454,052
STORAGE BATTERY PLATE ASSEMBLY
Charles D. Galloway, Wyndmoor, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Original application June 3, 1944, Serial No. 538,564. Divided and this application December 19, 1944, Serial No. 568,797
2 Claims. (Cl. 136—134)

1. A storage battery element comprising alternately disposed positive and negative plates with interposed separators, said plates provided with terminal lugs assembled respectively to positive and negative straps wherein the roots of the lugs are tightly shrinkage gripped by but separate from the adjacent metal of the strap and the tips of the lugs are autogenously welded to said metal.

2,454,053
PROCESS FOR THE MANUFACTURE OF STORAGE BATTERIES
Charles D. Galloway, Wyndmoor, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Original application June 3, 1944, Serial No. 538,564. Divided and this application December 22, 1944, Serial No. 569,387
6 Claims. (Cl. 22—203)

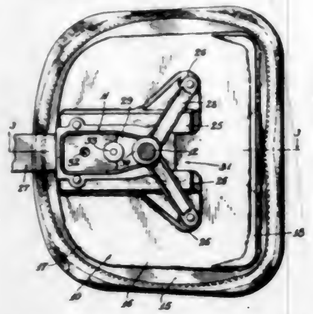


3. The method of producing on the lugs of storage battery plates a cast strap characterized by welded areas of high electrical conductivity at the tip-ends of the lugs which comprises inserting the lugs of the storage battery plates into a mold cavity with said lugs spaced from each other, surrounding the lugs with molten metal at a temperature such that when the metal comes into contact with the lug-surfaces the metal is not hot enough to fuse such surfaces, and while the strap is still in the mold applying heat to a localized area of the mold adjacent the tips of the lugs to effect localized fusing of the strap-metal to the ends of the lugs without fusing of the strap-metal to the root of the lugs.

2,454,054
EGG POACHER
Docia Irene Gibb, Denver, Colo.
Application May 24, 1947, Serial No. 750,283
3 Claims. (Cl. 99—449)

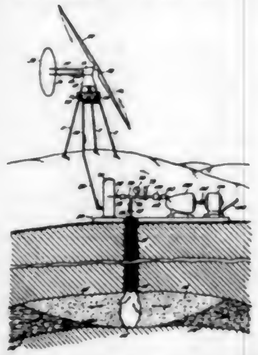
3. An egg poaching device comprising, in combination, a short cylindrical ring having an inwardly extending bead above the lower edge thereof, the material below the bead being foraminated, a plate resting on the upper surface of the bead forming a closure, the upper surface of the plate having a diametrical partition plate positioned in a plane substantially perpendicular thereto, said partition having a narrow notch extending downwardly at a point substantially midway between its ends, another partition plate having a notch at its middle point, adapted to be positioned in the notch in the first mentioned partition, and a handle having one end connected with the plate, the other end being accessible for removing the plate from the ring.

2,454,055
APPARATUS FOR HANDLING MATERIAL
Lawrence B. Gilchrist, Hammondsville, Ohio, assignor to National Steel Corporation, a corporation of Delaware
Application May 9, 1947, Serial No. 746,956
4 Claims. (Cl. 105—271)



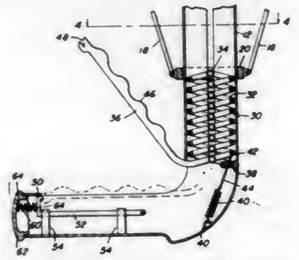
1. In apparatus for conveying material, the combination comprising a container; a rack; a gear engaging the rack and connected to the container, said gear being movable in a path back and forth along the rack to turn the gear and container from one position to another position; a pair of stops, each having a tooth engaging portion adapted to engage a tooth of the rack; and means movably supporting the stops for movement into an operative position adjacent opposite sides of the gear and in the path of movement of the gear with said portions each engaging a rack tooth and for movement to an inoperative position free of the rack, said stops when in the operative position holding the gear and container in one position.

2,454,056
ALUMINUM PHOSPHATE BINDER AND METHOD FOR PREPARING THE SAME
Herbert H. Greger, Washington, D. C.
No Drawing. Application September 19, 1944, Serial No. 554,863
6 Claims. (Cl. 106—287)



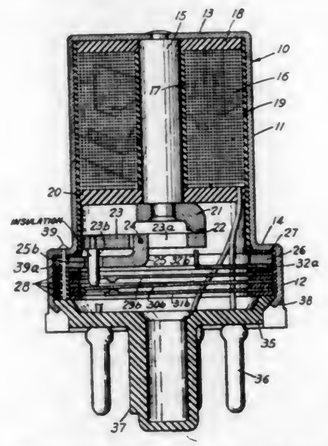
4. An aluminum phosphate binder consisting essentially of an aqueous aluminum phosphate solution and calcium oxalate, said calcium oxalate being present in quantities liberating sufficient oxalic acid on mixing with the aluminum phosphate solution to stabilize the binder by arresting the precipitation of calcium phosphates.

2,454,057
CHAIR IRON AND SEAT CUSHION THEREFOR
Albert C. Grunwald, River Forest, Ill., assignor to Precision Metal Workers, Chicago, Ill., a corporation of Illinois
Original application March 4, 1940, Serial No. 322,110. Divided and this application May 10, 1943, Serial No. 486,371
4 Claims. (Cl. 155—157)



2. A seat comprising, in combination, a horizontal metal base plate, two spaced ribs depressed from said plate intermediate its sides and defining rearwardly extending guides, the bottom of said ribs providing a mounting surface spaced downwardly from said plate, a seat support secured in position against said surface and underlying the intervening space between said ribs, said ribs and support defining a guideway adapted to receive and support a back support bar with a snug sliding fit against the bottom surface of said plate.

2,454,058
APPARATUS FOR CONVERTING INTERMITTENT POWER TO CONTINUOUS POWER
Russell R. Hays, Lawrence, Kans.
Application October 19, 1944, Serial No. 559,454
6 Claims. (Cl. 60—57)

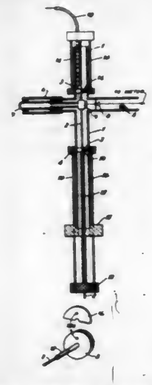


1. In combination, an air compressor driven by a varying source of power, a conduit connecting said compressor with a subsurface water bearing porous rock strata adapted to receive compressed air from said air compressor and to exert a hydrostatic pressure on said air whereby the density of said air remains substantially constant, and a pressure controlled conduit communicating with said porous rock strata whereby a substantially even flow of energy is maintained therefrom.

2,454,059
UMBRELLA
Samuel J. Heaney, Portland, Oreg.
Application July 29, 1947, Serial No. 764,503
3 Claims. (Cl. 135—22)

1. An umbrella handle including a tubular standard having a slot, a sleeve on said standard, lazy tongs operatively mounted within said standard and connected to said sleeve by a pin extending through said slot, means to actuate said lazy tongs to slide the sleeve along the standard, said means including a finger lever pivoted on said standard, and spring means connected to said standard and to said lazy tongs to bias the lazy tongs into collapsed position.

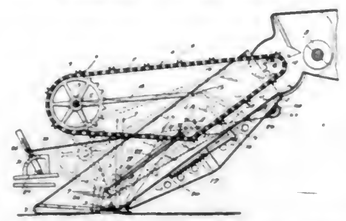
2,454,060
RELAY
Louis Hegy, Burbank, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 16, 1944, Serial No. 554,503
2 Claims. (Cl. 200—87)



1. An electrical relay comprising: a cup-shaped casing containing in the closed end thereof an actuating winding; means including a movable armature constituting a magnetic circuit for said winding; and a contact assembly for actuation by said armature, said contact assembly comprising a plurality of contact elements each having a parametrically continuous base portion fitting within and transversely supported by said casing, and insulator elements interposed between and corresponding in shape to the said base portions of said contact elements and fitting within and transversely supported by said casing, and means compressing said contact and insulator elements together within said casing.

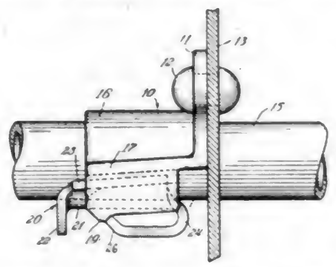
2,454,061
2-ETHYL-HEXYL, N-OCTADECYL TETRACHLOROPHTHALAMIDATE AND INSECTICIDAL COMPOSITIONS CONTAINING THE SAME
Mark L. Hill, Bethel Township, Delaware County, and Herschel G. Smith, Wallingford, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application February 3, 1948, Serial No. 6,018
6 Claims. (Cl. 167—30)

1. The compound, 2-ethyl-hexyl, N-octadecyl tetrachlorophthalamidate.



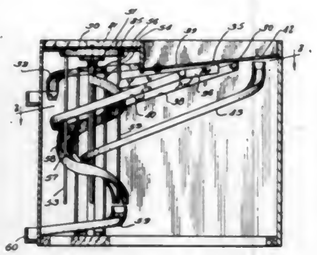
6. An insecticidal composition comprising from about 0.1 to 10.0 per cent by weight of 2-ethyl-hexyl, N-octadecyl tetrachlorophthalamidate and a hydrocarbon solvent therefor.

2,454,062
HIGH-FREQUENCY CONDUCTOR HAVING A LOW IMPEDANCE MOVABLE ELECTRICAL CONTACT DEVICE
Herbert Edward Holman, West Drayton, and Edward Cecil Cork, Ealing, London, England, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application October 2, 1943, Serial No. 504,744
In Great Britain December 17, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires December 17, 1960
7 Claims. (Cl. 178—44)



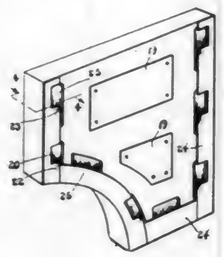
6. Apparatus for use with high frequency electrical oscillations comprising a cylindrical conductor, a conducting piston slidably arranged within said cylindrical conductor, a slidable clamp embracing the outer surface of said cylindrical conductor, said piston being mechanically coupled to said clamp so as to move therewith and to insure that said clamp remains substantially in the same plane as said piston.

2,454,063
REEL AND RAKE APPARATUS FOR COMBINES
Houston N. Irvine, Burlington, Iowa, assignor to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application October 28, 1944, Serial No. 560,779
3 Claims. (Cl. 56—219)



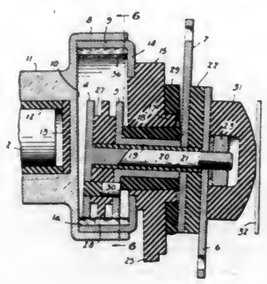
1. A reel and rake apparatus for harvester machines comprising a sickle, an inclined chute leading rearwardly and upwardly from the sickle, a flexible endless belt-like reel and rake member having transverse raking bar members thereon, and guide means for said belt-like member including rotors about which said belt-like member passes, one of said rotors being adjacent and spaced from the upper end of said chute, the second rotor being located at a point midway of the length of said chute and spaced therefrom a distance substantially the same as that of the first rotor, and the third rotor being located adjacent the lower end of said chute forwardly thereof and in substantially the same horizontal plane as the second mentioned rotor, the second mentioned rotor being adjustable longitudinally of the chute and the last mentioned rotor being adjustably mounted for vertical movement.

2,454,064
PIPE ANCHOR
Malcolm S. Johnson, Chicago, Ill., assignor to Illinois Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application November 29, 1945, Serial No. 631,629
9 Claims. (Cl. 248—56)



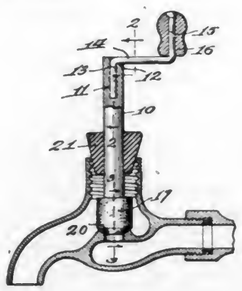
1. A pipe anchor comprising a main body member adapted to be immovably secured in place, having a pipe receiving channel and parallel spaced sides provided with oppositely facing grooves while the lower faces of the sides are provided with off-set surfaces; and a wedge member having a pipe engaging surface with side portions adapted to enter the grooves of the body member and provided on its outer side with off-set laterally disposed extensions adapted to effect interengaging relation with the off-set surfaces of the body member and prevent movement of the wedge member.

2,454,065
SIMULATED BASEBALL PLAYING MACHINE
Wesley A. Johnson, Augusta, Ga.
Application December 7, 1945, Serial No. 633,429
10 Claims. (Cl. 273—88)



1. In a simulated baseball machine including an inclined playing board, apertures in one portion of the machine to receive a projectile, a diamond secured to another portion of said machine, indicia to indicate the relative advance of base runners; the improvement which consists of a stationary elongated trough forming a closed curved inclined path, means at a plurality of levels along said trough to admit a projectile thereto, said means communicating with said apertures, a rotatable table containing said indicia positioned above said trough, a slot in said trough, and means depending from the table through said slot to rotate said table a predetermined distance.

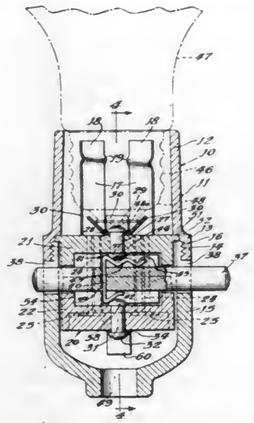
2,454,066
PANEL AND TRIM MOUNTING
Walter F. Johnson, Cincinnati, Ohio
Application October 13, 1944, Serial No. 558,525
4 Claims. (Cl. 296—44)



1. A panel mounting structure for a vehicle door comprising an inner flat panel on the door, a frame adjacent at least two edges of said panel and fastened thereto, notches in the inner edge of said frame, and imperforate recesses in said inner panel underlying only each notch and a portion of the inner frame edge adjacent thereto, a removable relatively rigid flat panel configured to cover said inner panel and frame, gibs incorporating a projecting neck mounted on said removable panel and so positioned as to register with said frame notches and project in said recesses when the removable panel is placed against said frame and to slide under said frame with their necks in contact with the inner edge thereof when said removable panel is slid into its final position.

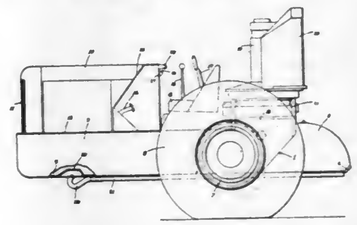
2,454,067
CIRCUIT INTERRUPTING DEVICE
Everard F. Kohl, Lakewood, Ohio
Application May 7, 1945, Serial No. 592,491
16 Claims. (Cl. 200—80)

2. Apparatus of the class described comprising a movable casing containing an electrically conductive liquid, a contact arranged in said casing which is in electrical contact with said liquid when said casing is at rest, means whereby said casing may be moved to separate said contact from said liquid to break said electrical contact, and an electrical resistance material of less specific gravity than said liquid arranged upon the surface of the liquid to minimize arcing when said contact is separated from said liquid.



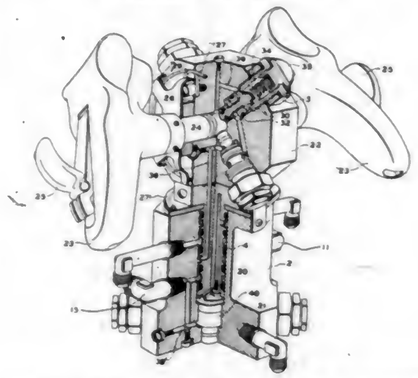
2,454,068
VALVE SEAT GRINDER
William A. Kuhlman, Los Angeles, Calif.
Application December 26, 1946, Serial No. 718,396
2 Claims. (Cl. 51—205)

1. In a valve seat grinding tool a shaft provided in its lower end with a notch, an abrasive body enclosing the lower end of said shaft with a portion embedded in said notch to anchor said body to said shaft, the upper end of said shaft being provided with an axial bore and a radial notch at the upper end of said bore, and a crank having inner end portions seated in said bore and notch.



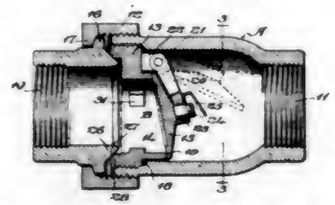
2,454,069
ELECTRIC SOCKET CONSTRUCTION
Theodore G. Lefler, Chicago, Ill.
Application June 24, 1946, Serial No. 678,833
6 Claims. (Cl. 200—51.16)

1. An electric lamp socket comprising means including a plurality of resilient members for supporting an electric lamp bulb in operative position, and a switch unit for controlling the flow of electrical current to such a bulb so positioned in said first named means, said switch unit comprising an upper supporting member and a lower supporting member, said resilient members providing means for holding said supporting members together, a pair of stationary electrical contacts mounted in said supporting members



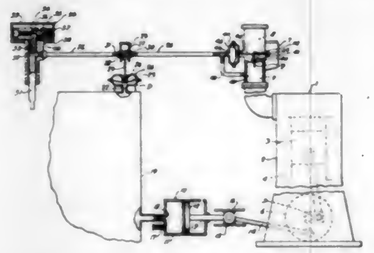
and adapted to be connected to such a lamp bulb and to a suitable source of power, respectively, and a movable electrical contact slidably mounted between said supporting members and movable into and out of interconnecting engagement with said stationary contacts to thereby control the opening and closing of electrical connection between said stationary contacts.

2,454,070
TWO-WHEEL TRACTOR
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau Inc., Stockton, Calif., a corporation of California
Application April 22, 1946, Serial No. 664,079
6 Claims. (Cl. 180—29)



1. A two-wheel tractor comprising a final drive housing having rigid side beams fixed thereon in transversely spaced, forwardly projecting relation, drive wheels mounted on the housing to the sides of the latter, an engine supported between the side beams ahead of the housing, and driving connections between the engine and wheels including a final drive assembly in said housing; there being a fuel tank on the back of the final drive housing and projecting rearwardly therefrom in normal ground clearance relation, said fuel tank being of rigid, heavy-duty construction and of a length to engage the ground and prevent rearward overturning of the tractor about the axis of the wheels.

2,454,071
GUN CONTROL MECHANISM
John P. Lidral and Mitchell M. Berry, Seattle, Wash., assignors to Boeing Airplane Company, a corporation of Delaware
Application May 20, 1944, Serial No. 536,554
5 Claims. (Cl. 137—144)

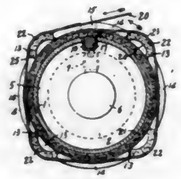


2. Control mechanism for use with an elevating motor and a traversing motor, comprising a stationary block, a traversing motor conduit and an elevating motor conduit connected to said stationary block, an upright shaft journaled in said block, traversing valve means including a plurality of units, each incorporating a valve and a valve seat, carried by said stationary block, distributed about said upright shaft and operatively connected therewith, the valves and valve seats of said units being relatively reciprocable by rotation of said upright shaft, to control flow of fluid through said traversing motor conduit, a movable casing rotatable with said upright shaft, a shaft extending transversely of said casing, elevating valve means including a plurality of units, each incorporating a valve and a valve seat, carried by said casing, distributed about said transverse shaft and operatively connected therewith, the valves and valve seats of said elevating valve means units being relatively reciprocable by rotation of said transverse shaft, to control flow of fluid through said elevating motor conduit, and means establishing communication between said elevating valve means and said elevating motor conduit connected to said stationary block.

2,454,072
COMBINED PIPE UNION AND CHECK VALVE
Fred R. Long, Catawissa, Pa.
Application August 4, 1944, Serial No. 548,089
2 Claims. (Cl. 251—123)

1. A combined pipe union and check valve comprising male and female sleeve elements disposed in end to end relationship to each other, a nut connecting said sleeve elements together, a check valve unit mounted in one of said sleeve elements, said unit including a base having a port, an arm pivoted at one end to said base and having its other end free and provided with an opening, a disk-type check valve having a pin of smaller diameter than said opening extending through said opening to permit rocking movement of said pin therein, said pin having a transverse opening therethrough adjacent its end, quick detachable and replaceable means in said pin opening cooperating with said arm to retain said valve in assembly with the latter for swinging movement therewith to control flow of fluid through said port, and a leaf spring element having two diverging legs, one of said legs being engaged with said pin and retained thereon by said detachable and replaceable means and having its other leg free to engage the inner wall of the sleeve element in which said check valve unit is mounted to cushion opening movements of said check valve.

2,454,073
AIR COMPRESSING SYSTEM
Marion Mallory, Detroit, Mich.
Application September 26, 1945, Serial No. 618,730
5 Claims. (Cl. 230—3)

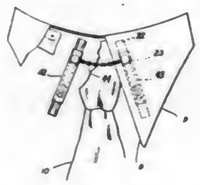


1. A gas compressing apparatus comprising a compressor, an internal combustion engine for driving said compressor and having an intake passageway, a throttle valve for controlling the flow of motive fluid through said passageway, a device actuated by changes of pressure in the intake passageway on the engine side of said throttle valve and connected to said throttle valve for imparting movement thereto, an air bleed for said pressure actuated device controlled in accordance with the engine speed, said air bleed tending to close whenever the engine reaches a predetermined governed speed whereby the pressure actuated device moves said throttle valve toward closed position, a container for storing gas compressed by said compressor, and means responding to a predetermined gaseous pressure in said container for shutting off said air bleed whereby said pressure actuated device responds to intake passageway pressure to move said throttle valve toward idle position.

2,454,074
MANUFACTURE OF DUCT TURNS OR VANES
Henri M. Marc, Roselawn, Ohio, assignor to The Philip Carey Manufacturing Company, a corporation of Ohio
Application February 8, 1946, Serial No. 646,279½
6 Claims. (Cl. 154—117)

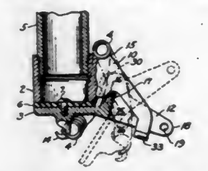
5. A method of making duct turns or vanes comprising winding a convolution of fabric about a mandrel, placing narrow spacing strips longitudinally at circumferentially spaced intervals

about the mandrel upon the convolution of fabric, then winding another convolution of fabric around the first convolution of fabric and over the strips with the convolutions of fabric contacting in zones between the strips, securing the



convolutions together along the zones of contact, severing the resulting structure longitudinally along the zones of contact, and applying adhesive indurating material to the severed longitudinal edges.

2,454,075
STEAM TURBINE LUBRICATING OILS
Robert G. Mastin, Okmulgee, Okla., assignor to Cities Service Oil Company, Bartlesville, Okla., a corporation of Delaware
No Drawing. Application April 2, 1947, Serial No. 738,933
5 Claims. (Cl. 252—50)

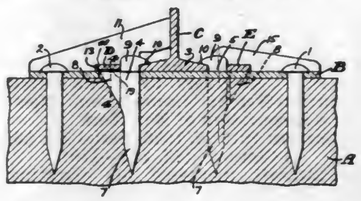


1. A steam turbine oil composition comprising a refined mineral steam turbine lubricating oil having incorporated therein an antioxidant selected from the group consisting of 1-phenyl-3,5,5-trimethyl pyrazoline and 1-phenyl-3-isobutenyl-5,5-dimethyl pyrazoline.

2,454,076
WEAR ACCESSORY
Paul Marx and Artie Abraham, New York, N. Y.
Application May 23, 1946, Serial No. 671,849
10 Claims. (Cl. 2—132)

7. A pin clip device as a collar stiffener or the like comprising a pair of clips, each clip comprising an elongated open-ended casing having a lower and an upper wall portion, the upper wall portion protruding beyond the lower at both ends of said casing, two pins located partly in the interior of the opposite casing ends, respectively, and projecting therefrom with their points which are overlapped by the ends of said upper wall portion, one of said pins being lengthwise shiftable, a spring interiorly of said casing and bearing against said shiftable pin, means accessible from the outside and connected to said pin to retract the latter against the restraint of said spring, an abutment to prevent projection of said pin beyond a predetermined limit, said other pin being rigidly connected to said casing, the upper wall portion including an extension at its end adjacent said rigidly secured pin, said extension being bent back at an angle upon said casing, and a flexible member connecting the free ends of the extensions of both said clips.

2,454,077
VALVE
Norman S. McEwen, Fort Lauderdale, Fla., assignor to Helpy Selfy Service System, Inc., Fort Lauderdale, Fla., a corporation of Florida
Application May 2, 1945, Serial No. 591,477
2 Claims. (Cl. 137—34)



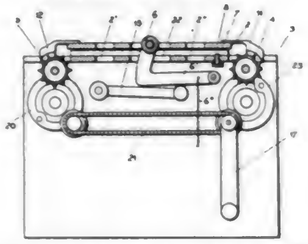
2. A valve comprising a conduit and a closure for one end thereof, said conduit provided with a tongue extending laterally therefrom, the uppermost portion of said tongue formed as a spring receiving pocket, the lower portion of said tongue having an under surface constituting a seat and upon which the closure has contacting oscillatable movement, said closure provided on its under portion with a projection and on its upper portion with a washer for engaging the end of said conduit, said closure further provided with a pair of substantially parallel fingers closely straddling said tongue, the inner ends of said fingers interconnected by a wall having a thin upper edge constituting a fulcrum contactingly engaging the seat of said tongue and about which fulcrum the closure is oscillated by a force applied through said fingers, and a coil spring for maintaining said fulcrum in coengagement with said seat, said spring having its mid-portion bodily seated in said pocket and having its opposite end portions extending downwardly on opposite sides of said tongue with the extremities of said spring removably engaging said projection.

2,454,078
METHYLOL MELAMINE ETHERS AND THEIR MANUFACTURE
Frank Clifton McGrew, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 9, 1941, Serial No. 387,771
11 Claims. (Cl. 260—249.5)

1. A crystalline monomeric ether of trimethylolmelamine with a monohydric alcohol, said alcohol having at least one hydrogen on the carbinol carbon.

2,454,079
RAIL FASTENER
Robert E. Merrell, Spartanburg, S. C.
Application August 16, 1946, Serial No. 691,047
1 Claim. (Cl. 238—294)

A rail fastener comprising a railroad rail chair adapted to receive and support the base of a railroad rail, buttress supports having openings



formed therein, forming a part of the rail chair, said rail chair having spike openings, spikes securing a railroad rail to the chair, enlargements on the rear edges of the spikes, the upper edges being tapered, the outer edges of which lie flush with the upper surface of the plate, a wedge having an inclined edge and having recesses in the under surface thereof, adapted to be driven through the openings in the buttress supports in contact with the enlargements of the spikes, the inclined edge of the wedge bearing against one of the respective walls of each opening, moving the spikes towards the rail, and the tapered portions of the enlargements projecting above the upper surface of the tie plate to lockingly engage with the recesses in the under surface of the wedge member, securing the wedge against displacement.

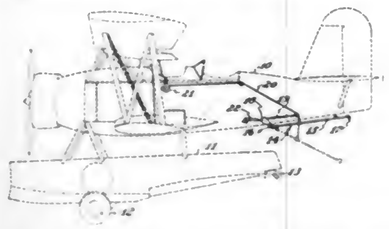
2,454,080

MOVING PICTURE FLASHING APPARATUS

Etienne Noel Mollier, Paris, France

Application August 9, 1946, Serial No. 689,629
In France August 10, 1945
5 Claims. (Cl. 88—16.6)

1. A moving picture apparatus comprising in combination a film bearing two rows of pictures to be flashed alternately, a film-guiding channel provided with a pair of spaced gates located respectively in front of the pictures of either row and with a transversal aperture between the two gates, a projection lens arranged before each gate, a sprocket roller at either end of the said channel adapted to feed the film through, a presser on each sprocket roller adapted to press the film upon the related roller, a guide roller midway of the channel in front of the film and of said transversal aperture in the channel, spring means to urge said roller towards the inside of said aperture and form a film loop, driving means to alternately rotate either roller through a fraction of a revolution in one direction or the other, means to alternately illuminate a picture in each row located in front of the corresponding gate, and means to progressively stop the illumination of one picture in one row while progressively illuminating the next picture in the other row.



2,454,081

ARRESTING GEAR

Eddie Molloy, Buffalo, and Louis G. Raiche, Kenmore, N. Y., assignors, by mesne assignments, to Curtiss-Wright Corporation, New York, N. Y., a corporation of New York

Application July 25, 1935, Serial No. 33,046
6 Claims. (Cl. 244—110)

1. In aircraft including an arresting hook assembly pivoted to the aircraft for vertical oscillation, a device for preventing hook bouncing upon impact thereof with a landing surface comprising cylinder means and piston means engaging said cylinder means, one said means being attached to the aircraft and the other to the arresting hook, said cylinder having spaced and interconnected ports for by-passing air from

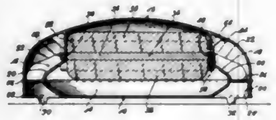
one end of said cylinder to the other upon movement of said piston to a position between said ports.

2,454,082

ALKENYL ALKALI METAL COMPOUNDS

Avery A. Morton, Watertown, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York

No Drawing. Application October 17, 1945, Serial No. 622,941
6 Claims. (Cl. 260—665)



1. The method of making alkenyl alkali metal compounds which comprises maintaining an alkali metal compound selected from the group consisting of alkyl sodium and alkyl potassium in intimate admixture with a mono-olefinic aliphatic hydrocarbon containing at least three carbon atoms.

2,454,083

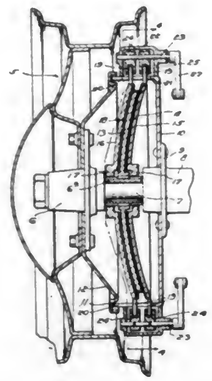
SOAP HOLDER

Joseph J. Nemeth, New York, N. Y.

Application March 1, 1945, Serial No. 580,349
11 Claims. (Cl. 45—28)

1. In the combination of a soap cake and a holder therefor, a rigid core for said cake having exposed end portions; means in said holder adapted to support said soap cake by the end portions of said core; and a cover for said holder having means adapted to contact the end portions of said core to space said cover from said soap cake.

2,454,084



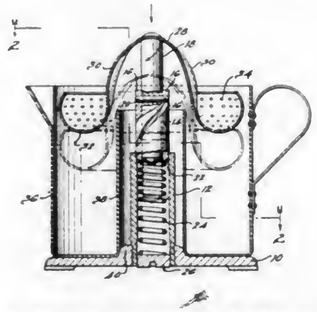
FRICTION DISK BRAKE FOR AUTOMOBILES AND THE LIKE

Edward L. Page, Flint, Mich.

Application September 13, 1946, Serial No. 696,854
2 Claims. (Cl. 188—72)

1. A brake for a rotating member comprising a disc secured to said member for rotation therewith, a pair of discs slidably mounted on said member at opposite sides of said rotatable disc, a stationary housing enclosing said discs and having a slot positioned transversely of the edges of the discs, tongues on the slidable discs projecting through said slot to secure the sliding

discs against rotation, and cams rockably mounted on said housing and engaging the



tongues to move said pair of discs into and out of braking contact with said rotatable disc.

2,454,085

JUICER WITH HAND RECIPROCATED ROTARY REAMER

Joshua Patrick, Detroit, Mich.

Application April 28, 1945, Serial No. 590,818
1 Claim. (Cl. 146—3)

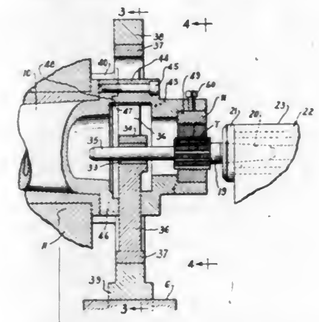
A juice extractor comprising a base, a central tubular member projecting upwardly from the face of said base, a sleeve carried in the upper open end of said tubular member, an adjustable closure member for the lower open end of said tubular member, said sleeve having a spiral slot in the wall thereof extending through the upper open end of said sleeve, a rod slidably mounted in said sleeve, a pin carried by said rod received in the slot of said sleeve, resilient compression means between the lower end of said rod and said adjustable closure member, a conically shaped ribbed head carried at the upper end of said rod, said head having a semi-circular flange at its outer edge and provided with a plurality of apertures, and a removable receptacle on said base having an open ended sleeve portion surrounding said tubular member extending from said base to within the semi-circular portion of said head and having an outer sleeve portion extending from said base above the semi-circular portion of said head having its lower end integrally connected through a base portion to the lower end of the sleeve portion of said receptacle.

2,454,086

BALL-POINT WRITING INSTRUMENT

Robert W. Randolph, Milton, Wis., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin

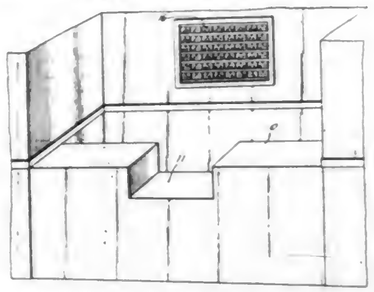
Application August 16, 1946, Serial No. 690,971
18 Claims. (Cl. 120—42.03)



1. A ball-point writing instrument comprising a point-and-cartridge unit including an ink reservoir, a ball writing element, and means for feeding ink from said reservoir to said writing element, housing means for said unit including a barrel, an actuating member mounted for turning movement about the axis of said barrel and having at least a portion exposed for manual manipulation, and means driven by said actuating member for effecting relative movement between said unit and said housing means between a position in which said writing element is exposed for writing and a position wherein said housing means substantially incloses said writing element, respectively.

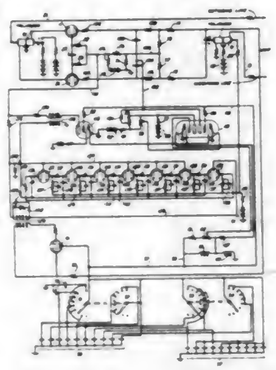
2,454,087

INTERNAL THREAD MILLING MECHANISM



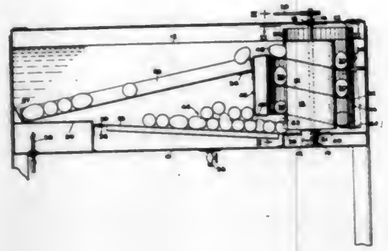
Stafford M. Ransome, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois

Application April 19, 1945, Serial No. 589,128
9 Claims. (Cl. 90—11.64)



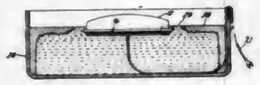
1. An internal thread milling mechanism comprising, in combination, a rotary work spindle supported for transaxial movement, a work holder adapted to support a workpiece and having a plurality of peripherally spaced connecting lugs removably secured to one end of said spindle, a rotary tool spindle mounted for axial feed in a direction generally parallel to the axis of said work spindle and adapted to support a rotary cutting tool for engagement with the interior of the workpiece, said tool spindle having an axial pilot adapted to extend longitudinally from the free end of said cutter inwardly of the workpiece, an outer bearing ring freely encircling the exterior of said work holder, a coaxial boss slidably and rotatably receiving said pilot and a plurality of arms connecting said boss to said ring and extending freely outwardly between said connecting lugs, and a stationary bearing support for said ring.

2,454,088
REGISTRATION DESK WITH MAIL INDICATING SYSTEM
Mason G. Rapp, Wilmette, Ill.
Application December 15, 1945, Serial No. 635,166
1 Claim. (Cl. 177—311)



In combination, a registration desk having a registration platform, numbered mail receptacles adjacent the platform within reach of an attendant behind the desk and invisible and out of reach from a position in front of the desk, a correspondingly numbered flashboard in spaced relationship at the rear of the desk and visible from a position in front of the desk, an electric light adjacent each number on the flashboard and a switch electrically communicating with each such light and located adjacent the correspondingly numbered receptacle in the desk.

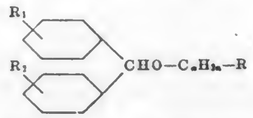
2,454,089
REGENERATIVE REPEATER
Wilton T. Rea, Manhasset, and Jefferson R. Wilkerson, Bayside, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 6, 1942, Serial No. 460,948
26 Claims. (Cl. 178—70)



1. In a telegraph signal repeater, a signal responsive relay, a normally inactive impulse generator, means controlled by said relay for setting said generator in operation, a signal transmitting relay, means controlled jointly by said signal responsive relay and said impulse generator for operating said transmitting relay, means for counting the impulses generated by said impulse generator, and means operated by said counting means upon counting a predetermined number of impulses for stopping said generator.

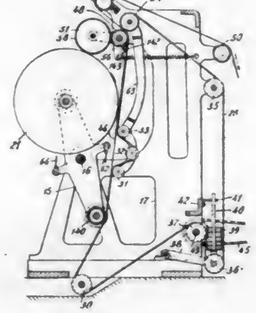
2,454,090
EGG WASHER
Walter J. Reading, Buffalo, N. Y.
Application July 28, 1944, Serial No. 546,969
7 Claims. (Cl. 15—3.15)

1. An egg cleaning device comprising a tank adapted to contain an egg cleaning solution, a vertically arranged cylindrical wall mounted within said tank and having its lower portion submerged in said solution, the said wall comprising a plurality of longitudinally extending separable staves, means for resiliently restraining said staves against outward movement to normally maintain said wall at predetermined diameter, a rotatable brush submerged in said solution and mounted in spaced relation to the inner surface of said wall, a stationary helical ramp carried by said tank and mounted in the space between said wall and said brush, egg feeding means mounted in the bottom of said tank in said solution for initially wetting the eggs with the solution and for feeding them to the lower end portion of said wall and to the receiving end of said ramp, and means located within said tank at the discharge end of said ramp and submerged in said solution for discharging eggs from the top end portion of said wall into said tank.



2,454,091
HEATER FOR LIVESTOCK WATERING TANKS
George A. Rietz, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 20, 1945, Serial No. 629,788
10 Claims. (Cl. 219—38)

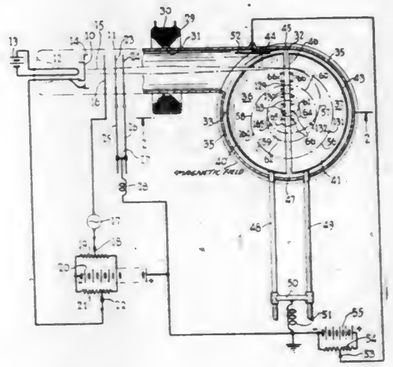
3. A heater for livestock watering tanks comprising a buoyant body arranged to float on the water in the tank, and electric heating means carried by said body extending substantially completely around the outside of said body and arranged to heat the water in proximity to said body so as to maintain said body free of ice, said body being of such size and shape as to adapt it to be depressed by the livestock to obtain access to the water in the tank, and electric supply conductor means for said heater secured to said body so as to serve as an anchor for said body.



2,454,092
BENZHYDRYL AMINO ETHERS
George Rieveschl, Jr., Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application June 2, 1947, Serial No. 751,983
8 Claims. (Cl. 260—243)

1. A compound of the class consisting of a free base, its acid addition salts, and hydrocabon halide, hydrocarbon sulfate and hydrocarbon sulfonate quaternary salts, said free base having the formula,

where n is an integer of 2 to 6 inclusive, R is a member of the class consisting of piperidino, morpholino, thiomorpholino and pyrrolidino radicals and R_1 and R_2 are members of the class consisting of hydrogen, halogen, lower alkyl and lower alkoxy.

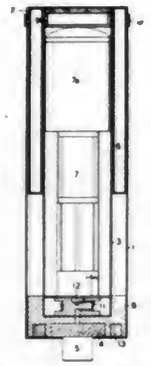


2,454,093
WEB SPLICING DEVICE
Oscar C. Roesen, Scarsdale, N. Y., assignor to Wood Newspaper Machinery Corporation, Plainfield, N. J., a corporation of Virginia
Application February 6, 1945, Serial No. 576,477
17 Claims. (Cl. 242—58)

1. In web splicing apparatus, in combination with a running web and a new web roll rotatably mounted with its cylindrical surface substantially parallel to the running web and movable toward the running web, means for accelerating the new roll to a surface velocity approximating the speed of the running web comprising rotary means driven solely by the running web and engageable with the surface of the new roll when it is moved toward the running web.

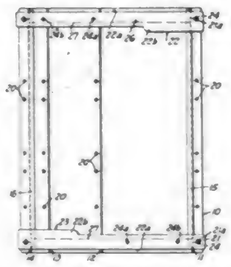
2,454,094
ELECTRON DISCHARGE DEVICE FOR PRODUCING ELECTRIC OSCILLATIONS
Adolph H. Rosenthal, New York, N. Y., assignor to Scophony Corporation of America, New York, N. Y., a corporation of Delaware
Application January 21, 1944, Serial No. 519,130
8 Claims. (Cl. 250—36)

1. An electric discharge device for producing electric oscillations, comprising substantially an envelope including two communicating spaces, an electron gun in the first of said spaces for directing an electron beam into the second of said spaces, means for modulating within said first space the velocities of the electrons of said beam to form recurrent electron concentrations within said second space at predetermined distance from said modulating means, two hollow electrodes arranged in said second space, an aperture in one of said electrodes facing said first space so that said electron beam can enter therethrough the cavity of said electrode, said electrodes arranged so that their cavities communicate and their adjacent edges are narrowly spaced to form a gap in a plane essentially perpendicular to the path of said beam, means for inducing a



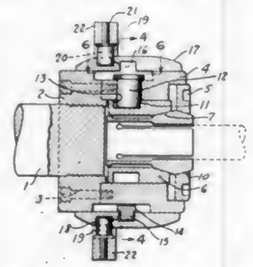
magnetic field of predetermined strength passing said second space and the cavities of and gap between said electrodes, said field substantially perpendicular or slightly inclined to the path of said beam and charge concentrations formed therein to cause the electrons comprised by the latter to spin in circular orbits within the space of said communicating cavities, a resonating circuit connected with said electrodes to produce across said gap an electric field component of alternating polarity, said circuit tuned to the output frequency and controlling said field component to decelerate the electrons of each concentration crossing said gap, and collecting electrodes for said decelerated electrons arranged close to or inside said gap.

2,454,095
FIGURE BASE
Louise K. Sandlovich, Lincoln, Nebr.
Application November 14, 1946, Serial No. 709,843
5 Claims. (Cl. 248—194)



5. The combination of a figure having feet with toe portions and a figure supporting base including a flat bottomed block having a recess adapted for removably retaining the feet of the figure, and retaining members extending transversely above and across portions of said recess to engage toe portions of said feet preventing rearward tilting of the figure.

2,454,096
MEANS FOR DISCHARGING ROCKETS
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England, assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, England, a British company
Application July 22, 1944, Serial No. 546,162
In Great Britain May 11, 1943
3 Claims. (Cl. 102—7)



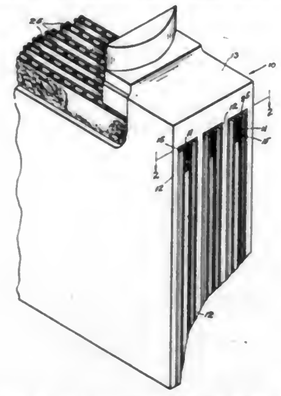
1. A device adapted to be dropped from aircraft into water and to discharge a rocket when in the water, comprising an inner casing, a buoyancy chamber on said inner casing, a rocket in said inner casing, an outer casing surrounding at least the lower part of said inner casing and buoyancy chamber, an igniter on said outer casing adapted to be operated after the device strikes the water, a burster arranged to be ignited by said igniter, a delay fuze arranged to be ignited by said burster, a second burster arranged to be ignited by said delay fuze, whereby upon explosion of said first-mentioned burster, said inner casing is ejected from said outer casing and upon explosion of said second burster said rocket is ejected from said inner casing and simultaneously ignited.

2,454,097
PHOTOGRAPHIC PRINTING EASEL
Floyd V. Schleimer, San Francisco, Calif.
Application March 2, 1946, Serial No. 651,444
3 Claims. (Cl. 88—24)

1. In a photographic enlargement easel, a base, a fixed flanged guide adjacent one side edge of said base, a second strip-like flanged guide adapted to be positioned in any one of a plurality of predetermined positions parallel to said first named flanged guide, the flanges on said guides forming masking media adapted to overlie the side edges of enlarging paper placed on said base, a pair of reversible opaque masking members extending the width of said base, a plurality of pins adjacent the side edges of said base, openings in said masking members adapted to receive selected pins so that said opaque masking members may be placed parallel to each other over said base at a desired distance apart, at least one of said end masking media having one straight edge and one irregular edge whereby either a straight or irregular edge may be caused to overlie the adjacent edge of said enlarging paper.

2,454,098
COLLET CHUCK
John G. Schmidt, Detroit, Mich., assignor to Arthur V. Whittington, Detroit, Mich.
Application November 30, 1943, Serial No. 512,356
11 Claims. (Cl. 279—50)

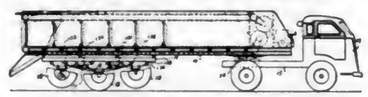
8. A chuck comprising a tubular retainer adapted to be rigidly attached to a rotatable spindle, a collet mounted in said retainer, a collet actuating bushing mounted to slide axially on said collet, cams mounted to turn on radial axes in said retainer and having portions engageable with said bushing to move the same axially, a sleeve slidable axially upon said retainer, means operably connecting said sleeve to said cams to turn the same upon axial movements of said sleeve, and means for shifting said sleeve.



2,454,099
PROCESS FOR CLEAVING THE —S—S— GROUP IN DIALKYL DISULFIDES
Frank K. Signaigo, Brandywine Hundred, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 24, 1944, Serial No. 523,744
5 Claims. (Cl. 260—609)

1. A process for cleaving the —S—S— group in dialkyl disulfides of the general formula R—S—S—R, wherein the R substituents are alkyl groups, which process comprises heating an olefin with an approximately equimolar amount of such a dialkyl disulfide in the presence of a sulfactive hydrogenation catalyst at a temperature within the range of from 125° C. to 250° C. under autogenous pressure.

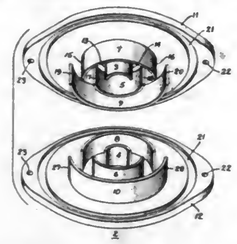
2,454,100
BATTERY PLATE SEPARATOR
Games Slayter, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Application December 20, 1943, Serial No. 515,039
4 Claims. (Cl. 136—145)



1. A battery plate separator comprising a pair of superposed fibrous glass mats, the mats being

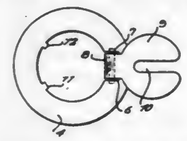
spaced apart with adjacent faces of said mats in uniformly spaced-apart relation over their substantially entire area by a plurality of rods of synthetic resin interjacent said mats and bonded in

line contact to the inner faces of both mats, said rods being substantially circular in cross-section and being arranged in laterally spaced apart relation to provide for maximum circulation of electrolyte between the mats.



2,454,101
DUMPING VEHICLE
Edwin B. Snead, Austin, Tex.
Application March 18, 1946, Serial No. 655,204
21 Claims. (Cl. 214—83.22)

1. A dumping vehicle including, a portable body having an imperforate floor, endless chains carried by said body, spaced transverse partitions across the body in close proximity to the floor movable longitudinally of said body carried by said chains, each partition extending continuously from one side of the body to the opposite side thereof, whereby a batch of loose material may be wholly confined between adjacent partitions and moved progressively rearwardly as preceding batches are discharged from the body, means for driving the chains, and means for automatically stopping travel of the chains when a partition reaches a predetermined dumping position.



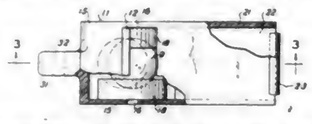
2,454,102
ELECTRIC CAPACITOR
John D. Stacy, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application January 2, 1948, Serial No. 266
10 Claims. (Cl. 175—41)

1. In a capacitor, a pair of identical electrode units, each of said units comprising a plurality of spaced and electrically interconnected conducting electrodes projecting from a common supporting plate and concentrically disposed about a common axis, said supporting plates spaced a predetermined distance and the electrodes of one unit projecting toward, interleaved with and spaced from the electrodes of the other unit, each of said electrodes comprising a surface of curved configuration having an angular extent of less than 180° and each of the electrodes of one unit located on opposite sides of a plane passing through said common axis from an identical elec-

trode of the other unit so that corresponding sides of said identical electrodes will face each other and corresponding points of said identical electrodes are an equal distance from said plane.

2,454,103
FASTENER
Stanley T. Swidersky, Houtzdale, Pa.
Application June 28, 1946, Serial No. 680,262
1 Claim. (Cl. 24—245)

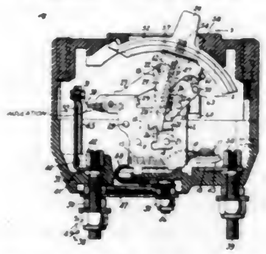
A fastener consisting of an annularly recessed cap, locking fingers extending inwardly from the rim of said cap and overlying the recessed interior thereof, a hinge socket in said cap, a circular securing plate pivotally hinged in said socket, said plate fitting within the annular recess and engaged by said locking fingers, and a headed button engaging slot in said securing plate.



2,454,104
PREPARATION OF N^1-ACYL SULFANILAMIDE
William B. Tarpley, Jr., Chatham, N. J., and August I. Ryer, New York, N. Y., assignors to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey
No Drawing. Application December 10, 1943, Serial No. 513,716
8 Claims. (Cl. 260—397.7)

1. Process for the manufacture of N^1-acyl sulfanilamides which comprises treating sulfanilamide in an approximately anhydrous solvent with a strong mineral acid of the class consisting of perchloric, chlorsulfonic and sulfuric acids, to form an acid addition product at the p-amino group and subjecting the compound to the action of an acylating agent to form the N^1-acyl derivative.

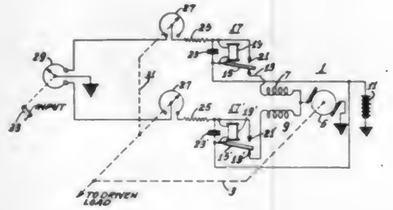
2,454,105
MULTITONE WHISTLE
Josephus Thompson, Covington, Ohio, assignor of one-third to Grossman Music Company, Cleveland, Ohio, a partnership
Application June 26, 1946, Serial No. 679,322
1 Claim. (Cl. 46—179)



A multi-tone whistle, comprising in combination, a body member including a cylindrical sound chamber including walls at each end thereof and parallel to each other, the said chamber having

a transverse opening therein extending between the said parallel walls, the said body member also including a mouth piece integral therewith and having an air passage opening into the said transverse chamber opening, the said body member also including a blade portion integral therewith at the said transverse chamber opening and being spaced from and opposite to the said air passage opening, each of the said walls having an annular race on the inner side thereof aligned with

and facing each other and each wall also having a central hole therein concentric with the circular race proximate thereto, and a ball in the sound chamber rollable on the said aligned races and revolvable around the said hole and producing a smooth tremolo sound effect when air is blown through the said mouth piece against the said blade, either or both of the said holes being closable as desired to produce different sound pitches when the whistle is blown.



2,454,106
CIRCUIT BREAKER
Fred G. von Hoorn, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Original application June 25, 1943, Serial No. 492,284, now Patent No. 2,422,508, dated June 17, 1947. Divided and this application April 7, 1947, Serial No. 739,765
5 Claims. (Cl. 200—116)

1. The combination in a circuit breaker of a pivoted trip arm normally held by a current responsive means in a predetermined angular position, means for moving said trip arm when released by said current responsive means to open the circuit breaker, a pivoted operating member movable in the same angular direction to close the circuit breaker as said trip arm moves to open said circuit breaker, and a lever pivotally mounted at an intermediate point of said lever and having its ends arranged for abutting engagement with said trip arm and said operating member respectively for causing simultaneous movement of one by the other.

2,454,107
SERVO MECHANISM
Sidney Wald, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 31, 1947, Serial No. 794,978
2 Claims. (Cl. 318—28)

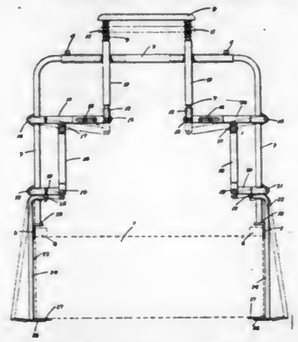
2. A follow-up system including an electric motor, means for energizing said motor to develop a torque in one direction of rotation, said means including a periodic switch having an actuating circuit, said switch remaining open during intervals of substantially constant lengths and remaining closed during intervals of lengths which depend upon the energization of said actuating circuit; furtner means, similar to said first mentioned means for energizing said motor to develop a torque in the opposite direction of rotation; a bridge network including the actuating circuit of said first mentioned means and that of said last mentioned means in two of its arms,

and two variable resistors connected respectively in series with said means; an adjustable voltage divider constituting two further arms of said bridge circuit, and means responsive to rotation of said motor to adjust said two variable resistors differentially, whereby said motor tends to maintain said bridge circuit in balance with the ratio between the lengths of the opened and closed periods of said first periodic switch equal to the ratio between the lengths of the opened and closed periods of the other of said periodic switches.

2,454,108
PREPARING ORGANIC SULFIDES
Cheves T. Walling, Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 16, 1944, Serial No. 522,632
10 Claims. (Cl. 260—399)

1. The method of preparing organic sulfides which comprises reacting an organic mercaptan which, except for the sulfur of the mercapto group, consists of carbon and hydrogen with an aliphatic ester of a long chain fatty acid containing at least one olefinic double bond in the presence of elementary selenium in a proportion of from about 1 mol per cent to about 10 mol per cent based on the reactant which is employed in the smallest molar quantity in a closed vessel at temperatures of from about 150° C. to about 250° C.

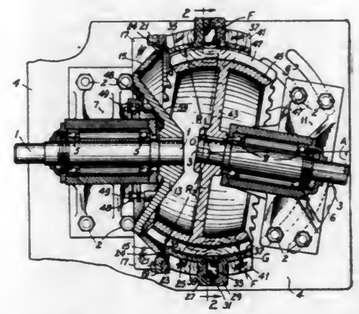
2,454,109
CRAYON HOLDER
Harry F. Waters, New York, N. Y.
Application March 19, 1945, Serial No. 583,459
3 Claims. (Cl. 120—18)



1. As a unitary article of manufacture, a crayon holder comprising a substantially tubular member consisting of a plurality of adjacent strips of material arranged in parallel relationship and each following a spiral path about a common central axis, said member being adapted to receive therein in slidable relationship a crayon, and a manipulation member designed for attachment to the crayon and projecting outwardly between adjacent convolutions of said strips a slight

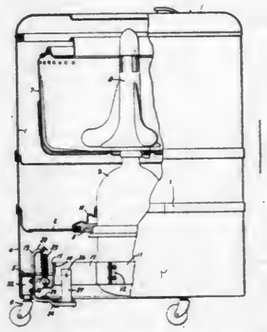
distance beyond the confines of the tubular member, said tubular member forming a shank for

the crayon holder adapted for direct contact with the fingers of the user.



2,454,110
LUG BOX LIFTER
Paul Weaver, Rio Vista, Calif.
Application November 8, 1945, Serial No. 627,312
5 Claims. (Cl. 294—115)

1. A lug box lifter comprising a bail-like handle having spaced, depending arms, a hand grip disposed adjacent and parallel to the top of the handle above the latter, vertical plungers depending from the hand grip, vertical guide sleeves on the top of the handle, the plungers slidably extending through the guide sleeves, a leg unit depending from each arm and pivoted in connection therewith for swinging motion in a plane lengthwise of the handle, inwardly projecting feet on the leg units at the lower end adapted to engage beneath opposite ends of a lug box when the leg units are in a predetermined position, and means between the plungers and corresponding leg units operative to swing the leg units to and from said position upon reciprocation of said plungers.



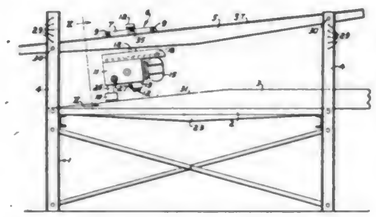
2,454,111
UNIVERSAL ANGLE DRIVE
Martin P. Winther, Waukegan, Ill., assignor to Martin P. Winther, Waukegan, Ill., trustee
Application November 14, 1946, Serial No. 709,837
4 Claims. (Cl. 172—284)

4. A constant velocity-ratio universal coupling for effecting a substantially angled mechanical drive comprising male and female driving and driven members rotary on angled axes having an intersecting point, one of said members having flux-concentrating polar members the outer peripheries of which are defined spherically with a center substantially at said point, the other member having an adjacent relatively uninterrupted inductor surface also defined spherically with a center substantially at said point, the resulting spherically defined polar peripheries of the flux-concentrating polar members and said spherically defined inductor surface being spaced by means of a constant spherical air gap irrespective of the angle of said axes, at least one annular by looped excitation coil carried on one of said members in a plane substantially perpen-

dicular to its axes of rotation and generating a toric flux field interlinking both of said members and passing through said polar members and through said inductor surface, the inductor surface and the polar members being magnetic, means for variably exciting said field coil, and means for adjustably maintaining said axes for intersection at said point, the spherical extents of said inductor surface of said polar members in the directions of their meridians being such that interlinking of the toric flux field with both of said members is substantially uninterrupted over the available range of adjustments of said axes.

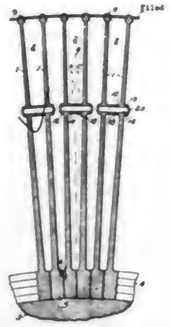
2,454,112
SUPPORT FOR SPIN BASKET FOR CLOTHES-WASHING MACHINES AND THE LIKE
Thomas T. Woodson, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application February 24, 1947, Serial No. 730,308
6 Claims. (Cl. 210—72)

1. In combination, a unitary structure comprising a spin basket, a casing and mechanism in the casing for rotating the basket; a support



surrounding the lower end of the structure in radially spaced relation thereto, circumferentially spaced radially extending arms carried by the lower end of the structure, brackets carried by the support having ends positioned over the ends of said arms, tension spring means connecting the ends of the arms to the ends of said brackets, and friction damping means carried by said support engaging the sides of said arms whereby they serve to dampen vibration in a vertical direction.

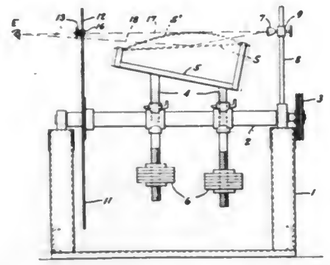
2,454,113
VIOLIN BRIDGE
William J. Ake, Cincinnati, Ohio
Application December 5, 1945, Serial No. 633,000
3 Claims. (Cl. 84—309)



1. A violin bridge consisting of, laminations of wood glued together to provide a string supporting upper edge and a lower supporting edge for contact with the top of the violin, one of said laminations being thin at the top and relatively thicker at the bottom and having its grain disposed at right angles to the string supporting edge and the other of said laminations being thick at the top and thin at the bottom and having its grain disposed at right angles to the grain of the first lamination.

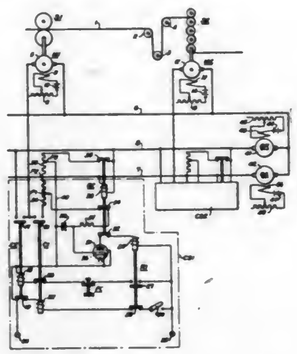
2,454,114
SCARFING MACHINE
George Norman Albree, Winchester, Mass.
Application January 18, 1945, Serial No. 573,441
2 Claims. (Cl. 144—118)

1. A machine of the class described comprising a supporting frame, a stationary rigidly supported work-supporting bed mounted on said frame and extending from one end to the other thereof, a pair of rigid parallel tracks having a relatively widely spaced relation, means rigidly supporting said tracks directly above the bed, a carriage movable on said tracks, a column rigid with and depending from the carriage and having its axis at right angles to the plane of the tracks, a machine head mounted on said column for bodily turning movement thereabout, a tool-carrying shaft depending from the machine head and situated parallel to but out of line with the column, a cutting tool mounted on the lower end of said shaft, a tool operating motor mounted on said machine head and situated on the opposite side thereof from the tool-carrying shaft, and means connecting said motor to said shaft.



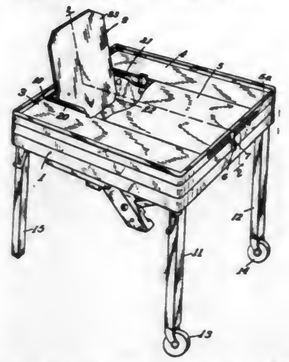
2,454,115
TURBINE BLADING
Robert C. Allen, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 2, 1945, Serial No. 586,110
7 Claims. (Cl. 253—77)

1. In a turbine rotor or the like provided with a row of relatively long blades each having an enlarged root part presenting plain oppositely facing surfaces abuttingly engaged with the like root-part surfaces on adjacent blades to thereby position the opposed fluid confining faces of the blades in correctly spaced passage-forming relation, means rigidly uniting said blades in pairs with their opposed fluid confining faces disposed in correctly spaced passage-forming relation as determined by the abutting engagement of their said root parts comprising a part of each blade remote from its root part enlarged so as to provide a pair of oppositely extending alined integral projections, said projections presenting plain end surface portions disposed in spaced opposed relation with respect to the plain end surface portions of the projections on adjacent blades, said blades each having a rivet-receiving hole intersecting the respective plain end surface portion and extending through the enlarged portion of the blade through the other side thereof with the holes through adjacent blades disposed in substantial alinement, a filler piece disposed between and end-abutting the spaced opposed end surface portions of the projections presented by the opposed faces of each pair of blades, said filler piece having a hole therethrough alined with the holes extending through the projections abutting same, and a rivet member extending through said alined holes and rigidly uniting each pair of blades with the projections on the opposed faces thereof disposed in firm end-abutting engagement with the opposite ends of the filler piece interposed therebetween.



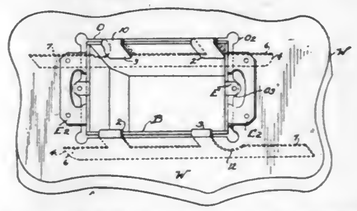
2,454,116
APPARATUS FOR CONTROLLING CENTRIFUGAL FORMATION OF SHEET MATERIAL
Robert S. Ames, Mauritz P. Peterson, and John C. Feldscher, Akron, Ohio, assignors to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application June 14, 1946, Serial No. 676,694
9 Claims. (Cl. 18—19)

3. Apparatus for forming a heat softened sheet including a jig for supporting edges of the sheet, means for rotatably supporting the jig, an adjustably positioned stationary light source, a sighting disc rotatable with the jig, said disc having a sighting aperture through which the operator can periodically, during the rotation of the disc, see the light source and the reflection of the light source on the sheet being formed, a sighting means adjustably carried in association



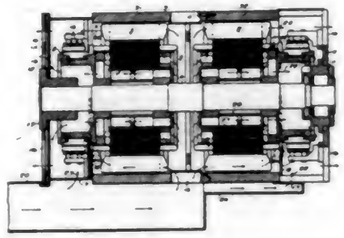
with the aperture in the sighting disc, said sighting means and light source being aligned to define the line to which the sheet is to be shaped, and means to rotate the jig to centrifugally shape the sheet substantially until the reflection of the light source verges into the line between the light source and the sighting means.

2,454,117
BUS TRANSFER SYSTEM
Earl B. Ankenman, Braintree, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 28, 1947, Serial No. 731,510
9 Claims. (Cl. 318—393)



1. A system for transferring a direct-current motor from starting to running connections, comprising voltage-responsive control means responsive to the occurrence of a given low differential voltage between running and starting connections, current-responsive control means responsive to the occurrence of a given low motor current, electromagnetic contactor means having contacts for switching the motor from starting to running connections and coil means for controlling said contacts, an electronic trigger tube having a plate circuit connected with said coil means and having a trigger circuit connected with said voltage-responsive control means and said current-responsive control means for triggering said tube only when both said control means have responded to said given voltage and current respectively.

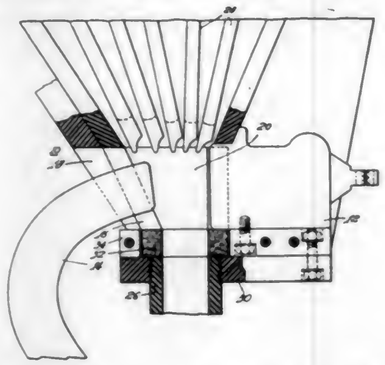
2,454,118
COMBINATION TABLE AND CHAIR
Ralph S. Athey, Tarentum, Pa., assignor to Baby Haven Manufacturing Company, Brackenridge, Pa., a corporation of Pennsylvania
Application April 23, 1947, Serial No. 743,258
9 Claims. (Cl. 155—123)



1. A table having a top provided with an opening, means for supporting said table and secured to the underside thereof, a chair, means for slidably supporting said chair within said opening, means for allowing introduction of said chair into said opening from above said top, said chair including a back rest, said first-named means including guiding means for guiding the seat of said chair horizontally below the surface of said table after said chair is introduced into said opening from above the table top to adjustably vary the size of said opening and accommodate different sized infants in said chair, the removal of the chair providing an unobstructed opening whereby a panel may be placed on said table top to cover said opening.

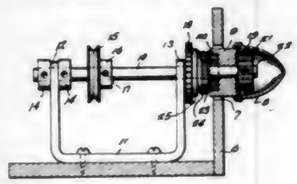
2,454,119
SWITCH BOX SUPPORT
Earl B. Atkinson, Bay Village, Ohio
Application June 6, 1947, Serial No. 752,973
2 Claims. (Cl. 248—27)

1. A switch box securing device comprising a flat bar of stiff but somewhat ductile metal having a length several times that of its width, and having spaced securing fingers integral therewith and extending from one edge, and adapted to be bent over the edge of the box and have their ends engage the inside of the same, the bar extending each way from the spaced apart fingers a distance sufficient to provide substantial engagement with the back of a wall into which the switch box is fitted, and having a sloping surface at one end of the bar and a cutaway portion at the juncture between the remote finger and the adjacent edge of the bar to facilitate inserting the bar edgewise beside the box in its receiving opening.



2,454,120
DUAL GENERATOR VENTILATION
Clarence A. Atwell, Pittsburgh, and Erich O. Mueller, Irwin, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 30, 1947, Serial No. 745,024
4 Claims. (Cl. 171—252)

1. A dynamo-electric machine comprising: a stationary field-member having a tubular outer frame-portion which provides a magnetizable yoke-member, a plurality of salient pole-members projecting inwardly from the yoke-member, a rotatable shaft, an armature-member carried by the shaft in cooperative relation to the field-poles, a commutator-member carried by the shaft at the front side of the armature-member, said field-member carrying brushes bearing on said commutator-member, said commutator-member having a smaller outer diameter than said armature-member, said tubular outer frame-portion having one or more front-end air-inlet perforations radially opposite the inner end of said commutator-member, said frame having a front end-member having one or more openings for providing an exhaust-vent or vents for a substantially axially moving stream of exhaust-air from the machine, means for providing a supply of ventilating-air at the rear end of the machine, whereby a stream of cooling-air flows axially through the machine, past the salient pole-members in the annular space between the tubular outer frame-portion and the outer diameter of the armature-member, then over the commutator-member and out through said exhaust-vent or vents, and means for bleeding off a relatively small volume of air from said rear-end supply of ventilating-air, outside of the tubular outer frame-portion, and directing it radially into the machine toward the commutator-member through said front-end air-inlet perforation or perforations.

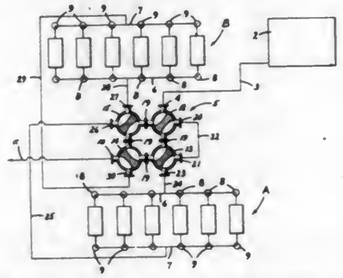


2,454,121
CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, and Donald C. Harker, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,400
7 Claims. (Cl. 200—148)

1. An electric circuit interrupter comprising, in combination, conductor means between which an arc is formed on interruption of the circuit, arc extinguishing and confining means disposed along the path of the arc from which an arc extinguishing medium can be evolved due to the heat of the arc for extinguishing the same, and a blast tube for conveying and directing a gaseous medium for blowing the arc into the arc-extinguishing and confining means, at least that portion of the blast tube nearest the conductor means being composed of an insulating, non-moisture absorbing, non-vapor glazing, thermal

shock-resisting porcelain type ceramic having less than 65% silica.

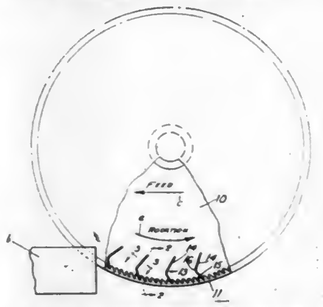
2,454,122
SELECTIVE SINGLE CONTROL MECHANISM
Fred H. Barger, Dayton, Ohio
Application May 23, 1945, Serial No. 595,460
2 Claims. (Cl. 192—48)



1. A selective control mechanism for operating a plurality of motion transmitting members mounted behind a panel selectively by means of a single control member arranged in front of the panel, comprising a shaft mounted behind the panel provided with a portion projecting through the panel, motion transmitting members on said shaft, one of said members being mounted fixedly and one of said members being mounted loosely on said shaft, a coupling member fixed on the shaft portion projecting through said panel, an axially shiftable control member and a hand operated knob associated with the same loosely mounted on the portion of the shaft projecting through the panel between the aforementioned coupling member and the loosely mounted motion transmission member, means for effecting a rotational coupling formed on each side of said axially movable member and coupling means engageable therewith on said fixed coupling member and on said loosely mounted transmission member.

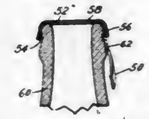
2,454,123
ENAMEL COMPOSITION
Charles J. Bartholomew, Birmingham, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
No Drawing. Application July 22, 1944, Serial No. 546,213
7 Claims. (Cl. 260—33.6)

1. A baking enamel comprising, an alkyd resin and a volatile hydrocarbon thinner having a boiling point of less than 200° C., and from 2–10% kerosene based on the combined weight of the other components of the enamel which, upon the initial application of the baking heat, causes the enamel to flow forming a smooth surface and which, upon the remaining application of said baking heat, dries and leaves said resin otherwise unaffected thereby, said kerosene having a boiling range above the boiling range of said thinners.



2,454,124
SERIES FILTRATION
Edwin T. Birsch and William D. Silcox, Lewistown, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 25, 1946, Serial No. 664,879
2 Claims. (Cl. 210—62)

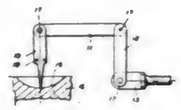
1. Apparatus for filtering dispersions comprising a set of filters connected in parallel between a supply header and a discharge header therefor, a second set of filters connected in parallel between a supply header and a discharge header therefor, a supply conduit, a discharge conduit, a set of four four-way valves arranged at the corners of a quadrilateral conduit system, each valve having four ports, of which two are connected with the adjacent ports of the adjacent valves, the third port of two adjacent valves being connected together, the remaining port of one of the last-mentioned adjacent valves being connected to the supply conduit, the remaining port of the other of the last-mentioned adjacent valves being connected to the supply header of the second set of filters, the adjacent port of another valve adjacent the last-mentioned valve being connected to the discharge header of the first set of filters, the remaining port of said other valve being connected to the discharge conduit, a third port of the remaining valve adjacent the last-mentioned port being connected to the discharge header of the second set of filters, and the remaining port of the last-named valve being connected to the supply header of the first set of filters.



2. Apparatus for filtering dispersions comprising a set of filters connected in parallel between a supply header and a discharge header therefor, a second set of filters connected in parallel between a supply header and a discharge header therefor, a supply conduit, a discharge conduit, a set of four four-way valves arranged at the corners of a quadrilateral conduit system, each valve having four ports, of which two are connected with the adjacent ports of the adjacent valves, the third port of two adjacent valves being connected together, the remaining port of one of the last-mentioned adjacent valves being connected to the supply conduit, the remaining port of the other of the last-mentioned adjacent valves being connected to the supply header of the second set of filters, the adjacent port of another valve adjacent the last-mentioned valve being connected to the discharge header of the first set of filters, the remaining port of said other valve being connected to the discharge conduit, a third port of the remaining valve adjacent the last-mentioned port being connected to the discharge header of the second set of filters, and the remaining port of the last-named valve being connected to the supply header of the first set of filters, and means for simultaneously operating said valves.

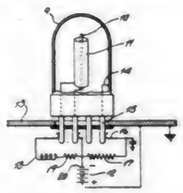
2,454,125
CUTOFF WHEEL
Fred M. Bley, Glenview, Ill.
Application March 2, 1946, Serial No. 651,579
7 Claims. (Cl. 51—206)

1. As a new article of manufacture, a cut-off wheel adapted to be driven about its axis in one direction and comprising a disc having a cutting periphery, said disc being provided with liquid receiving slots therethrough extending outward thereof toward and terminating adjacent its periphery, the lengthwise walls of the respective slots being normal to the plane of said disc, the respective slots comprising a substantially straight inner portion inclined outwards with respect to the axis of said disc in a direction away from the direction of drive of the wheel and a substantially straight outer portion inclined outwards with respect to the axis of said disc in a direction toward the direction of drive of said wheel.



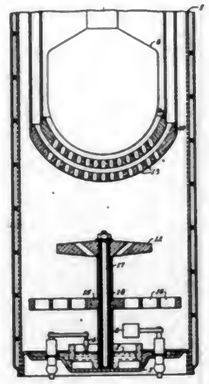
2,454,126
BOTTLE CLOSURE
Samuel Bloomfield, Wichita, Kans., assignor, by direct and mesne assignments, to C. Earl Hovey, Kansas City, Mo., trustee
Application January 8, 1945, Serial No. 571,765
1 Claim. (Cl. 215—46)

For a bottle having an open mouth defined by an annular lip and a crown cap for said mouth of the bottle, said cap being provided with an annular skirt terminating in a free edge below the lip of said bottle when the cap is operably mounted on the bottle; a combined sealing and cap removal device comprising a body of flexible material having a gasket portion disposable within said cap against the lip of said bottle, and a pair of tongues integral with said gasket portion and extending therefrom in diametrically op-



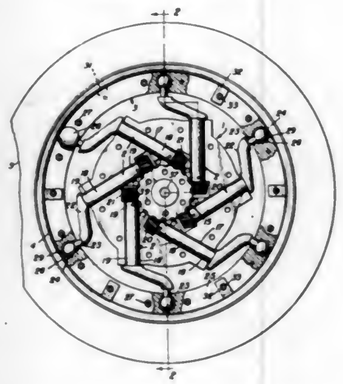
posed relationship, one of said tongues having a length substantially equal to the width of said skirt of the cap, the other tongue being relatively long and having an enlarged perforated end to present a grip below the free edge of the annular skirt when the body is operably mounted in said cap, said tongues extending substantially perpendicular to the gasket portion of the body when mounted between said cap and the mouth of said bottle.

2,454,127
MASK WITH ADJUSTABLE SUPPORTING MEANS FOR PROFILE PROJECTORS
Hubert Boardman, Rochdale, England
Application November 14, 1945, Serial No. 628,600
In Great Britain November 18, 1944
5 Claims. (Cl. 88—24)



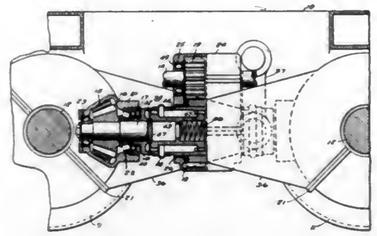
1. Means for use with a profile projector for producing a chart the equivalent of an image or silhouette point by point of a profile normally inaccessible to the light ray of the projector, comprising a mask adapted to set in different positions in contact with the said profile, means for supporting said mask in such positions, and a template which is a replica of the image of that part of the mask engaging the profile, said mask and template having means whereby the template may be placed on the chart congruent with the incomplete image thereon of the mask so that the silhouette of the hidden profile-contacting portion of the mask may be recorded on the chart for a plurality of different positions of the mask and the contours of the hidden portion of the profile obtained therefrom.

2,454,128
ELECTRICAL SYSTEM
Wilson P. Boothroyd, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 24, 1944, Serial No. 560,141
6 Claims. (Cl. 250—27)



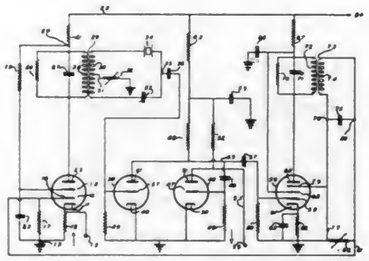
5. In an electronic tube system of the type employing at least one electron tube with a conductive enclosing envelope, direct current power supply means to maintain the cathode of said tube at a high negative potential with respect to ground, and means for normally maintaining said conductive envelope at substantially the same direct current potential as said cathode, the last-mentioned means comprising a high resistance conductively connected between said cathode and said conductive envelope.

2,454,129
VAPOR ELECTRIC DEVICE
John L. Boyer, Wilkinsburg, and Robert J. Ballard, West Newton, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 23, 1947, Serial No. 781,632
8 Claims. (Cl. 250—27.5)



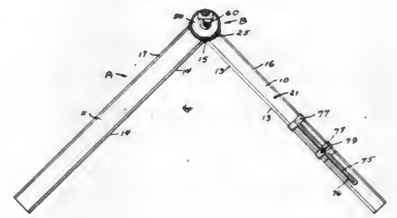
1. A vapor-electric device comprising an evacuated container; and anode and a cathode in spaced insulated relation in said container, an ionizable vapor in said container, means for periodically initiating a cathode spot on said cathode, cathode spot maintaining means operative to maintain said cathode spot for a predetermined interval after initiation, a control grid between said anode and cathode and electron collecting means interposed between the major portion of said ionizable vapor and said cathode spot maintaining means.

2,454,130
ADJUSTABLE WHEEL STRUCTURE
Armond W. Braun, Grafton, Iowa
Application August 5, 1947, Serial No. 766,337
7 Claims. (Cl. 301—5)



1. In a wheel structure, a hub, a tire retaining rim, and means for adjusting said rim laterally of said hub comprising spokes rotatable in said hub, and means to rotate said spokes in unison.

2,454,131
LOCOMOTIVE DRIVE
Winston A. Brecht, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application August 26, 1943, Serial No. 500,096, now Patent No. 2,411,363, dated November 19, 1946. Divided and this application October 12, 1945, Serial No. 622,052
5 Claims. (Cl. 105—117)

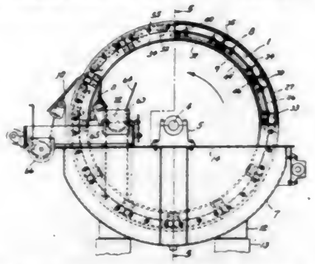


1. In a locomotive drive, in combination, a pair of axles having wheels thereon, frame members disposed between said wheels, a main drive shaft disposed substantially at right angles to the axles, an intermediate gear driven by the main drive shaft and disposed between said frame members substantially midway between the axles, a gear mounted on each axle, an auxiliary shaft for driving each one of the axle gears, said auxiliary shafts being disposed substantially parallel to the main shaft and driven by said intermediate gear, coupling means slidably disposed in the intermediate gear for flexibly connecting each auxiliary shaft to the intermediate gear, spring means disposed between said coupling means, a gear case for enclosing each one of the axle gears, a torque arm for each gear case, and means for movably connecting the torque arms to the frame members on opposite sides of the intermediate gear.

2,454,132
OSCILLATING SYSTEM
Paul F. Brown, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application January 11, 1944, Serial No. 517,896
12 Claims. (Cl. 250—36)

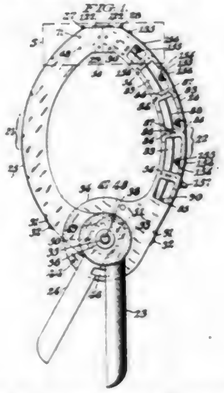
1. An oscillating system comprising a resonant circuit having inductance and capacitance, said circuit having some resistance inherent therein, means for shock exciting said circuit so that oscillations are induced therein, an output circuit from which said oscillations may be taken for utilization, and means operative after a predetermined number of shock-excited oscillations for damping said oscillations, said oscillating circuit having negligible damping during its normal operation and having such high damping upon the operation of said last named means as to suppress oscillations completely almost instantly, an amplifier for said shock-excited oscillations, means for feeding said amplified oscillations back into said shock-excited circuit in opposite phase, and means for rendering said feed-back means inoperative during the time that oscillations are desired.

2,454,133
ATTACHMENT TO GEOMETRICAL INSTRUMENTS
Robert H. Buchhorn, Texas City, Tex.
Application May 23, 1947, Serial No. 750,055
4 Claims. (Cl. 33—46)



1. In an attachment for a linear measuring instrument provided with a pair of blades fixed to each other and converging together to a corner portion having opposite faces, with an opening extending from face to face, said attachment including a first portion disposed upon one of said faces, provided with degree graduations upon its outer face, an opening and means to prevent rotation of said first portion relative to said blades and to position said first portion so that the axes of said openings will coincide; a second portion rotatable over the outer face of said first portion exclusive of the degree graduations-carrying section thereof, said second portion having an index, a circular opening, a bracket, and a spirit level carried by said bracket with the longitudinal axis of the index normal to the longitudinal axis of the level; a third portion disposed upon the other of the faces of said corner portion, provided with a pair of sights, one in alignment with the other, an opening and means to prevent rotation of said third portion relative to said blades and to position said third portion so that the axis of the opening therein will coincide with the axis of the first-mentioned opening; and means to detachably secure said first, second and third portions to said corner portion, including a shank extending through all of said openings.

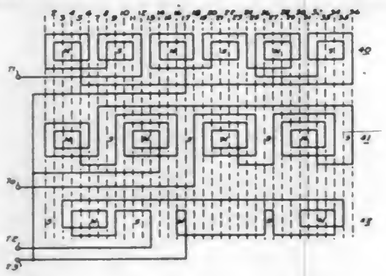
2,454,134
ROTARY DRUM FILTER
Ambrose L. Burleson, Berkeley, Calif.
Application January 8, 1945, Serial No. 571,756
13 Claims. (Cl. 210—202)



1. In a rotary drum filter of the character described having a cylindrical wall, a plurality of arched screen segments formed and adapted to collectively substantially cover said cylindrical wall, means adapted for securing a separate sheet of cloth over one side of each of the screen segments, and means for holding said cloth in contact over the surface of said screen segment and providing a series of spaced strips extending

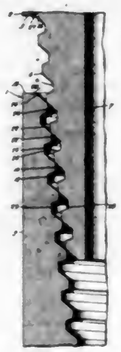
across said screen segment outward of said cloth forming tracks for a sludge scraping blade to

bear against, and means for detachably securing said screen segments to said wall.



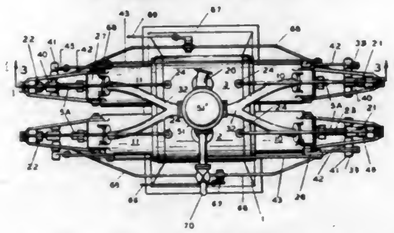
2,454,135
BINDING IMPLEMENT
Joseph R. Burns, Millbourne, Pa.; Thomas A. Foulke executor of said Joseph R. Burns, deceased
Application April 5, 1946, Serial No. 659,980
19 Claims. (Cl. 100—31)

1. In a binding implement comprising opposed interpivoted hollow-jaws and means supplying a binder-medium; means for feeding the binder-medium through one of the jaws to the head portion thereof; means in the other jaw head portion for arrestively gripping the leading end of the binder-medium when projected thereinto; means alternatingly operative to enable application of a length of the binder-medium about an article or bundle and to sever the applied portion, from supply, concurrently with release of the previously gripped leading end; and independently actuable means effective to impart consecutive unidirectional half-turns to the terminal portions of the applied binder-medium whereby said terminal portions are positively twist-locked together.



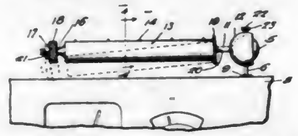
2,454,136
TWO-SPEED SINGLE-PHASE MOTOR
Theodore E. M. Carville, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 3, 1946, Serial No. 713,716
8 Claims. (Cl. 318—224)

1. A single-phase induction motor having relatively rotatable primary and secondary members, a first main primary winding on the primary member, a second main primary winding on the primary member, said first and second main primary windings having different numbers of poles, means for alternatively connecting one or the other of said main primary windings to a single-phase supply line for operation of the



motor at different speeds, a single auxiliary primary winding having a plurality of poles, said auxiliary winding being disposed on the primary member with at least some of its poles displaced from poles of the same polarity of both the first and second main windings, and means for energizing the auxiliary winding from said line.

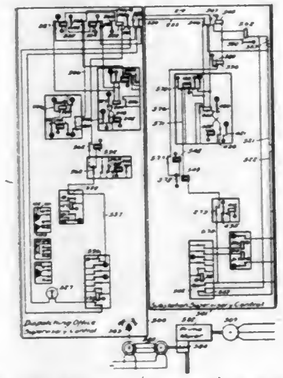
2,454,137
TUBING TOOL JOINT
Robbins M. Claypool, Bellaire, and David M. Best, Houston, Tex.
Application October 10, 1947, Serial No. 779,102
3 Claims. (Cl. 285—146)



1. A tubing tool joint for use in a production string of tubing and the like, said tool joint comprising pin and box members provided with bores, the upper end of the bore of said pin member being enlarged and threaded and adapted to receive the threaded lower end of an upper section of said tubing, said pin member having a lower, external tapering surface, said box member having an upper, internal tapering surface, mating trapeziform screw threads on said tapering surfaces of said pin and box members, the crests of said threads being flattened for an appreciable extent and extending substantially parallel with the axis of said joint to provide mating engagement of the threads without interference from the crests thereof, said joint having a maximum outer diameter substantially equal to the outer diameter of the usual coupling collar used in connection with said tubing and a minimum inner diameter substantially equal to the inner diameter of said tubing, and said box member having a lower threaded end of reduced diameter adapted to be received in said coupling collar.

2,454,138
ENGINE DRIVEN PUMP
Reinhold Delzer, Portland, Oreg.
Application October 25, 1944, Serial No. 560,250
8 Claims. (Cl. 103—54)

1. A power plant including an internal combustion engine, a hydraulic pump having a movable pump member operated by the engine, a fuel injector for the engine and having a movable injector member operated by the movement of the movable pump member, a pressure tank for storing and distributing the power from the hydraulic pump for further power use, and valved mechanism having an operating member operated by the movement of the movable pump member when it moves the movable fuel injector member for controlling the admission of the pressure medium to the hydraulic pump and the admission of such power medium from the hydraulic pump to the pressure tank.

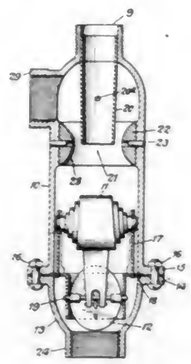


2,454,139
ROAD MAP HOLDER, INCLUDING A ROTATABLE ROLLER
Linus J. De Muth, Fresno, Calif.
Application February 11, 1947, Serial No. 727,884
3 Claims. (Cl. 40—68)

1. A road map holder of the class described comprising a ball, means for securing the ball to a part of a vehicle, an elongated rod, a socket carried by one end of the rod, said socket journaled on the ball for swivel movement of the rod, a roller journaled for rotation on the rod, and a line of longitudinally spaced teeth projecting outwardly from said roller adapted to grip the edges of a conventional map rolled on the periphery of said roller.

2,454,140
REMOTE CONTROL FOR ELECTRIC TRANSMISSION SYSTEMS
Willard A. Derr, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1946, Serial No. 685,060
10 Claims. (Cl. 171—118)

1. A signal system comprising, indicating means responsive in accordance with the polarity and magnitude of an applied voltage, circuit means producing a unidirectional voltage proportional to the difference in frequency between two sources of electrical energy, and means selectively responsive to the direction of the difference in frequency between the sources operable to connect the circuit means to the indicating means in opposite senses in accordance with the direction of the frequency difference.

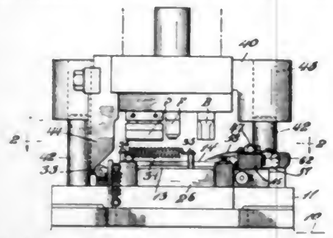


8. The combination in a supervisory control system having control station and remote station supervisory control equipment operable over a signal channel to select a circuit breaker control point and operate the circuit breaker to connect two alternating current sources at the remote station, of frequency responsive means at the remote station operable to produce a reversible unidirectional voltage proportional in magnitude to a difference in frequency between the sources and having a polarity which is dependent upon which source has the greater frequency, transfer means at the remote station operable in response to selection of the circuit breaker control point to disconnect the channel from the supervisory control equipment and connect it to the frequency responsive means, indicating means at the control station selectively responsive to the magnitude and polarity of an applied voltage, transfer means at the control station responsive to the selective and check of the circuit breaker control point to transfer the signal channel from the supervisory control equipment, control means at the remote station operable in response to a predetermined voltage pulse applied to the channel from the control station to render the transfer means at the remote station inoperative, and circuit means at the control station operable to render the transfer means at the control station inoperative in response to operation of the supervisory control equipment to operate the circuit breaker and to effect application of a voltage pulse to the signal channel.

2,454,141
THERMOSTATIC LIQUID CONTROLLING DEVICE
Harold B. Drapeau, Oak Park, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Original application May 2, 1939, Serial No. 271,314. Divided and this application July 5, 1943, Serial No. 493,534
1 Claim. (Cl. 236—34)

A thermostatic liquid controlling device comprising a casing having an inlet at one end thereof and an outlet near said inlet, a tube connected

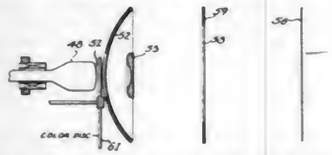
with said inlet and projecting into said casing and past said outlet, said casing having a second outlet member removably mounted at the other end thereof, a valve for controlling said second outlet, a thermostat in the casing operatively connected with said valve and in the path of the liquid leaving said inlet tube, a restrictor annulus in the



casing between the discharge end of said inlet tube and the first mentioned outlet for restraining return of fluid past the tube until the valve has substantially closed the second outlet, and means connecting the valve and thermostat for insertion, mounting and removal as a single unit in the casing in longitudinal alignment with the inlet tube and said second outlet member.

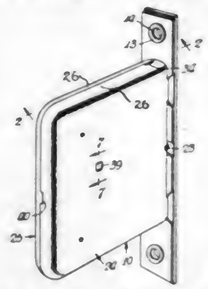
2,454,142
ELECTROLYTIC RECOVERY OF ZINC
John T. Ellsworth, Collinsville, Ill.
No Drawing. Application February 16, 1942, Serial No. 431,055
1 Claim. (Cl. 204—119)

In the method of recovering zinc from zinciferous materials involving the treatment of the zinciferous material with a cyclic acid zinc sulfate solution and electrodeposition of zinc therefrom, the improvement in reducing prior to electrodeposition the concentration in the solution of soluble salts which exercise a harmful effect during electrodeposition when present in too high a concentration, which comprises withdrawing and evaporating to substantial dryness from about 3 to about 10 percent of the solution, in the course of which a substantial part of the harmful soluble salts therein is rendered insoluble without materially impairing the solubility of the zinc therein, leaching the dried residue of said evaporation with water to dissolve zinc sulfate therefrom, separating the dissolved zinc sulfate from the solid residue, and returning the separated dissolved zinc sulfate to the cyclic solution.



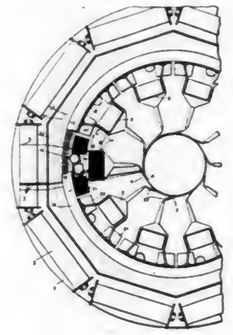
2,454,143
DIE SET WITH FEEDING MEANS
August J. England, Providence, R. I.
Application November 19, 1946, Serial No. 710,755
6 Claims. (Cl. 164—88)

1. The combination with a die set having one die movable toward the other, a work feed comprising means responsive to the movement of said dies toward each other to engage the work and feed the same forwardly, stop means to engage the work and limit the forward movement of the work, said feeding means carrying a portion to engage and render inactive the stop means



during a portion of the movement of said feeding means.

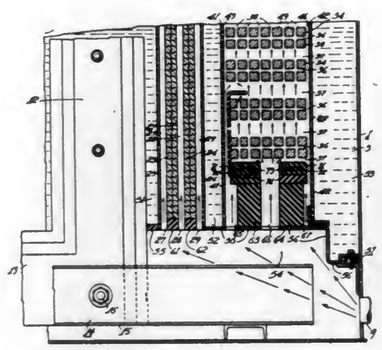
2,454,144
IMAGE PROJECTION SYSTEM
David W. Epstein, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 27, 1944, Serial No. 556,026
7 Claims. (Cl. 178—5.4)



1. An optical system for image projection comprising a cathode ray tube operative to produce a bi-dimensional optical luminous image, an aspherical correcting mirror positioned to receive light from said cathode ray tube, a light reflecting surface of revolution having its concave surface positioned to receive light reflected from said correcting mirror, said correcting mirror being axially aligned with said cathode ray tube and said reflector and having a surface configuration whereby to correct the spherical aberration introduced into the light rays reflected directly by said reflecting surface whereby a sharply focused image of the original luminous image is developed at a plane located a finite distance from the reflecting surface.

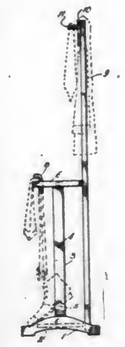
2,454,145
LOCK CASING CONSTRUCTION
Andrew Erkkila, Fitchburg, Mass., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application April 29, 1947, Serial No. 744,577
9 Claims. (Cl. 70—448)

1. In a lock having casing sections attached to an end plate, the combination wherein the end plate comprises an outer and an inner segment laminated together, the inner segment being formed with at least one offset portion forming a loop and said casing sections having inturned walls with their edges in contact and inwardly directed fingers engaging said loop portion, holding said plate and sections anchored together, providing a rivet-free outer surface to said end plate.



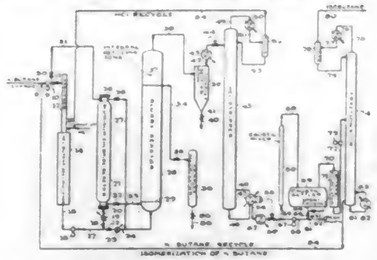
2,454,146
WEAVING MACHINE
Georges Eugène Ezbelent, Paris, France
Application December 15, 1938, Serial No. 245,959
In France December 15, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires December 15, 1957
7 Claims. (Cl. 139—13)

1. A circular loom, comprising self-operated shuttles movable upon a circular track, in which the said self-operated shuttles comprise electric controlling means operating through the distance between shuttles and adapted to maintain a constant spacing between the shuttles, the said electric means consisting of magnets adapted to act upon regulating devices mounted in the circuit of the motor or motors of the self-operated shuttles and adapted to maintain a constant spacing between the shuttles.



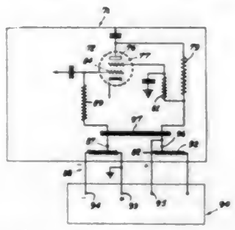
2,454,147
ELECTRICAL APPARATUS
Frederick D. Fielder, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 22, 1945, Serial No. 579,200
5 Claims. (Cl. 175—361)

2. In an electrical transformer, in combination, a core and coil assembly comprising a magnetic core structure having a vertical winding leg, a low voltage winding assembly spaced from and surrounding the winding leg of the core, the low voltage winding assembly including two cylindrical barriers of insulating material positioned in spaced relation from the low voltage winding on the inside and on the outside thereof, respectively, a high voltage winding assembly spaced from and surrounding the low voltage winding assembly and comprising a plurality of flat disc-type coils spaced apart to provide space for the circulation of cooling and insulating liquid therebetween, each coil having a plurality of turns of conductor strands, the conductor strands being spaced radially apart at intervals to provide a plurality of annular passageways through the coils to permit cooling liquid to pass vertically therethrough, the high voltage winding assembly including two cylindrical barriers of insulating material positioned in spaced relation from the high voltage winding coils on the inside and outside thereof, respectively, and a barrier of insulating material below the bottom of the coils of the windings and continuing to the tank wall to prevent cooling liquid from passing upwardly in the space between the high voltage winding assembly and the tank wall, and in the space between the high-voltage winding assembly and



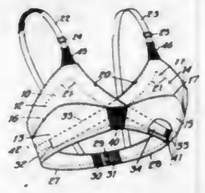
the low-voltage winding assembly, the barrier being provided with openings therethrough positioned to permit the flow of cooling liquid upwardly through the cooling passageways within the winding assemblies adjacent the conductor turns to be cooled, and a barrier in the space between the winding leg of the core and the low voltage winding assembly for limiting the flow of cooling and insulating liquid between the winding leg of the core and the low voltage winding assembly.

2,454,148
GARMENT STAND
William O. Fought, Jr., Parkersburg, W. Va.
Application December 29, 1945, Serial No. 637,815
3 Claims. (Cl. 211—124)



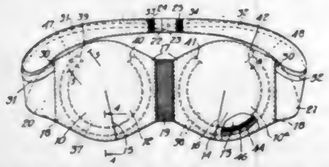
1. In a garment supporter, a stand including a slotted table portion, and a resilient rod having its ends in said table slot and its body contiguous thereto to frictionally engage a garment passing through said slot.

2,454,149
ISOMERIZATION OF NORMAL BUTANE
Leslie U. Franklin and Charles F. Plumhoff, Port Arthur, Tex., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 31, 1945, Serial No. 625,874
3 Claims. (Cl. 260—683.5)



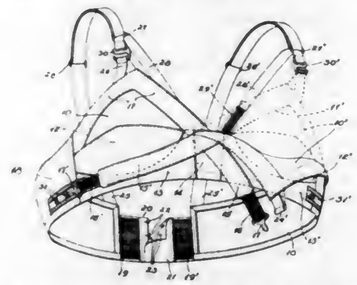
1. A liquid phase process of producing isobutane substantially free from aluminum chloride comprising mixing a charge of normal butane with hydrogen chloride, passing the normal butane-hydrogen chloride mixture in an amount progressing from about 10 to about 90 per cent of the total mixture through a first isomerizing zone containing solid aluminum chloride at a temperature within the range of 160° to 300° F. and at a space velocity between about 2 and about 8, contacting in a second isomerizing zone the effluent stream from the first isomerizing zone and the remainder of the normal butane-hydrogen chloride mixture with a body of aluminum chloride-hydrocarbon complex slurry at a temperature within the range of 160° to 300° F. and at a space velocity between about 2 and about 8 whereby normal butane is isomerized to isobutane in an amount corresponding to an ultimate yield of isobutane substantially less than 100 per cent and also some hydrocarbon side reaction products are formed, reacting the products resulting from the isomerization of normal butane and aluminum chloride freed from said complex whereby said hydrocarbon side reaction products react with said free aluminum chloride, and withdrawing an isomerization product free from aluminum chloride.

2,454,150
VOLTAGE ADJUSTING SYSTEM
Gordon L. Fredendall, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application March 13, 1944, Serial No. 526,287
4 Claims. (Cl. 250—27)



1. In a system for providing desired operating voltages at the electrodes of vacuum tube equipment, a power supply source, adjustable means for providing an adjustable negative biasing potential for the control electrodes of said tubes, means including a voltage dividing resistor for providing operating potentials at the high voltage electrodes of said tubes from said power supply source, a variable resistor in series with said voltage divider and said power supply source, and common operating means for adjusting said bias and said adjustable resistor whereby to maintain the voltage at said high voltage electrodes substantially constant for various degrees of adjustment of said biasing voltage.

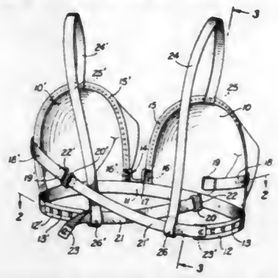
2,454,151
BRASSIÈRE
Jack Glick, Bronx, N. Y., assignor to The Gluckin Corporation, New York, N. Y., a corporation of New York
Application January 25, 1945, Serial No. 574,565
3 Claims. (Cl. 2—42)



1. A brassière comprising two similar pockets, means comprising side and back bands and shoulder straps for mounting the brassière upon the body of a wearer, means coupling adjacent portions of the pockets, bust supporting members extending from inner edge portions of the pockets to outer side edges of opposed pockets, said members being crossed intermediate the pockets, said members including firm stiffening elements extending throughout the major portion of the length thereof and arranged upon lower portions of the pockets, said pockets comprising inner and outer facings for the entire pockets adapting the brassière to reversible use, and the major portion of said members being freely disposed between said inner and outer facings.

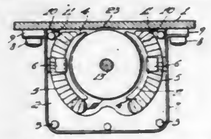
2,454,152
BRASSIÈRE AND SIMILAR GARMENTS
Jack Glick, Bronx, N. Y., assignor to The Gluckin Corporation, New York, N. Y., a corporation of New York
Application February 14, 1945, Serial No. 577,861
5 Claims. (Cl. 2—42)

1. In garments of the class described, a pair of substantially similar breast pockets, said pockets having wide adjacent and outer edge portions, means joining adjacent edge portions of the pockets, side and back bands attached to outer side edges of the pockets, means adjustably and detachably coupling rear end portions of said bands, straps coupled with upper outer edge portions of each pocket and paralleling said bands, when arranged upon the body of the wearer, means on the straps and bands for detachably and adjustably coupling the rear end portion of the straps with the rear end portion of the band of an opposed pocket, to aid in supporting the garment upon the body of the wearer, said pockets being composed of inner and outer facings joined by spaced parallel stitchings arranged at lower and inner and outer side portions of the pockets, said stitchings forming between the facings curved channels, curved brace members arranged in the channels of said pockets, and one of the facings having openings formed therein adjacent one end of the channels for detachable mounting of the brace members with repect to said pockets.



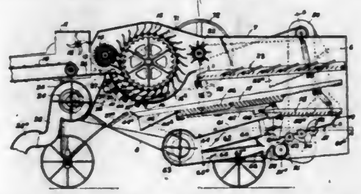
2,454,153
BRASSIÈRE
Jack Glick, Bronx, N. Y., assignor to The Gluckin Corporation, New York, N. Y., a corporation of New York
Application November 15, 1945, Serial No. 628,694
4 Claims. (Cl. 2—42)

1. A brassière comprising a pair of substantially similar pockets, means comprising body encircling bands for supporting the brassière around the body of the wearer, shoulder straps for supporting the brassière upon the shoulder of the wearer, means at upper ends of the pockets and forward ends of the shoulder straps for detachably coupling the shoulder straps with the upper central portions of the pockets, whereby upper portions of each pocket may be lowered to expose the breast for nursing without displacing the brassière from around the body of the wearer, said last named means including supplemental supporting straps extending from the upper central front portion of the brassière and slidably coupled with the forward ends of the shoulder straps and having at their ends coupling hooks and loops at the upper portions of the pockets with which said coupling hooks are detachably coupled, supplemental supporting straps extending from upper, inner sides of each pocket over lower portions of opposed pockets, and means at side portions of the brassière and on ends of the supplemental supporting straps for detachably engaging the straps with side portions of the brassière.



2,454,154
SUPPORTING STRAPS FOR BRASSIÈRES
Jack Glick, Bronx, N. Y., assignor to The Gluckin Corporation, New York, N. Y., a corporation of New York
Application April 25, 1946, Serial No. 664,849
4 Claims. (Cl. 2—42)

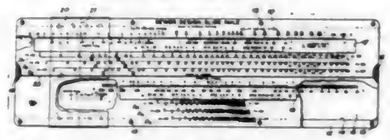
1. A brassière having breast supporting pockets, outer side edges of each pocket having a pair of vertically spaced straps, one strap terminating at its free end in a coupling loop, the other strap having a series of longitudinally spaced coupling elements, a pair of free strap members, one end of each of said strap members having a coupling member for engaging the loops of the first mentioned straps, and the other ends of the strap



members having coupling elements for engaging the spaced coupling elements of the second mentioned straps in supporting the pockets upon the body of the wearer.

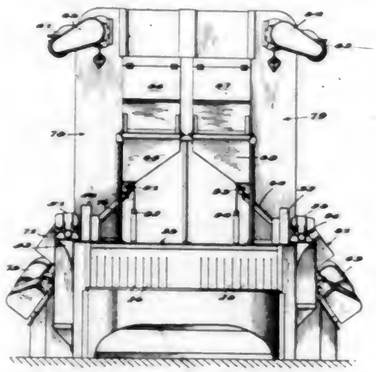
2,454,155
ELECTRIC MOTOR
Francis H. Gerlach, Wapakoneta, and John D. Miner, Jr., Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1945, Serial No. 582,854
3 Claims. (Cl. 172—36)

1. An electric motor adapted to be mounted on a supporting plate positioned at a minimum distance from the axis of the motor, said motor having a generally U-shaped laminated core, the open side of the U-shaped core being adapted to abut against the supporting plate, inter-engaging means on the core and plate for preventing relative movement between the core and plate, opposed polar projections on the core closely adjacent the open side thereof, a field coil on each of said polar projections, a rotor member rotatably supported between the polar projections, and a longitudinally skewed strap member encircling the core for securing it to the supporting plate.



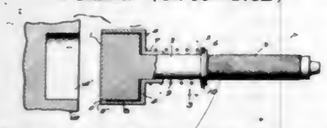
2,454,156
PEANUT PICKER
Daniel F. Good, Waynesboro, Pa., assignor to Frick Company, Franklin County, Pa.
Application November 21, 1942, Serial No. 466,470
13 Claims. (Cl. 130—30)

1. In a peanut picking machine, a picking cylinder, a concave bed including a concave proper



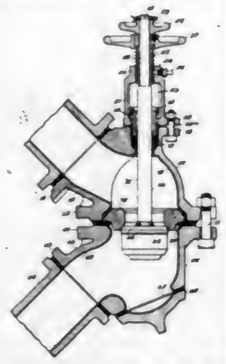
and a stripping screen section located adjacent to and coacting with said cylinder, said concave being formed with openings of a size such as will permit passage of dust, dirt and like extraneous matter therethrough but will bar the passage of nuts and said screen section being formed with stripping openings of a size to permit the passage of nuts therethrough, said stripping openings being substantially pear-shaped with the enlarged portion of each opening opening extending toward the front of the bed.

2,454,157
SEWER DESIGN SLIDE RULE
Irving Goldfien, Milwaukee, Wis.
Application February 21, 1948, Serial No. 10,129
5 Claims. (Cl. 235—70)



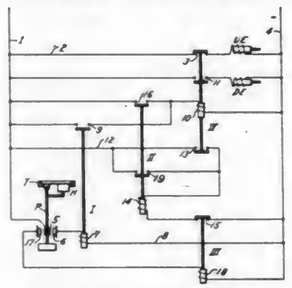
1. A Kutter-formula sewer design slide rule for circular sewers, comprising a body member and a slide member movable with respect thereto; said rule having first and second rule sections disposed one above the other; the first rule section having on the body member a logarithmic quantity of flow scale and a logarithmic velocity of flow scale each for sewers running .8 full, and a plurality of scales of sewer diameters for different Kutter coefficients of friction; the second rule section having on the body member a logarithmic time of flow scale for sewers running .8 full and a plurality of scales of sewer diameters for different Kutter coefficients of friction corresponding to those for the first section; each of said rule sections having on the slide member a logarithmic sewer length scale, a logarithmic sewer drop scale and a "Parts Full" conversion scale.

2,454,158
ABRASIVE BLAST TABLE
Charles M. Gossard, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland
Application October 3, 1945, Serial No. 619,994
7 Claims. (Cl. 51—9)



1. Apparatus for blast treating articles comprising, a main table supported for rotation in a substantially horizontal plane, an auxiliary table supported on said main table and rotatable about a substantially vertical axis, means for rotating said main table to move said auxiliary table in an orbital path, means for projecting abrasive at a blasting velocity downwardly in a substantially fan-shaped stream, said projecting means being so arranged that the elongated pattern of the abrasive blast stream is substantially at right angles to the orbital movement of said auxiliary table, and means for rotating the auxiliary table while moving through the blast stream.

2,454,159
GUIDE SLEEVE CONSTRUCTION FOR PLUG GAUGES
Walter Graves, Ann Arbor, Mich., assignor, by mesne assignments, to Federal Products Corporation, Providence, R. I., a corporation of Rhode Island
Application June 29, 1944, Serial No. 542,703
1 Claim. (Cl. 33—178B)



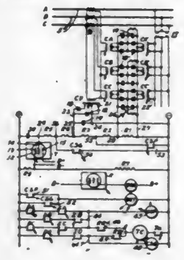
A plug gauge aligning device comprising a sleeve and a stem, spaced concentric guiding portions provided on said sleeve slidably engaging respectively the plug and the stem and arranged in accurately sliding relation to each other, said stem having a handle portion at one end and an inserting plug portion at its other end, said sleeve having a base portion defining a spring abutment, a spring abutment located on the stem, a spring surrounding a portion of said sleeve and a portion of said stem, said spring being located between said abutments and yieldingly engaging the same to urge said sleeve toward the free end of said plug, said plug extending slightly beyond said sleeve when said device is not in use to initially facilitate the insertion of the plug into a recess of a piece of work.

2,454,160
CORROSION RESISTING VALVE
Otto W. Greene, Brighton, N. Y., assignor to The Pfaudler Co., Rochester, N. Y., a corporation of New York
Application August 31, 1943, Serial No. 500,669
6 Claims. (Cl. 251—158)

2. In a corrosion resisting valve, a metallic valve body having a conducting opening formed with an inwardly inclined shoulder, a connecting flange about said opening, a metallic conducting part having a connecting flange, said body and part having their inner surfaces lined with a vitreous enamel and said flanges having cooperating seating surfaces and means for drawing the same together, a metallic valve spindle movably mounted in said body and having a vitreous enamel coating, a valve head on said spindle having a surface of corrosion resisting material, a separately formed ceramic valve seat having an inwardly inclined shoulder cooperating with said body shoulder and also a surface for cooperation with said conducting part, said seat being spaced from said body and part, and resilient gasket material between said seat and part and between said seat and body shoulders for centering said seat relatively to said body opening and valve head by resilient pressure thereon between said part and said body shoulder and for limiting transmission to said seat of stresses occurring between said body and part.

2,454,161
ELECTRICAL RELAY SYSTEM
Sherman B. Hall, Brockway, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,980
3 Claims. (Cl. 175—320)

1. In a system of control, in combination, a circuit to be controlled, switching means for controlling the energization of said circuit, a pair of supply terminals for supplying electric energy to the system of control, a solenoid for actuating said switching means, said solenoid having one terminal connected to one supply terminal and having the other terminal connected through two parallel circuits to the other supply terminal, a pair of switches one in each of said parallel circuits, a second solenoid having one terminal connected to one supply terminal and having the other terminal connected through two parallel circuits to the other supply terminal, a second pair of switches one in each of said last-named parallel circuits, one of said last-named switches being operable by the first solenoid and the other of said last-named switches being operable by the second solenoid, a third solenoid, means for connecting the third solenoid to the supply terminals, one of said two first-named switches being operable by the last-named solenoid and the other being operable by said second-named solenoid.

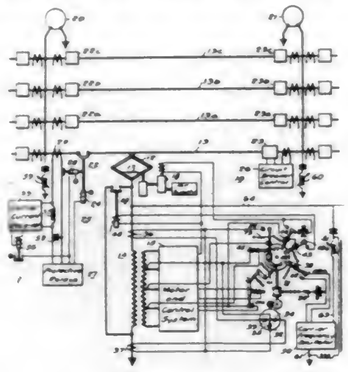


2,454,162
TRAFFIC OR DISPLAY SIGN
John J. Hammer, Detroit, Mich.
Application April 12, 1946, Serial No. 661,550
7 Claims. (Cl. 40—52)

1. A traffic or display sign comprising a housing, a plurality of sign panels disposed in depending visible relationship therefrom, lighting means within said housing adapted to illuminate said sign panels when disposed in their depending

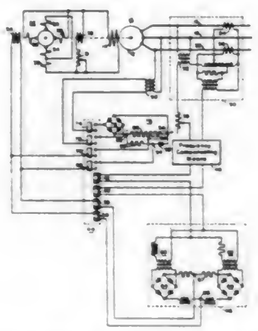
visible relationship, spring means constantly urging said sign panels to their depending visible position, and solenoid means for retracting said panels to an obscure position.

2,454,163
PROTECTIVE RELAYING SYSTEM
Edwin L. Harder, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 20, 1943, Serial No. 506,969
14 Claims. (Cl. 175—294)



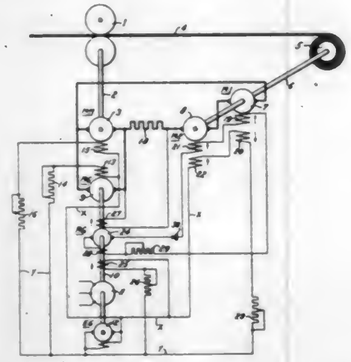
1. Fault-responsive relaying-apparatus for a polyphase circuit which is to be protected, comprising means for developing a plurality of unidirectional derived current-responsive voltages, responsive to different phases of line-currents of the protected circuit, means for developing a plurality of unidirectional derived voltage-responsive voltages, responsive to different phases of line-voltages of the protected circuit, circuit-means for opposing derived current-responsive and voltage-responsive voltages against each other in pairs, to obtain, in each case, a resultant derived voltage for that phase, and means for connecting the resultant derived voltages as a plurality of parallel-connected sources of voltage for a relaying circuit, the parallel connections including rectifiers whereby the largest of said resultant derived voltages is substantially excluded from feed-back into the circuits of the smaller of said resultant derived voltages, and fault-responsive apparatus energized from said relaying circuit.

2,454,164
CONTROL SYSTEM
Edwin L. Harder, Edgewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 2, 1945, Serial No. 608,579
6 Claims. (Cl. 191—8)



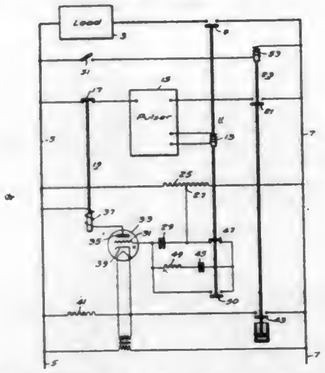
1. In a control system for electrical apparatus on an electrically operated vehicle having a current collector for engaging a trolley conductor which is disposed to be connected to a source of electrical energy through a circuit breaker, tuned circuit means connected on the source side of the circuit breaker to provide a high frequency ground connection connecting the trolley conductor at substantially ground potential for a

high frequency signal, control circuit means responsive to a fault condition on the vehicle to produce a high frequency signal on the order of 10,000 cycles per second, and circuit means



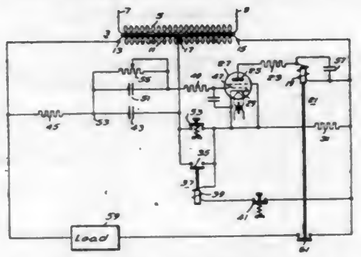
associated with the circuit breaker including control means coupled to the trolley conductor by a low impedance current transformer, said control means being responsive to said high frequency signal to open the circuit breaker.

2,454,165
REGULATING SYSTEM
Edwin L. Harder, Pittsburgh, and Ernest I. Pollard, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 29, 1945, Serial No. 631,725
2 Claims. (Cl. 322—77)



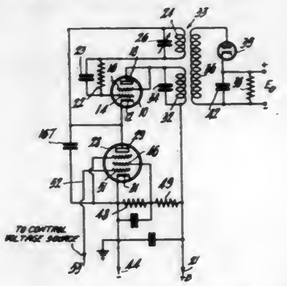
1. In a regulating system for a dynamo-electric machine disposed to supply a load circuit, in combination, an exciter for supplying the field excitation of the dynamo-electric machine, a control field winding for the exciter disposed to be directionally energized, a manual control circuit consisting of a pair of circuits connected in parallel circuit relation between common taps disposed to be supplied from the load circuit, one of the parallel circuits comprising a resistor having an adjustable tap disposed between the common taps, the other of the parallel circuits comprising a resistor and a constant potential device connected in series-circuit relation through a fixed tap, rectifying means connected between the load circuit and the common taps disposed to supply a unidirectional current to the manual control circuit, the control field winding being connected across the adjustable tap and the fixed tap to be directionally energized in accordance with the potential at said taps, the adjustable tap being disposed for movement to provide a balance in potential at the adjustable tap and the fixed tap for a predetermined condition on the load circuit whereby the energization of the control field winding is zero, the manual control circuit thereby being automatically operative upon a departure from the predetermined condition on the load circuit to directionally energize the control field winding depending upon the direction of the departure, the directional energization automatically tending to increase the output of the exciter when the departure is a decrease to increase the energization of the dynamo-electric machine and thereby tend to restore the predetermined condition on the load circuit, the adjustable tap also being operative to effectively force a directional energization of the control field winding.

2,454,166
PLURAL ELECTRIC MOTOR CONTROL SYSTEM
William R. Harding, Export, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,831
5 Claims. (Cl. 318—48)



1. A variable speed drive, comprising direct-current supply means, two rotary direct-current machines having respective armatures mechanically connected with each other and being each provided with two field windings which relative to each other, are cumulative in one machine and differential in the other, a circuit including said armatures in series connection to each other, said circuit being connected to said current-supply means to be energized by the latter, circuit means connected to one field winding of each machine to provide substantially constant excitation therefor, and control means connected to said armature circuit to be controlled in dependence upon the current flowing in said circuit and being connected to said other field winding of each machine to provide control excitation therefor, whereby the resultant field excitation of one machine is lowered when that of the other machine is raised so that both machines operate as drive motors when said control means are in condition for low speed operation while one machine operates as a booster and is driven by the other machine when said control means are in condition for high speed operation.

2,454,167
COUNTING CIRCUIT
Edward C. Hartwig, Tonawanda, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 22, 1946, Serial No. 692,402
7 Claims. (Cl. 315—275)

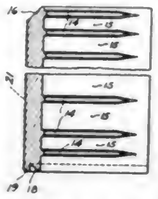


1. Apparatus for use in counting a selected number of occurrences of a repeated event comprising means adapted to function as an alternating current source, an electric valve connected in a main circuit across said source, a control circuit for said valve including a capacitor, an initiating device, means effective only prior to operation of said initiating device for charging said capacitor to a predetermined maximum value, said control circuit being effective after operation of said initiating device to cause said valve to have one condition with respect to conduction of current therethrough when the charge on said capacitor is greater than a preselected critical value less than said maximum value and another condition when the capacitor charge is less than said critical value, and switch means actuated in response to each occurrence of said event for connecting to said capacitor a discharge path to reduce the charge on said capacitor by a preselected amount only.

2,454,168
TIMING CIRCUIT
Edward C. Hartwig, Tonawanda, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 22, 1946, Serial No. 692,403
7 Claims. (Cl. 315—275)

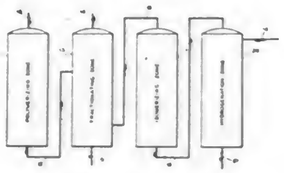
1. A timing circuit for use with a source of alternating voltage comprising an electric valve having an anode, a cathode and a control electrode, circuit means including an initiating device and effective upon operation of said initiating device for connecting said anode and cathode in a circuit with said source, a filter connected in a circuit energized from said source for filtering surges in said source voltage so that such surges do not appear in substantial magnitude in the alternating voltage across said filter, a capacitor connected in series with said filter from said control electrode to said cathode after operation of said initiating device, means effective only prior to operation of said initiating device to cause said capacitor to be charged to a predetermned maximum value, said valve having such characteristics as to become conductive after operation of said initiating device only when the control electrode to cathode voltage is more positive than a critical value which normally requires a charge on said capacitor no greater than a predetermined value less than said maximum value, and a discharge circuit including a second resistor in shunt with said capacitor to discharge it at a preselected rate following operation of said initiating device.

2,454,169
GAIN CONTROL SYSTEM RESPONSIVE TO AN AVERAGE VALUE
Harold E. Haynes, Audubon, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 26, 1946, Serial No. 718,376
6 Claims. (Cl. 250—41.5)



1. A signal reproducing system comprising means for generating signal currents in response to an incident modulated light beam, said means including an electron multiplier phototube, an output circuit for said phototube comprising a pair of resistors in series, means for obtaining a control voltage from the junction point of said resistors, means for utilizing said control voltage to control said phototube means for obtaining a signal output across said resistors, the resistor which is situated electrically more remotely from said phototube being shunted by a capacitor whereby to provide a time constant circuit, and a source of voltage which is substantially unaffected by signalling currents generated by said phototube being connected to said time constant circuit at its terminal opposite said control voltage deriving point.

2,454,170
STEREOTYPE CYLINDER PRINTING PLATE
George A. Hiester, Seattle, Wash.
Application February 23, 1942, Serial No. 431,942
3 Claims. (Cl. 101—378)

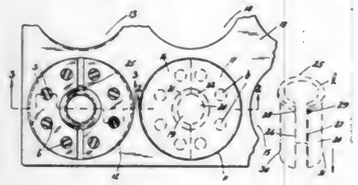


1. A stereotype cylinder printing plate formed in a casting machine having a rotatable casting core and a segment ring having an upstanding rib between said core and the matrix, said plate being characterized by being a rotatable core cast

plate and having the edge portion which prints that portion of the news page next the folding space provided with a cast recess in its end wall dividing said edge portion into two parts, first, an inner part having an inclined face serving as a clamping face and second, an outer part constituting a printing part having a printing sur-

face overhanging said inclined face, the recess having a second face parallel to the printing surface, said printing surface and said second face being concentric, the ends of said two parts lying in the same plane at right angles to the cylinder plate axis, the contour and condition of said recessed inclined clamping face being complete at the time the plate is removed from the core.

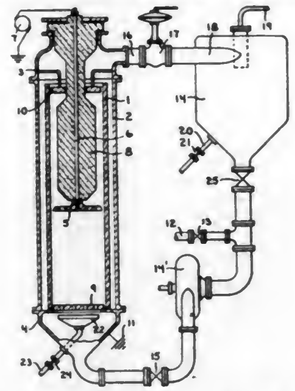
2,454,171
COMBINATION ISOMERIZATION AND HYDROGENATION PROCESS
Harold J. Hepp, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 21, 1946, Serial No. 642,449
4 Claims. (Cl. 260—683.6)



1. In a process for the production of a paraffin hydrocarbon wherein a tertiary olefin in a hydrocarbon stream is selectively polymerized to form a dimer having a terminal carbon to carbon double bond and the dimer is subsequently hydrogenated to form the paraffin hydrocarbon, that improvement which comprises separation of said dimer from higher polymers and unpolymerized material by distillation, passing the resulting purified dimer over an isomerization catalyst comprising brucite at a temperature in the range from 50° to 450° F. and subsequently catalytically hydrogenating the resulting isomerized dimer to form the paraffin hydrocarbon.

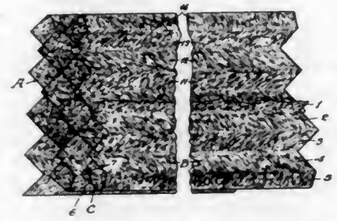
2,454,172
METHOD OF MAKING SEAMLESS PLATINUM RUTHENIUM ALLOY CANNULAE
George M. Hickey, Paoli, and William W. Matlack, Malvern, Pa., assignors to J. Bishop & Co. Platinum Works, Malvern, Pa., a corporation of Pennsylvania
No Drawing. Original application February 27, 1941, Serial No. 380,960. Divided and this application July 14, 1945, Serial No. 605,180
1 Claim. (Cl. 148—11.5)

Method of making a seamless cannula for a hypodermic needle which comprises forming a tube of homogeneous platinum metal alloy, alternately annealing the tube and swedging the tube over a mandrel with reduction of the tube diameter while maintaining its wall thickness, alternately annealing the tube and drawing the tube on a mandrel with reduction of the tube diameter and wall thickness, and finally sinking the tube through a succession of dies to reduce its outside diameter to a size suitable for use as a hypodermic needle cannula, the platinum metal alloy consisting essentially of platinum alloyed with from about 8% to about 20% by weight of ruthenium and the seamless tube initially being formed by hot forging and hot rolling an ingot of the alloy to a thickness of about .050 inch, thereafter alternately annealing and cold rolling the sheet to a thickness of about .020 inch, forming the sheet into a tube, fusing together the edges of the sheet and annealing the resulting tube at a temperature not less than 2000° F.



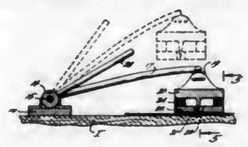
2,454,173
TUBE SOCKET
William M. Hicks, Glen Head, N. Y.
Application July 28, 1945, Serial No. 607,535
2 Claims. (Cl. 173—328)

1. A tube socket assembly comprising a plurality of semi-circular complementary parts having bores in one surface to receive the prongs of a tube, each part having a half round inner surface whereby said parts together define a central vertically extending bore in the said socket assembly, an external surface of said parts respectively being recessed to provide a space for receiving and engaging an edge portion of a base defining a cut-out to receive the socket assembly, and a compressible cylinder-like member split vertically and thus having opposed vertically extending free edges and consituting a spring adapted when compressed to be inserted in the said central bore of the socket assembly and to press against the inner surfaces of said parts respectively when released to cause said parts to move apart thereby seating the edge portions of the base in the said recesses of said parts respectively and holding said parts in such engagement with said base.



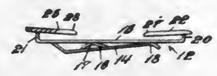
2,454,174
METHOD OF CONTROLLING THE POWER INPUT OF ELECTRICAL CONDUCTANCE HEATERS
Harold S. Hill and Laurence R. Beath, Kenogami, Quebec, Canada, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada, a corporation of Quebec, Canada
Application June 5, 1947, Serial No. 752,688
10 Claims. (Cl. 219—40)

1. The method of power control in electrical conductance heating of a liquid for its evaporative concentration, which comprises continuously passing the conducting liquid through the inter-electrode space maintained substantially full of the liquid, maintaining on the liquid a pressure such that boiling of the liquid occurs in said space to supply a dispersed vapor phase in the conducting liquid, regulating the amount of said boiling by regulating the rate of flow of the liquid passing through said space, separating the vapor from the



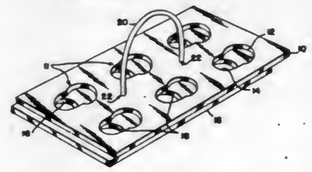
mixture of liquid and vapor leaving said space, and recycling the residual liquid through said space.

2,454,175
MULTILAYERED FIBROUS BATTING
Rudolph F. Hlavaty, Cicero, Ill.
Original application September 29, 1941, Serial No. 412,815. Divided and this application April 7, 1945, Serial No. 587,042
10 Claims. (Cl. 154—54)



1. In combination in a multi-layer article, a plurality of superimposed layers of fibrous material, each such layer having the fiber thereof disposed in a plurality of generally parallel zones, the fibers of the material of each such zone being disposed at an angle to the fibers of the material of adjacent zones of said layer, and the fibers of the material of each zone of an intermediate layer being disposed at an angle to the fibers of the material of corresponding zones of layers above and below it.

2,454,176
PLEATING DEVICE
Walter J. Houser, San Marcos, Calif.
Application September 12, 1944, Serial No. 553,687
7 Claims. (Cl. 38—108)

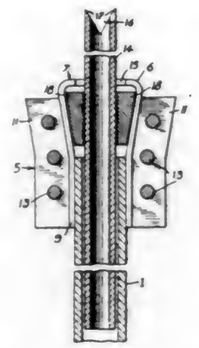


1. A pleating device comprising a base, means for clamping the base upon an ironing board, an engaging bar engageable with the work placed on the ironing board and a toothed clamping bar movable relatively to the engaging bar toward and away from the work, and means on the base for yieldably forcing the clamping bar toward the ironing board whereby its teeth may be advanced relatively to the engaging bar.

2,454,177
NECKTIE HOLDER
Viola T. Howard, Saylesville, R. I., assignor to Swank, Inc., a corporation of Delaware
Application November 29, 1946, Serial No. 712,782
2 Claims. (Cl. 24—49)

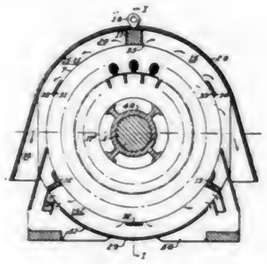
2. A tie holder comprising a back provided with means for mounting the same on a shirt which is beneath a tie, a pair of elongated members rigidly secured to said back on the side thereof opposed to the mounting means and extending from spaced points on said back toward each other in spaced relation to said back but inclined rearwardly toward the back as they approach each other, said members terminating to leave their free ends in spaced relation for the forward protrusion of the tie, the rear surface of each of the ends being in the plane of inclination of its member to contact the tie, the upper side edges of said members being segments of a continuous line extending along the said edges of said members, the lower side edges of said member similarly being segments of a continuous line extending along the lower side edges of said members, and the front surface of said members adjacent said free ends being bevelled.

2,454,178
BOTTLE CARRIER
Gordon W. Howell, Seattle, Wash.
Application January 24, 1944, Serial No. 519,490
2 Claims. (Cl. 294—87)



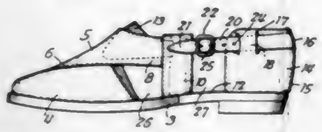
1. A bottle carrier, comprising: a body portion for supporting bottles by their necks or rims, the body portion including apertured upper and lower members of flat sheet material slidably adjustable longitudinally one relative to the other into bottle receiving and bottle carrying positions, a flexible handle passing through said upper member and being secured to said lower member, said handle operating to move said member longitudinally into locking position when said device is lifted by said handle.

2,454,179
EXTENSIBLE ANCHOR POST
Clyde Hudkins, Moundsville, W. Va.
Application December 17, 1945, Serial No. 635,486
1 Claim. (Cl. 248—354)



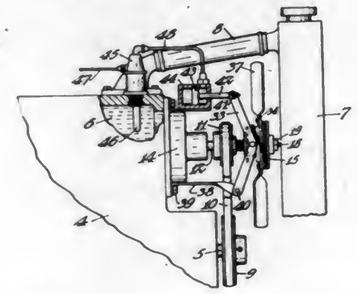
An extensible post comprising a main tubular section having an upper end, a clamp on said upper end including a substantially tubular head

for said section tapering downwardly, an auxiliary tubular section extending out of said upper end of the main section and through and out of said head for endwise adjustment to extend and retract the same relative to said main section, and means in said head operative under the influence of gravity and the taper of said head



to grip said auxiliary section upon opposite sides thereof and lock the same against retraction, said clamp comprising a pair of opposed complemental sections each including a half section of said head and a part fitting part way around the upper end of the main section, and lateral flanges on said complemental sections bolted together in pairs.

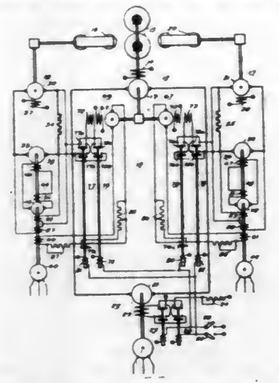
2,454,180
FRAME STRUCTURE OF DYNAMOELECTRIC MACHINES
Francis J. Johns, Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 28, 1947, Serial No. 771,015
20 Claims. (Cl. 171—252)



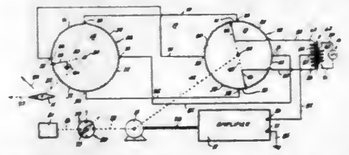
1. A horizontal-shaft dynamo-electric machine having a stator-member and a rotor-member; said stator-member comprising a stack of annular stator-punchings having a substantially cylindrical outer periphery, and having a bore defining an air gap surrounding the rotor-member, stator-windings carried by the stator-punchings near the bore thereof, a plurality of radially thick punching-holding frame-bars extending axially across the outer periphery of said stack of stator-punchings and extending beyond both ends of the stack, only one of said thick frame-bars being in the region extending from the top to a point below the centerline of the stack of stator-punchings on either side thereof, and that one being at the top, an annular frame-ring secured to the ends of the plurality of thick frame-bars at each end of the machine, said frame-rings having a substantially annular outer periphery which is substantially flush with the outer surfaces of the thick frame-bars, an end-bracket secured to each frame-ring, each end-bracket having a bearing-member for supporting the rotor-member, and having one or more inlet-openings for ventilating-air, ventilating-means for causing ventilating-air to enter through said inlet-openings at the respective ends of the machine and to flow radially outwardly over the end-turns of the stator-windings and thence to flow radially outwardly past the end portions of the frame-bars where they extend between the end of the stack of stator-punchings and the frame-ring at that end of the machine, a sheet-like top enclosure-member extending over the top frame-bar and the top portions of the two frame-rings for defining an upper annular ventilating-space between said top enclosure-member and the periphery of the punchings, a sheet-like bottom enclosure-member extending over the bottom portions of the two frame-rings for defining a lower annular ventilating-space between said bottom enclosure-member and the periphery of the punchings, outlet-means for providing outlets, below the centerline of the stator-punchings, for discharging air from the ends of the top and bottom enclosure-members, along the sides of the machine, and a plurality of radially thin, axially extending, punching-retaining means, secured to the outer periphery of the stack of stator-punchings at intermediate points between the thick frame-bars, for preventing axial spreading of said stack while permitting annular airflow in radial spaces between said thin punching-retaining means and the associated enclosure-member.

2,454,181
SANDAL TYPE SHOE WITH INSTEP GUARD
Evart L. Jordan, Rockford, Ill.
Application April 22, 1946, Serial No. 664,058
2 Claims. (Cl. 36—11.5)

1. In a shoe construction, a full length sole, flaps of flexible sheet material of substantially uniform thickness secured to the front portion of the sole on the opposite side edge portions thereof and extending inwardly and rearwardly in criss-crossed overlapping relation to cover the toes and front portion of a human foot in the shoe, said flaps being tapered in width toward the rear ends which are relatively narrow, upstanding side members secured to the instep portion of the sole on the opposite side edge portions and supporting the narrow rear end portions of said flaps, an upstanding heel pocket secured to the heel portion of the sole and having one or more strap guides on the upper portion thereof, a strap of flexible material extending from the rear end of one of said flaps rearwardly around the heel pocket through said strap guides and forwardly toward the rear end of the other flap and adjustably connected therewith by means of a suitable fastener so as to tie the shoe and place both flaps and the heel pocket under a desired tension on the foot, and a tongue member of flexible sheet material extending cross-wise of the shoe under and in contact with the overlapped portions of the flaps to engage the foot of the wearer over the instep portion, said tongue member having its opposed side portions extending rearwardly and secured to said side members for its sole support.



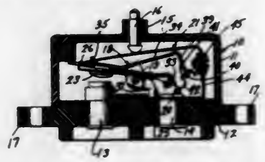
2,454,182
CONTROL DEVICE FOR ROTARY BLADE UNITS
George L. Kampa, Minneapolis, Minn.
Application April 27, 1945, Serial No. 590,689
6 Claims. (Cl. 123—178)



3. The combination with a heat producing mechanism, of a rotary fan, a clutch device mounted for axial movement with a cooperating portion of said clutch device, a heat responsive unit in heat exchange relationship with said heat producing mechanism, and connected to said fan and its connected clutch portion to disengage said connected clutch portion and fan from the other portion of said clutch responsive to changes in temperature, and said fan being so related to said clutch that initial engagement of the clutch and rotation of the fan will urge the clutch into closer operative coupling when said temperature responsive device is inoperative to disengage from said fan and its connected clutch portion.

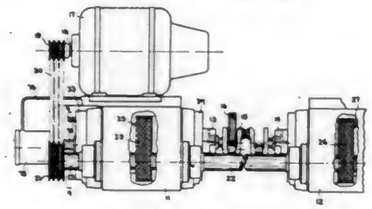
2,454,183
MOTOR CONTROL SYSTEM
Alonzo F. Kenyon, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 22, 1946, Serial No. 692,339
8 Claims. (Cl. 318—6)

8. In a control system for controlling a motor in accordance with a reversible variable speed motor, means producing a control voltage responsive to the load on the motor, means including a control generator connected to apply a variable voltage to the motor to be controlled, said control generator having a pattern field winding and a field winding energized in accordance with the load on the motor, means connected to energize the pattern field winding including a pilot generator having a driving connection to the reversible variable speed motor, said pilot generator having a main field winding energized from a source of substantially constant voltage and a differential field winding energized in accordance with the load on the motor, control means effective to reduce the energization of the pattern field winding, and means operable to effect reversal of the reversible variable speed motor, reverse the connections of the differential field winding and render the control means ineffective.



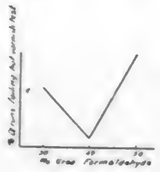
2,454,184
TELEMETRIC COMPASS
Waldo H. Kliever, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application August 20, 1947, Serial No. 769,757
12 Claims. (Cl. 318—29)

1. Control apparatus comprising, in combination: a pair of endless impedance members electrically connected together at a plurality of corresponding points; tap means for adjustably introducing a voltage between two spaced points of one of said members; tap means adjustably engaging the other of said members; means adjusting one of said tap means in response to a condition; and means responsive to the signal voltage between said second named tap means and a point at a potential fixed with respect to those of said two spaced points.



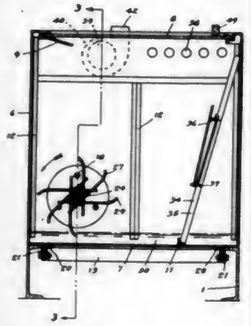
2,454,185
SNAP SWITCH
Leo J. Kmiecik, Chicago, Ill., assignor, by mesne assignments, to McDonnell & Miller, Inc., Chicago, Ill., a corporation of Delaware
Application July 20, 1945, Serial No. 606,249
8 Claims. (Cl. 200—67)

1. In a snap device such as a snap switch or the like, a pair of angular members disposed in superposed spaced relation and each with an



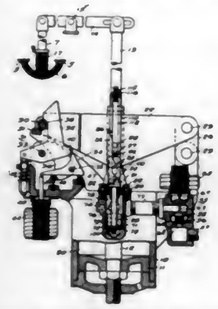
elongated first leg intermediately pivoted to render the members relatively rockable, each of said members having a shorter second leg at an angle to the first leg and with the shorter legs in spaced opposing relation, and a snap spring interconnecting the ends of said shorter legs and arranged normally to hold said members relatively rocked in opposite directions, said snap spring having an over center relation to said shorter legs, and the ends of said shorter legs being movable generally past one another in the relative rocking of the levers so that said spring operates to snap past a substantially aligned condition of said shorter leg ends to dispose the members in respective opposite relatively rocked positions responsive to movement of one of said levers to carry the end of its shorter leg selectively to either side of the aligned position of the shorter leg ends.

2,454,186
CRANKPIN GRINDING MACHINE
Elphege D. La Fleur, Lancaster, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application December 19, 1945, Serial No. 635,883
10 Claims. (Cl. 51—237)



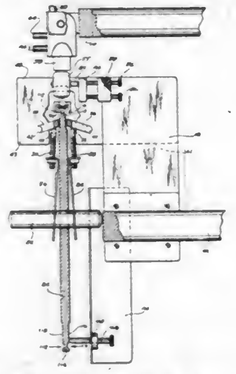
1. In a crankpin grinding machine having a work head, a rotatable spindle thereon, means to rotate said spindle, a pot chuck adjustably supported by said spindle, means rotarily to index said chuck relative to said spindle, and means including a gauging block having a plurality of gauging members, said gauge block being adjustably mounted on said head to facilitate adjustment of said chuck relative to said spindle in a radial direction normal to the spindle axis for grinding crankpins having different throws.

2,454,187
UREA-FORMALDEHYDE-ALKYD INSULATING COMPOSITION
Charles B. Leape, Pittsburgh, and Frank A. Sattler, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 29, 1944, Serial No. 542,740
6 Claims. (Cl. 260—32.8)



1. A resinous composition composed of, in combination, from 30% to 60% by weight of partially reacted, thermosetting urea-formaldehyde resin, and from 70% to 40% by weight of the partial resinous polyester alkyd reaction product compound of an acidic mixture of maleic anhydride and succinic acid, the mols of maleic anhydride being more than, but not exceeding substantially 3.35 times, the mols of succinic acid, and a mixture of glycerol and ethylene glycol in a molar ratio of from 1:1 to 1:6, the mixture of ethylene glycol and glycerol providing substantially two hydroxyl groups for each molecule of acidic mixture, the alkyd reaction product having an acid number between 75 and 140.

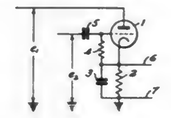
2,454,188
PADDLE MEANS FOR SPRAYING
William Henry Legge, Winnipeg, Manitoba, Canada
Application March 1, 1946, Serial No. 651,391
3 Claims. (Cl. 259—136)



1. A paddle wheel for spraying or surface stirring of liquids, comprising: a shaft rotatably suppported; a pair of paddles mounted on said shaft; said paddles positioned parallel across said shaft, one on each side, to form pockets therebetween, and each paddle mounted oppositely off center; perforations through the faces of the projecting ends of said paddles; and means for driving said shaft.

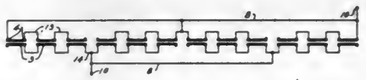
2,454,189
FLUID PRESSURE OPERATED CIRCUIT INTERRUPTER
Gerhard Lentjes, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 12, 1946, Serial No. 640,838
7 Claims. (Cl. 200—82)

1. In a fluid pressure operated circuit breaker having relatively movable contact means, a cylinder, piston means operative upon an increase in fluid pressure in said cylinder for moving said contact means to a circuit closed position, and means for moving said contact means to an open circuit position, the combination of supply valve means operative to supply fluid under pressure through a communication to said cylinder, throttle valve means interposed in said communication and having an element movable between a position for restricting flow therethrough and an open position for permitting maximum flow, means for biasing said movable throttle valve element toward open position, a positive latch pivotally mounted on said movable throttle valve element and engageable with a fixed part for releasably holding said throttle valve element in the restricting position, a member movable by said piston means for moving said throttle valve element against its bias, and said member engaging and releasing said latch during movement of said piston means prior to movement of said throttle valve element.



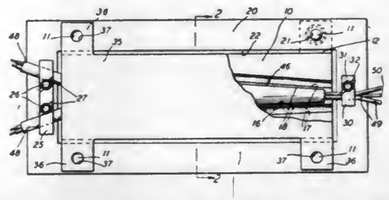
2,454,190
RESISTANCE WELDING APPARATUS AND JIG THEREFOR
Winfred N. Lurcott, Elizabeth, N. J., assignor to L. J. Wing Mfg. Co., New York, N. Y., a corporation of New York
Application November 1, 1946, Serial No. 707,060
21 Claims. (Cl. 219—4)

1. In a resistance welding apparatus having an electrode movable toward a first object to which a second object carried by the electrode is to be welded, a second electrode, a pair of spaced jaws pivoted to the apparatus and electrically connected to the second electrode, said jaws for gripping between them the first object, means for mounting on the first electrode the second object, and strap members, each pivotally connected to a jaw, for supporting thereon the first object.



2,454,191
CONTROL CIRCUIT
Angus A. Macdonald, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 19, 1945, Serial No. 589,251
8 Claims. (Cl. 320—1)

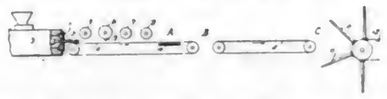
1. In combination with a grid controlled electrical discharge tube a capacitor connected to be charged by current flow through said tube, means for impressing on the anode of said tube and said capacitor a first voltage pulse, means for impressing on the control electrode of said tube and said capacitor a second voltage pulse, said capacitor being intended to be charged in an amount dependent upon the overlap in time of said pulses,



one of said voltage pulses having a substantially horizontal crest, and an output circuit connected to derive voltage from said capacitor.

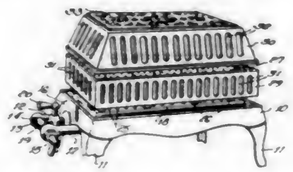
2,454,192
CRITICALLY DAMPED CAPACITOR
Ralph E. Marbury, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 14, 1944, Serial No. 518,210
2 Claims. (Cl. 175—41)

2. A multi-section capacitor comprising a plurality of individual capacitor sections, each of said sections consisting of two continuous conducting foils separated by dielectric material and spirally disposed in a multi-turn capacitor section, means for electrically connecting said capacitor sections in groups, said connecting means including means for connecting together in series one foil of each of the capacitor sections in each group, means for connecting together in series the other foils of each of the capacitor sections in each group, first terminal means connected to one end of one series-connected set of foils of each group of sections, and second terminal means connected to one end of the other series-connected set of foils of each group of sections, whereby current flows through all the foils of each set in series.



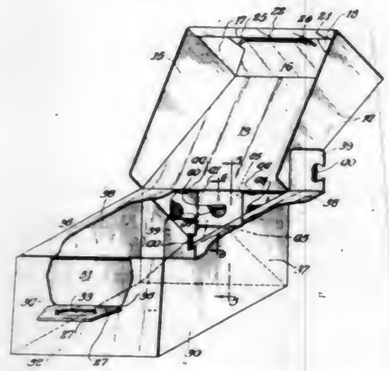
2,454,193
APPARATUS FOR MOLDING ARTICLES
Samuel M. Martin, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 13, 1944, Serial No. 540,083
5 Claims. (Cl. 18—36)

5. A molding apparatus, which comprises a stationary die member having a Y-shaped molding recess formed therein, a plurality of guide pins projecting from the stationary die member, a loading frame slidably and removably mounted on the guide pins and having formed therein an opening for providing clearance for the portion of the stationary die member having the recess therein, a pair of clamping plates mounted on one end of the frame in spaced positions for clamping



arms of a flexible core of a Y-type cord to that end of the frame, a clamping plate mounted on the other end of the frame for clamping the stem of the core to that end of the frame after the arms and the stem of the core have been tensioned, a movable die member having formed therein a Y-shaped molding recess complementary to the recess in the stationary die member and slidably and removably mounted on the guide pins for pressing the loading frame toward the stationary die member, and a plurality of compression springs mounted on the guide pins for pressing the loading frame against the movable die member when the die members are in a molding relationship.

2,454,194
METHOD FOR MAKING A HOLDER OF PLASTIC MATERIAL FOR POCKET COMBS AND THE LIKE
Charles E. Maynard, Florence, Mass., assignor to The Pro-Phy-Lac-Tic Brush Company, Florence, Mass., a corporation of Delaware
Application October 9, 1946, Serial No. 702,118
1 Claim. (Cl. 18—47.5)

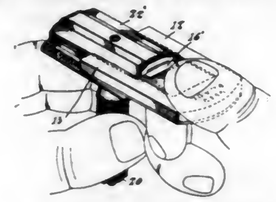


The method of making pocket comb holders, which consists in continuously extruding hot thermo-plastic material as a coreless hollow tube and with a wall thickness to support the tube enough for only gradually and progressively moving toward tube collapsed condition while hot, the thermo-plastic material being extruded in condition and slowly enough for setting by cooling to retain its shape when partially collapsed for internally fitting a comb, pinching the tube form together to completely collapse it to provide for end closures of the pocket comb holders, piercing the tube at intervals of its length to vent it against internal air pressure, setting the tube material in successive portions, and cutting off lengths formed for the comb holders as stated.

2,454,195
CIRCULATING GAS HEATER
Æolian E. Moores, Dallas, Tex.
Application October 30, 1945, Serial No. 625,467
2 Claims. (Cl. 126—90)

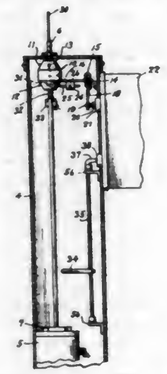
2. A gas heater comprising an elevated base having a central open area and a burner pipe extending about the edge of said open area but spaced inwardly therefrom, a frame surmounting said burner pipe consisting of upper and lower portions conforming to the inner periphery of said burner pipe, said frame portions being spaced apart by horizontally spaced uprights, each extending above and turned outwardly from the upper of said frame portions to define lips, confronting lips carried by and spaced apart on the lower of said frame portions, radiants supported on the sides and ends of said frame by the lips of said frame portions in perpendicularity to said burner pipe, a reticulated housing in separable, horizontal sections superimposed on said base and means for introducing fuel into said burner pipe.

2,454,196
MILLINERY BOX
Ersel C. Mulnix, Lake Bluff, Ill.
Application November 8, 1946, Serial No. 708,515
3 Claims. (Cl. 229—31)



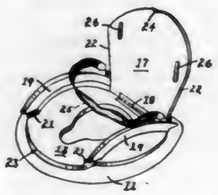
1. A box of integral construction comprising a cardboard blank margined and scored to fold into a cover portion having a top panel; side walls on opposite sides of said top panel; a front panel arranged outwardly of said top panel; an apron on the outer end of said front panel; corner sections between said side walls and said front panel adapted to fold against the inner face thereof; a tongue member carried by each opposite corner member arranged and adapted to project inwardly in overlapped and relative gripping position to be covered and held by said apron when folded; and a base portion adapted to be closed by said cover portion comprising a rear wall hingedly formed with said top panel of said cover portion; a bottom panel connected to the lower edge of said rear wall; side walls attached to opposite sides of said bottom panel; an inwardly projecting side rail foldably attached to the top of each side wall; rectangular folding flaps carried at each end of each side rail arranged and adapted to be folded into pocket engagement with diagonally folding corner members at each corner of said base portion; and button means forming a part of each of said folding flaps arranged in position to engage the innermost corner member at each corner; there being in each of said innermost corner members a hole to receive said button means.

2,454,197
BLADE HANDLING DEVICE
Joseph Muros, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application May 24, 1945, Serial No. 595,608
18 Claims. (Cl. 30—40)



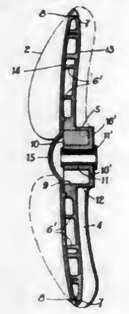
1. The combination of a safety razor having separable cap and guard with a blade-handling device comprising a thin, stiff body having on one face a sharp unused blade and means for detachably retaining the blade while leaving it free to

be withdrawn in an endwise direction, and on its other face parallel ways for guiding the device on



the cap of a safety razor, whereby the said blade may be located symmetrically beneath the cap.

2,454,198
AUTOMATIC CONTROL FOR WASHING MACHINES
Phillip M. Pappas, Houston, Tex.
Application July 19, 1944, Serial No. 545,586
6 Claims. (Cl. 200—53)

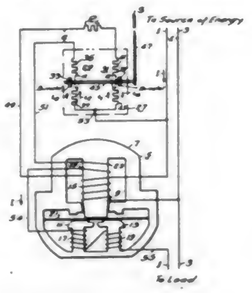


1. In an automatic control for washing machines, the combination of a casing, a cylinder in said casing, a plunger on said cylinder, a ball unit on said plunger, a primary trigger device in said casing and normally engaging said ball unit when said plunger is in a set position, an auxiliary trigger device in said casing and being operated by said ball unit, and a manually operated lock on said casing for normally holding the primary trigger device against action.

2,454,199
CHILD'S TOILET SEAT
William Howard Perrin, Grand Rapids, Mich.
Application July 28, 1944, Serial No. 546,990
2 Claims. (Cl. 4—239)

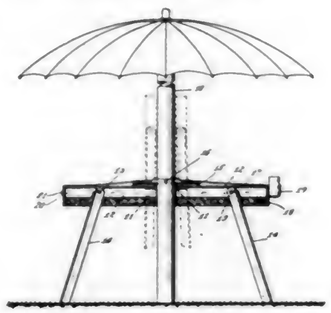
2. In a structure of the class described, an auxiliary toilet seat adapted to be hingedly secured adjacent its rearward end to the rearward portion of a conventional toilet seat, a cover hingedly secured adjacent the rearward end of the auxiliary seat and forming a back when in its upwardly unfolded position, said cover having cammed sides, and a normally vertically disposed spring actuated arm hingedly secured on each opposite side of the auxiliary seat, each arm adapted to be folded outwardly by the engaging of the cammed sides of the cover with the upper lengths of the arms during the downwardly folding movement of the cover and each spring of each arm adapted to maintain said arms in upright position as body supports when the cover is in unfolded position.

2,454,200
MOLDED IMPELLER
Kenneth Perkins, Scotch Plains, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 16, 1944, Serial No. 558,823
2 Claims. (Cl. 170—159)



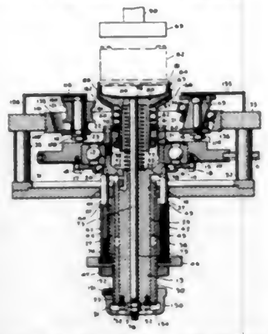
1. An air impeller formed in two parts from plastic material, one of said parts being formed with a hub from which a plurality of blades radiate, said blades having a cup-shaped portion formed with a series of longitudinally and laterally arranged ribs, the other part having a central portion which covers said hub and a plurality of blades complemental to the blades on said first mentioned part, and means for securing said parts together to form an air impeller having hollow blades with air foil sections.

2,454,201
ELECTRICAL MEASURING INSTRUMENT
Ambrose J. Petzinger, Passaic, and Rodney V. Adams, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 13, 1943, Serial No. 510,132
11 Claims. (Cl. 171—95)



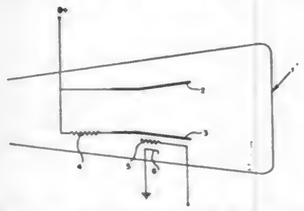
1. In an electrical measuring instrument for measuring a function of a voltage quantity and a current quantity of an electrical circuit, a pair of electroresponsive units having outputs responsive to electrical current supplied thereto, means connecting said units for energization respectively, in accordance with the sum of said quantities and the difference of said quantities, said units when energized equally by a first one of said quantities having a response to said quantities which does not portray accurately said function, said connecting means being proportioned to provide a ratio of the energizations of said units which are dependent on said first one of said

quantities other than unity for the purpose of compensating substantially for said inaccuracy,



and means differentially responsive to the outputs of said units.

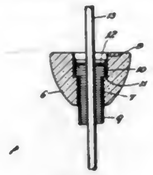
2,454,202
FOLDING PICNIC TABLE
John Pierik, Indianapolis, Ind.
Application June 11, 1945, Serial No. 598,845
1 Claim. (Cl. 311—78)



A table comprising a central standard having a base, a plurality of arms, hinge means for each of said arms, each hinge means connecting one end of its associated arm to said standard for swinging movement of the other end of such arm toward and away from said base, each such arm lying substantially parallel with said standard when its said other end is most remote from said base and substantially perpendicular with said standard when its said other end is nearest said base, a leg for each arm, each leg being pivotally connected to its associated arm near said other end of the latter for swinging movement, about an axis substantially parallel with the axis of said hinge means for such arm, each leg being swingable, when its associated arm is substantially perpendicular to said standard, into a position inclined downwardly and outwardly from said standard to support said arm, means slidably mounted on said standard and engageable with the upper surfaces of said arms, when said arms are substantially perpendicular to said standard, to restrain said arms against movement of said other ends thereof away from said base, a top element having a central opening therein sleevable over said standard to overlie said arms and said slidably mounted means, and means for connecting said top element to said arms near said other ends thereof.

2,454,203
SPINNING APPARATUS
Paul R. Powell, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application February 28, 1946, Serial No. 650,999
9 Claims. (Cl. 113—24)

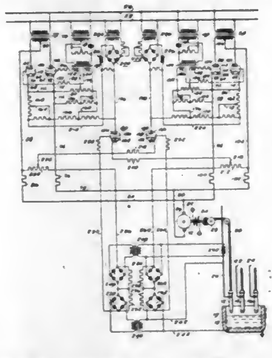
3. Spinning apparatus, comprising a fluid operated press including a reciprocable ram, a spring loaded member in alignment with said ram and having a recess therein for receiving a cup-shaped cover, a rotatably mounted flyer surrounding the spring loaded member and movable therewith, means for rotating the flyer, a stationary annular cam positioned coaxially with respect to the flyer, a plurality of arms pivotally mounted upon the flyer, rollers rotatably mounted upon the arms intermediate the ends thereof so as to engage the annular cam, and forming rollers mounted on the ends of the arms, whereby when the ram of the press is advanced into engagement with a cover positioned in the cover-receiving recess, the forming members are forced inwardly by the coaction of the rollers and the annular cam to cause the forming rollers to form an edge of the cover into a desired configuration.



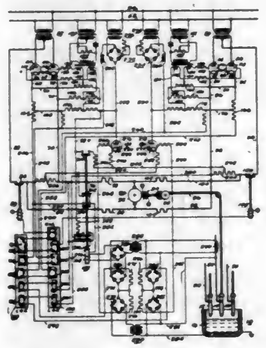
2,454,204
CATHODE-RAY TUBE
Richard C. Raymond, State College, Pa., assignor to the United States of America as represented by the Secretary of War
Application December 17, 1945, Serial No. 635,587
1 Claim. (Cl. 315—2)

In a cathode ray oscilloscope, a source of positive potential, a cathode ray tube including an evacuated envelope and a beam forming cathode, a pair of deflecting plates, means for electrically connecting said deflecting plates to said source of potential, resistor means within said envelope connected between one of said deflecting plates and said source of potential, an amplifier cathode within said envelope, and a control grid within said envelope located between said deflecting plate and said amplifier cathode in such a manner that the flow of current through said resistor

means may be controlled by the potential applied to said control grid, the voltage drop developed across said resistor by said current being impressed directly upon said one deflection plate.



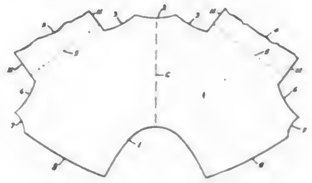
2,454,205
FILTERING DEVICE
Ludwig Reichold, Winsted, Conn., assignor to The Silex Company, Hartford, Conn., a corporation of Connecticut
Application October 9, 1944, Serial No. 557,903
4 Claims. (Cl. 210—162)



4. For a device of the character described comprising an upper bowl having a hollow stem depending therefrom, a filtering device comprising a filtering portion having an axial opening extending therethrough with an enlarged portion in said opening providing an intermediate shoulder, a helical spring extending downwardly from said shoulder through said opening and having an enlarged portion disposed within the enlarged portion of said opening and seated upon said shoulder for retaining the spring in the filtering portion, a washer fitting within said opening above the spring for retaining said spring in position and preventing the passage of particles, therethrough, a rod extending downwardly through an aperture in said washer and through said spring; the lower end of said spring being secured to said rod, a hook at the bottom of said rod for engaging the bottom edge of said stem for anchoring said spring thereto in extended position and thereby retaining said filtering portion seated within the mouth of said stem, and an extension on said rod above said filtering portion providing a handle for said rod.

2,454,206
ELECTRIC MOTOR REVERSING CONTROL
Jack E. Reilly, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,838
6 Claims. (Cl. 318—261)

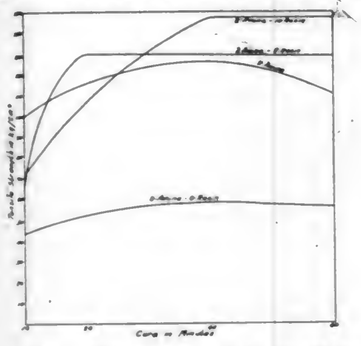
6. In a control system, in combination, a reversible motor the operation of which is to be controlled; a first and second pair of electric valves disposed to selectively connect the motor to a source of alternating current to control the direction of operation of the motor; the electric valves having grids to be utilized for controlling the conductivity thereof; a grid control circuit including a resistor for each pair of the electric valves; a first and second discharge valve having a grid in each disposed to be utilized for controlling the bias of the grids of the first and second pairs, respectively, of electric valves; a first and a second pair of sources of control voltages variable in opposite senses in response to the operation of the motor for impressing predetermined biases on the grids of the first and second discharge valves, respectively; a first and second resistor connected in circuit with the first and second pairs, respectively, of electric valves disposed to have potentials thereacross proportional to the flow of current therethrough to the motor; and another first and second resistor connected in the grid circuit of the second and first discharge valves, respectively; said another first and second resistors also being connected across the input circuits to the motor from the first and second pairs, respectively, of electric valves to a potential thereacross proportional to the potential across the motor; the potentials across the first and second resistors in circuit with the first and second pairs, respectively, of electric valves being substantially equal but opposite to the potentials across said another first and second resistors, respectively, connected in the grid circuits of the second and first discharge valves, respectively, when the first and second pairs, respectively, of the electric valves are conducting; said another first and second resistor cooperating in the grid circuits of the second and first discharge valves, respectively, to render the respective discharge valves non-conducting when the first and second pairs, respectively, of electric valves cease to conduct and the motor is coasting whereby the second and first pairs, respectively, of electric valves are rendered conducting to pass current from the coasting motor to the source of alternating current and thereby effect the braking of the motor.



2,454,207
ELECTRIC MOTOR REVERSING CONTROL
Jack E. Reilly, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,839
7 Claims. (Cl. 318—261)

7. In a control system, in combination, a reversible motor the operation of which is to be con-

trolled, a plurality of pairs of electric valves disposed to selectively connect the motor to a source of alternating current to control the direction of operation of the motor, the electric valves having grids to be utilized for controlling the conductivity thereof, a grid control circuit including a resistor for each pair of the electeric valves, a discharge valve having a control grid therein to be utilized for controlling the bias of the grids of the pair of electric valves associated therewith, a pair of control voltages variable in opposite senses in response to the operation of the motor for impressing predetermined biases on the grids of the discharge valves, a resistor connected across the motor to provide a source of potential proportional to the terminal potential of the motor and having a polarity depending upon the direction of operation of the motor, and a switching mechanism disposed to be actuated to a switching position in response to a predetermined potential across said resistor source as the motor operates in one direction, and to a component of one of the control voltages to render one of the discharge valves inoperative and simultaneously therewith render the pair of electric valves associated with said one of the discharge valves non-conducting to prevent further operation of the motor in the one direction.



2,454,208
GARMENT
Ruth E. Richman, Cedarhurst, N. Y.
Application September 24, 1946, Serial No. 698,969
2 Claims. (Cl. 2—108)

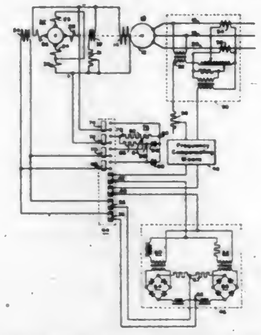
1. A garment blank having a lower edge and having substantially straight side edges extending from the lower edge, the upper edge of the blank at each side of the center comprising a series of curved portions forming a portion of the neck opening and a rear shoulder portion, a portion of the front neck opening and a front shoulder portion, and an intermediate sleeve portion between the front shoulder portion and the rear shoulder portion.

2,454,209
PROCESS FOR MODIFYING VINYL CHLORIDE-VINYLIDENE CHLORIDE COPOLYMERS WITH PHENOL FORMALDEHYDE RESINS
Thomas H. Rogers, Jr., Akron, Ohio, and Robert D. Vickers, New Rochelle, N. Y., assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application September 28, 1944, Serial No. 556,152
1 Claim. (Cl. 260—43)

A method of preparing a thermoset copolymer of 75 to 90 percent of vinyl chloride and from 25 to 10 percent of vinylidene chloride which comprises incorporating from 1 to 10 percent of hexamethylenetetramine and from 2 to 20 percent of a heat-hardenable phenol-aldehyde condensation product, and heating the mixture at a temperature between 200 and 400° F. until a product is obtained which has a tensile strength at least

fifty percent greater than the untreated copolymer.

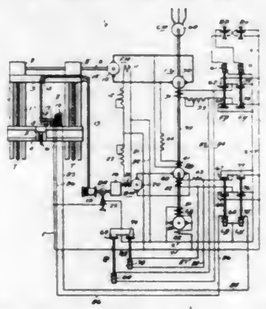
2,454,210
SYNTHETIC RESIN AND MEMBERS PRODUCED THEREFROM
Robert H. Runk, Pittsburgh 21, and Robert D. Jerabek, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 17, 1943, Serial No. 483,490
10 Claims. (Cl. 154—2.6)



2. The moldable resinous reaction product consisting of 1 mol of pentaerythritol, 1.5 mols±10% of maleic acid and 0.5±10% mol of phthalic acid substantially one mol of pentaerythritol being provided for two mols of maleic acid and phthalic acid combined, the reaction resulting in the product being carried out to the extent that the product has an acid number of from about 220 to 280 and a ball and ring softening point of from about 50° C. to 80° C., the resinous reaction product being moldable into a thermoset state in one hour at 150° C. in relatively thick sections.

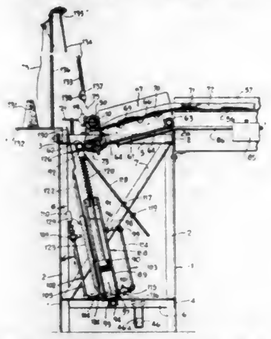
6. Electrical insulation comprising in combination, mica and from 3% to 15% by weight of a binder for bonding the mica into a predetermined shape, the binder consisting of the resinous reaction product of substantially only 1 mol of pentaerythritol, 1.5 mols±10% of maleic acid and 0.5±10% mol of phthalic acid substantially one mol of pentaerythritol being provided for two mols of maleic acid and phthalic acid combined, the reaction resulting in the product being carried to the extent that the product has an acid number of from about 220 to 280 and a ball and ring softening point of from about 50° C. to 80° C.

2,454,211
REGULATING SYSTEM
Homer M. Rustebakke and Albert W. Kimball, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 29, 1945, Serial No. 631,724
4 Claims. (Cl. 322—77)



1. In a regulating system for a dynamo-electric machine, in combination, an exciter for supplying the field excitation of the dynamo-

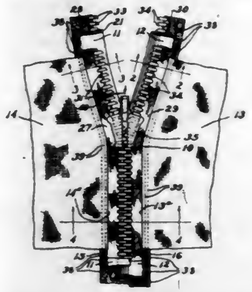
electric machine, a pair of circuits disposed to be connected in parallel circuit relation across the exciter, one of the parallel circuits comprising a resistor having an adjustable tap, the other of the parallel circuits comprising a resistor and a pair of parallel connected but op-



posed dry type rectifiers connected in series circuit relation therewith with a fixed tap therebetween, and a control field winding for the exciter disposed to be connected to the adjustable tap and the fixed tap to be directionally energized in accordance with the potential at the adjustable and fixed taps.

2,454,212
DRUM-OPERATING ELECTRIC DRIVE
Oren G. Rutemiller, St. Bernard, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 29, 1944, Serial No. 524,399
9 Claims. (Cl. 318—39)

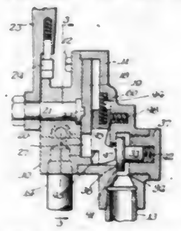
9. A control system for a machine having a vertically movable body and feed means for raising and lowering said body, comprising an electric drive for actuating said feed means, a cable to be attached to said body, an appertaining cable drum, a torque motor connected with said drum for substantially counterbalancing the weight of said body, a generator having an output circuit connected with said motor for energizing the latter, said generator having two field windings for controlling the voltage of said circuit, one of said windings being connected with said drive so as to be energized in accordance with the operation of said drive so as to move said cable at a speed lower than that of said drive, and pull responsive control means connected with said other winding for energizing it in dependence upon the pull of said cable so as to move said cable at a still lower speed.



2,454,213
APPARATUS FOR FORMING FILTER ELEMENTS AND THE LIKE
Victor Sager, Arcadia, Calif., assignor to Diesel Filter Co., El Monte, Calif., a limited partnership
Application May 15, 1944, Serial No. 535,590
21 Claims. (Cl. 242—1)

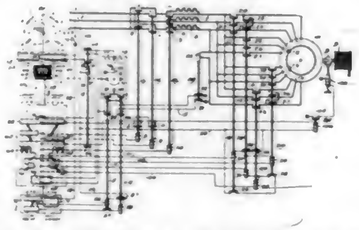
1. Winding apparatus comprising a work-supporting member, a pressure member, means mounting one of said members for movement toward or away from the other member, and means operable upon movement of said movable member into predetermined spaced relation to the other member for restraining said member against movement in either direction.

20. In winding apparatus: a work supporting member; a pressure member; means mounting one of said members for movement toward and away from the other member; means forming a closed liquid filled chamber, including a movable element for supporting said one member, said element being adapted to displace liquid from said chamber upon movement of said member in one direction; and means responsive to an increase of the fluid pressure in said chamber for discharging liquid therefrom.



2,454,214
CLOSURE
John P. Sapp, Kent, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application June 21, 1945, Serial No. 600,677
11 Claims. (Cl. 24—205.1)

2. A closure for adjacent margins, said closure comprising fastener means for detachably joining said margins, and sealing elements including interlocking overlapping portions at said margins for closing the latter, one of said portions at a face thereof having a recess therein for receiving



at least part of the other portion in sealing relation therewith, and one of said portions having a plurality of spaced-apart ribs of elastic material projecting from a face thereof and terminating in edges for contact with the other portion and sealing against the latter said other portion by lip-action of said edges providing a plurality of sealing zones, and said portions being backed by said fastener means for holding and supporting said sealing elements in engaged relation to one another.

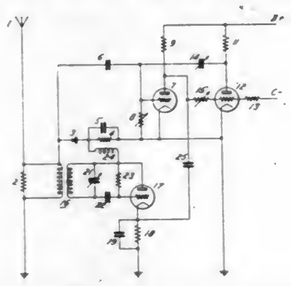
2,454,215
CONTROLLING MECHANISM FOR SAND TRAPS
Frank E. Saari, Chicago, and Grant V. W. Roth, Evanston, Ill.
Application February 21, 1947, Serial No. 729,966
7 Claims. (Cl. 291—16)

1. In controlling mechanism for a sand trap provided with an air nozzle for discharging sand and a duct for a clean-out blast, the combination of a casing provided with conduits for separately delivering air to the nozzle and the clean-out duct, a valve element rotatable in the casing, provided with a port for successively controlling delivery of air to said conduits, and with rotatable cam means, a normally closed auxiliary valve in the casing for controlling the supply of compressed air to said element, and means for opening the auxiliary valve movable in the casing, said cam means including faces for shifting said opening-means to open the auxiliary valve for the successive delivery of air to the nozzle and the clean-out duct when the disk is rotated in one direction and a face for shifting said means to leave the auxiliary valve closed during the return stroke of said element to its normal position.

2,454,216
APPARATUS AND SYSTEM FOR ELECTRIC CONTROL PURPOSES
Walter Schaelchlin and Kurt Mahnke, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 27, 1947, Serial No. 737,612
10 Claims. (Cl. 318—224)

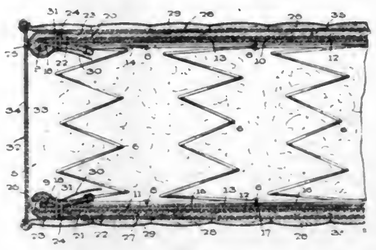
9. A motor control system comprising a multi-speed alternating-current motor having a plurality of terminal groups for operating the motor at different respective speeds, line terminals for energizing said motor, a plurality of selectively operable contactors for connecting said line terminals to said terminal groups respectively, a master controller having a primary member selectively adjustable between a plurality of positions for selecting the motor speed, and an intermediate member deflectable in opposite directions from an "off" position and a secondary member movable between a plurality of positions, a differential gear mechanism forming part of said master controller and being associated with said three members so that said intermediate member deflects from said "off" position due to a change in position of said primary member and returns to said "off" position when said secondary member is driven to change its position toward correspondence with the position of said primary member, a lost-motion coupling interposed between said primary member and said gear mechanism to permit individual movement of said primary member between some of its positions for low motor speed while entraining said gear mechanism to cause movement of said intermediate member when said primary member is moved between its other positions for higher motor speed, a reversible auxiliary motor in driving connection with said secondary member and an energizing circuit connected to said auxiliary motor, said intermediate member having contact means for controlling said energizing circuit to operate said auxiliary motor to drive said secondary member into positional correspondence with said primary member when said intermediate member is deflected from its "off" position, first contact means associated with said primary member and connected to at least one of said contactors appertaining to a terminal group for low motor speed so as to cause said variable-speed motor to operate at said low speed when said primary member is in a corresponding position, and second contact means associated with said secondary member and connected to at least one other contactor appertaining to a terminal group for high speed so as to cause said variable-speed motor to operate at said high speed when said secondary member is in a corresponding position.

2,454,217
PROCESS FOR THE MANUFACTURE OF A THIOPHAN DERIVATIVE
Otto Schnider, Jean-Pierre Bourquin, and André Grüssner, Basel, Switzerland, assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application January 29, 1946, Serial No. 644,186. In Switzerland February 2, 1945
2 Claims. (Cl. 260—309)



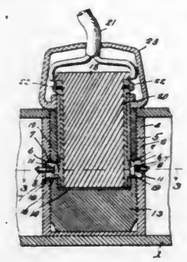
1. Process for the manufacture of a thiophan derivative, comprising reacting 2-(omega-methoxy-butyl)-thiophan - 3,4 - dicarboxylic - acid-ester with hydrazine-hydrate, treating the mother-liquor remaining after separation of crystalline hydrazide with sodium-nitrite, decomposing the resulting acid azide by heating with alcohol to yield the 3,4-diurethane, evaporating the solution under reduced pressure, dissolving the residue in benzene, passing the solution through a column of aluminum oxide, washing with benzene, eluting with chloroform, evaporating to dryness and converting the residue into the dihydrobromide of 2-(omega-bromo-butyl)-3,4-diamino-thiophan by heating with hydrobromic acid, reacting the resulting salt with phosgene, successively causing potassium-cyanide and a saponifying agent to act on the resulting reaction product and isolating the resulting 2-(omega-carboxy-butyl)-3,4-(imidazolidone-2')-thiophan in crystalline form after acidification.

2,454,218
COMPOSITE ASBESTOS MEMBER
Earl L. Schulman, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 10, 1943, Serial No. 509,737
3 Claims. (Cl. 154—2.6)



1. A composite electrical insulating member comprising, in combination, a plurality of laminations of long fiber woven asbestos fabric, a resin impregnating the fabric, and a layer of asbestos paper coextensive with and disposed between two of the laminations of asbestos fabric, the asbestos paper comprising a minor proportion of the member, the asbestos paper composed of short fiber asbestos, the asbestos paper being impregnated with resin, the asbestos fabric and paper bonded by the resin into a unitary member having higher breakdown voltage in a direction perpendicular to the plane of the laminations than a member without the asbestos paper.

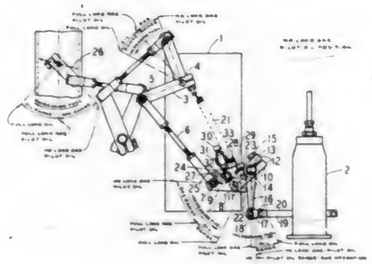
2,454,219
TRANSPONDER FOR TESTING RADAR DEVICES
Mortimer A. Schultz, Baltimore, Md., and Robert E. Bertine, deceased, late of Pittsburgh, Pa., by Gladys L. Bertine, administratrix, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 27, 1946, Serial No. 665,360
4 Claims. (Cl. 250—17)



4. An electronic echo device for transmitters of pulsed radiant energy comprising receiving means energized by said pulse radiant energy, a capacitor charged through a rectifier by the output of said receiving means, and provided with a discharge circuit proportioned to produce saw tooth voltage waves on said capacitor, a time delay circuit having input terminals energized from said capacitor, and an oscillation generator adapted to produce intermittent pulses of energy, and means for initiating generation of said intermittent pulses by said oscillation generator connected to the output circuit of said time delay means.

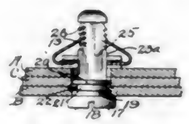
2,454,220
MATTRESS
Maurice D. Seeche, Lawrence, Mass.
Application June 4, 1947, Serial No. 752,445
4 Claims. (Cl. 5—351)

1. A mattress comprising an inner coil spring assembly, upper and lower pluralities of superimposed pads, an intermediate one of the pads of each of the pluralities having a marginal roll-edge embracing the proximate marginal edge of the coil spring assembly, flaps secured to the inner side of the outer-most pad of the respective pluralities and folded over the roll edge of the proximate intermediate pad, means securing the flaps in said folded position, and an intervening peripheral covering for the mattress secured for the entire thickness thereof at its edges to the edges of the outer-most pads for the entire thickness of the respective outer-most pads.



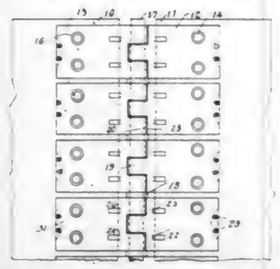
2,454,221
ELECTRIC SERVICE OUTLET
Fred H. Seals, Warner Robins, Ga.
Application February 11, 1946, Serial No. 646,929
2 Claims. (Cl. 173—330)

1. An electrical service outlet and plug including a cylindrical receptacle, opposed beveled contact elements slidably mounted in the wall thereof, yielding means on the contact elements normally urging them toward each other, a cylindrical socket member rotatable in the receptacle, the socket member having opposed transversely disposed arcuate cam grooves in its side wall in which the contact elements are received and having a non-circular socket extended inwardly from its outer end, the grooves each being deepest at one end and communicating at said ends with the socket at opposite points in the same plane along the side wall of the socket, means at the respective other ends of the grooves adapted to engage the contact elements when the socket member is in one extreme position, a plug formed correspondingly to the socket for insertion thereinto, and opposed contacts mounted in the side wall of the plug and projecting into said deepest ends of the grooves, the contacts on the plug being transversely grooved for locking engage-



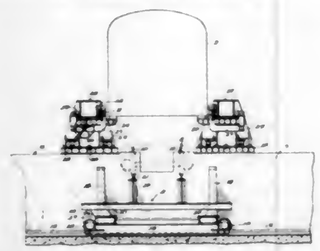
ment with the contact elements on the receptacle, the socket member being rotatable from said extreme position with the plug inserted, to position the receptacle contact elements at the deepest ends of the cam grooves and thereby bring the plug contacts into locking engagement with said elements.

2,454,222
FUEL REGULATING MEANS FOR DUAL FUEL ENGINES
Harold F. Shepherd, Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 18, 1947, Serial No. 780,742
6 Claims. (Cl. 123—121)



1. An internal combustion engine operating on fuel oil or gaseous fuel fired by pilot oil and provided with an engine driven governor for regulating the combined fuel supplied to said engine through a governor control linkage system including a stop and means incorporated in said linkage system comprising an articulated lever adapted to operate as a solid lever to control the supply of pilot oil under normal operation and adapted to operate as a cam fulcruming about said stop to supply additional oil fuel when the gas supply is decreased.

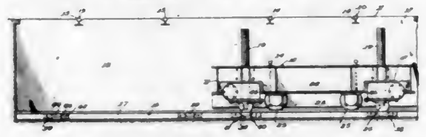
2,454,223
ROTATABLE SEPARABLE FASTENER
Winsor Shippee, Fair Haven, N. J.
Application August 9, 1944, Serial No. 548,693
5 Claims. (Cl. 24—221)



3. In a fastening device adapted to fasten together two apertured plates, a spring having inwardly and downwardly turned ends secured to one of said plates, upwardly and inwardly turned spring fingers formed on the central part of said spring, said spring having an aperture between said fingers, a shoulder in said aperture, a stud projecting through the apertures in both of said plates, and through the aperture in said spring, means on said stud engageable with said spring fingers upon rotation of said stud to secure the plates together, and stop means on said stud engageable with said abutments to limit the rotation of said stud.

2,454,224
BELT CONNECTOR
Charles P. Shook, Jr., Birmingham, Ala.
Application January 27, 1945, Serial No. 574,959
2 Claims. (Cl. 24—33)

1. A belt connector adapted for application to relatively wide, transversely flexible belts, comprising a relatively long temporary pintle, a plurality of hinges mounted on the pintle in side to side relation, each comprised of a pair of interconnecting U-shaped members fitting snugly about the pintle and having bolt holes therein for the reception of securing means for the belt, spacers on the pintle to limit movement of the hinge members toward each other said members abutting in end to end relation to limit movement thereof transversely of the pintle, and belt stops in each of the members closely adjacent the pintle, all of the said stops being in alignment across the connector, each of said U-shaped members having a plurality of small holes therein for reception of temporary securing means for a belt when marking it for punching.

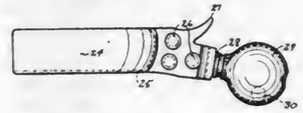


2,454,225
APPARATUS FOR SUPPORTING BODIES OF RAILWAY VEHICLES IN CONNECTION WITH REMOVAL AND REPLACEMENT OF THE TRUCKS THEREOF
Asa W. Skinner, Riverdale Village, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application July 31, 1947, Serial No. 765,066
13 Claims. (Cl. 104—32)

1. An apparatus designed for use with a railway track having an interruption therein and a vertically movable rail equipped element positioned adjacent the interruption and operative when raised to have the rails thereof bridge and complete the track, adapted after a railway vehicle is propelled along the track to a position wherein one of the trucks thereof is supported on the element to support the body of the vehicle so that the one truck may be released from the vehicle body and then lowered by said element, and comprising a pair of horizontal, laterally spaced beams disposed in an elevated position

with respect to the track and at opposite sides of the interruption, a pair of carriages mounted on the beams to move lengthwise thereof, and a pair of vehicle body supporting members mounted on the carriages so that they are movable back and forth between an operative position wherein they underlie and support the vehicle body and a retracted position wherein they are clear of the vehicle body.

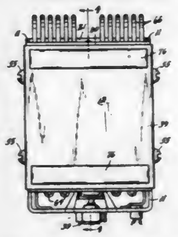
2,454,226
DROP TABLE APPARATUS FOR USE IN SERVICING TRUCKS AND WHEELS OF RAILWAY VEHICLES
Asa W. Skinner, Riverdale Village, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
Application October 31, 1947, Serial No. 783,415
8 Claims. (Cl. 104—32)



1. A drop table apparatus having associated therewith a main railway track with an interruption therein and an elongated pit extending transversely of the main track at said interruption and having a longitudinal track along its bottom, designed for use in removing and then replacing wheels on a railway vehicle on the main track, and comprising a table extending across the pit, adapted to be raised and lowered in the pit and when in its raised position while adjacent the main track to bridge the interruption and permit the wheels to be propelled thereover, and having mounted directly thereon wheels adapted when the table is in its lowered position in the pit to rest on the pit track and permit the table to be propelled therealong, a plurality of vertically extending struts connected to the table so that they and said table are capable of relative raising and lowering movement, and reversible power operated mechanism mounted on the table, operative to effect relative raising and lowering movement of the struts and table, and so related to said struts that it is adapted when actuated in one direction after the lower ends of the struts are supported at the pit bottom and the table is in its raised position first to lower the table until the wheels thereof rest on the pit track and then to raise the struts relatively to the table and free the latter so that it is capable of being propelled along the pit track, and is further adapted when actuated in the opposite direction first to lower the struts until the lower ends thereof are supported at the bottom of the pit and then to raise the table.

2,454,227
BETA-ALUMINA CATALYSTS
Albert E. Smith and Otto A. Beeck, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application December 26, 1947, Serial No. 794,080
15 Claims. (Cl. 252—434)

1. A process for the preparation of an adsorptive beta alumina suitable for use in catalysis which comprises reacting an alumina of the gamma system of Haber, in the absence of metal oxide isomorphous with alpha alumina, with a compound of an alkali metal selected from the group consisting of sodium, potassium and rubidium decomposable to the oxide by heat, at a temperature between about 900° C. and about 1400° C. for a time of at least two hours and until the material shows the X-ray diffraction pattern of beta alumina of the general formula $R_2O \cdot 11Al_2O_3$, R representing the alkali metal, the amount of said alkali metal compound employed being between about 3 mol % and about 12 mol % of the alumina.



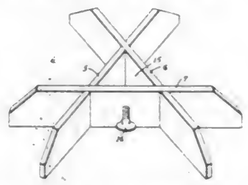
12. As a composition of matter a microporous alumina suitable for use in catalysis prepared by reacting an alumina of the gamma system of Haber, in the absence of a metal oxide isomorphous with alpha alumina, with a compound of an alkali metal selected from the group consisting of sodium, potassium and rubidium decomposable to the oxide by heat, at a temperature between about 900° C. and about 1400° C. for a time of at least two hours and until the material shows the X-ray diffraction pattern of beta alumina of the general formula $R_2O \cdot 11Al_2O_3$, R representing the alkali metal, the amount of said alkali metal compound employed being between about 3 mol % and about 12 mol % of the alumina, said alumina having an available surface of at least 20 $m.^2/g.$

2,454,228
SPUR
George N. Smith, near Nutwood, Ohio, assignor of one-half to Henry S. Robins, Warren, Ohio
Application June 3, 1946, Serial No. 674,078
2 Claims. (Cl. 54—83)

1. A spur comprising a U-shaped body member having an inturned flange thereon, a projecting portion on said spur including a spur point and a secondary projecting member, a bell affixed to said secondary projecting member.

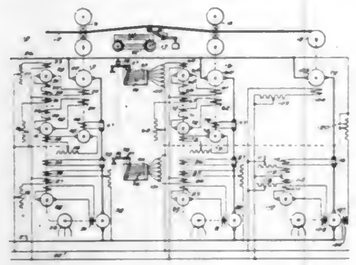
2,454,229
THERMOELECTRIC GENERATOR WITH PILOT BURNER
Hubert T. Sparrow, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application July 31, 1942, Serial No. 453,113
20 Claims. (Cl. 136—4)

1. A combination electric generator and pilot burner device comprising, a plurality of thermocouples electrically connected in series, a pilot burner member having an elongated and rela-



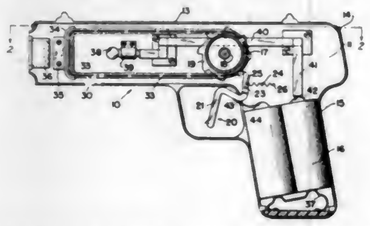
tively narrow slot at one end thereof for producing a thermocouple heating flame and having larger orifice means therein as igniter producing means, said burner having an opening at the opposite end thereof for the admission of gas and primary air thereinto, sleeve members for protecting the hot junction of the thermocouples, insulated casing means for insulating and supporting the thermocouples with one leg of each thermocouple on opposite sides of the said burner and with the hot junctions spaced from the pilot burner in a row extending parallel with said narrow pilot burner slot to be thus subjected to substantially the highest temperature produced by proper operation of the pilot flame, and the said sleeve members supporting the cold junction end portions of the thermocouples in a position below the said burner and sleeve members and in the path of the flow of primary air into the said pilot burner.

2,454,230
MOTOR BRUSH HOLDER CONNECTOR
Fernald S. Stickney, West Caldwell, N. J.
Application July 1, 1947, Serial No. 758,376
6 Claims. (Cl. 171—323)



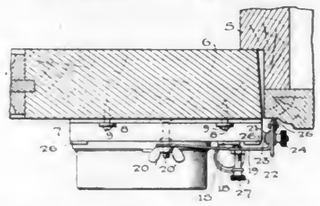
1. Means for making electrical connection to a small motor brush holder having an outer groove therein; said means comprising a helix of from one to one and a half turns of flat wire of good current conductivity and having a dimensional area which will substantially fill the groove in the holder, one end of the helix having a metallic sleeve thereon with said end bent over to hold the sleeve thereon, the sleeve also having a motor conductor inserted therein and then crimped so as to force said conductor and helix end into good electrical contact with each other.

2,454,231
STAND FOR CHRISTMAS TREES AND THE LIKE
Reinhold L. Stoick, Missoula, Mont.
Application October 30, 1946, Serial No. 706,717
3 Claims. (Cl. 248—44)



3. A stand for a Christmas tree or the like comprising three strips, two of said strips being formed each with a pair of spaced lateral slots extending inwardly from the same side edge of the strip about to the center line thereof, and the third of said strips being formed with a pair of spaced slots one of which extends from one side edge about to the center line of the strip and the other of which extends from the opposite side edge about to the center line of the strip, said slots being of such size and so arranged that each strip may be interlocked in the region of its slots with each of the other two strips to form a stand having a central triangular recess capable of receiving the trunk of a tree.

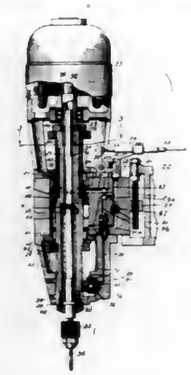
2,454,232
CONTROL SYSTEM
Glenn E. Stoltz, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 2, 1946, Serial No. 707,477
9 Claims. (Cl. 318—6)



9. In a control system for a roll driving motor having an armature arranged to be energized from a source of electrical energy and a plurality of field windings; a pilot generator driven by the roll motor for producing a variable control voltage and having a field winding energized in accordance with the armature current of the roll motor; a regulating generator connected to energize one of the motor field windings and having a pattern field winding energized in accordance with said variable control voltage and a differential field winding energized in accordance with the armature current of the roll motor; an additional regulating generator connected to energize another of the motor field windings, said generator having a pattern field winding energized from a source of substantially constant control voltage, a cumulative control field winding energized in accordance with the tension of the strip and a differential field winding energized in accordance with the current of said another field winding; and means operable to vary the energizations of the pattern field windings jointly in opposite senses.

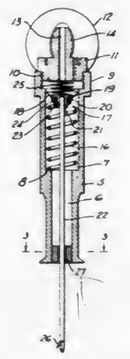
2,454,233
PICTURE PROJECTING PISTOL
Mathew A. Strumor, Brooklyn, N. Y.
Application April 27, 1946, Serial No. 665,554
1 Claim. (Cl. 88—28)

A picture projecting pistol comprising a housing including a barrel, said housing having a handle, battery cells in said handle, a trigger pivoted to said housing, a drum rotatable in said housing rearward of the barrel, opposed complementary vertical guides mounted in the side walls of the barrel near the muzzle thereof, an endless flexible belt trained about said drum and registering in said guides, said belt having film receiving means between the edges thereof, said edges of said belt comprising strips, said strips having longitudinal grooves cut into the juxtaposed inner walls of said edges, said grooves having transversely aligned obstructions therein thereby providing spacers in said grooves defining the length of the individual films, said grooves between successive of said spacers providing said film receiving means for the insertion of the edges of the film thereinto, means partly on said drum and partly on said trigger for advancing said belt a distance equal substantially to the length of one of said films upon pulling of said trigger, means normally retaining the trigger in cocked position, a light bulb mounted between said drum and said guides, a lens mounted forward of said guides, circuit means connecting one terminal of said bulb with one terminal of said cells, and means on said trigger for closing said circuit through said bulb upon said pulling of said trigger.



2,454,234
PORTABLE ALARM
Samuel Sundel, Philadelphia, Pa., assignor of one-half to Alexander Sundel and one-half to Christ Bastis, both of New York, N. Y.
Application April 12, 1945, Serial No. 587,875
2 Claims. (Cl. 200—54)

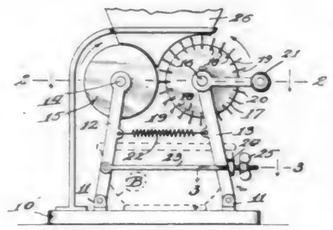
2. In a portable self-contained alarm of the type including a mounting panel adapted to be secured to a closure, a circuit maker and breaker embodying a contact fixedly secured to the panel, a resilient contact strip secured at one end to the panel, the other end overlying the fixed contact and extending beyond the edge of the closure, and a spacer pivotally mounted on the extended end of said resilient contact strip, the pivoted spacer having a set position extending from the resilient contact strip and into engagement with the closure frame when the closure is closed, the spacer being automatically pivotable, when the closure is opened, to a free position wherein it does not engage the closure frame when the closure is subsequently closed.



2,454,235
DRILLING MACHINE
Ernst J. Tomek, Danbury, Conn., assignor to Connecticut Tool & Engineering Company, Bridgeport, Conn., a corporation of Connecticut
Application October 19, 1943, Serial No. 506,815
12 Claims. (Cl. 77—32)

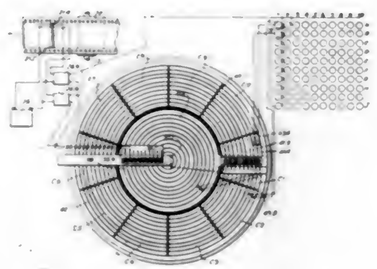
1. In a power driven and fed tool spindle mechanism, a reciprocatory tool spindle; and a hydraulic circuit for controlling the movements of said tool spindle including hydraulic power means for causing the spindle to approach and travel relative to the work, a valve mechanism including a part manually set and a part operated by the spindle in its travel for causing rapid movement of the spindle to work-engaging position and becoming inoperative to control the speed of travel of the spindle after it reaches a predetermined work-engaging position, said manually set part being adjustable to vary the point in the travel of the spindle at which it becomes inoperative and another valve mechanism manually adjustable for

variably controlling the speed of travel of the spindle in the working portion of the stroke thereof; an adjustable stop for engaging the spindle and limiting the outer movement of the spindle; and means operated by the power means after the spindle has stopped for reversing the power means and returning the spindle to starting position.



2,454,236
PNEUMATIC KNITTING DEVICE
Marcel Vitoux, Troyes, France, assignor to American Vitos Company, Inc., New York, N. Y., a corporation of Delaware
Application August 6, 1947, Serial No. 766,697
In France December 10, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 10, 1962
1 Claim. (Cl. 66—1.5)

A knitting device comprising a cylinder having a longitudinal bore, a piston at the upper end of said bore slidably arranged therein, a spring upon which said piston is supported, a bushing at the lower end of the cylinder, having an opening formed therein, and a knitting needle carried by the piston and passing through the opening in



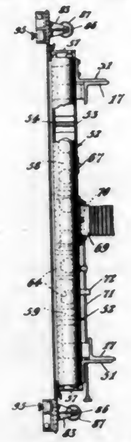
the bushing, the contour of said opening and cross-section of the needle corresponding one to the other and being such as to prevent rotary movement of the needle, said piston including a leather cup and means connected with said leather cup for supporting an end of said knitting needle directly below said leather cup.

2,454,237
VEGETABLE CUTTER
Albert G. Wahl, Los Angeles, Calif.
Application June 20, 1947, Serial No. 755,942
1 Claim. (Cl. 146—122)

In a vegetable cutter, a base, two pairs of upright arms having their lower ends pivoted on said base, rollers mounted for rotation upon and between the upper portions of the members of said pairs of arms, spaced radially arranged blades projecting from the periphery of one of said rollers, retractile springs connecting the intermediate portions of the arms on both sides of the cutter, perforated lugs on the lower portions of the arms carrying the roller provided with the blades, rods passing through said perforated lugs, said arms at one end being pivoted to the lower portions of the arms carrying the other roller, the ends of said rods being threaded and nuts mounted on the threaded portions of said rods outwardly from said lugs.

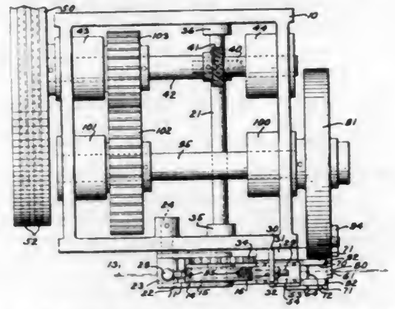
2,454,238
ELECTRICALLY ILLUMINATED DISPLAY APPARATUS
Fred Waller, Huntington, N. Y., and Willis Robert Dresser, Long Hill, Conn., assignors to The Vitarama Corporation, Huntington Station, N. Y., a corporation of New York
Application July 26, 1944, Serial No. 546,712
3 Claims. (Cl. 177—350)

1. In an electrically illuminated display device, in combination, a multiplicity of lamps arranged in a plurality of successive groups, the lamps of each group being equal in number, a single control band having a series of control frames, a single series of circuit controlling devices controlled by said control band, the number of controlling devices in said series corresponding to the number of lamps in each group, means for advancing said control band across said circuit controlling devices, means for completing circuits controlled by said series of circuit controlling devices successively to each of said successive groups of lamps while said control band is being advanced one frame length, and means in each of said circuits for controlling the apparent intensity of illumination of each of said lamps, said means being controlled by said circuit controlling devices.



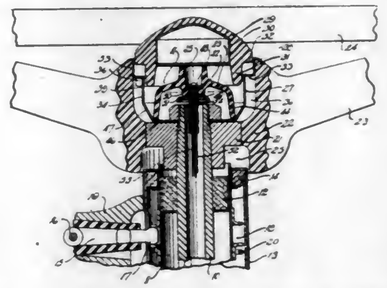
2,454,239
SURFACE COVERING MATERIAL
Frank Washburn, La Fayette, Ind., assignor of one-half to William O. Mayne, Battle Creek, Mich.
Application July 23, 1946, Serial No. 685,685
5 Claims. (Cl. 108—7)

2. A roof shingle of substantially rectangular shape with one of its diagonals disposed in a vertical plane, a lateral corner of each of said shingles being truncated to provide a vertical guide, a pair of downwardly converging sides for each shingle, a pair of lugs formed at the bottom of each shingle having an outer straight edge disposed at an angle of 45° with said converging sides, a hook formed by a recess in one of said converging edges directly below said truncated corner for limiting the upward movement of said pair of lugs, and a second lateral corner provided in each of said shingles having an inwardly stepped vertical guide as a laying guide for abutting engagement with said first vertical guide of an adjacent shingle, whereby said laying guides and hook are adapted to maintain said shingles in vertical and horizontal alignment.



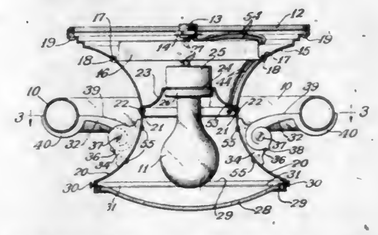
2,454,240
PHOTOGRAPHIC SUCTION HOLDER
Stephen N. Wekeman, Saddle River Township, Bergen County, N. J., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
Original application April 29, 1943, Serial No. 485,004. Divided and this application March 1, 1946, Serial No. 651,213
3 Claims. (Cl. 88—24)

1. In a device of the character described, a suction housing and an abjective lens spaced therefrom, the front wall of said suction housing comprising a centrally disposed translucent focusing plate disposed in and at right angles to the optical axis of said objective lens, said front wall and said plate being provided with apertures placing the interior of said housing in communication with the atmosphere, the rear wall of said suction housing comprising a movable door centrally disposed which may be opened when it becomes desirable to view said focusing plate, and a suction hose having one end secured to said



door and in communication with the interior of said housing.

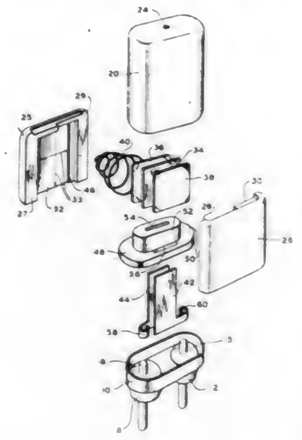
2,454,241
WIRE-CUTTING APPARATUS
August Wennerberg, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 12, 1946, Serial No. 683,041
3 Claims. (Cl. 140—146)



1. In a stock cutting apparatus, a cutting blade having a cutting surface, means for moving said blade in a circular path, a pair of feed rolls operable in timed relation to said moving means for moving said stock into the path of said blade, a cutting member having a shearing edge for cooperating with said blade, means for supporting said cutting member for limited movement with respect to the path of said blade, adjustable means for selectively limiting the movement of said cutting member with respect to the path of said blade, resilient means for urging the cutting member toward the path of said blade, a channel in said cutting member having walls for aligning said stock, a channel disposed between said feed rolls and said cutting member having walls for guiding said stock, a flange on one of said feed rolls overlapping the rim of the other of said rolls to retain the stock between said rolls, and a camming surface on said cutting member for engagement by said blade to align the cutting edge of said member with the cutting surface of said blade.

2,454,242
HORN BUTTON CONSTRUCTION
John J. Wharam, Dearborn, and Milton Jovanovich, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application October 20, 1945, Serial No. 623,496
3 Claims. (Cl. 200—59)

1. In a push-button electrical switch construction of the type in which the operating member is resiliently urged into one position of reciprocation and may be depressed therefrom against said urging to another position of reciprocation to effect a change in an electrical circuit but will be automatically returned to said one position when pressure is released, comprising, an operating member, a unitary actuating member formed of resilient rubber-like material having a first portion opposing a relatively slight resistance to the initial travel of said operating member and second portion opposing a substantially greater resistance to continued travel of said operating member thereafter, a mounting, said operating member comprising a horn button reciprocably disposed in said mounting and urged outwardly therefrom by the resiliency of said actuating member, a bayonet and pin connection effective between said horn button and said mounting to limit the outward movement of said button, a fixed contact member on said mounting, a movable contact member insulatedly supported on said actuating member, said movable contact member being adapted to engage said fixed contact member on the flexure of said first portion and said pin and slot being brought into disengaging alignment on further depression of said horn button resiliently opposed by the flexure of said second portion.

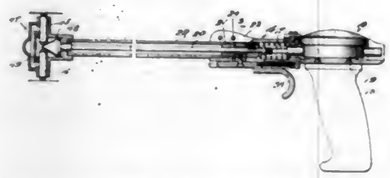


2,454,243
LIGHTING FIXTURE
Arthur E. Wiedenhoeft, Glen Ellyn, Ill.
Application September 7, 1945, Serial No. 614,881
9 Claims. (Cl. 240—51.12)

1. A lighting fixture comprising a circular tube lamp, a reflector extending downwardly within the lamp, arms movably secured to the reflector

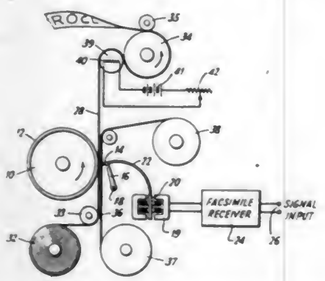
to swing within the lamp for admitting it from below past the arms and movable outwardly therefrom for supporting the lamp above and at the ends of the arms.

2,454,244
MOISTUREPROOF HOUSING FOR PIEZO-ELECTRIC ELEMENTS
Carlton H. Wintermute, Newark, N. J.
Application February 19, 1945, Serial No. 578,750
14 Claims. (Cl. 171—327)



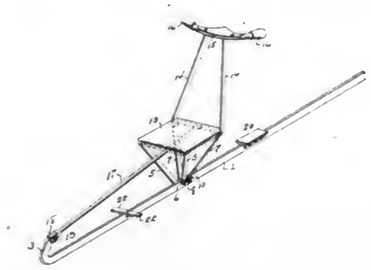
6. A moisture-proof housing for a piezo-electric element comprising a metallic cap and a base, said base including a stamped, metallic frame, said frame forming the external member of said base, the upper portion of said frame making a sliding fit with said cap, and the lower portion of said frame having two bottom openings, two pins for establishing electrical connections of said element, a glass seal filling the bottom portion of said frame, and holding said pins in concentric relationship with respect to said openings, the inner ends of said pins protruding through said glass seal into said housing for establishing said electrical connections with the mountings of said piezo-electric element, said frame, pins, and glass seal having substantially equal thermal coefficients of expansion, and a solder seal between said cap and said frame for making said housing moisture-proof.

2,454,245
FLAME-RETARDING MATERIAL AND PROCESS OF MAKING THE SAME
Jackson A. Woodruff, St. Davids, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 20, 1946, Serial No. 649,131
5 Claims. (Cl. 117—137)



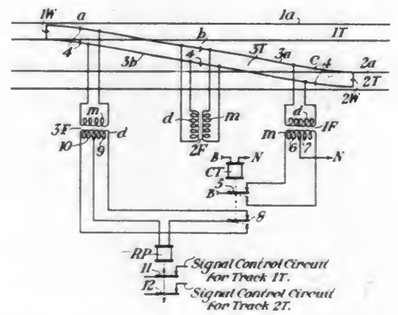
3. The method of rendering cellulose flame resistant and capable of withstanding repeated wetting with water without substantial loss of flame resistance, which comprises treating the cellulose with an aqueous solution of sodium tungstate, removing excess treating liquid from the material, and thereafter treating the material with an aqueous dilution of an acid solution of the resin obtained by reacting substantially equimolecular proportions of cyanamide and formaldehyde in an aqueous medium having a pH of about 6 to 9, at a temperature between about 70° C. and 100° C., to thereby form on the cellulose a water insoluble complex of tungsten with the resin, and fix the complex to the cellulose through the substantivity of the resin for cellulose, the complex being formed and fixed to the cellulose without benefit of curing.

2,454,246
BORE GAUGE
John H. Worthen, Providence, R. I., assignor to Federal Products Corporation, a corporation of Rhode Island
Application October 17, 1944, Serial No. 559,070
2 Claims. (Cl. 33—147)



1. In a bore gage, a body member, a dial indicator carried thereby having an operating plunger, a slidably mounted actuating rod engageable with said plunger, a trigger slidably mounted on the body member, means connecting said trigger to said rod including an abutment secured on said rod, an abutment secured on said trigger and extending about said rod and free thereof, one in the path of sliding movement of the other, a spring urging said rod away from said plunger and a spring urging said trigger away from said plunger.

2,454,247
FACSIMILE RECORDING APPARATUS
Charles J. Young, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 28, 1945, Serial No. 637,660
2 Claims. (Cl. 178—11)

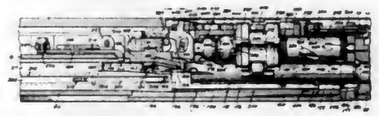


1. A facsimile recorder comprising a recording drum and means for passing a record sheet relative to said drum and moving said sheet so that the sheet and drum have at least tangential peripheral contact, means for marking said record sheet at the point of contact with said drum under the control of received signals, means for treating the marks on the record sheet comprising a heating device over which the marked record sheet is passed subsequent to a recording operation thereon, and means for regulating the quantity of heat supplied to said record sheet.

2,454,248
ICE GLIDER
Paul Anderson and Bernard Anderson, Clifton, N. J.
Application May 11, 1945, Serial No. 593,260
4 Claims. (Cl. 280—23)

2. A sled comprising a seat including a front supporting frame having a horizontal portion, portions depending from the ends of the horizontal portion, a rear supporting frame including lower portions, a cross member secured to and bridging the lower portions and paralleling said horizontal portion, a top for the seat and fixed to the horizontal portion and cross member, upper portions included in the rear frame, a handle bar secured to and bridging the upper ends of the upper portion, a relatively long runner having openings therein, parallel portions formed on the lower ends of the depending portions and said lower portions respectively, inwardly directed dowel pins on said parallel portions and receivable in certain openings of the runner, means for disposal through the remaining openings of the runner for cooperation with the dowel pins for detachably securing the runner to the frames, and bracing means for the seat and detachably secured to the runner.

2,454,249
TRAFFIC PROTECTION APPARATUS
John H. Broadbent, Willistown Township, Chester County, Pa., assignor to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application April 25, 1946, Serial No. 664,717
8 Claims. (Cl. 246—114)

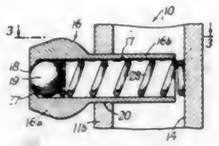


1. In combination, a stretch of railway track divided into two sections, a coding device having two contacts repeatedly closed at the same time alternately in a first position and a second position while said coding device is energized, a transformer, a secondary winding of said transformer connected across the rails of one of said sections adjacent one end of said stretch of track, means controlled by one of said contacts in its first and second positions for repeatedly energizing the primary winding of said transformer alternately in opposite directions, a second transformer the primary winding of which is connected across the opposite end of said one track section and the secondary winding of which is connected across the adjacent end of the other track section, a decoding transformer the primary winding of which is connected across the opposite end of said other track section, a code detecting relay, means including the other one of said contacts for rectifying the current from the secondary winding of said decoding transformer for energizing said code detecting relay, and traffic governing means controlled by said code detecting relay.

2,454,250
MOLDING COMPOSITION OF POLYVINYL AROMATIC COMPOUND
Lawrence M. Debing, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 27, 1945, Serial No. 625,103
4 Claims. (Cl. 260—45.2)

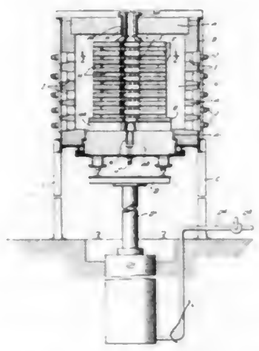
1. A molding powder comprising one part of a solid polymer consisting of a polymerized vinyl aromatic compound taken from the group consisting of styrene, ring-substituted alkyl styrenes, ring-substituted chlorostyrenes and vinyl naphthalene, blended with from ½ to 5 parts of a pulverulent, incompatible, infusible, insoluble aldehyde-aminotriazine resin, said molding powder being capable of being molded under heat and pressure.

2,454,251
CARTRIDGE FEEDING MECHANISM FOR AUTOMATIC GUNS
Wallace Hamilton, Albany, N. Y.
Application January 11, 1946, Serial No. 640,447
4 Claims. (Cl. 89—33)



3. In a gun having a tube, normally locked means operable by gas pressure from an intermediate point in said tube to feed successive rounds into position for ramming, and means operable by blow-back impact of cartridge cases to unlock said locked means for a feeding step.

2,454,252
LUBRICATOR HEAD CONSTRUCTION
Lewis R. Heim, Fairfield, Conn., assignor to The Heim Company, Fairfield, Conn.
Application February 24, 1945, Serial No. 579,619
3 Claims. (Cl. 184—105)



2. In bearing construction, in combination, a member having a bore extending therethrough

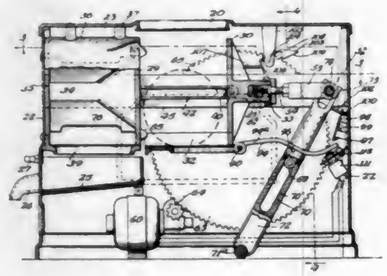
and having a hole extending through its wall into said bore, the axis of said hole being at right angles to the axis of said bore, a second member having a cylindrically shaped inner portion securely mounted in said hole and extending across said bore to abut against the opposite side thereof, the inner end of said second member being cut off in a radial plane, whereby space is provided between the inner end of said second member and the curved side wall of said bore when said second member is mounted on said

first-mentioned member, said second member having a lubricating hole extending therethrough and having a head shaped to fit the mouth of a nozzle of a lubricant-injecting unit, said lubricating hole having a portion of reduced diameter adjacent the outer end thereof to provide a valve seat, a check ball mounted in said last-mentioned hole, and spring means for holding said ball against said valve seat, said spring means acting between said check ball and the wall of said bore against which the inner end of said second member abuts.

2,454,253
METHOD OF AND APPARATUS FOR HEATING STACKED BODIES
James Kniveton, Wyncote, Pa., assignor to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application January 25, 1947, Serial No. 724,341
4 Claims. (Cl. 263—43)

1. A method of heating bodies in an enclosed furnace space having a heating gas outlet at its upper end which consists in arranging said bodies in said space in a stack with a vertically disposed central flue in said stack and communicating at its upper end with said outlet, and with horizontal passages extending from the outer side of the stack to said central flue at different levels from the portion of the furnace space at the outer side of said stack, and burning a combustible gas and air mixture in said furnace space portion and thereby radiating heat to said stack and filling said space portion with hot gases, and in burning a combustible gas and air mixture under a pressure higher than that of the atmosphere and thereby producing a jet of highly heated combustion products passing upward through said central flue and thereby aspirating said hot gases into said central flue through said horizontal passages.

2,454,254
STABILIZED ORGANIC PEROXIDES
Robert Kuoch, Tonawanda, and Edward S. Shanley, Kenmore, N. Y., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.
No Drawing. Application February 24, 1944, Serial No. 523,730
9 Claims. (Cl. 260—610)

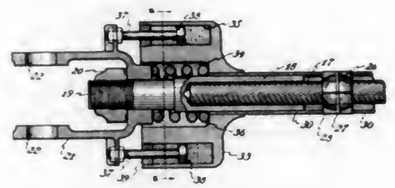


1. A stabilized organic peroxide composition essentially consisting of a single phase liquid mixture of an alkyl ester of phthalic acid and an organic peroxide containing more than 6.6% active oxygen of the formula

where R is a straight chain unsubstituted alkyl radical and R' is a radical selected from the class consisting of (*a*) straight chain unsubstituted alkyl radicals and (*b*) hydrocarbon monocyclic aryl radicals.

2,454,255
POLYSTYRENE-CHLORINATED META DIPHENYL BENZENE COMPOSITION
Joseph R. Mares, Webster Groves, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 6, 1944, Serial No. 566,947
1 Claim. (Cl. 260—45.5)

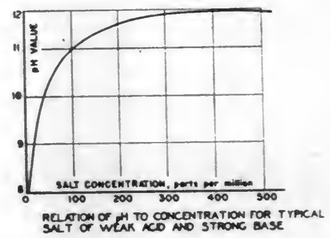
A composition of matter consisting of 100 parts of polystyrene resin and 100 parts of chlorinated meta diphenyl benzene containing 68% chlorine, said composition being characterized by a heat distortion temperature above that of polystyrene.



2,454,256
JUICE EXTRACTOR
Louis Myers, Rockford, Ill.
Application January 11, 1945, Serial No. 572,333
15 Claims. (Cl. 100—41)

3. In a juice extractor, the combination of a casing having a horizontally extending squeezing

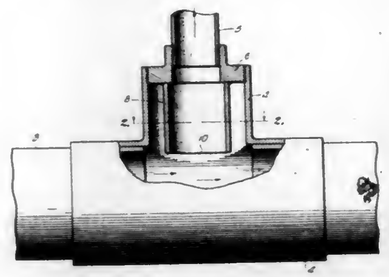
chamber therein, a pair of squeezer members respectively adapted to move the fruit horizontally into and squeeze the fruit in said chamber and to withdraw the fruit-residue from the chamber, means for guiding the squeezer members, the members being relatively movable, one of said members being movable in one direction in the chamber by the other by fruit interposed between them and being retractable by the other member for moving the fruit-residue out of the chamber, a holder for fruit between the squeezer members, means for arresting said one member in the chamber, and mechanism for reciprocating said other member to move the fruit from the holder into said chamber, and in coaction with said one member while it is stopped by said arresting means, to express the juice from the fruit therein and withdraw the one member to force the fruit-residue from said chamber.



2,454,257
ARRESTING HOOK
Donald C. Rowe, Kenmore, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation, a corporation of Delaware
Application October 4, 1934, Serial No. 746,762
11 Claims. (Cl. 244—110)

3. An arresting gear for aircraft comprising a tension element flexible throughout its length organized to normally assume a straight line attitude and capable of being curvably deformed in a vertical plane only, means secured to said element for tensioning same, and means secured to said element for damping the movement of said element between straight line and curved attitudes.

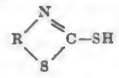
2,454,258
WATER TREATMENT TO PREVENT EMBRITTLEMENT CRACKING
Wilburn C. Schroeder, Calvert Hills, and Abraham A. Berk, Berwyn Heights, Md., assignors to the United States of America as represented by the Secretary of the Interior
Application July 2, 1942, Serial No. 449,454
19 Claims. (Cl. 210—23)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A method of conditioning the water in a boiler to render it alkaline but incapable of yielding strong concentrations of caustic soda on evaporation, in which the alkalinity is imparted to the water exclusively by hydrolytic dissociation of alkali-metal salts and especially one of said salts selected from the group consisting of secondary and tertiary phosphates, silicates, borates, acetates and fluorides, and in which the alkalinity of the boiler water is controlled by determining the concentrations of all the alkali-metal salts of said group contained in the boiler water exclusive of the selected salt and determining the concentration of the selected salt which in conjunction therewith would impart to pure water a selected pH value desirable for boiler operation and lying between 8.5 and 12, adding to the boiler water the so determined

RELATION OF pH TO CONCENTRATION FOR TYPICAL SALT OF WEAK ACID AND STRONG BASE

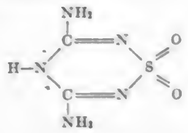
concentration of the selected salt, testing the pH of the boiler water from time to time, and adding thereto such quantities of the selected salt and of acid and basic agents as are indicated by the tests to be necessary concurrently to maintain the so determined concentration of the selected salt and an alkalinity of the boiler water between the selected pH value and 8.5.



2,454,259
SELF-CLEANING SCREEN STRUCTURE
Rolland O. Shadday, Joplin, Mo., assignor to Herbert Wolcott, Columbia, Mo.
Application April 30, 1945, Serial No. 591,129
2 Claims. (Cl. 210—167)

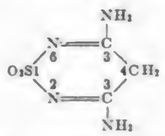
2. A self-cleaning screen assembly comprising, in combination with a main conduit for conducting a liquid flow and having a branch pipe portion tapped for a branch pipe connection, an adapter fitting having a body portion threaded into said branch pipe portion and formed with an exterior nipple for connection with a branch pipe and also an interior pipe section of relatively larger inside diameter than the inside diameter of said exterior nipple and projecting in alinement therewith, whereby the inner end of said pipe section is positioned by turning of said body portion of the fitting in substantially flush relation with the interior wall of the main conduit, and a screen element carried by the inner end of said pipe section in substantially parallel relation to the direction of the main liquid flow through said main conduit.

2,454,260
PREPARATION OF METAL MERCAPTIDES OF AMINO-ARYL MERCAPTANS
Norbert Steiger, Nutley, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application February 12, 1946, Serial No. 647,197
9 Claims. (Cl. 260—429)



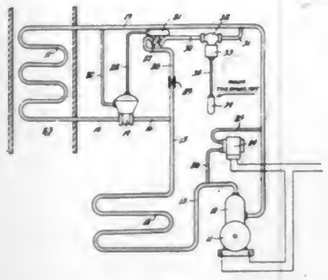
8. A process of preparing metal compounds of amino-aryl mercaptans which comprises hydrolyzing a compound of the general formula:

in which R is an arylene radical of the group consisting of the phenylene and naphthalene series, free from substituents reactive in the process steps, adjacent carbon atoms of which are attached to the nitrogen and sulfur atoms, with an alkali metal hydroxide in the presence of calcium hydroxide, whereby insoluble calcium carbonate is formed, treating the reaction product, in the presence of an alkali metal hydroxide, with zinc chloride in an amount sufficient substantially to remove sulphide in the form of insoluble zinc sulphide, but insufficient in amount to form any substantial quantity of zinc aryl-amino-mercaptide.



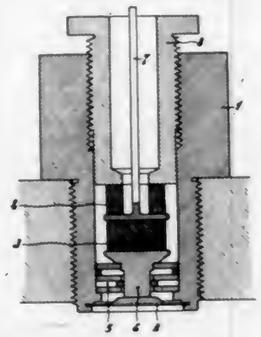
2,454,261
AMINOTRIAZINE AND DERIVATIVES
Henry A. Walter, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application January 19, 1946, Serial No. 642,434
2 Claims. (Cl. 260—249.5)

1. 3,5-diamino-4-hydro thiotriazine-1-dioxide having the formula



2,454,262
DIAMINO THIADIAZINE DERIVATIVES
Henry A. Walter, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application August 6, 1947, Serial No. 766,893
2 Claims. (Cl. 260—243)

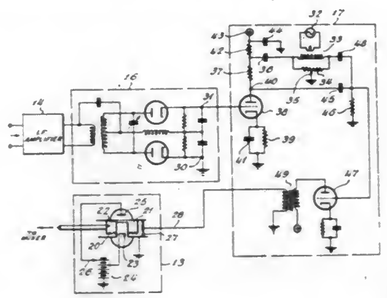
1. 3,5-diamino-4-dihydro thiadiazine-1-dioxide having the following structure



2. A process for preparing 3,5-diamino-4-dihydro-thiadiazine-1-dioxide which comprises reacting together substantially equimolar proportions of sulfamide and malononitrile in solution in an alcohol and recovering said 3,5-diamino-4-dihydro-thiadiazine-1-dioxide.

2,454,263
REFRIGERATION SYSTEM
Alwin B. Newton, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 5, 1943, Serial No. 481,795
17 Claims. (Cl. 62—8)

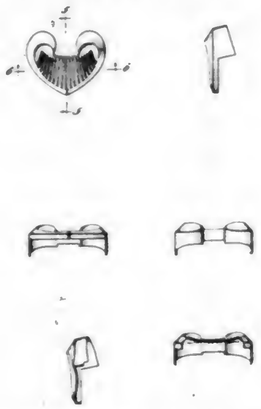
1. In a refrigeration system having an evaporator, in combination, an expansion valve in control of the flow of refrigerant to the evaporator and including a thermostatic element responsive to the temperature of the refrigerant leaving the evaporator, an auxiliary evaporator associated with the thermostatic element of the expansion valve for cooling the same to vary the superheat maintained at the outlet of said evaporator by the expansion valve, conduit means for supplying refrigerant to said auxiliary evaporator from the main system from a point upstream of the main evaporator, restrictor means in said conduit means, and means including a valve arranged to prevent or establish the discharge of refrigerant from the auxiliary evaporator.



2,454,264
PIEZOELECTRIC DEVICE FOR CONVERTING PRESSURE VARIATIONS INTO POTENTIAL VARIATIONS
Willem Hendrik Stigter, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application January 19, 1943, Serial No. 472,919
In the Netherlands August 31, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires August 31, 1960
9 Claims. (Cl. 171—327)

1. A piezo-electric pressure indicator comprising a piezo-electric element, a diaphragm member mechanically connected to the piezo-electric element for applying a variable pressure thereto, means for applying a preliminary pressure to the piezo-electric element, and resilient means interposed between the piezo-electric element and the diaphragm member to relieve the diaphragm member of the preliminary pressure applied to the piezo-electric element.

2,454,265
AUTOMATIC FREQUENCY CONTROL SYSTEM
Edwin T. Jaynes, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application November 6, 1943, Serial No. 509,262
19 Claims. (Cl. 250—36)

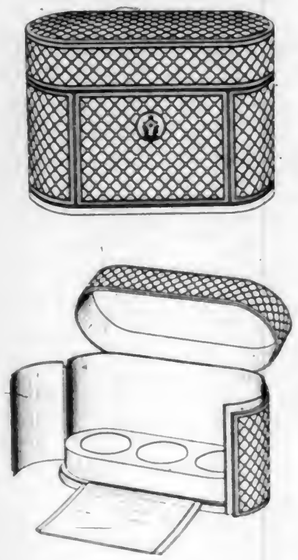


1. Automatic frequency control apparatus, comprising a controlled oscillator having a frequency-determining circuit and thermally-actuated means for tuning said circuit, means for deriving a control signal corresponding to deviation of the output frequency of said oscillator from a desired value, a control tube having an anode, a control grid and cathode, means connecting said signal-deriving means to said control grid to impress said control signal thereon, an output impedance, a source of alternating voltage, means connecting said source between said anode and cathode in series with said output impedance, means for deriving an alternating output voltage from said output impedance, a source of adjustable alternating voltage, means for combining said alternating output voltage in phase opposition with an adjustable alternating voltage derived from said latter source, and means for heating said tuning means by said combined voltages to restore said oscillator frequency to the desired value.

DESIGNS

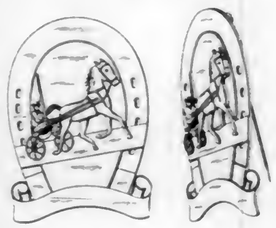
NOVEMBER 16, 1948

151,728
DESIGN FOR A TERMINAL LINK FOR A WATCH BRACELET OR SIMILAR ARTICLE
Karl C. Augenstein, Cranston, R. I., assignor to Speidel Corporation, Providence, R. I., a corporation of Rhode Island
Application July 7, 1948, Serial No. 147,417
Term of patent 14 years
(Cl. D45—4)



The ornamental design for a terminal link for a watch bracelet or similar article, substantially as shown.

151,729
DESIGN FOR A CONTAINER FOR A PERFUME BOTTLE OR THE LIKE
Georges Baud, Paris, France
Application March 29, 1946, Serial No. 128,049
In France February 7, 1946
Term of patent 14 years
(Cl. D58—11)



The ornamental design for a container for a perfume bottle or the like, as shown.

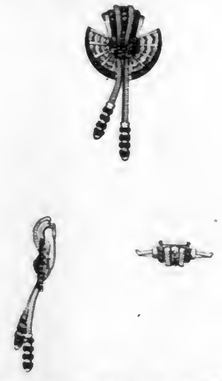
151,730
DESIGN FOR A CONTAINER FOR PERFUME BOTTLES OR THE LIKE
Georges Baud, Paris, France
Application March 29, 1946, Serial No. 128,050
In France January 19, 1946
Term of patent 14 years
(Cl. D58—11)

The ornamental design for a container for perfume bottles or the like, as shown and described.

151,731
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Octave Blake, Plainfield, N. J.
Application May 14, 1948, Serial No. 146,384
Term of patent 14 years
(Cl. D45—19)

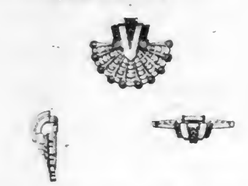
The ornamental design for a brooch or similar article, substantially as shown.

151,732
DESIGN FOR A LADY'S STOCKING
William G. Bley, Bustleton, Pa., assignor to William G. Bley and Richard C. Spurgeon, copartners trading as Bley & Spurgeon, Philadelphia, Pa.
Application November 20, 1947, Serial No. 142,696
Term of patent 14 years
(Cl. D47—7)



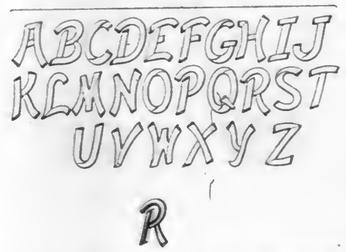
The ornamental design for a lady's stocking, as shown.

151,733
DESIGN FOR A LADY'S STOCKING
William G. Bley, Bustleton, Pa., assignor to William G. Bley and Richard C. Spurgeon, copartners trading as Bley & Spurgeon, Philadelphia, Pa.
Application November 20, 1947, Serial No. 142,697
Term of patent 14 years
(Cl. D47—7)



The ornamental design for a lady's stocking, as shown.

151,734
DESIGN FOR A CLIP OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,473
Term of patent 3½ years
(Cl. D45—19)

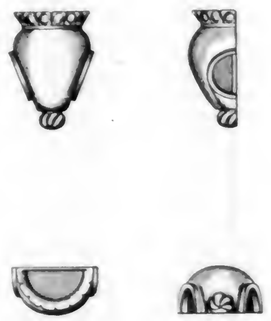


The ornamental design for a clip or similar article, as shown.

151,735
DESIGN FOR A CLIP OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,474
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a clip or similar article, as shown.

151,736
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Michael Chernow, New York, N. Y.
Application November 26, 1946, Serial No. 135,094
Term of patent 14 years
(Cl. D64—12)



The ornamental design for an alphabet for forming monograms or the like, substantially as shown.

151,737
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Michael Chernow, New York, N. Y.
Application November 26, 1946, Serial No. 135,095
Term of patent 14 years
(Cl. D64—12)

The ornamental design for an alphabet for forming monograms or the like, substantially as shown.

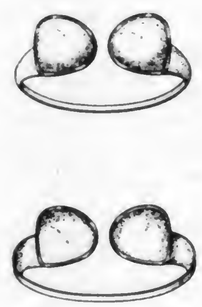
151,738
DESIGN FOR A SCARF HOLDER OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,554
Term of patent 7 years
(Cl. D17—10)

The ornamental design for a scarf holder or similar article, substantially as shown.

151,739
DESIGN FOR A CHILD'S SPOON
Roland S. Claflin, Park Ridge, Ill.
Application March 15, 1947, Serial No. 137,631
Term of patent 14 years
(Cl. D54—12)

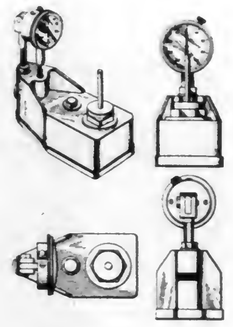
The ornamental design for a child's spoon, as shown.

151,740
DESIGN FOR A GIRDLE
Hazel Miller Colby, Chicago, Ill.
Application January 12, 1948, Serial No. 143,664
Term of patent 14 years
(Cl. D20—2)



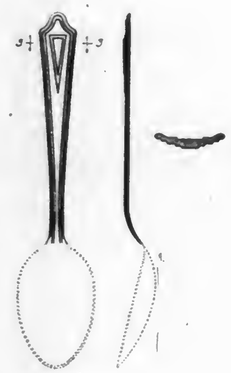
The ornamental design for a girdle, substantially as shown.

151,741
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, Meriden, Conn., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application January 22, 1947, Serial No. 136,289
Term of patent 14 years
(Cl. D54—12)



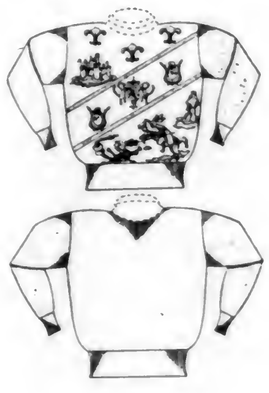
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

151,742
DESIGN FOR A BRASSIÈRE
Lilly Daché, New York, N. Y.
Application March 16, 1948, Serial No. 145,110
Term of patent 14 years
(Cl. D20—4)



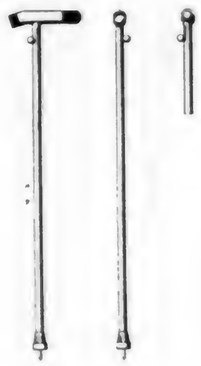
The ornamental design for a brassière, as shown.

151,743
DESIGN FOR AN INTERNAL LENGTH COMPARATOR GAUGE
Walter K. Dow, Longmeadow, Mass.
Application December 10, 1946, Serial No. 135,393
Term of patent 14 years
(Cl. D52—1)



The ornamental design for an internal length comparator gauges, as shown.

151,744
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Allen J. Eggleston, Hamden, Conn., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application February 28, 1948, Serial No. 144,798
Term of patent 14 years
(Cl. D54—12)

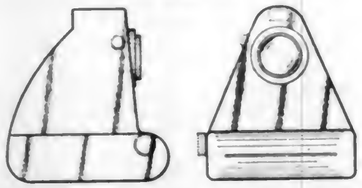


The ornamental design for a spoon or similar article, as shown and described.

151,745
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application March 17, 1948, Serial No. 145,183
Term of patent 3½ years
(Cl. D3—4)

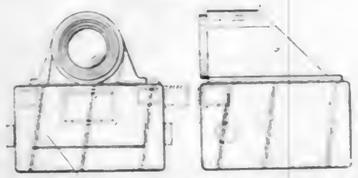
The ornamental design for a sweater or similar article, substantially as shown and described.

151,746
DESIGN FOR A WALKING STICK
Eberly R. Ethington, Santa Monica, Calif.
Application May 8, 1946, Serial No. 129,450
Term of patent 3½ years
(Cl. D88—3)



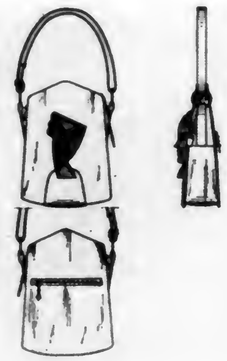
The ornamental design for a walking stick, as shown.

151,747
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Emil E. Fachon, Edgewood, R. I., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application May 26, 1948, Serial No. 146,606
Term of patent 7 years
(Cl. D45—4)



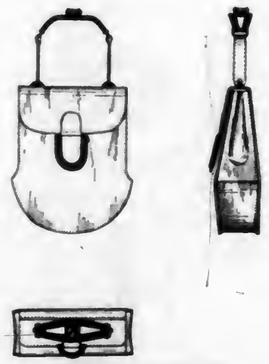
The ornamental design for a bracelet or similar article, as shown and described.

151,748
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Murry N. Fairbank, Belmont, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 14, 1946, Serial No. 135,518
Term of patent 14 years
(Cl. D61—1)



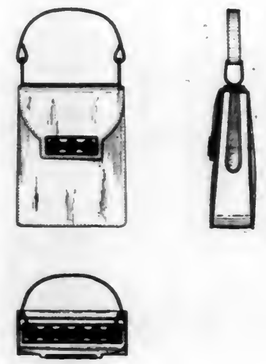
The ornamental design for a camera or similar article, substantially as shown and described.

151,749
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Murry N. Fairbank, Belmont, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 16, 1946, Serial No. 135,551
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a camera or similar article, substantially as shown and described.

151,750
DESIGN FOR A HANDBAG
Charles Feigl, New York, N. Y.
Application June 17, 1948, Serial No. 147,034
Term of patent 7 years
(Cl. D87—3)

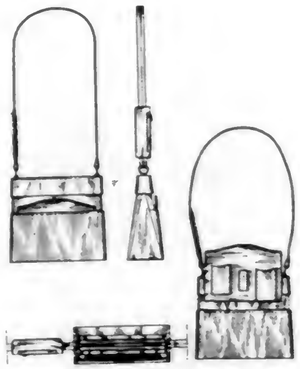


The ornamental design for a handbag, substantially as shown and described.

151,751
DESIGN FOR A HANDBAG
Charles Feigl, New York, N. Y.
Application June 17, 1948, Serial No. 147,035
Term of patent 7 years
(Cl. D87—3)

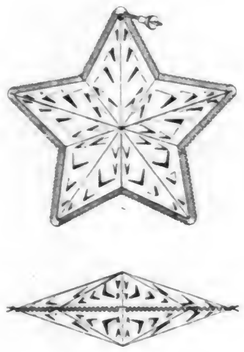
The ornamental design for a handbag, substantially as shown and described.

151,752
DESIGN FOR A HANDBAG
Charles Feigl, New York, N. Y.
Application June 17, 1948, Serial No. 147,036
Term of patent 7 years
(Cl. D87—3)



The ornamental design for a handbag, substantially as shown and described.

151,753
DESIGN FOR A COMB
John Frickel, Greenwich, Conn., assignor to Vulcanized Rubber and Plastics Company (Incorporated), New York, N. Y., a corporation of New York
Application March 25, 1947, Serial No. 137,870
Term of patent 7 years
(Cl. D86—8)



The ornamental design for a comb, as shown and described.

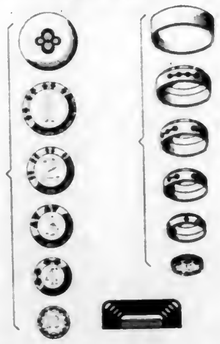
151,754
DESIGN FOR A HANDBAG
Joseph L. Friedman, New York, N. Y.
Application April 7, 1948, Serial No. 145,571
Term of patent 7 years
(Cl. D87—3)

The ornamental design for a handbag, substantially as shown.

151,755
DESIGN FOR A CHRISTMAS ORNAMENT
Eugene B. Glunz and Matthew D. Offen, Fresno, Calif.
Application January 9, 1948, Serial No. 143,606
Term of patent 14 years
(Cl. D29—1)

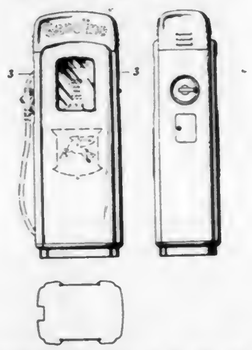
The ornamental design for a Christmas ornament, as shown.

151,756
DESIGN FOR A DECORATIVE SCARF OR THE LIKE
Sally Goldenstein, Brooklyn, N. Y.
Application November 26, 1947, Serial No. 142,813
Term of patent 3½ years
(Cl. D3—12)



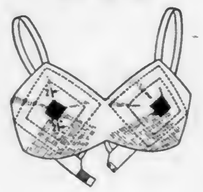
The ornamental design for a decorative scarf or the like, substantially as shown.

151,757
DESIGN FOR A COMBINED EJECTOR PUMP AND STRAINER BASE PLATE
Walter B. Harris, Southold, N. Y.
Application August 13, 1946, Serial No. 132,476
Term of patent 7 years
(Cl. D65—1)



The ornamental design for a combined ejector pump and strainer base plate, as shown.

151,758
DESIGN FOR A GAME PIECE SET
Roy R. Hart, San Jose, Calif.
Application May 6, 1947, Serial No. 138,836
Term of patent 3½ years
(Cl. D34—5)

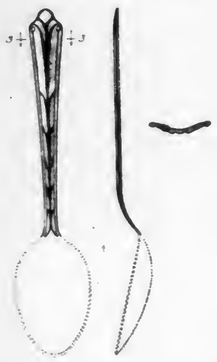


The ornamental design for a game piece set, as shown.

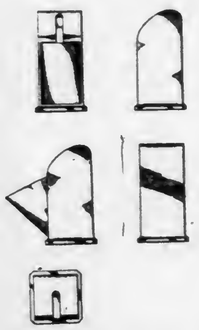
151,759
DESIGN FOR A CASING FOR SERVICE STATION DISPENSING APPARATUS
Arthur Paul Hoppe, Salisbury, Md.
Application November 14, 1946, Serial No. 134,793
Term of patent 14 years
(Cl. D52—2)

The ornamental design for a casing for service station dispensing apparatus, as shown and described.

151,760
DESIGN FOR A BRASSIÈRE
Lillian Hunau, Brooklyn, N. Y.
Application November 21, 1946, Serial No. 134,974
Term of patent 14 years
(Cl. D20—4)



151,760—Continued



The ornamental design for a brassière, as shown and described.

151,761
DESIGN FOR A SPOON OR SIMILAR ARTICLE
James L. Hvale, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application February 18, 1948, Serial No. 144,588
Term of patent 14 years
(Cl. D54—12)

The ornamental design for a spoon or similar article, as shown and described.

151,762
DESIGN FOR A TOILET BOWL BRUSH RECEPTACLE
Mike Karagozian, Los Angeles, Calif.
Application August 25, 1947, Serial No. 141,064
Term of patent 7 years
(Cl. D9—2)

The ornamental design for a toilet bowl brush receptacle, as shown.

151,763
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application May 29, 1948, Serial No. 146,688
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,764
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 19, 1948, Serial No. 147,065
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,765
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 19, 1948, Serial No. 147,066
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,766
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 25, 1948, Serial No. 147,196
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

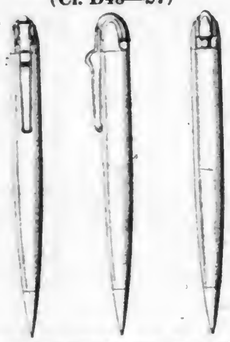
151,767
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. N. Y., a corporation of New York
Application June 29, 1948, Serial No. 147,268
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,768
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 29, 1948, Serial No. 147,269
Term of patent 7 years
(Cl. D45—19)

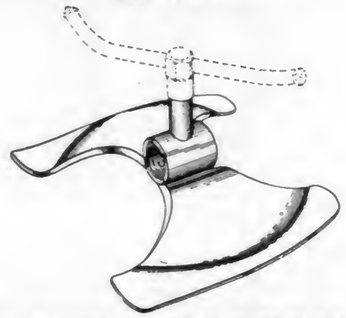
The ornamental design for a brooch or similar article, substantially as shown.

151,769
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 29, 1948, Serial No. 147,270
Term of patent 7 years
(Cl. D45—19)



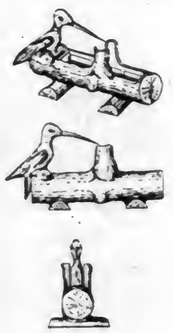
The ornamental design for a brooch or similar article, substantially as shown.

151,770
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,594
Term of patent 7 years
(Cl. D45—16)



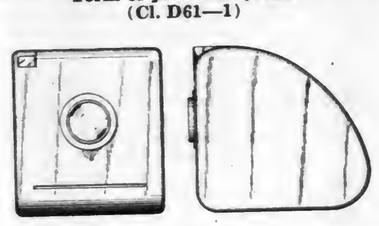
The ornamental design for a necklace or similar article, substantially as shown and described.

151,771
DESIGN FOR A COMBINED LIGHTER AND WRITING IMPLEMENT OR SIMILAR ARTICLE
Frederick Kaupmann, Brooklyn, N. Y., assignor to Ronson Art Metal Works, Inc., Newark, N. J., a corporation of New Jersey
Application June 7, 1947, Serial No. 139,515
Term of patent 14 years
(Cl. D48—27)



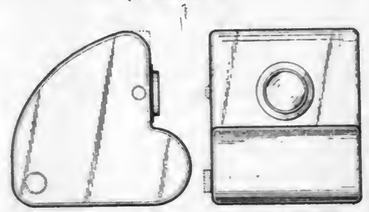
The ornamental design for a combined lighter and writing implement or similar article, substantially as shown.

151,772
DESIGN FOR A WATER SPRINKLER
Charles B. Kemp, Detroit, Mich.
Application October 26, 1946, Serial No. 134,283
Term of patent 7 years
(Cl. D91—1)



The ornamental design for a water sprinkler, substantially as shown and described.

151,773
DESIGN FOR A TOOTHPICK DISPENSER
Charles Koenig, Dayton, Ohio
Application January 24, 1947, Serial No. 136,365
Term of patent 7 years
(Cl. D52—1)

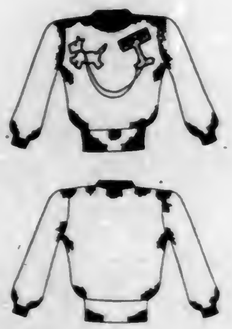


The ornamental design for a tooth pick dispenser, as shown.

151,774
DESIGN FOR A PHOTOGRAPHIC CAMERA
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 14, 1946, Serial No. 135,519
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a photographic camera, substantially as shown.

151,775
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 16, 1946, Serial No. 135,552
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a camera or similar article, substantially as shown and described.

151,776
DESIGN FOR A SWEATER
Samuel Levine, New York, N. Y.
Application July 24, 1947, Serial No. 140,484
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater, substantially as shown.

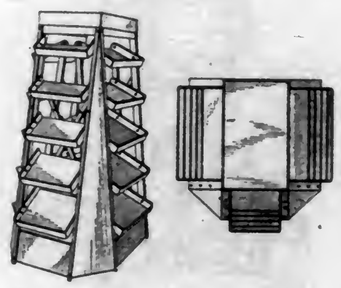
151,777
DESIGN FOR A SWEATER
Samuel Levine, New York, N. Y.
Application September 2, 1947, Serial No. 141,164
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater, substantially as shown.

151,778
DESIGN FOR A TELEPHONE STAND
George A. Levis, Williamsport, Pa.
Application September 22, 1947, Serial No. 141,534
Term of patent 14 years
(Cl. D26—14)

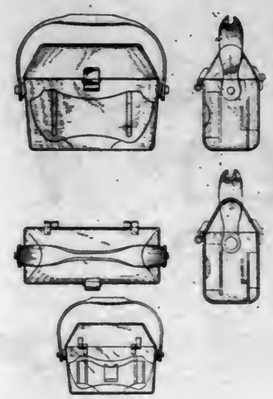
The ornamental design for a telephone stand, as shown.

151,779
DESIGN FOR A BEVERAGE DISPENSER
Charles William Lloyd, Brooklyn, N. Y., assignor to Dispensers, Inc., Brooklyn, N. Y., a corporation of New York
Application January 17, 1947, Serial No. 136,208
Term of patent 14 years
(Cl. D2—3)



The ornamental design for a beverage dispenser, substantially as shown.

151,780
DESIGN FOR A TABLE
Stanley Low, New York, N. Y., assignor to D. F. H. Novelty Furniture Co., Inc., a corporation of New York
Application May 28, 1948, Serial No. 146,657
Term of patent 7 years
(Cl. D33—14)

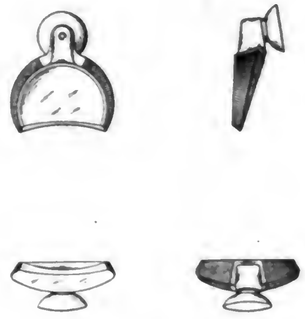


The ornamental design for a table, substantially as shown.

151,781
DESIGN FOR A DISPLAY STAND OR SIMILAR ARTICLE
Laurence B. Morrison, Canajoharie, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a corporation of New York
Application March 25, 1947, Serial No. 137,869
Term of patent 14 years
(Cl. D80—9)

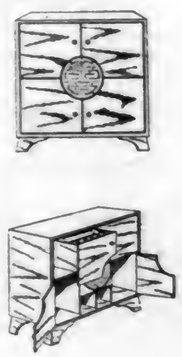
The ornamental design for a display stand or similar article, as shown.

151,782
DESIGN FOR A HANDBAG
Carolyn N. Munn, New York, N. Y.
Application July 3, 1947, Serial No. 140,081
Term of patent 14 years
(Cl. D87—3)



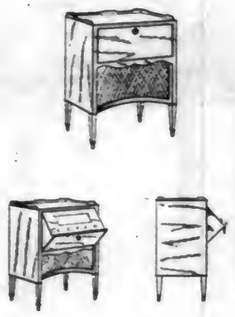
The ornamental design for a handbag, substantially as shown.

151,783
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 15, 1948, Serial No. 147,580
Term of patent 7 years
(Cl. D45—16)



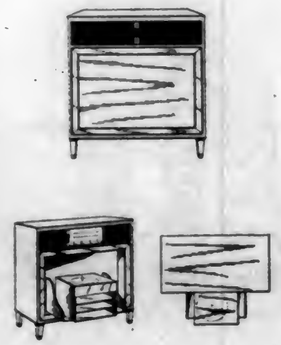
The ornamental design for a necklace or similar article, substantially as shown and described.

151,784
DESIGN FOR A TRAFFIC SIGNAL OBSERVATION LENS
Howard C. Riemann, West Allis, Wis., assignor to The Fulton Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 8, 1947, Serial No. 141,250
Term of patent 14 years
(Cl. D14—6)



The ornamental design for a traffic signal observation lens, substantially as shown.

151,785
DESIGN FOR A RADIO CABINET
Wallace Schier, Forest Hills, and David L. Doggett, Mount Kisco, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 136,078
Term of patent 3½ years
(Cl. D56—4)



The ornamental design for a radio cabinet, substantially as shown and described.

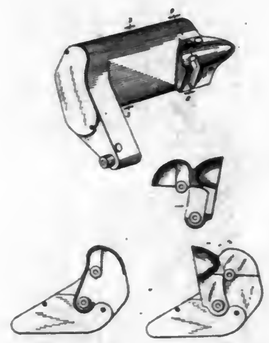
151,786
DESIGN FOR A RADIO RECEIVER CABINET
Wallace Schier, Forest Hills, and David L. Doggett, Mount Kisco, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 136,079
Term of patent 3½ years
(Cl. D56—4)

The ornamental design for a radio receiver cabinet, substantially as shown and described.

151,787
DESIGN FOR A CONSOLE CABINET FOR RADIO-PHONOGRAPH COMBINATION
Wallace Schier, Forest Hills, and David L. Doggett, Mount Kisco, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 136,081
Term of patent 3½ years
(Cl. D56—4)

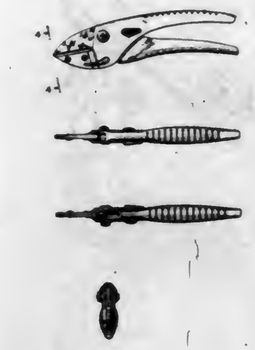
The ornamental design for a console cabinet for radio-phonograph combination, substantially as shown and described.

151,788
DESIGN FOR A CHAIR
Harry Sebel, London, England
Application May 13, 1946, Serial No. 129,684
In Great Britain January 28, 1946
Term of patent 14 years
(Cl. D15—1)



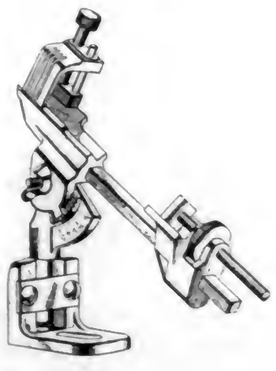
The ornamental design for a chair, as shown.

151,789
DESIGN FOR A TOE RING
Joseph Shapiro, New York, N. Y., assignor to Joseph Shapiro and Abraham Gluck, doing business as Eto Ring Co.
Application December 30, 1947, Serial No. 143,440
Term of patent 14 years
(Cl. D45—10)



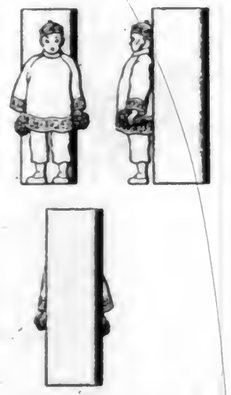
The ornamental design for a toe ring, substantially as shown.

151,790
DESIGN FOR A RUFFLER ATTACHMENT HOUSING FOR SEWING MACHINES
Victor J. Sigoda, Great Neck, N. Y., assignor to Man-Sew Corporation, New York, N. Y., a corporation of New York
Application April 10, 1947, Serial No. 138,291
Term of patent 14 years
(Cl. D70—2)



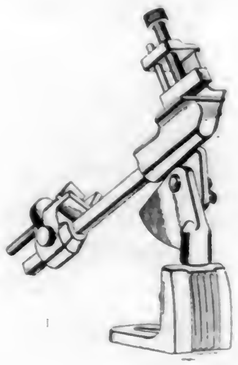
The ornamental design for a ruffler attachment housing for sewing machines, substantially as shown.

151,791
DESIGN FOR PRUNING SHEARS
Justin L. Smith, Watertown, Conn., assignor to Seymour Smith & Son, Inc., Oakville, Conn., a corporation of Connecticut
Application September 2, 1947, Serial No. 141,155
Term of patent 14 years
(Cl. D22—5)



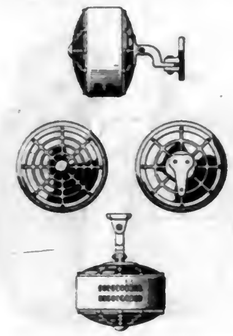
The ornamental design for pruning shears, as shown.

151,792
DESIGN FOR A DRILL SHARPENER
Roger P. Smith, Madison, Conn., assignor to General Hardware Mfg. Co. Inc., New York, N. Y., a corporation of New York
Application October 8, 1946, Serial No. 133,821
Term of patent 14 years
(Cl. D37—1)



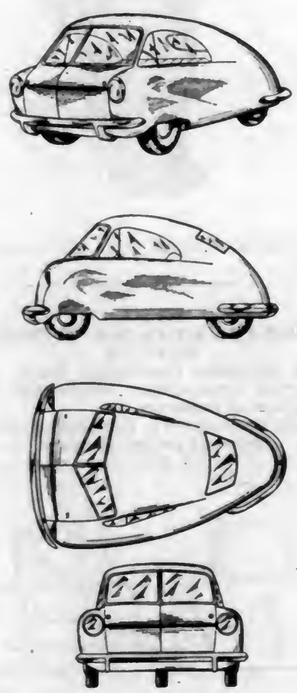
The ornamental design for a drill sharpener, substantially as shown.

151,793
DESIGN FOR A VASE
George A. Sparks and Allan C. Cunningham, Los Angeles, Calif.
Application October 25, 1946, Serial No. 134,233
Term of patent 3½ years
(Cl. D27—28)



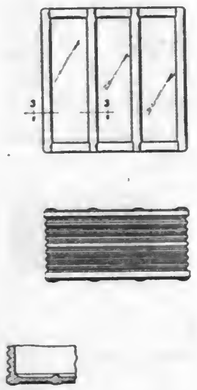
The ornamental design for a vase, as shown.

151,794
DESIGN FOR A VASE
George A. Sparks and Allan C. Cunningham, Los Angeles, Calif.
Application October 25, 1946, Serial No. 134,234
Term of patent 3½ years
(Cl. D29—28)



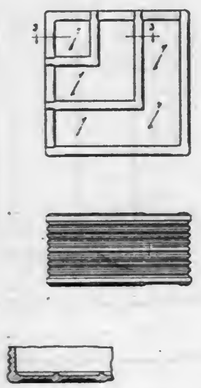
The ornamental design for a vase, as shown.

151,795
DESIGN FOR A SPEAKER CASE
Lester G. Stine, Harrisburg, Pa.
Application November 14, 1947, Serial No. 142,527
Term of patent 14 years
(Cl. D26—14)



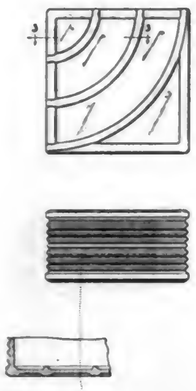
The ornamental design for a speaker case, as shown.

151,796
DESIGN FOR AN AUTOMOBILE
George C. Sullivan, Hollywood, Calif.
Application February 10, 1947, Serial No. 136,808
Term of patent 14 years
(Cl. D14—3)



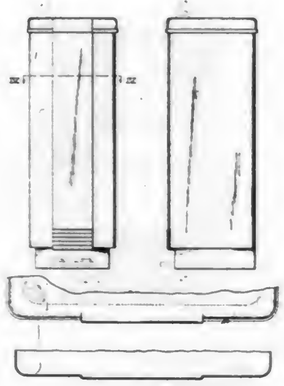
The ornamental design for an automobile, substantially as shown.

151,797
DESIGN FOR A HOLLOW GLASS BUILDING BLOCK
John H. Sutter, Norcross, Ga., assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 15, 1947, Serial No. 141,922
Term of patent 3½ years
(Cl. D18—2)



The ornamental design for a hollow glass building block, substantially as shown and described.

151,798
DESIGN FOR A HOLLOW GLASS BUILDING BLOCK
John H. Sutter, Norcross, Ga., assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 15, 1947, Serial No. 141,923
Term of patent 3½ years
(Cl. D18—2)

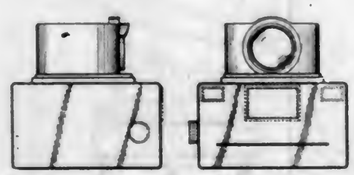


The ornamental design for a hollow glass building block, substantially as shown and described.

151,799
DESIGN FOR A HOLLOW GLASS BUILDING BLOCK
John H. Sutter, Norcross, Ga., assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 15, 1947, Serial No. 141,924
Term of patent 3½ years
(Cl. D18—2)

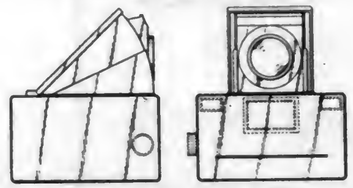
The ornamental design for a hollow glass building block, substantially as shown and described.

151,800
DESIGN FOR A DRINKING FOUNTAIN OR SIMILAR ARTICLE
Robert H. Tull, Springfield, Mass., assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application November 30, 1946, Serial No. 135,194
Term of patent 14 years
(Cl. D67—4)



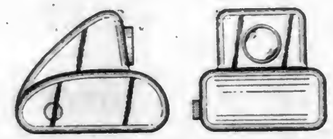
The ornamental design for a drinking fountain or similar article, substantially as shown and described.

151,801
DESIGN FOR A TOY ANIMAL FIGURE
Amy von Erdberg, Boston, Mass.
Application October 18, 1947, Serial No. 142,001
Term of patent 14 years
(Cl. D34—2)



The ornamental design for a toy animal figure, as shown.

151,802
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Sidney B. Whittier, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 14, 1946, Serial No. 135,517
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a camera or similar article, substantially as shown and described.

151,803
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Sidney B. Whittier, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 16, 1946, Serial No. 135,549
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a camera or similar article, substantially as shown and described.

151,804
DESIGN FOR A CAMERA OR SIMILAR ARTICLE
Otto E. Wolff, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application December 16, 1946, Serial No. 135,553
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a camera or similar article, substantially as shown and described.

	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	6-3-47	5-12-47	2762
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	2-10-47	10-3-46	2020
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	2-7-48	2-6-48	1346
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	3-31-47	2-6-47	4157
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	5-29-47	12-5-46	1712
6. SURLE, H., Carbon Chemistry (part)	11-26-47	10-21-47	1770
7. HANLIN, GEORGE, Optics; Photographic Apparatus	2-9-48	11-5-47	1597
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	2-28-47	11-4-46	4410
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-9-47	2-6-47	2423
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	2-12-48	12-12-47	1853
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	1-24-48	2-19-48	810
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	11-17-47	9-26-46	2289
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	11-8-46	11-14-46	2414
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	1-26-48	11-4-47	1345
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	7-22-47	5-23-47	2099
16. LOVEWELL, N. N., Television; Telephony	1-7-48	8-15-47	1510
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	5-6-47	10-25-46	2079
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	7-15-47	9-14-46	2044
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	9-26-47	2-3-47	1689
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	4-7-47	1-20-47	2046
21. MADER, R. C., Textiles	12-4-47	9-11-47	1298
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	11-14-47	1-3-47	1534
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	11-7-47	12-13-46	1163
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	10-10-47	9-9-47	2631
25. BLAKELY, C. F., Classifying Solids: Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	2-6-48	2-27-47	1746
26. YOUNG, R. R., Electricity—Generation and Motive Power	2-12-48	3-7-47	1163
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-18-47	1-16-47	3502
28. BRAUNER, R. H. (Acting), Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Railway Wheels and Axles.	11-20-47	10-23-47	973
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	3-28-47	3-24-47	3199
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	2-4-48	11-12-47	1539
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	2-24-48	2-24-48	2128
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	4-22-47	11-5-46	3215
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	3-7-47	11-21-46	2577
34. SAPERSTEIN, S., Electricity—Transmission of Vehicles; Railways; Track Sanders; Signals and Indicators	5-2-47	1-2-47	1467
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	6-16-47	12-3-46	3394
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	10-16-46	2006

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

A & R Co., Omaha, Nebr. Press plates used in dry cleaning and clothing manufacturing. Serial No. 523,448, Nov. 23. Class 24.

Abletsam Manufacturing Company Limited, The, London, Eng. Perfumes, face powder, bath salts, etc. Serial No. 520,246, Nov. 23. Class 6.

Ada Milling Company, Ada, Okla. Dairy feed. Serial No. 534,223, Nov. 23. Class 46.

Alida Company: *See*—
Allen, Alida V.

Allen, Alida V., doing business under the name and style of Alida Company, Jamaica, N. Y. Ladies' hand and shoulder bags. Serial No. 556,517, Nov. 23. Class 3.

Allen, W. B., Yuma, Ariz. Fresh melons. Serial No. 530,358, Nov. 23. Class 46.

American Chemical Paint Company, Ambler, Pa. Acid emulsion. Serial No. 535,114, Nov. 23. Class 6.

American Chewing Products Corp., Newark, N. J. Chewing gum. Serial Nos. 539,472–3, Nov. 23. Class 46.

American Fixture and Manufacturing Co., St. Louis, Mo. Mannequins and display forms. Serial No. 536,897, Nov. 23. Class 50.

American Gas Association, Inc., New York, N. Y. Heating appliances. Serial No. 536,864, Nov. 23. Class 34.

American Home Foods, Inc., New York and Rochester, N. Y., assignor to Chef Boy-Ar-Dee Quality Foods, Inc., Milton, Pa., now by change of name American Home Foods, Inc. Specially prepared packaged vegetables, apple sauce, fruits, etc. Serial No. 538,223, Nov. 23. Class 46.

American Laboratories Incorporated, Richmond, Va. Petrolatum. Serial No. 539,379, Nov. 23. Class 6.

American Luggage Works, Inc., Providence, R. I. Trunks and hand luggage. Serial No. 513,371, Nov. 23. Class 3.

Angier Corporation, Framingham, Mass. Strand reinforced, multi-ply building paper. Serial No. 531,285, Nov. 23. Class 12.

Arizona Food Products, Inc., Tucson, Ariz. Potato chips. Serial No. 532,545, Nov. 23. Class 46.

Arkansas Rice Growers Cooperative Association, Stuttgart, Ark. Rice. Serial No. 515,151, Nov. 23. Class 46.

Armour and Company, Chicago, Ill. Vegetable shortening and mixed vegetable and animal shortening. Serial No. 532,197, Nov. 23. Class 46.

Arnold, Constable & Co., Inc., New York, N. Y. Men's and boys' apparel. Serial No. 535,784, Nov. 23. Class 39.

Arranbee Doll Co., New York, N. Y Dolls. Serial No. 521,051, Nov. 23. Class 22.

Asbestos Manufacturing Company, Huntington, Ind. Asbestos brake lining. Serial No. 545,325, Nov. 23. Class 35.

Ashland Rubber Products Corporation, The, Ashland, Ohio. Rubber toy balloons. Serial No. 543,870, Nov. 23. Class 22.

Baker Paint & Varnish Co., Jersey City, N. J. Putty. Serial No. 536,335, Nov. 23. Class 12.

Beaunit Mills, Inc., New York, N. Y. Fabrics in the piece of rayon fibres. Serial No. 519,049, Nov. 23. Class 42.

Beautytime Radio Service Company, Los Angeles, Calif. Radio receiving sets. Serial No. 534,593, Nov. 23. Class 21.

Behr-Manning Corporation, Troy, N. Y. Coated abrasives. Serial No. 523,643, Nov. 23. Class 4.

Belize Estate & Produce Company, Limited, The, London, England. Sawn timber. Serial No. 537,656, Nov. 23. Class 12.

Blue Ridge Quarries, Inc., Slatington, Pa. Roofing slates and structural slate. Serial No. 520,319, Nov. 23. Class 12.

Bode, Joe C., Jr., doing business as Manson Distributors, Aurora, Ill. Preparation in stick form to prevent fogging and formation of ice. Serial No. 530,717, Nov. 23. Class 4.

Boland Mfg. Co., Chicago, Ill. Shower bath curtains. Serial No. 521,240, Nov. 23. Class 42.

Boughton, Nolan E., doing business as The Caddy-Roll Company, Three Rivers, Mich. Carts for golf bags. Serial No. 507,568, Nov. 23. Class 22.

Bradford Dyeing Association, (U. S. A.), Westerly, R. I. Piece goods of rayon and wool, etc. Serial No. 507,965, Nov. 23. Class 42.

Brandywine Mushroom Corporation, West Chester, Pa. Canned mushrooms. Serial No. 537,409, Nov. 23. Class 46.

Branick Manufacturing Company, Incorporated, Fargo, N. C. Tire tools and tire handling apparatus. Serial No. 529,585, Nov. 23. Class 23.

Brawley, T. R., Felt Company, Inc., Brooklyn, N. Y. Wicks for feeding oil to motor bearings, fans and kindred uses. Serial No. 547,695, Nov. 23. Class 34.

Bryan, William T., doing business as V-Ring Hosiery Co., Philadelphia, Pa. Ladies' hosiery. Serial No. 531,194, Nov. 23. Class 39.

Burlington Mills Corporation, Greensboro, N. C. Bedspreads, upholstery and slipcover fabrics, nylon curtain panels, etc. Serial No. 546,358, Nov. 23. Class 42.

Coal, Bituminous. Truax-Traer Coal Company. 504,146, Nov. 23; Serial No. 534,067, published Aug. 17, 1948.

Coal, Semi anthracite. Pittsburg & Midway Coal Mining Co. 504,117, Nov. 23; Serial No. 531,240, published Aug. 10, 1948.

Filamentary material in sheet or block form, Compressible resilient. Sponge Rubber Products Company. 414,716, June 26, 1945. Republished Nov. 23.

Fur skins, hides, and pelts. Fouke Fur Company. 504,089–90, Nov. 23; Serial Nos. 527,197–8, published Aug. 24, 1948.

Gypsum, Finely ground. United States Gypsum Company. 290,665, Jan. 12, 1932. Republished Nov. 23.

Gypsum, Finely ground. United States Gypsum Company. 291,874, Feb. 23, 1932. Republished Nov. 23.

Horse hair, Dressed. A. A. Reichmann. 504,143, Nov. 23; Serial No. 533,685, published Aug. 10, 1948.

Latex, Rubber. General Latex and Chemical Corporation. 387,530, May 20, 1941. Republished Nov. 23.

Leather, Tanned. Gutmann & Company. 71,506, renewed Dec. 1, 1948. O. G. Nov. 23.

Limestone employed in rock dusting coal mines, Ground. National Gypsum Company. 441,398, Nov. 23; Serial No. 508,179, published Aug. 24, 1948.

Material used as cushioning supports and fillers in upholstered furniture. Sponge Rubber Products Company. 410,187, Nov. 14, 1944. Republished Nov. 23.

Material used as cushioning supports and fillers in upholstered furniture. Sponge Rubber Products Company. 424,021, Sept. 17, 1946. Republished Nov. 23.

Peat for horticultural uses. Nutria Peat Sales Company. 504,133, Nov. 23; Serial No. 532,861, published Aug. 17, 1948.

Pulp, Sulphite and sulphate paper, rayon pulp, ground wood, etc. Svenska Cellulosa Attiebolaget. 441,392, Nov. 23; Serial No. 505,531, published Aug. 24, 1948.

Rubber, Sponge. Sponge Rubber Products Company. 429,795, May 20, 1947. Republished Nov. 23.

Rubber, Sponge, medical sponge rubber, and rubber sponges. Sponge Rubber Products Company. 300,788, Feb. 7, 1933. Republished Nov. 23.

Seed beans. Stockton District Kidney Bean Growers, Inc. 504,237, Nov. 23; Serial No. 496,408, published Aug. 10, 1948.

Seed corn, Hybrid. Farmer's Pride Hybrid Corn Co. 441,396, Nov. 23; Serial No. 506,997, published Aug. 17, 1948.

Seed, Grass. Associated Seed Growers, Incorporated. 504,080, Nov. 23; Serial No. 526,580, published Aug. 24, 1948.

Seeds, Field and grass. Cornell Seed Company. 504,208, Nov. 23; Serial No. 543,371, published Aug. 17, 1948.

Seeds, Field and grass. Cornell Seed Company. 504,216, Nov. 23; Serial No. 544,647, published Aug. 17, 1948.

Seeds, Grass. F. W. Bolgiano & Co., Inc. 504,061, Nov. 23; Serial No. 514,101, published Aug. 10, 1948.

Sheets, rods and tubes. Fabri-Form Company. 441,389, Nov. 23; Serial No. 504,892, published Aug. 10, 1948.

Sprays and designed natural holly pieces. Cut holly. G. Weber. 504,157, Nov. 23; Serial No. 534,575, published Aug. 17, 1948.

Stocks, Nursery. Andrews Nursery Company. 504,164, Nov. 23; Serial No. 535,213, published Aug. 24, 1948.

Stocks, Nursery. Lakeland Nurseries. 504,135, Nov. 23; Serial No. 532,983, published Aug. 24, 1948.

Vermiculite, Crude and exfoliated. Bee Tree Vermiculite Mines. 377,315, Apr. 30, 1940. Republished Nov. 23.

CLASS 2

Boxes and paper boxes, Corrugated fibreboard. Crescent Box Corporation. 300,771, Feb. 7, 1933. Republished Nov. 23.

Containers, Shipping. Kieckhefer Container Company. 504,055, Nov. 23; Serial No. 511,226, published Aug. 24, 1948.

Drums, Metal. Southern States Iron Roofing Company. 504,170, Nov. 23; Serial No. 535,640, published Aug. 24, 1948.

Goods made of "plastic" film, storage bags, bags for storing food, etc. Boland Mfg. Co. 441,421, Nov. 23; Serial No. 521,238, published Aug. 24, 1948.

Trays, Food. United States Rubber Company. 504,082, Nov. 23; Serial No. 526,645, published Aug. 24, 1948.

CLASS 3

Cases, Pocket leather, card cases, pass cases, etc. Springfield Leather Products Company. 253,326, renewed Feb. 26, 1949. O. G. Nov. 23.

Handbags and pocketbooks, Ladies' and children's. Julius Resnick, Inc. 353,830, Jan. 18, 1938. Republished Nov. 23.

Harness, Parts of. Enterprise Manufacturing Company. 72,243, re-renewed Jan. 12, 1949. O. G. Nov. 23.

Portfolios. Samuel Ward Manufacturing Co. 227,865, May 17, 1927. Republished Nov. 23.

CLASS 4

Balls, Glass. Akro Agate Company. 247,554, renewed Oct. 2, 1948. O. G. Nov. 23.

Cleaner, Liquid. Western Chemical Company. 215,632, July 20, 1926. Republished Nov. 23.

Cleaning fluid. A. H. Beggs. 247,021, renewed Sept. 18, 1948. O. G. Nov. 23.

Preserver and dressing, etc., Belt. J. E. Rhoads & Sons. 237,811, Jan. 17, 1928. Republished Nov. 23.

Soap. Gillette Safety Razor Co. 70,758, re-renewed Sept. 29, 1948. O. G. Nov. 23.

Soap. Los Angeles Soap Company. 110,051, May 2, 1916. Republished Nov. 23.

Soap. Los Angeles Soap Company. 207,464, Jan. 5, 1926. Republished Nov. 23.

Soap, Granulated. Safeway Stores, Inc. 370,265, Aug. 22, 1939. Republished Nov. 23.

Soap powder combined with mineral ingredients. Cudahy Packing Company. 504,255, Nov. 23; Serial No. 555,801.

Soap, Shaving. Jean Vivaudou Co., Inc. 441,434, Nov. 23; Serial No. 503,026.

Soap, Toilet. Los Angeles Soap Company. 151,852, Feb. 14, 1922. Republished Nov. 23.

Soap, Toilet. Los Angeles Soap Company. 344,258, Mar. 16, 1937. Republished Nov. 23.

Soaps, Toilet. Societe Commandite Chome & Cie. 189,980, renewed Sept. 30, 1944. O. G. Nov. 23.

Soap, Washing machine. Los Angeles Soap Company. 152,864, Mar. 7, 1922. Republished Nov. 23.

Soaps. Los Angeles Soap Company. 145,133, July 26, 1921. Republished Nov. 23.

Solvents. Circo Products Company. 385,042, Feb. 11, 1941. Republished Nov. 23.

CLASS 5

Acetate of alumina, citrate of alumina, acetate of barium, etc. Jacques Wolf & Co. 239,759, renewed Mar. 13, 1948. O. G. Nov. 23.

Adhesive clay composition, Prepared. E. C. Matignon. 404,867. Dec. 28, 1943. Republished Nov. 23.

Glue, Liquid, mucilage, and adhesive paste. Russia Cement Company. 72,172, re-renewed Jan. 5, 1940. O. G. Nov. 23.

Paste, Dry paper hanger's, and paper hanger's wall size. Miner-Hillard Milling Company. 291,283, Feb. 9, 1932. Republished Nov. 23.

Pastes, Dry. Penn Paste Milling Company. 197,748, Apr. 21, 1925. Republished Nov. 23.

CLASS 6

Acetaldehyde, acetanilid, acetic anhydride, etc. Mallinckrodt Chemical Works. 359,706, Aug. 30, 1938. Republished Nov. 23.

Acetate of alumina, citrate of alumina, acetate of barium, etc. Jacques Wolf & Co. 239,759, renewed Mar. 13, 1948. O. G. Nov. 23.

Alkali neutralizer in the nature of a laundry sour. Hood Chemical Co., Inc. 504,210, Nov. 23; Serial No. 543,451, published Aug. 17, 1948.

Alkaline water, Artificially-prepared. Kalak Water Co. of New York, Inc. 252,750, renewed Feb. 12, 1949. O. G. Nov. 23.

Alkaline water, Artificially-prepared. Kalak Water Co. of New York, Inc. 504,178, Nov. 23; Serial No. 537,046, published Aug. 3, 1948.

Alkanolamine carbonate polymers. Mallinckrodt Chemical Works. 504,085, Nov. 23; Serial No. 526,906, published Aug. 3, 1948.

Antiseptic, Urinary. Van Pelt and Brown, Incorporated. 504,226, Nov. 23; Serial No. 550,569, published Aug. 17, 1948.

Boiler chemicals. Bird-Archer Company. 158,184, Aug. 29, 1922. Republished Nov. 23.

Chemical admixtures, Solid or liquid. American Chemical Paint Company. 504,162, Nov. 23; Serial No. 535,115, published Aug. 10, 1948.

Chemical composition in granular or tablet form. S. W. Kendall. 504,218, Nov. 23; Serial No. 545,004, published Aug. 24, 1948.

Chemical fluid. Boyle-Midway Inc. 504,185, Nov. 23; Serial No. 537,976, published Aug. 3, 1948.

Cleansing cream, tissue cream, face lotion, etc. Los Angeles Soap Company. 341,946, Dec. 29, 1936. Republished Nov. 23.

Cleansing powder and insecticide for domestic animals, Combined. W. J. Hickmott, Jr. 504,254, Nov. 23; Serial No. 547,851.

Cologne, men's talcum powder and shaving lotions, Men's. L. G. Rothchild. 441,382, Nov. 23; Serial No. 502,079, published Mar. 18, 1947.

Cough preparation, Liquid. Great American Tea Company. 504,229, Nov. 23; Serial No. 550,919, published Aug. 24, 1948.

Cream or ointment in clear or tinted forms. A. C. Wallace. 441,373, Nov. 23; Serial No. 494,586, published Aug. 10, 1948.

Deodorants. Western Chemical Company. 241,356, Apr. 24, 1928. Republished Nov. 23.

Dietary supplement. L. A. Dentone. 441,411, Nov. 23; Serial No. 515,487, published July 20, 1948.

Disinfectant in powder form. Diversey Corporation. 504,221, Nov. 23; Serial No. 549,519, published Aug. 17, 1948.

Dyes, dyestuffs, and color in the nature of textile dyes. National Aniline & Chemical Company, Inc. 389,011, July 22, 1941. Republished Nov. 23.

Dyes, dyestuffs, and colors. National Aniline & Chemical Company, Inc. 151,553, Feb. 7, 1922. Republished Nov. 23.

Dyes, dyestuffs, and colors. National Aniline & Chemical Company, Inc. 151,556–8, Feb. 7, 1922. Republished Nov. 23.

Dyes, dyestuffs, and dye colors. National Aniline & Chemical Company, Inc. 287,316, Sept. 22, 1931. Republished Nov. 23.

Dyestuffs. Allied Chemical & Dye Corporation. 419,754, Mar. 5, 1946. Republished Nov. 23.

Dyestuffs. National Aniline & Chemical Company, Incorporated. 144,877, July 19, 1921. Republished Nov. 23.

Dyestuffs. National Aniline & Chemical Company, Inc. 372,191, Oct. 24, 1939. Republished Nov. 23.

Dyestuffs, certified food colors and intermediates. National Aniline & Chemical Company, Incorporated. 150,489, Jan. 3, 1922. Republished Nov. 23.

Dyestuffs, Coal-tar. National Aniline & Chemical Company, Inc. 123,946, Dec. 24, 1918. Republished Nov. 23.

Dyestuffs, Intermediates, and certified food-colors. National Aniline & Chemical Company, Incorporated. 145,985, Aug. 23, 1921. Republished Nov. 23.

Face creams and powders, cold cream, etc. K K K Medicine Company. 504,104, Nov. 23; Serial No. 529,470, published July 27, 1948.

Face, neck and hand cream. F. Szyperski. 504,197, Nov. 23; Serial No. 542,370, published Aug. 17, 1948.

Food-colors. National Aniline & Chemical Company, Incorporated. 136,548, Nov. 2, 1920. Republished Nov. 23.

Food-colors. National Aniline & Chemical Company, Incorporated. 138,491, Dec. 28, 1920. Republished Nov. 23.

Food-colors. National Aniline & Chemical Company, Inc. 139,008, Jan. 18, 1921. Republished Nov. 23.

Food-colors. National Aniline & Chemical Company, Inc. 139,009, Jan. 18, 1921. Republished Nov. 23.

Food-colors. National Aniline & Chemical Company, Incorporated. 139,010–13, Jan. 18, 1921. Republished Nov. 23.

Food-colors. National Aniline & Chemical Company, Incorporated. 143,107, May 24, 1921. Republished Nov. 23.

Hair and scalp tonic. P. Gorse. 387,020, Apr. 29, 1941. Republished Nov. 23.

Hairdressing. Procter & Gamble Company. 504,235, Nov. 23; Serial No. 553,015, published Aug. 24, 1948.

Hydrocarbon fumigant, Chlorinated. Huntington Laboratories, Inc. 504,071, Nov. 23; Serial No. 520,705, published Aug. 24, 1948.

Insecticide. Woolfolk Chemical Works, Ltd. 441,429, Nov. 23; Serial No. 523,445, published Aug. 17, 1948.

Insecticide, Residual. Ransford Insecticide Co. 504,242, Nov. 23; Serial No. 510,799.

Insecticide spray, Liquid. Western Chemical Company. 231,608, Aug. 23, 1927. Republished Nov. 23.

Kits consisting of chemicals, Photographic processing. Eastern Kodak Company. 504,059, Nov. 23; Serial No. 513,035, published Aug. 10, 1948.

Laundry sour in crystal form. Hood Chemical Co., Inc. 504,209, Nov. 23; Serial No. 543,450, published Aug. 17, 1948.

Liquid compound. North American Fibre Products Company. 225,383, Mar. 15, 1927. Republished Nov. 23.

Liquid preparation. A. H. Zastrow. 389,760, Aug. 19, 1941. Republished Nov. 23.

Lotion, Hair, and a liquid massaging preparation. Great American Tea Company. 504,227, Nov. 23; Serial No. 550,913, published Aug. 24, 1948.

Medical preparation. Dermik Pharmacal Co., Inc. 441,419, Nov. 23; Serial No. 518,389, published Aug. 17, 1948.

Medicinal preparation. A. R. Martino. 230,629, Aug. 2, 1927. Republished Nov. 23.

Medicinal preparation. Upjohn Company. 504,232, Nov. 23; Serial No. 551,063, published Aug. 24, 1948.

Medicinal preparation. Upjohn Company. 504,233, Nov. 23; Serial No. 551,064, published Aug. 24, 1948.

Medicinal preparation. Upjohn Company. 504,234, Nov. 23; Serial No. 551,067, published Aug. 24, 1948.

Medicinal preparation. Van Pelt and Brown, Incorporated. 504,225, Nov. 23; Serial No. 550,568, published Aug. 17, 1948.

Medicinal preparations. Upjohn Company. 504,231, Nov. 23; Serial No. 551,062, published Aug. 24, 1948.

Medicinal product, Liquid. J. E. Respondek. 504,062, Nov. 23; Serial No. 514,495, published Aug. 24, 1948.

Medicinal remedy for treatment of athlete's foot. Carlisle Drug Co. 504,053, Nov. 23; Serial No. 509,561, published Aug. 24, 1948.

Mineral supplement. Marblehead Lime Company. 419,737, Mar. 5, 1946. Republished Nov. 23.

Mouth wash and dentifrice. D. J. Barben. 441,414, Nov. 23; Serial No. 515,815, published June 8, 1948.

Mouth wash, Antiseptic. Great American Tea Company. 504,228, Nov. 23; Serial No. 550,916, published Aug. 24, 1948.
Nail polish, nail polish remover, and cuticle remover. Henkel-Clauss Company. 372,902, Nov. 21, 1939. Republished Nov. 23.
Odoriferous, Organic, and flavor-imparting chemicals, etc. Givaudan-Delawanna, Inc. 504,203, Nov. 23; Serial No. 543,038, published Aug. 17, 1948.
Parasiticides, insecticides, Plant and horticultural. California Spray-Chemical Corporation. 441,412, Nov. 23; Serial No. 515,655, published July 27, 1948.
Perfume extracts. L. T. Piver, Inc. 253,507, renewed Feb. 26, 1949. O. G. Nov. 23.
Perfume, lipsticks, rouge, etc. J. May. 441,367, Nov. 23; Serial No. 481,232, published July 16, 1946.

Fertilizers. Tennessee Corporation. 377,688, May 14, 1940. Republished Nov. 23.
Lime. Woodville Lime Products Company. 252,941, renewed Feb. 19, 1949. O. G. Nov. 23.
Mixture of mineral elements. Tennessee Corporation. 405,145, Jan. 11, 1944. Republished Nov. 23.

CLASS 11

Carbon paper and typewriter ribbon. Phillips Ribbon & Carbon Co., Inc. 206,919–20, Dec. 15, 1925. Republished Nov. 23.

CLASS 12

Asbestos heat insulating blocks, Hydraulically bonded. United States Gypsum Company. 417,681, Nov. 13, 1945. Republished Nov. 23.
Brick, Face, common brick, and fireproofing tile. Alliance Clay Product Co. 230,398, July 19, 1927. Republished Nov. 23.
Casting plaster, Gypsum. United States Gypsum Company. 409,665, Oct. 17, 1944. Republished Nov. 23.
Cement compositions, Gypsum. United States Gypsum Company. 401,120, Apr. 27, 1943. Republished Nov. 23.
Cement, Hydraulic. Ash Grove Lime & Portland Cement Co. 231,618, Aug. 23, 1927. Republished Nov. 23.
Clips, Metallic, for attaching building boards. United States Gypsum Company. 372,325–6, Oct. 31, 1939. Republished Nov. 23.
Cut-logs for buildings, Ready. Pioneer Log Cabin Company, Inc. 386,747, Apr. 22, 1941. Republished Nov. 23.
Emulsion of coal tar pitch, Anti-corrosive, irreversible. Selby, Battersby and Company. 416,921, Oct. 2, 1945. Republished Nov. 23.
Fiber board, Acoustical. United States Gypsum Company. 372,333, Oct. 31, 1939. Republished Nov. 23.
Gypsum, Calcined. United States Gypsum Company. 273,568, Aug. 5, 1930. Republished Nov. 23.
Gypsum, Calcined, wall plaster, and finishing plaster. United States Gypsum Company. 160,711, Oct. 24, 1922. Republished Nov. 23.
Insulation batts. Standard Cotton Products Co., Inc. 401,047, Apr. 20, 1943. Republished Nov. 23.
Leaders, gutters, elbows for eaves, etc. Sheet Metal Manufacturing Company, Inc. 347,741, July 6, 1937. Republished Nov. 23.
Leveling compound and crack filler. Selby, Battersby and Company. 420,024, Mar. 19, 1946. Republished Nov. 23.
Materials for plastic and mastic floor and deck coverings. Selby, Battersby & Company. 380,658, Aug. 27, 1940. Republished Nov. 23.
Paints, Ready-mixed cold water and paste, dry paint colors, paint thinners, etc. North American Paint & Chemical Co. Ltd. 293,021, Apr. 5, 1932. Republished Nov. 23.
Plaster and calcined gypsum, Wall. United States Gypsum Company. 160,710, Oct. 24, 1922. Republished Nov. 23.
Plaster, Calcined gypsum. United States Gypsum Company. 386,653, Apr. 22, 1941. Republished Nov. 23.
Plaster composition, Casting. United States Gypsum Company. 373,842, Dec. 26, 1939. Republished Nov. 23.
Plaster, Gypsum. United States Gypsum Company. 410,589, Dec. 5, 1944. Republished Nov. 23.
Plaster of Paris, wall plaster, etc., Calcined gypsum. United States Gypsum Company. 160,704, Oct. 24, 1922. Republished Nov. 23.
Rugs and drapable sheet coverings, Floor. Sponge Rubber Products Company. 357,290, May 31, 1938. Republished Nov. 23.
Structural material of rubber composition. Sponge Rubber Products Company. 356,438, Apr. 26, 1938. Republished Nov. 23.
Tile, Acoustical. United States Gypsum Company. 391,246, Oct. 28, 1941. Republished Nov. 23.

CLASS 13

Automotive parts. King Manufacturing Corporation. 244,575, July 24, 1928. Republished Nov. 23.
Bands, stays, open seals, etc. Acme Steel Company. 247,878, renewed Oct. 9, 1948. O. G. Nov. 23.
Clips, Rope. American Hoist & Derrick Company. 50,804, Apr. 3, 1906. Republished Nov. 23.
Dishes, Soap, towel bars, roll holders, etc. Autoyre Company, Incorporated. 366,094, Mar. 28, 1939. Republished Nov. 23.
Strainers, Sink. Master Metal Products, Inc. 247,220, renewed Sept. 25, 1948. O. G. Nov. 23.

CLASS 14

Alloys, Antifriction. Manganese Bronze & Brass Co. Ltd. 69,044, re-renewed May 19, 1948. O. G. Nov. 23.
Alloys, Metallic. Manganese Bronze & Brass Co. Ltd. 69,043, re-renewed May 19, 1948. O. G. Nov. 23.
Alloys, Metallic. Manganese Bronze & Brass Co. Ltd. 69,067, re-renewed May 19, 1948. O. G. Nov. 23.
Lead and alloys. Bearium Bearings, Inc. 240,220, Mar. 20, 1928. Republished Nov. 23.
Lead and alloys. Bearium Bearings, Inc. 241,054, Apr. 17, 1928. Republished Nov. 23.
Sheets and plates, Perforated metal. Diamond Manufacturing Company. 194,139, Jan. 13, 1925. Republished Nov. 23.

CLASS 15

Gasoline, fuel oils. True's Oil Company. 113,182, Oct. 10, 1916. Republished Nov. 23.
Kerosene and illuminating oils. True's Oil Company. 113,179, Oct. 10, 1916. Republished Nov. 23.
Kerosene, illuminating oils. True's Oil Company. 113,180, Oct. 10, 1916. Republished Nov. 23.
Oil and gasoline, Lubricating. Manning Mfg. Co. 373,746, Dec. 19, 1939. Republished Nov. 23.
Oils and greases. Star Oil Company. 433,673, Oct. 28, 1947. Republished Nov. 23.
Oils, Lubricating. True's Oil Company. 113,181, Oct. 10, 1916. Republished Nov. 23.
Oils, Lubricating. True's Oil Company. 117,222–4, June 19, 1917. Republished Nov. 23.
Oils, Motor-lubricating. Dearborn Chemical Company. 250,018, renewed Nov. 27, 1948. O. G. Nov. 23.
Oils, Penetrating. Shaler Company. 366,667, Apr. 25, 1939. Corrected. O. G. Nov. 23.

CLASS 16

Chips and pastes. C. J. Osborn Co. 335,286, June 2, 1936. Republished Nov. 23.
Emulsion of coal tar pitch, Cold applied stable. Selby, Battersby and Company. 421,015, May 14, 1946. Republished Nov. 23.
Enamel undercoating, White. Great Lakes Varnish Works, Inc. 203,248, Sept. 15, 1925. Republished Nov. 23.
Lacquer, Linoleum. Great Lakes Varnish Works, Inc. 416,973, Oct. 9, 1945. Republished Nov. 23.
Paint, Aluminum, aluminum-paint undercoater or primer. Detroit Graphite Company. 224,320, Feb. 22, 1927. Republished Nov. 23.
Paint enamel. Great Lakes Varnish Works, Inc. 212,194, Apr. 27, 1926. Republished Nov. 23.
Paint enamels. Great Lakes Varnish Works, Inc. 212,323, Apr. 27, 1926. Republished Nov. 23.
Paint finishes, Automotive. Old Colony Paint & Chemical Co. 394,577, Apr. 14, 1942. Republished Nov. 23.
Paint, House, paint enamels, varnish stains, etc. Con-Ferro Paint & Varnish Company. 221,175, Nov. 23, 1926. Republished Nov. 23.

Linnert, George E.

Armstrong Cork Company, assignee: *See*—
King, Ellis G.

Arnold, Gordon H., Flint, Mich. Stall indicating warning signal for airplanes. 2,454,587, Nov. 23.

Arrow-Hart & Hegeman Electric Co., assignee: *See*—
Gates, Frederic P.

Artzt, Maurice, Princeton, N. J., assignor to Radio Corporation of America. Wave generating system. 2,454,367, Nov. 23.

Ashton, Howard W., South Ardmore, Pa., assignor to O. W. Storey & Associates, Chicago, Ill. Transducer. 2,454,496, Nov. 23.

Ashton, Howard W., Havertown, Pa., assignor to O. W. Storey, as trustee for the partnership of O. W. Storey & Associates, Chicago, Ill. Electrical apparatus. 2,454,497, Nov. 23.

Astra Bent Wood Furniture Co., assignee: *See*—
Hirsch, Frederic.

Atchison, Leonard W., Erie, Pa., assignor to General Electric Company. Two-temperature refrigerating system. 2,454,537, Nov. 23

Ateliers de Construction Electriques de Charierol, assignee: *See*—
Mees, Herman.

Atkinson, Paul S., New York, N. Y. Combination contact printer and enlarger. 2,454,422, Nov. 23.

Atkinson, Ralph L.: *See*—
Staunton, LeRoy W., and Atkinson.

Attorney General of the United States: *See*—
Bakonyi, Stefan.
Waselge, Charles R.

Auskelis, John V., Dorchester, and J. H. Martino, Mattapan, Mass. Clothes hanger for vehicles. 2,454,368, Nov. 23.

Avila, Frank W., Columbia City, Ind., assignor to International Harvester Company. Drive axle for vehicles. 2,454,685, Nov. 23.

Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Safety switch for airplanes. 2,454,423, Nov. 23.

Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Compressor control system. 2,454,424, Nov. 23.

Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control apparatus. 2,454,588, Nov. 23.

Babey, Charles, W. Thommen, and E. Stocker, assignors to J. R. Geigy A.-G., Basel, Switzerland. Textile chrome-printing compositions and their manufacture. 2,454,623, Nov. 23.

Babson Bros. Co., assignee: *See*—
Babson, Henry B.
Schilling, Lorell J.

Babson, Henry B., Chicago, Ill., assignor to Babson Bros. Co. Overhead support for milkers. 2,454,300, Nov. 23.

Back, Frank G., New York, N. Y. Varifocal lens for cameras. 2,454,686, Nov. 23.

Bacon, Walter M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph system. 2,454,301, Nov. 23.

Bakonyi, Stefan, Tovaros, Hungary, vested in the Attorney General of the United States. Refining keratin-containing material. 2,454,730, Nov. 23.

Ballentine, Earle W., Wilmette, assignor to Russell Electric Company, Chicago, Ill. Shaded pole motor and the like. 2,454,589, Nov. 23.

Bangert, Charles, Jr.: *See*—
Bazley, Carl E., and Bangert.

Bartelink, Everhard H. B., Bronxville, assignor to General Telephone Corporation, New York, N. Y. Signaling and control system for carrier telephone trunk circuits. 2,454,498, Nov. 23.

Bates, John R., Swarthmore, Pa., assignor to Houdry Process Corporation, Wilmington, Del. Catalysis of hydrocarbons. 2,454,369, Nov. 23.

Bauer, Benjamin B., assignor, by mesne assignments, to Shure Brothers, Incorporated, Chicago, Ill. Magnetic translating device. 2,454,425, Nov. 23.

Baughman, George W., assignor to The Union Switch & Signal Company, Swissvale, Pa. Approach signal system. 2,454,687, Nov. 23.

Bazley, Carl E., Schenectady, and C. Bangert, Jr., Ballston Spa, N. Y., assignors to General Electric Company. Shockproof support. 2,454,538, Nov. 23.

Beaubien, de Gaspe, Outremont, near Montreal, Quebec, Canada. Electronic baking oven. 2,454,370, Nov. 23.

Beauchamp, Wilfred A., Chicago, Ill., assignor to The Youngstown Steel Door Company, Cleveland, Ohio. Hatch cover and means for locking the same. 2,454,688, Nov. 23.

Beavers, Ellington M., assignor to Rohm & Haas Company, Philadelphia, Pa. Preparing resinous linear polyesters in crumblike form. 2,454,539, Nov. 23.

Beckwith, John R., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Electrical phase-shifting system. 2,454,426, Nov. 23.

Bee Bee Shoe Co., assignee: *See*—
Galper, Isa.

Bell, Dell E., Omaha, Nebr. Device for removing extruded plaster from exterior surfaces of dental flasks. 2,454,427, Nov. 23.

Bell, Harry G., Paris, and J. D. Gay, Jr., Lexington, Ky. Tobacco hogsheads and securing means for the heads thereof. 2,454,267, Nov. 23.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bacon, Walter M.
Gent, Edgar W.
Mason, Warren P.

Belmont Radio Corporation, assignee: *See*—
Beckwith, John R.

Benander, George B., Oaklawn, R. I., assignor to Monowatt Incorporated. Electric switch. 2,454,540, Nov 23.

Bendix Aviation Corporation, assignee: *See*—
McNaney, Joseph T.
Roberts, Jean M.

Berges, Donald M., Cleveland Heights, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Explosion-proof motor. 2,454,371, Nov. 23.

Berlinger, Bernard E., Elkins Park, assignor to Quaker City Gear Works, Inc., Philadelphia, Pa. Continuous shaft brake for fishing reels. 2,454,590, Nov. 23.

Billeter, Henry R., Highland Park, Ill. Drill and drill jig bushing carrier attachment. 2,454,372, Nov. 23.

Blanchard, Benjamin B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fastening inserting machine. 2,454,302, Nov. 23.

Blanding, Forrest H., Elizabeth, N. J., assignor to Standard Oil Development Company. Fluidized catalyst regeneration process which includes overhead cooling. 2,454,373, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Polymeric detergents. 2,454,541, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Polymeric detergents. 2,454,542, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Polymeric detergents. 2,454,543, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Polymeric detergents comprising water-soluble salts of the half-esters of dicarboxylic acids and the formaldehyde condensates of hydrocarbon-substituted phenoxy-polyalkoxy alkanols. 2,454,544, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Hydrocarbon-substituted phenol-formaldehyde condensates modified in the phenolic hydroxyl. 2,454,545, Nov. 23.

Bock, Louis H., Huntingdon Valley, and J. L. Rainey, Abington, assignors to Rohm & Haas Company, Philadelphia, Pa. Surface-active linear polyesters. 2,454,546, Nov. 23.

Bock, Louis H., Huntingdon Valley, Pa., and A. L. Houk, San Luis Obispo, Calif., assignors to Rohm & Haas Company, Philadelphia, Pa. Polymeric quaternary ammonium salts. 2,454,547, Nov. 23.

Boeing Airplane Company, assignee: *See*—
Christian, John C.

Boerger, Martin G., assignor to Modine Manufacturing Company, Racine, Wis. Producing radiator tubes. 2,454,624, Nov. 23.

Bondon, Lewis A., Arlington, N. J. Insulated electrical conductor and fabricating the same. 2,454,625, Nov. 23.

Boothe, James H., Pearl River, assignor to American Cyanamid Company, New York, N. Y. Preparing 6-methyl pteridines. 2,454,751, Nov. 23.

Borg-Warner Corporation, assignee: *See*—
Berges, Donald M.

Borzell, John, Pittston, Pa. Fifth wheel coupling for trailers. 2,454,626, Nov. 23.

Bouton, Gertrude V., assignee: *See*—
Vischer, Alfred, Jr.

Bowen, John L., Sr., Morgantown, W. Va. Car-rail stop. 2,454,500, Nov. 23.

Bowlin, Pete, Lewiston, Idaho. Shaving kit. 2,454,374, Nov. 23.

Brackett, Frederick S., Chevy Chase, Md. Periscope mounting for armored vehicles. 2,454,268, Nov. 23.

Brady, Samuel G., and J. L. King, Royal Oak, assignors to The Gear Grinding Machine Company, Hamtramck, Mich. Indexing mechanism. 2,454,591, Nov. 23.

Brandt, Otho A., St. Paul, and F. G. Ellingsen, Minneapolis, Minn. Wheel operating means for airplanes. 2,454,627, Nov. 23.

Branson Company, assignee: *See*—
Powell, Clayborn F.

Braucher, Harvey M., Baltimore, Md. Milling machine. 2,454,269, Nov. 23.

Braun, Karl J., Merrick, assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Punched card sorting machine. 2,454,628, Nov. 23.

Braunsdorff, Reginald K., East Orange, assignor to Tung-Sol Lamp Works, Inc., Newark, N. J. Basing electric bulb. 2,454,270, Nov. 23.

Breslow, Ben B.: *See*—
Leo, Herbert S., and Breslow.

Brinkert, Edward J., Hartley, Iowa. Lifting device. 2,454,548, Nov. 23.

Brodheim, Morris, Philadelphia, Pa. Portable refrigerator. 2,454,303, Nov. 23.

Broluska, Amel B., Detroit, Mich. Fluid pressure turbine. 2,454,428, Nov. 23.

Brooker, Leslie G. S., assignor to Eastman Kodak Company, Rochester, N. Y. Polymethine dyes. 2,454,629, Nov. 23.

Brown, George W., Cranbury, and E. A. Goldberg, Princeton, N. J., assignors to Radio Corporation of America. Electronic equation solver. 2,454,549, Nov. 23.

Brucksch, William F., Jr.: *See*—
Howland, Louis H., and Brucksch.

Buckendale, Lawrence R., and R. K. Super, assignors to The Timken-Detroit Axle Company, Detroit, Mich. Friction coupling device. 2,454,271, Nov. 23.

Buckthal, Elmer P., Brookfield, assignor to United Air Lines, Inc., Chicago, Ill. Method and apparatus for indicating potential gradients. 2,454,630, Nov. 23.

Budzinski, Joseph, Kenosha, Wis. Cable eye and splicing the same. 2,454,592, Nov. 23.

Buehler, Allan M., assignor to Eastern Steel Products Limited, Preston, Ontario, Canada. Feeding mechanism for agricultural machines. 2,454,304, Nov. 23.

Bugatti, Ettore, Paris, France. Machine for bending and shaping rolled irons and the like. 2,454,429, Nov. 23.

Bundy Tubing Company, assignee: *See*—
Payne, Arthur W.

Burkholder, Alden H., assignor to Industrial Rayon Corporation, Cleveland, Ohio. Apparatus for coordinating the operating rate of forming thread with the drawing thereof. 2,454,731, Nov. 23.

Burns, Fred J., Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y. Venetian blind head box. 2,454,550, Nov. 23.

Bush, Herman, Union City, N. J. Mechanical toy. 2,454,375, Nov. 23.

Butterfield, Harry E., Jr.: *See*—
Pityo, Albert F., and Butterfield.

Byler, William H., Morris Plains, and C. C. Carroll, Madison, N. Y., assignors to United States Radium Corporation, New York, N. Y. X-ray screen. 2,454,499, Nov. 23.

Cameron, Byron R., Mount Vernon, Ill. Drafting compass. 2,454,305, Nov. 23.

Camm, Frederick J., London, England. Pyrophoric lighter. 2,454,501, Nov. 23.

Carlson, Bert G., Gates Mills, assignor to W. R. Jack, Cleveland, Ohio. Servo unit. 2,454,551, Nov. 23.

Carlson, Joseph: *See*—
Thompson, Richard A., Eriksson, and Carlson.

Carlson, Marie E. H. W., assignee: *See*—
Thompson, Richard A., Eriksson, and Carlson.

Carroll, Clayton C.: *See*—
Byler, William H., and Carroll.

Carter Carburetor Corporation, assignee: *See*—
Ericson, George R.

Case, Harold W., Dayton, Ohio. Instrument panel for aircraft cockpits. 2,454,272, Nov. 23.

Case, J. I., Company, assignee: *See*—
Rutter, Alvah E.

Cashman, Aloysius F.: *See*—
Hodges, Caleb E., and Cashman.

Cashman, Edward P.: *See*—
Lieber, Eugene, and Cashman.

Cathey, Robert S., and L. D. Clarke, Portland, Oreg.; said Clarke, assignor to said Cathey. Support for newspaper bags. 2,454,732, Nov. 23.

Celanese Corporation of America, assignee: *See*—
Daly, Arthur J., and Lowe.

Central Soya Company, Inc., assignee: *See*—
Gunther, James K., and Sair.

Challcarne, Gabriel, assignor to Societe Anonyme: Forges & Atelliers De Meudon, Meudon, France. Pneumatic chuck. 2,454,593, Nov. 23.

Chneerson, Zalman, and A. Razdowitz, New York, N. Y. Holder for cigars and cigarettes. 2,454,631, Nov. 23.

Christensen, Niels C., Salt Lake City, Utah. Method and apparatus for spraying. 2,454,594, Nov. 23.

Christian, John C., Seattle, Wash., assignor to Boeing Airplane Company. Gun supporting mechanism. 2,454,502, Nov. 23.

Ciba Products Corporation, assignee: *See*—
Widmer, Gustav, Sutter, Fisch and Hochuli.

City Tank Corporation, assignee: *See*—
Green, Herman.

Clarke, Lewis D.: *See*—
Cathey, Robert S., and Clarke.

Cleveland Pneumatic Tool Company, The, assignee: *See*—
Van Sittert, Paul, Kostrubanic, and Lehman.

Clifford, David G., Palo Alto, Calif., and E. Pawlishen, deceased, by J. Pawlishen, administrator, New York, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Tunable generator for ultra high frequencies. 2,454,306, Nov. 23.

Clover Industries, Inc., assignee: *See*—
Henderson, Harold P., and Kaplan.

Cobean, Richard W., Schenectady, N. Y., assignor to General Electric Company. Temperature responsive device. 2,454,552, Nov. 23.

Coca, Arthur F., Oradell, N. J., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Production of antibodies. 2,454,752, Nov. 23.

Cohn, Howard R., Brooklyn, N. Y. Educational device. 2,454,632, Nov. 23.

Cole, Ben R., Princeton, N. J., assignor to Radio Corporation of America. Frequency modulated radar apparatus. 2,454,633, Nov. 23.

Columbia Mills, Inc., The, assignee: *See*—
Burns, Fred J.

Commercial Solvents (Great Britain) Limited, assignee: *See*—
Darling, Harold N., and Holdsworth.

Control Instrument Company, Inc., assignee: *See*—
Braun, Karl J.

Cook Electric Company, assignee: *See*—
Hasselhorn, Walter C., and Jaap.

Cooley, Burnell, San Francisco, Calif. Interlocking mosaic. 2,454,307, Nov. 23.

Cortés, Edmundo, New York, N. Y. Hygienic dustpan. 2,454,430, Nov. 23.

C-O-Two Fire Equipment Company, assignee: *See*—
Allen, Frank B.

Cox, Richard F. B., assignor to Hercules Powder Company. Wilmington, Del. Cellulose ether composition. 2,454,273, Nov. 23.

Cox, Richard F. B., assignor to Hercules Powder Company. Wilmington, Del. Purifying a resinous lactone. 2,454,376, Nov. 23.

Craig, Alfred B.: *See*—
Gluesenkamp, Earl W., and Craig.
Mowry, David T., and Craig.

Craig, George D., II, Flushing, N. Y. Electromagnetic circuit. 2,454,634, Nov. 23.

Cramer, William F., Jr., assignor to The Dole Valve Company, Chicago, Ill. Drink dispenser. 2,454,595, Nov. 23.

Crampton, Basil R., assignor by mesne assignments, to Crampton Manufacturing Company, Grand Rapids, Mich. Double-action flush valve lever. 2,454,431, Nov. 23.

Crampton Manufacturing Company, assignee: *See*—
Crampton, Basil R.

Crandall, Theron T., Canoga Park, Calif. Punch press stripper. 2,454,432, Nov. 23.

Crane, Carl J., Dayton, Ohio. Automatic aural-visual signal transmitter for aviation ground trainers. 2,454,503, Nov. 23.

Cranston Print Works Company, assignee: *See*—
Jones, Albert S., and Stackpole.

Crever, Frederick E.: *See*—
Thompson, Louis W., and Crever.

Crouch, Willie W.: *See*—
Schulze, Walter A., and Crouch.

Cullinan, John F., and L. D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Acid treatment of pyrene-quinone vat dyestuffs. 2,454,433, Nov. 23.

Cunningham, Charles G., Chicago, Ill. Curtain or panel and hanger structure therefor. 2,454,434, Nov. 23.

Curtis, Cecil A., Manchester, and D. S. Stephens, Cheadle, England. Manufacture of rubberlike materials. 2,454,635, Nov. 23.

Curtis, Lucien B., Verona, N. J., assignor to Radio Corporation of America. Grid support structure. 2,454,377, Nov. 23.

Dahl, Alvin D., assignor to The Dow Chemical Company, Midland, Mich. Making dense magnesium oxide. 2,454,733, Nov. 23.

Daly, Arthur J., and W. G. Lowe, Spondon, near Derby, England, assignors to Celanese Corporation of America. Manufacture of mixed esters of glycols. 2,454,274, Nov. 23.

Daly, Arthur J., and W. G. Lowe, Spondon, near Derby, England, assignors to Celanese Corporation of America. Manufacture of mixed esters of polyhydroxy compounds. 2,454,275, Nov. 23.

Dana Corporation, assignee: *See*—
Peterson, Carl D., and Deimel.

Darlington, Harold N., Birkenhead, and H. Holdsworth, Wirral, assignors to Commercial Solvents (Great Britain) Limited, Bromborough Port, England. Distillation of acetone, ethanol, and butanol, from aqueous solutions thereof. 2,454,734, Nov. 23.

Dashew, Robert L., deceased, Baltimore, Md., by R. L. Dashew, administratrix, Pittsburgh, Pa. Knot tying mechanism. 2,454,689, Nov. 23.

Dashew, Ruth L., administratrix: *See*—
Dashew, Robert L.

Davis, Alan C., East Haddam, Conn. Device for preventing overtravel of operating mechanisms. 2,454,636, Nov. 23.

Davis, Evan W., Spokane, Wash. Bolt holding tool. 2,454,309, Nov. 23.

Davis, George B., Jr., Green Acres, Md., assignor to the United States of America as represented by the Secretary of War. Subcaliber gun mount. 2,454,276, Nov. 23.

Davis, Harold S., Riverside, Conn., and H. A. Newey, Richmond, Calif., assignors to American Cyanamid Company, New York, N. Y. Production of acrylonitrile. 2,454,308, Nov. 23.

Davis, Marion V. T., assignee: *See*—
Van Trine, Ralph.

Dawson, Charles A., South Pasadena, assignor to Lockhead Aircraft Corporation, Burbank, Calif. Portable riveting machine. 2,454,596, Nov. 23.

Dean, Troy O., Houston, Tex. Door hook. 2,454,690, Nov. 23.

De Ganahl, Carl, Trenton, N. J., assignor to Kaiser Fleetwings, Inc. Heat exchanger and reaction thrust apparatus. 2,454,310, Nov. 23.

De Groote, Melvin, University City, and O. H. Pettingill, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Process for breaking petroleum emulsions. 2,454,435, Nov. 23.

Diemel, Albert H.: *See*—
Peterson, Carl D., and Deimel.

Delafontaine, Charles, Arlington, and F. W. Kotler, Watertown, Mass. Grinding and polishing machine. 2,454,597, Nov. 23.

De la Fuente Tejedo, Juan, Madrid, Spain. Electric machine for typing in the Braille and Abreu systems. 2,454,637, Nov. 23.

Deutsch, Joseph J., Norwalk, Conn., and J. Vigilante, New York, N. Y., said Vigilante assignor to said Deutsch. Ice-cream scoop. 2,454,735, Nov. 23.

Dickerson, Paul M.: *See*—
Furst, Albert J., Aakjer, and Dickerson.

Dickinson, John T., Basking Ridge, N. J., O. Morfit, Scarsdale, and L. J. Van Orden, Olean, N. Y., assignors to The M. W. Kellogg Company, Jersey City, N. J. Fractionation of fats. 2,454,638, Nov. 23.

Dietz, Albert E., Washington, D. C. Smoker's pipe. 2,454,436, Nov. 23.

Diroff, Alton J.: *See*—
Peltier, Walter J., and Diroff.

Distillation Products, Inc., assignee: *See*—
Embree, Norris D., and Kuhrt.

Distillers Company, Limited, The, assignee: *See*—
Galitzenstein, Eugen Gottfried, and Woolf.

Ditto, Incorporated, assignee: *See*—
Holik, Melville J.

Dixon, James Kenneth: *See*—
Pfann, Harry F., and Dixon.

Dole Valve Company, The, assignee: *See*—
Cramer, William F., Jr.

Dow Chemical Company, The, assignee: *See*—
Dahl, Alvin D.
Lehnard, Philip J., Jr.
Stanton, George W., and Lowrey.

Doyle, Irvin H., Phoenix, Ariz. Stabilizing control mechanism for model airplanes. 2,454,598, Nov. 23.

Drautz, Walter G.: *See*—
Huey, William G., and Drautz.

Drew, E. F., & Co. Inc., assignee: *See*—
Pollack, Maxwell A.

Dunson, William M., Welska, Fla. Baby dining-play table. 2,454,599, Nov. 23.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Kirk, Joseph S.
Sauer, John C.

Duriron Company, Inc., The, assignee: *See*—
Jacobsen, Oystein.

Dyestuffs & Chemicals, Inc., assignee: *See*—
Adler, Leon, Johnson, and Schneider.

Eastern Steel Products Limited, assignee: *See*—
Buehler, Allan M.

Eastman Kodak Company, assignee: *See*—
Brooker, Leslie G. S.

Edison, Thomas A., Incorporated, assignee: *See*—
Hornbostel, John.

Edwards & Company, Inc., assignee: *See*—
Verkuil, Leo L.

Edwards, Raymond W., Mangotsfield, England. Portable chess or checker board with game piece retaining means. 2,454,639, Nov. 23.

Ehnborn, Victor C., Honolulu, T. H. Device for working thermoplastic materials. 2,454,437, Nov. 23.

Ehrenhaft, Franz F., Forest Hills, N. Y. Nonintermittent cinematographic projector. 2,454,504, Nov. 23.

Eichner, Ferdinand R., assignor to Trail-A-Boat Company, Pontiac, Mich. Mast for marine craft. 2,454,640, Nov. 23.

Eisner, Robert S., Red Bank, N. J., and D. Schoenholz, New York, N. Y., said Schoenholz assignor to said Eisner. Brush. 2,454,553, Nov. 23.

Electro-Pneumatic Looms Limited, assignee: *See*—
Heaton, John.

Ellingsen, Florence G.: *See*—
Brandt, Otho A., and Ellingsen.

Ellingson, Martin A., McCook, Nebr. Card shuffling and placement board. 2,454,691, Nov. 23.

Ellis-Foster Company, assignee: *See*—
Robertson, John W.

Embree, Norris D., and N. H. Kuhrt, assignors to Distillation Products, Inc., Rochester, N. Y. Preparation of tocopherol concentrate. 2,454,692, Nov. 23.

Empire Electric Brake Company, assignee: *See*—
Penrose, William F.

Enrico, Robert J.: *See*—
Iredell, Charles V., and Enrico.

Ericson, George R., Kirkwood, assignor to Carter Carburetor Corporation, St. Louis, Mo. Fluid pulsator transmission system. 2,454,311, Nov. 23.

Eriksson, Erik E.: *See*—
Thompson, Richard A., Eriksson, and Carlson.

Evans, Edward L., Wilmington, N. C. Door holder 2,454,505, Nov. 23.

Evans Products Company, assignee: *See*—
Nampa, Sulo M.

Evans, Val G.: *See*—
Tackett, James R., and Evans.

Fairchild Camera and Instrument Corporation, assignee: *See*—
Moore, David W., Jr.

Falk, Charles T.: *See*—
Falk, Joseph M., and C. T.

Falk, Joseph M., and C. T., Kansas City, Mo. Holder and carrier for bottles and the like. 2,454,438, Nov. 23.

Faust, Jacob, Belleville, N. J., assignor to L. Sonneborn Sons, Inc. Alkaline earth metal petroleum sulfonate compositions. 2,454,736, Nov. 23.

Fengler, William W.: *See*—
Rogers, Thomas H., and Fengler.

Figmick, Michael J., Cairnbrook, Pa. Safety hitch for vehicles. 2,454,641, Nov. 23.

Finman, Marian L., Minneapolis, Minn. Comb. 2,454,642, Nov. 23.

First Industrial Corporation, assignee: *See*—
Repka, Paul T.

Fisch, Willi: *See*—
Widmer, Gastav, Sutter, Fisch, and Hochuli.

Fischer, Albert C., Chicago, Ill. Composition of rubber-like qualities. 2,454,506, Nov. 23.

Fischer, William V., assignor to The Air-Flo Compressor Company, Akron, Ohio. 2,454,600, Nov. 23.

Fisher, Charles H.: *See*—
Rehberg, Chessie E., and Fisher.

Flaherty, Charles J., New York, N. Y. Athletic supporter. 2,454,507, Nov. 23.

Fontaine, Clarence F. H., Newport, assignor to Marvel Jewelry Mfg. Company, Providence, R. I. Box catch for watch bracelets. 2,454,439, Nov. 23.

Food Machinery Corporation, assignee: *See*—
Krueger, Frank W.

Fordham, Stanley, Saltcoats, Scotland, and John L. Moilliet, Styal, England, assignors to Imperial Chemical Industries Limited. Gelatine blasting explosive compositions containing water-soluble salts. 2,454,643, Nov. 23.

Forgue, Stanley V., Princeton, N. J., assignor to Radio Corporation of America. Cathode-ray tube apparatus. 2,454,378, Nov. 23.

Fortuna, Bruno G., and Emil Helliker, North Bergen, N. J. Embroidery machine. 2,454,379, Nov. 23.

Foster, Charles H., New York, N. Y. Airplane control toy. 2,454,693, Nov. 23.

Foulston, Roy A., Tugaske, Saskatchewan, Canada. Wind electric governor. 2,454,440, Nov. 23.

Fox, Alexander P.: *See*—
Rotter, Lutwin C., Fox, and Mueller.

Francis, A. Glyn, assignee: *See*—
Middleton, John M.

Frederieksen, James P., Braintree, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Art of sewing. 2,454,277, Nov. 23.

Fritzlen, Thomas L., Florence, Ala., assignor to Reynolds Metals Co., Richmond, Va. High-strength corrosion-resistant aluminum alloy sheets. 2,454,312, Nov. 23.

Funk, Charles E., Jr., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Purification of guanidine nitrate. 2,454,644, Nov. 23.

Furst, Albert J., Newark, and J. J. Aakjer and P. M. Dickerson, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electronic device having a metal collar and discal ring supporting an electrode from a resonator. 2,454,313, Nov. 23.

Gallitzenstein, Eugen G., and C. Woolf, London, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland. Production of alkyl chlorides. 2,454,645, Nov. 23.

Gallagher, William M., Oklahoma City, Okla. Nutcracker with an adjustable sliding jaw. 2,454,601, Nov. 23.

Galper, Isa, assignor to Bee Bee Shoe Co., Manchester, N. H. Platform cover turning device. 2,454,441, Nov. 23.

Garnett, Edward V., Denver, Colo. Automobile transporting truck. 2,454,554, Nov. 23.

Gates, Frederic P., Toronto, Ontario, Canada, assignor to The Arrow-Hart & Hegeman Electric Co., Hartford, Conn. Electric range switch. 2,454,646, Nov. 23.

Gaver Tank & Mfg. Co., Inc., assignee: *See*—
Kamp, Ewald A.

Gay, Jacob D., Jr.: *See*—
Bell, Harry G., and Gay.

Gear Grinding Machine Company, The, assignee: *See*—
Brady, Samuel G., and King.

Geiger, John P., assignee: *See*—
Smith, Merton J.

Geigy, J. R., A.-G., assignee: *See*—
Babey, Charles T., and Stocker.

General Aniline & Film Corporation, assignee: *See*—
Huey, William G., and Drautz.
Morgan, Jack F.

General Electric Company, assignee: *See*—
Atchison, Leonard W.
Bazley, Carl E., and Bangert.
Coburn, Richard W.
Lafferty, James W.
Linke, Ernest A.
Nelson, Richard B.
Rector, Paul C.
Stauffer, Lynn H.
Thielemann, Rudolf H.
Thomas, Charles A.
Thompson, Louis W., and Crever.

General Motors Corporation, assignee: *See*—
Kaufman, Daniel L.

General Telephone Corporation, assignee: *See*—
Bartelink, Everhard H. B.

Gent, Edgar W., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vacuum cleaner. 2,454,314, Nov. 23.

Gibbs, Kelly W., and R. Hillman, Ashland, Ky. Cement block machine. 2,454,442, Nov. 23.

Gilbert, A. C., Company, The, assignee: *See*—
Morse, Shirley P.

Giles, Eugene M., Western Springs, assignor, by mesne assignments, to Illinois Tool Works, Chicago, Ill. Grip nut. 2,454,443, Nov. 23.

Gille, Willis H., St. Paul, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Pressure switch. 2,454,647, Nov. 23.

Gluesenkamp, Earl W., and A. B. Craig, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Copolymers of hydrocarbon dienes and acrylates of alpha-hydroxy - methylethano - 9,10 - dihydroanthracene. 2,454,737, Nov. 23.

Goddard, Anne F., executrix: *See*—
Yanes, Francisco G.

Goff, Francis L., assignee: *See*—
Hurst, Edmund E., and Paxton.

Goff, Francis Lee, assignor of one-third to E. E. Hurst and one-third to J. W. Paxton, Bloomington, Ill. Perspective drafting attachment. 2,454,380, Nov. 23.

Goldberg, Edwin A.: *See*—
Brown, George W., and Goldberg.

Goodman Manufacturing Company, assignee: *See*—
Hagenbook, Loy D.
Sloane, William W.

Gordy, Irving, Eatontown, N. J. Sealed potentiometer. 2,454,278, Nov. 23.

Gorham, John E.: *See*—
Zahl, Harold A., Rouse, and Gorham.

Gorham, John E., Spring Lake, N. J. High-power oscillator tube. 2,454,279, Nov. 23.

Gosnell, Jesse L., St. Joseph, Mo. Wedge actuator attachment for journal boxes. 2,454,445, Nov. 23.

Grebb, Robert F., Boise, Idaho. Automatic fluid controlled transmission. 2,454,694, Nov. 23.

Green, Herman, Garden City, assignor to City Tank Corporation, Corona, Long Island, N. Y. Sign stand for displaying posters. 2,454,648, Nov. 23.

Grubola, Edward F., assignee: *See*—
Kirschbaum, Abe F.

Grubola, Henry M., assignee: *See*—
Kirschbaum, Abe F.

Guinot, Henri M., Versailles, assignor to Les Usines De Melle (Societe Anonyme), Saint-Leger-les-Melle, France. Pyroligneous liquors for preserving food products and preparing the same. 2,454,649, Nov. 23.

Gunther, Frederick F., assignor to Helmco, Inc., Chicago, Ill. Needle holder and sterilizer. 2,454,602, Nov. 23.

Gunther, James K., and L. Sair, Decatur, assignors to Central Soya Company, Inc., Fort Wayne, Ind. Treating fish press water. 2,454,315, Nov. 23.

Haecks, Erwin, San Francisco, Calif. Dough cutter. 2,454,316, Nov. 23.

Hagenbook, Loy D., assignor to Goodman Manufacturing Company, Chicago, Ill. Kerf-cutting machine. 2,454,446, Nov. 23.

Hager, Floyd D., Pearl River, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Inoculum and preparing and using same. 2,454,753, Nov. 23.

Hambly, Allen E., Huntington Park, assignor to Byron Jackson Co., Vernon, Calif. Suspension for pipe tongs. 2,454,317, Nov. 23.

Hamilton Art Metal Corporation, assignee: *See*—
Wedemeyer, Eric.

Hammell, Frederick P., Washington, D. C. Clothes guard attachment for ironing boards. 2,454,381, Nov. 23.

Hammer, Samuel, New York, assignor to United Metal Box Co., Inc., Brooklyn, N. Y. Fastening means and combination. 2,454,695, Nov. 23.

Hardesty, George K. C., Seat Pleasant, Md. Illuminated indicator using light polarizing elements. 2,454,280, Nov. 23.

Hardware Products Co.: *See*—
Nissenbaum, Moses D.

Harlan, John L., Houston, Tex., assignor to Standard Oil Development Company. Resolving petroleum emulsions. 2,454,382, Nov. 23.

Harney, William S., Jr., Elizabeth, and E. H. Amick, Jr., Linden, N. J., assignors to Standard Oil Development Company. Dehydration of methyl ethyl ketone by azeotropic distillation under superatmospheric pressure. 2,454,447, Nov. 23.

Harris, Forist, Merced, Calif. Sanding machine. 2,454,650, Nov. 23.

Harshaw Chemical Company, The, assignee: *See*—
Kremers, Harry C., and Price.

Hartford National Bank and Trust Company, assignee, as trustee: *See*—
Roovers, Wilhelmus A.

Hasselhorn, Walter C., and J. F. Jaap, assignors to Cook Electric Company, Chicago, Ill. Lightning arrester. 2,454,448, Nov. 23.

Haws, James C., and C. A. White, Sugarland, Tex. Shade roller bracket. 2,454,449, Nov. 23.

Hawthorne, William R., Silver Spring, Md., assignor to Power Jets (Research and Development) Ltd., London, England. Internal-combustion turbine power plant. 2,454,738, Nov. 23.

Hayes, William A., Kearny, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Fabricating electron discharge devices. 2,454,318, Nov. 23.

Hazeltine Research, Inc., assignee: *See*—
Malling, Leonard R.

Heaton, John, Riddlesden, Keighley, assignor to Electro-Pneumatic Looms Limited, Bradford, England. Picking motion for looms. 2,454,603, Nov. 23.

Heid, Jacob B., Oak Park, assignor to Universal Oil Products Company, Chicago, Ill. Refining of hydrocarbon distillates. 2,454,383, Nov. 23.

Heijn, Paul C.: *See*—
Watson, Leland A., and Heijn.

Heim, Edward A., Lisbon, Ohio. Joist and girder construction. 2,454,604, Nov. 23.

Helliker, Emil: *See*—
Fortuna, G., and Helliker.

Helmco, Inc., assignee: *See*—
Gunther, Frederick F.

Henderson, Harold P., and P. Kaplan, assignors to Clover Industries Inc., Buffalo, N. Y. Combination cap and plug. 2,454,555, Nov. 23.

Henderson, Philip H., Los Angeles, Calif. Traction splint. 2,454,319, Nov. 23.

Hendricks, Cornelius, assignor to Applied Arts Corporation, Grand Rapids, Mich. Ash receiver. 2,454,450, Nov. 23.

Hendrickson, Severin B., Templeton, assignor to Heywood-Wakefield Company, Gardner, Mass. Detachable glide unit for furniture legs. 2,454,739, Nov. 23.

Henley's Tyre & Rubber Company, assignee: *See*—
Woods, Edgar C.

Henry, Thomas J., Newark, N. J., assignor to Radio Corporation of America. Button stem for electron discharge devices. 2,454,384, Nov. 23.

Hercules Powder Company, assignee: *See*—
Cox, Richard F. B.

Herrick, George G., Benzinger Township, Elk County, and H. N. Veley, assignors to Speer Resistor Corporation, St. Marys, Pa. Resistor and making the same. 2,454,508, Nov. 23.

Hewitt, Ellis E., Edgewood, and A. G. Larson, Forest Hills, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus. 2,454,509, Nov. 23.

Heyman, Wilbert A., New York, N. Y. Forming a coffee concentrate. 2,454,510, Nov. 23.

Heymann, Seymour E., Evanston, assignor to Stewart-Warner Corporation, Chicago, Ill. Aircraft heater, including means to prevent fuel contamination of the ventilating air. 2,454,512, Nov. 23.

Heymann, Seymour E., Evanston, and W. A. Marshall, Jr., Chicago, Ill., assignors to Stewart-Warner Corporation. Combustion air heater having variable output with constant temperature. 2,454,511, Nov. 23.

Heywood-Wakefield Company, assignee: *See*—
Hendrickson, Severin B.

Hicks, Clarence A., Milwaukee, Wis. Antipersonnel artillery mine. 2,454,281, Nov. 23.

Highberg, Axel L., West Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Engine cooling means. 2,454,696, Nov. 23.

Hilblom, Samuel E., Chicago, Ill., assignor to International Harvester Company. Tractor mower. 2,454,697, Nov. 23.

Hill, Philip: *See*—
Ridgway, John A., Jr., and Hill.

Hillman, Roy: *See*—
Gibbs, Kelly W., and Hillman.

Hinks, Bernard, Willenhall, England. Electromagnetic switch. 2,454,451, Nov. 23.

Hippler, Hans, North Hollywood, Calif. Hook guard. 2,454,698, Nov. 23.

Hirsch, Frederic, assignor, by mesne assignments, to Astra Bent Wood Furniture Co., New York, N. Y. Composite chair. 2,454,699, Nov. 23.

Hirst, Franklin G., Philadelphia, Pa. Disk handling apparatus. 2,454,556, Nov. 23.

Hochuli, Ernst: *See*—
Widmer, Gustav, Sutter, Fisch, and Hochuli.

Hodges, Caleb E., Roselle, N. J., and A. F. Cashman, Staten Island, N. Y., assignors to Standard Oil Development Company. Lube additives made by solvent refining high molecular weight aliphatic-aromatic condensation products. 2,454,452, Nov. 23.

Holdsworth, Harold: *See*—
Darling, Harold N., and Holdsworth.

Holik, Melville J., Berwyn, assignor to Ditto, Incorporated, Chicago, Ill. Duplicating inks. 2,454,700, Nov. 23.

Homeyer, August H.: *See*—
Wallingford, Vernon H., and Homeyer.

Homrighous, John H., Oak Park, Ill. Synchronizing system. 2,454,651, Nov. 23.

Honey, John P., Danville, Ill. Shield for dental lathes. 2,454,513, Nov. 23.

Hopkins, Mark C.: *See*—
Kirkbridge, Chalmer G., and Hopkins.

Hornbostel, John, Glen Ridge, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Hygrometer and switch for radiosondes. 2,454,320, Nov. 23.

Houdry Process Corporation, assignee: *See*—
Bates, John R.

Houk, Alva L.: *See*—
Bock, Louis H., and Houk.

Howard, Jack W., Brigham, Utah. Convertible skate. 2,454,321, Nov. 23.

Howard, Jesse: *See*—
Nissenbaum, Moses D.

Howard, Lena: *See*—
Nissenbaum, Moses D.

Howland, Louis H., Watertown, and W. F. Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y. Manufacture of fumaric acid. 2,454,385, Nov. 23.

Howland, Louis H., Watertown, and W. F. Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y. Manufacture of fumaric acid. 2,454,386, Nov. 23.

Howland, Louis H., Watertown, and W. F. Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y. Isomerization of maleic acid to fumaric acid. 2,454,387, Nov. 23.

Huey, William G., Nassau, and W. G. Drautz, Glenmont, assignors to General niline & Film Corporation, New York, N. Y. Pigment green and producing the same. 2,454,453, Nov. 23.

Hughes, Marion D., Wilmot, Ark. Rail fastener. 2,454,454, Nov. 23.

Hurst, Edmund E., assignee: *See*—
Goff, Francis L.

Hurst, Edmund E., and J. W. Paxton, assignors of one-third to F. L. Goff, Bloomington, Ill. Drafting equipment. 2,454,388, Nov. 23.

Hyland, William A., Horicon, Wis., assignor to John Deere Van Brunt Company. Lever. 2,454,701, Nov. 23.

Iams, Harley, A. Rose, and G. L. Krieger, Princeton, N. J., assignors to Radio Corporation of America. Cathode-ray storage tube. 2,454,652, Nov. 23.

Illinois Tool Works, assignee: *See*—
Giles, Eugene M.
Poupitch, Ougljesa J.

Imperial Chemical Industries Limited, assignee: *See*—
Fordham, Stanley, and Moilliet.
McGinty, Lawrence.
Smith, Walter F., and White.

Industrial Rayon Corporation, assignee: *See*—
Burkholder, Alden H.

Interchemical Corporation, assignee: *See*—
Armatys, Edward.

International Harvester Company, assignee: *See*—
Avila, Frank W.
Hilblom, Samuel E.
Palmer, John S.
Wherry, Isaac M.

Iredell, Charles V., Essex Fells, and R. J. Enrico, Union City, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Manufacture of molybdenum. 2,454,322, Nov. 23.

Irvine, Vanan C.: *See*—
Tamele, Miroslav W., Irvine, and Mahar.

Irwin, James W., Washington, D. C. Telescoping cigarette case. 2,454,455, Nov. 23.

Jaap, John F.: *See*—
Hasselhorn, Walter C., and Jaap.

Jack, William R., assignee: *See*—
Carlson, Bert G.

Jackson, Byron Co., assignee: *See*—
Hambly, Allen E.

Jackson, Edward H., Jr., Temple, Pa. Spinning means and method. 2,454,323, Nov. 23.

Jacobsen, Oystein, Montgomery County, assignor to The Duriron Company, Inc., Dayton, Ohio. Plug valve. 2,454,389, Nov. 23.

Jacobsen, Oystein, Montgomery County, assignor to The Duriron Company, Inc., Dayton, Ohio. Centrifugal pump. 2,454,390, Nov. 23.

Jacobson, Franz, New York, N. Y. No-twist self-locking coupling. 2,454,557, Nov. 23.

Jefferson, Glen V., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Circuit controller. 2,454,702, Nov. 23.

Joannides, Christe, Edgeware, England. Materials for dental purposes. 2,454,456, Nov. 23.

Joannides, Christe, Edgware, England. Making dentures. 2,454,457, Nov. 23.

Johnson, Harold G.: *See*—
Adler, Leon, Johnson, and Schneider.

Johnson, Herbert L., Peabody, Mass. Tube forming device. 2,454,282, Nov. 23.

Jones, Albert S., Dudley, and G. B. Stackpole, Oxford, Mass., assignors to Cranston Print Works Company, Cranston, R. I. Producing printed fabrics. 2,454,391, Nov. 23.

Jorgenson, John P., Wilmette, assignor to Kling Bros. Engineering Works, Chicago, Ill. Tumbler. 2,454,392, Nov 23

Joslyn Mfg. and Supply Co., assignee: *See*—
Smalley, Burt M

Joy Manufacturing Company, assignee: *See*—
Wineman, Wade H.

Kaetker, Howard C., Cincinnati, Ohio. Fishing pole holder. 2,454,458, Nov. 23.

Kaiser Fleetwings, Inc., assignee: *See*—
De Ganahl, Carl.

Kamp, Ewald A., Chicago, Ill., assignor to Graver Tank & Mfg. Co., Inc. Method of and apparatus for the removal of solids from liquids, with a control operating in response to viscosity or pressure. 2,454,653, Nov. 23.

Kaplan, Philip: *See*—
Henderson, Harold P., and Kaplan.

Kaufman, Daniel L., assignor to General Motors Corporation, Dayton, Ohio. Air cooling apparatus. 2,454,654, Nov. 23.

Kayler, Frank H., Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill. Coupler attachment. 2,454,514, Nov. 23.

Kearfott Company, Inc., assignee: *See*— Reichel, Wladimir A.

Kellogg, M. W., Company, The, assignee: *See*— Dickinson, John T., Morfit, and Van Orden.

King, Ellis G., Pittsburgh, assignor to Armstrong Cork Company, Lancaster, Pa. Sealing element including a binder consisting of polyisobutylene and factice. 2,454,283, Nov. 23.

King, John L.: *See*— Brady, Samuel G., and King.

King, Lucille, Bartow, Fla. Hair curler. 2,454,459, Nov. 23.

Kirk, Joseph S., Seven Hills Village, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Composition of half-ester of styrene-maleic anhydride copolymer and a solvent. 2,454,284, Nov. 23.

Kirkbride, Chalmer G., College Station, and M. C. Hopkins, Texas City, Tex., assignors to Pan American Refining Corporation, New York, N. Y. Desalting crude oil. 2,454,605, Nov. 23.

Kirschbaum, Abe F., Greenbelt, Md., assignor to H. M. Grubola, Washington, D. C., and E. F. Grubola, Long Island City, N. Y. Educational device. 2,454,635, Nov. 23.

Kispert, Joseph J., Mount Carmel, Conn. Ventilated corset. 2,454,606, Nov. 23.

Kleinsmith, Ben, Seattle, Wash. Tight curl forming device. 2,454,558, Nov. 23.

Kling Bros. Engineering Works, assignee: *See*— Jorgenson, John P.

Knapp, William E., Moline, Ill., assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Tractor mounted loader. 2,454,461, Nov. 23.

Koepke, Walter, Baytown, Tex. Fish gig. 2,454,460, Nov. 23.

Kollman, Alexander A., Los Angeles, Calif. Mechanical galloping horse. 2,454,656, Nov. 23.

Kopp Glass, Inc., assignee: *See*— Leberknight, Charles E., and Ostrader.

Kostrubanic, Michael, Jr.: *See*— Van Sittert, Paul, Kostrubanic, and Lehman.

Kotler, Frank W.: *See*— Delafontaine, Charles, and Kotler.

Kreiger, Gardner L.: *See*— Iams, Harley, Rose, and Kreiger.

Kremers, Harry C., Cleveland Heights, and R. E. Price, Cleveland, assignors to The Harshaw Chemical Company, Elyria, Ohio. Production of welded silver chloride articles. 2,454,462, Nov. 23.

Kromer, Edward L.: *See*— Kromer, Esther M. and E. L.

Kromer, Esther M. and E. L., Chicago, Ill. Baby's safety sheet. 2,454,463, Nov. 23.

Krueger, Frank W., Atherton, assignor to Food Machinery Corporation, San Jose, Calif. Container feeder. 2,454,285, Nov. 23.

Kuehn, Henry F., Seattle, Wash. Portable drying rack. 2,454,559, Nov. 23.

Kuhrt, Noel H.: *See*— Embree, Norris D., and Kuhrt.

Kuzmin, Walter R., Nutley, and S. J. Levine, Newark, N. J. Vaporizer. 2,454,657, Nov. 23.

Lacey-Webber Co., assignee: *See*— Siemers, Eric.

Lafferty, James W., Colonie, N. Y., assignor to General Electric Company. Ultra high frequency electric discharge device. 2,454,560, Nov. 23.

La Fond, Joseph O., Gardner, Mass. Spring construction. 2,454,703, Nov. 23.

Laidig, Alfred H.: *See*— McNall, John W., and Laidig.

Land, Edwin H., Boston, Mass., assignor to Polaroid Corporation, Dover, Del. Light-polarizing sheet of molecularly oriented transparent linear high polymer dyed with dichroic substance and manufacture. 2,454,515, Nov. 23.

Larson, Arthur G.: *See*— Hewitt, Ellis E., and Larson

Laureyns, Fred R., Middle Village, N. Y. Adjustable multiple plate holder. 2,454,516, Nov. 23.

Lear, Incorporated, assignee: *See*— Nygaard, Herman.

Leberknight, Charles E., and E. C. Ostrander, Edgewood, assignors to Kopp Glass, Inc., Swissvale, Pittsburgh, Pa. Glass composition. 2,454,607, Nov. 23.

Lee, John G., Farmington, assignor to United Aircraft Corporation, East Hartford, Conn. Control for engine cooling blowers. 2,454,324, Nov. 23.

Lee, Walter E., Chicago, Ill. Tent structure. 2,454,464, Nov. 23.

Lehman, Eugene W.: *See*— Van Sittert, Paul, Kostrubanic, and Lehman.

Lehnhard, Philip J., Jr., Midland, Tex., assignor to The Dow Chemical Company, Midland, Mich. Apparatus for treating wells. 2,454,740, Nov. 23.

Leitch, Donald M., Los Angeles, Calif., assignor to North American Aviation, Inc. Tail wheel mechanism. 2,454,658, Nov. 23.

Leo, Herbert S., and B. B. Breslow, assignors to Utility Appliance Corp., Los Angeles, Calif. Pipe fitting. 2,454,465, Nov. 23.

Leonard, Charles A., Cincinnati, Ohio. Miles-per-gallon meter. 2,454,393, Nov. 23.

Leonard, Charles A., Cincinnati, Ohio. Electrically controlled governor. 2,454,659, Nov. 23.

Leonard, Everett P., Forth Worth, Tex. Nut-shelling machine. 2,454,660, Nov. 23.

Lerner, William H., Lorain, Ohio, assignor, by mesne assignments, to Specialties Development Corporation, Belleville, N. J. Dip tank for thermoplastic material. 2,454,286, Nov. 23.

Le Roi, Earl J., Baton Rouge, La., assignor to Standard Oil Development Company. Regeneration of fluid catalysts with cooling of the flue gases by water injection. 2,454,466, Nov. 23.

Lester Engineering Company, assignee: *See*— Lester, Nathan, and Schwartz.

Lester, Nathan, Shaker Heights, and W. H. Schwartz, assignors to Lester Engineering Company, Cleveland, Ohio. Extrusion machine for plastic material. 2,454,661, Nov. 23.

Lester, William M., Mountainside, N. J. Molding machine. 2,454,561, Nov. 23.

Les Usines de Melle (Societe Anonyme) assignee: *See*— Guinot, Henri M.

Levine, Samuel J.: *See*— Kuzmin, Walter R., and Levine.

Lieber, Eugene, New York, N. Y., and E. P. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company. Lubricating oil composition. 2,454,394, Nov. 23.

Lincoln Engineering Company, assignee: *See*— Rotter, Lutwin C., Fox, and Mueller.

Linke, Ernest A., Fort Wayne, Ind., assignor to General Electric Company. Current collector brush mechanism. 2,454,562, Nov. 23.

Linnert, George E., Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation. Combustion cutting of stainless steel. 2,454,325, Nov. 23.

Lisek, Walter J., Chicago, Ill. Napkin holder. 2,454,517, Nov. 23.

Lockheed Aircraft Corporation, assignee: *See*— Dawson, Charles A.

Lopez, Manuel, Akron, Ohio. Sleeve stretcher or the like. 2,454,395, Nov. 23.

Love, Robert M., Baytown, Tex., assignor to Standard Oil Development Company. Removing olefins from aromatic hydrocarbons. 2,454,467, Nov. 23.

Lowe, William G.: *See*— Daly, Arthur J., and Lowe.

Lowry, Charles E.: *See*— Stanton, George W., and Lowry.

Lytle, Lawrence D.: *See*— Cullinan, John F., and Lytle.

Machlett Laboratories Incorporated, assignee: *See*— Rogers, Thomas H., and Fengler.

Mahar, James F.: *See*— Tamele, Miroslav W., Irvine, and Mahar.

Mahoney, Ruth M., Santa Monica, Calif. Maternity garment. 2,454,287, Nov. 23.

Malco Company, Incorporated, The, assignee: *See*— Watson, Leland A., and Heljn.

Makenny, William: *See*— Whitmore, James B., Makenny, and Newcombs.

Makenny, William, Mountainview, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Base and contact for electrical devices. 2,454,326, Nov. 23.

Malcolm, Scott: *See*— Mitchell, Percival H., and Malcolm.

Mallinckrodt Chemical Works, assignee: *See*— Wallingford, Vernon H., and Homeyer.

Malling, Leonard R., San Diego, Calif., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Wave-signal receiver-transmitter system. 2,454,396, Nov. 23.

Malsom, Frank, Maplewood, N. J. Base for holding vernier calipers. 2,454,327, Nov. 23.

Marsh, James, Bay City, Mich. Device for mixing fertilizer with soil and screening. 2,454,662, Nov. 23.

Marshall, William A., Jr.: *See*— Heymann, Seymour E., and Marshall, Jr.

Martin, Oliver O., Montrose, Calif. Margin justifying device for typewriters. 2,454,470, Nov. 23.

Martino, Joseph H.: *See*— Auskelis, John V., and Martino.

Marvel Jewelry Mfg. Company, assignee: *See*— Fontaine, Clarence F. H.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,454,328, Nov. 23.

McArdle, Edward H., Linden, N. J., assignor to Standard Oil Development Company. Preparing aromatic nitro compounds and amines. 2,454,468, Nov. 23.

McCann, Gordon, Oakland, Calif. Portable shower unit. 2,454,518, Nov. 23.

McCarthy, Henry J., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency electronic tube. 2,454,741, Nov. 23.

McClure, Glenn T., and J. W. Rush, Wilkinsburg, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Control valve device. 2,454,469, Nov. 23.

McGinty, Lawrence, Frodsham, near Warrington, Cheshire, England, assignor to Imperial Chemical Industries Limited. Fluorodihalo esters. 2,454,663, Nov. 23.

McLean, Robert E., Fort Benning, Ga. Takedown type swing-out-of-the-way wall bracket. 2,454,664, Nov. 23.

McMichael, Floyd J., Orlando, Fla. Method and apparatus for cooling produce by alternate dipping and draining. 2,454,704, Nov. 23.

McMichael, Floyd J., Orland, Fla. Method and apparatus for cooling produce by alternate dripping and draining. 2,454,705, Nov. 23.

McMichael, Floyd J., Orlando, Fla. Method and apparatus for cooling produce by alternate dipping and draining. 2,454,706, Nov. 23.

McNall, John W., East Orange, and A. H. Laidig, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Positive grid oscillator. 2,454,330, Nov. 23.

McNaney, Joseph T., Baltimore, assignor to Bendix Aviation Corporation, Towson, Md. Combination step-by-step and induction motor. 2,454,519, Nov. 23.

Mees, Herman, Lodelinsart, assignor to Ateliers de Construction Electriques de Charleroi, Brussels, Belgium. Fluid-cooled current converter. 2,454,665, Nov. 23.

Mercier, Jean, New York, N. Y. Pump output regulator. 2,454,563, Nov. 23.

Merwin, Harry H., and A. C. Nystrom, Rutherford, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Takeup mechanism. 2,454,329, Nov. 23.

Meyer, August J.: *See*— Peterson, Anton U., and Meyer.

Meyerdick, Clarence E., Fair Oaks, Calif. Luggage carrier and protector. 2,454,608, Nov. 23.

Meyers, George L., Willoughby, and J. C. Shutt, Wickliffe, assignors to The Ohio Rubber Company, Willoughby, Ohio. Mounting for spinning rings and the like. 2,454,707, Nov. 23.

Michaelson, Marion L., Ames, Iowa, assignor to the United States of America as represented by the Secretary of War. Heat-pressure operated warning switch. 2,454,288, Nov. 23.

Middleton, John M., Harrisburg, assignor of fifty per cent to A Glyn Francis, Camp Hill, Pa. Apparatus for heating ceramics. 2,454,708, Nov. 23.

Miller, Edward A., Cuba, N. Y., assignor, by mesne assignments, to Acme Electric Corporation. Making laminations. 2,454,609, Nov. 23.

Miller, Joe W., Brunswick, Ga. Planer attachment for lathes. 2,454,331, Nov. 23.

Minneapolis-Honeywell Regulator Company, assignee: *See*— Baak, Albert E. Gille, Willis H.

Minneapolis-Moline Power Implement Company, assignee: *See*— Knapp, William E.

Mitchell, Percival H., and S. Malcolm, Toronto, Ontario, Canada. Lens for lighting equipment. 2,454,332, Nov. 23.

Modine Manufacturing Company, assignee: *See*— Boerger, Martin G.

Moilliet, John L.: *See*— Fordham, Stanley, and Moilliet.

Moir, William T., Sherwood, Oreg. Matrix predrier. 2,454,334, Nov. 23.

Molnar, Eugene J., Toledo, Ohio, assignor to Montclair Research Corporation. Alginate impression material containing chromic sulfate. 2,454,709, Nov. 23.

Momberg, James W., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine drive. 2,454,471, Nov. 23.

Monkley, Edward H., Worcester, Mass. Tool grinding fixture. 2,454,472, Nov. 23.

Monowatt Incorporated, assignee: *See*— Benander, George B.

Monsanto Chemical Company, assignee: *See*— Gluesenkamp, Earl W., and Craig. Mowry, David T., and Craig.

Montcalm, Incorporated, assignee: *See*— Roth, Joseph N.

Montclair Research Corporation, assignee: *See*— Molnar, Eugene J. Robertson, John W.

Moon, James M., Graham, N. C. Electric drain stopper. 2,454,333, Nov. 23.

Moore, David W., Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation. Ratio-measuring system. 2,454,520, Nov. 23.

Morfit, Oliver: *See*— Dickinson, John T., Morfit, and Van Orden.

Morgan, Jack F., Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y. Pyridazone derivatives and preparing the same. 2,454,742, Nov. 23.

Morris, Howard I., San Marcos, Calif., assignor to The Yoder Company, Cleveland, Ohio. Apparatus for vulcanizing flexible tubes. 2,454,666, Nov. 23.

Morse, Shirley P., East Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Attachment cord anchorage with ball contact switch. 2,454,667, Nov. 23.

Mosesman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Iron oxide-alkali metal pyroantimoniate catalysts and preparation. 2,454,398, Nov. 23.

Mossberg, Harold F., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn. Sight for firearms. 2,454,397, Nov. 23.

Mossberg, O. F., & Sons, Inc., assignee: *See*— Mossberg, Harold F.

Mowry, David T., and A. B. Craig, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo. Copolymer of a conjugated hydrocarbon diene and an acrylate of a cyclopentadienyl alcohol. 2,454,743, Nov. 23.

Mueller, Carl H.: *See*— Rotter, Lutwin C., Fox, and Mueller.

Myers, David I.: *See*— Weisblatt, David I., and Myers.

Myers, Donald R.: *See*— Weisblatt, David I., Myers, and Wise.

Myers, Walter, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Stop mechanism for sewing machines. 2,454,710, Nov. 23.

Nampa, Sulo M., assignor to Evans Products Company, Detroit, Mich. Apparatus for loading freight or the like. 2,454,473, Nov. 23.

Nance, Wilbur O., Ardmore, Okla. Paintbrush holder. 2,454,474, Nov. 23.

Napier, D., & Son Limited, assignee: *See*— Snell, Leonard S.

Narcus, Harold, Worcester, Mass. Metalization on nonconductors. 2,454,610, Nov. 23.

National Slug Rejectors, Inc., assignee: *See*— Wallin, Fred E.

Navy, United States of America as represented by the Secretary of the, assignee: *See*— Shoemaker, David P.

Neef, Frederick E., Jr., U. S. Army, Hartsdale, N. Y. Portable self-contained drum cleaner. 2,454,289, Nov. 23.

Nelson, Richard B., Schenectady, N. Y., assignor to General Electric Company. Ionization-type vacuum gauge. 2,454,564, Nov. 23.

Netschert, Franz, Glendale, assignor to Technical Glass Company, Los Angeles, Calif. Door latch. 2,454,754, Nov. 23.

Newcombe, Frank A.: *See*— Whitmore, James B., Makenny, and Newcombe.

Newey, Herbert A.: *See*— Davis, Harold S., and Newey.

Nichols, Gordon E., assignor to Winthrop-Atkins Co., Inc., Middleboro, Mass. Easel back. 2,454,521, Nov. 23.

Nichols, Hayden, Salt Lake City, Utah. Shoe closure. 2,454,335, Nov. 23.

Nissenbaum, Moses D., Brooklyn, assignor to J. and L. Howard, co-partners, doing business as Hardware Products Co., New York, N. Y. Sandpaper holder. 2,454,668, Nov. 23.

Norlin, Clarence F., Chicago, Ill. Pencil eraser. 2,454,399, Nov. 23.

Norman, Joseph T., Huntington Mills, Pa. Automatic stoker. 2,454,400, Nov. 23.

North American Aviation, Inc., assignee: *See*— Leitch, Donald M.

Norwood, Arthur F. B., Dalkeith, Victoria, Australia. Treatment of gold- and silver-bearing ores, residues, and other products. 2,454,336, Nov. 23.

Nudelman, Eoina, assignor to Whitehall Publishing Company, Chicago, Ill. Animated toy book. 2,454,669, Nov. 23.

Nygaard, Herman, East Orange, N. J., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Electronic motor control system. 2,454,401, Nov. 23.

Nystrom, Axel C.: *See*— Merwin, Harry H., and Nystrom.

Odell, George W., Rutherford, N. J. Means for use in computing elapsed time and the like. 2,454,711, Nov. 23.

Ohio Rubber Company, The, assignee: *See*— Meyers, George L., and Shutt.

Okrain, Lazar, New York, N. Y. Xylophone. 2,454,402, Nov. 23.

Okress, Ernest C., Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electronic device. 2,454,337, Nov. 23.

Olsen, Ivan, Muskegon, Mich. Mold for producing crankshafts. 2,454,712, Nov. 23.

O'Meara, Thomas J., assignor to The Union Switch & Signal Company, Swissvale, Pa. Polarized electrical relay. 2,454,713, Nov. 23.

Operadio Manufacturing Co., assignee: *See*— Stone, John M.

Orchard Industries, Inc., assignee: *See*— Thompson, Richard A., Eriksson, and Carlson.

Oriani, Richard A.: *See*— Skow, Norman A., Seiler, Oriani, and Whitaker.

Osterman, Joseph T., Northampton, assignor to American Bosch Corporation, Springfield, Mass. Converter for ignition systems. 2,454,714, Nov. 23.

Ostrader, Eugene C.: *See*— Leberknight, Charles E., and Ostrader.

Owen, Benjamin F., Omaha, Nebr. Scraper. 2,454,475, Nov. 23.

Paddock, Levi S.: *See*— Ramsbottom, John M., and Paddock.

Palmer, John S., Chicago, Ill., assignor to International Harvester Company. Device for preventing excessive condensation in the insulating space of refrigerators. 2,454,715, Nov. 23.

Palmer, Rufus N., Pittsburgh, Pa., assignor to American Pearl Button Co., Washington, Iowa. Tubular saw chuck. 2,454,522, Nov. 23.

Palmieri, Mario, Beverly Hills, Calif. Constructing concrete vessels. 2,454,403, Nov. 23.

Pan American Refining Corporation, assignee: *See*—
Kirkbridge, Chalmer G., and Hopkins.
Ridgway, John A., Jr., and Hill.

Paramount Industries, Inc., assignee: *See*—
Pollack, Israel.

Paraskevas, Louis, New Orleans, La. Retractable auxiliary landing gear for aircraft. 2,454,611, Nov. 23.

Parfentjev, Ivan A., Nyack, and A. J. Weil, Pearl River, assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y. Production of toxins and toxoids. 2,454,755, Nov. 23.

Pawlishen, Edward: *See*—
Gordon, Clifford D., and Pawlishen.

Pawlishen, John, administrator: *See*—
Gordon, Clifford D., and Pawlishen.

Paxman, Edward P., Colchester, England. Construction of internal-combustion engines. 2,454,612, Nov. 23.

Paxton, John W., assignee: *See*—
Goff, Francis L.

Paxton, John W.: *See*—
Hurst, Edmund E., and Paxton.

Payne, Arthur W., assignor to Bundy Tubing Company, Detroit, Mich. Apparatus for bending work such as tubing into serpentine coils. 2,454,290, Nov. 23.

Peltier, Walter J., and A. J. Diroff, Monroe, assignors to Woodall Industries Incorporated, Detroit, Mich. Sun visor. 2,454,613, Nov. 23.

Penrose, William F., Summit, N. J., assignor to Empire Electric Brake Company. Brake control apparatus. 2,454,291, Nov. 23.

People in the Territory of the United States, dedicated to the free use of the, assignee: *See*—
Potts, Samuel F., and Spencer.

Peterson, Anton U., Chicago, and A. J. Meyer, River Forest, Ill., said Meyer assignor to said Peterson. Multiple toggle clamping means for vises and the like. 2,454,744, Nov. 23.

Peterson, Carl D., and A. H. Delmel, assignors to Dana Corporation, Toledo, Ohio. Control system for transmission mechanisms. 2,454,614, Nov. 23.

Peterson, William W., Mankato, Minn. Governor (speed responsive type). 2,454,563, Nov. 23.

Petitjean, Charles: *See*—
Wehrli, Walter, and Petitjean.

Petrolite Corporation, Ltd., assignee: *See*—
De Groote, Melvin, and Pettingill.

Pettingill, Owen H.: *See*—
De Groote, Melvin, and Pettingill.

Pfann, Harry F., Greenwich, and J. K. Dixon, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Preparation of piperazine. 2,454,404, Nov. 23.

Pfeiffer, William H., Seattle, Wash. Hearse. 2,454,566, Nov. 23.

Philco Corporation, assignee: *See*—
Sunstein, David E.
Tiley, John W.

Philip, George, Detroit, Mich. Door casement and forming the same. 2,454,523, Nov. 23.

Phillips Petroleum Company, assignee: *See*—
Schulze, Walter A., and Crouch.

Pickett, Andrew B., United States Army. Revetment mat. 2,454,292, Nov. 23.

Pierson, Adrian A., Jr., Cooperstown, N. Y. Radio shielding sealing gasket. 2,454,567, Nov. 23.

Pityo, Albert F., Clifton, and H. E. Butterfield, Jr., Maplewood, N. J. Apparatus for welding. 2,454,338, Nov. 23.

Polaroid Corporation, assignee: *See*—
Land, Edwin H.

Pollack, Israel, Brooklyn, N. Y., assignor to Paramount Industries, Inc. Portable fluorescent lamp control system. 2,454,670, Nov. 23.

Pollack, Maxwell A., Denville, N. J., assignor to E. F. Drew & Co. Inc., New York, N. Y. Thioglycol esters. 2,454,568, Nov. 23.

Potts, Samuel F., Hamden, and R. A. Spencer, Stafford Springs, Conn., dedicated to the free use of the People in the Territory of the United States. Sprayer. 2,454,339, Nov. 23.

Poupitch, Ougljesa J., assignor to Illinois Tool Works, Chicago, Ill. Lock nut and making same. 2,454,444, Nov. 23.

Powell, Clayborn F., Monroe, assignor to Branson Company, Charlotte, N. C. Yarn feed for twisting machines. 2,454,405, Nov. 23.

Power Jets (Research and Developments) Ltd., assignee: *See*—
Hawthorne, William R.

Price, Robert E.: *See*—
Kremers, Harry C., and Price.

Price, Vernon J., West Dearborn, Mich. Animal trap. 2,454,476, Nov. 23.

Quaker City Gear Works, Inc., assignee: *See*—
Berlinger, Bernard E.

Quinn, Gerald S., assignor to Sylvania Electric Products Inc., Salem, Mass. Method and means for protecting fluorescent coatings and the like. 2,454,745, Nov. 23

Radio Corporation of America, assignee: *See*—
Artzt, Maurice.
Brown, George W., and Goldberg.
Cole, Ben R.
Curtis, Lucien B.
Forgue, Stanley V.
Henry, Thomas J.
Iams, Harley, Rose, and Krieger.
Sanders, Royden C., Jr.
Synder, Richard L., Jr.
Tourshou, Simoen I.

Rainey, James L.: *See*—
Bock, Louis H., and Rainey.

Ramsbottom, John M., and L. S. Paddock, assignors to Swift & Company, Chicago, Ill. Treating animal tissue. 2,454,716, Nov. 23.

Ray, Don, Beverly Hills, Calif. Apparatus for compacting and packaging materials. 2,454,477, Nov. 23.

Razdowitz, Adolph: *See*—
Chneerson, Zalman and Razdowitz.

Rebman, Alfred, Richmond Hill, assignor to Rockwood & Co., Brooklyn, N. Y. Flexible multibladed rotor assembly for cylinder grinding machines. 2,454,406, Nov. 23.

Rector, Paul C., East Cleveland, Ohio, assignor to General Electric Company. Motor and fan unit mounting for vacuum cleaners. 2,454,569, Nov. 23.

Rector, Paul C., East Cleveland, Ohio, assignor to General Electric Company. Motor and fan unit mounting for vacuum cleaners. 2,454,570, Nov. 23.

Rehberg, Chessie E., Philadelphia, and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Polymerization of furfuryl acrylate. 2,454,756, Nov. 23.

Reichel, Wladimir A., Hackensack, N. J., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y. Sealed transmitting mechanism. 2,454,340, Nov. 23.

Repka, Paul T., Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del. Switch operating mechanism. 2,454,341, Nov. 23.

Reynolds Metals Co., assignee: *See*—
Fritzlen, Thomas L.

Reyrolle, A., & Company Limited, assignee: *See*—
Amer, Donald F.

Rice-Stix Dry Goods Company, assignee: *See*—
Worley, Richard H.

Ridgway, John A., Jr., Texas City, Tex., and P. Hill, Hammond, Ind., assignors to Pan American Refining Corporation, New York, N. Y. Catalytic cracking of hydrocarbons. 2,454,615, Nov. 23.

Rietachel, Henry F. C., Nassau County, N. Y. Timer switch for internal-combustion engines. 2,454,524, Nov. 23.

Roberts, Jean M., Ridgewood, assignor to Bendix Aviation Corporation, Bendix, N. J. Electric motor control. 2,454,671, Nov. 23.

Roberts, Melvin R., Los Angeles, Calif. Game. 2,454,478, Nov. 23.

Robertshaw-Fulton Controls Company, assignee: *See*—
Weber, Victor.

Robertson, John W., Englewood, N. J., assignor of one-half to Ellis-Foster Company, and one-half to Montclair Research Corporation. Modified alkyd sizing composition. 2,454,717, Nov. 23.

Rockwood & Co., assignee: *See*—
Rebman, Alfred.

Rogers, Thomas H., New Canaan, and W. W. Fengler, Glenbrook, assignors to Machlett Laboratories Incorporated, Springdale, Conn. X-ray apparatus. 2,454,525, Nov. 23.

Rohm & Haas Company, assignee: *See*—
Beavers, Ellington M.
Bock, Louis H., and Houk.
Bock, Louis H., and Rainey.

Rom, Palmer W., Cudahy, Wis. Culinary oven with heat diverting means. 2,454,571, Nov. 23.

Roovers, Wilhelmus A., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electric discharge tube. 2,454,572, Nov. 23.

Rose, Albert: *See*—
Iams, Harley, Rose, and Krieger.

Rosenberger, Clyde G., Fort Wayne, Ind. Rotating game pointer. 2,454,479, Nov. 23.

Rosene, Frank G., Pittsburgh, Pa. Nonskid device. 2,454,407, Nov. 23.

Rosenthal, Lawrence L., Los Angeles, and R. B. Spencer, Huntington Park, assignors to Technical Glass Company, Los Angeles, Calif. Door latch. 2,454,672, Nov. 23.

Ross, William H., Phoenix, Ariz. Door chime control switch. 2,454,342, Nov. 23.

Rossman, David, Long Beach, Calif. Air control device. 2,454,480, Nov. 23.

Roth, Alice, assignor to The Troy Sunshade Company, Troy, Ohio. Lounge chair. 2,454,408, Nov. 23.

Roth, Joseph N., Belding, assignor, by mesne assignments, to Montcalm, Incorporated, Greenville, Mich. Absorption refrigeration system. 2,454,344, Nov. 23.

Rotter, Lutwin C., Maplewood, A. P. Fox, University City, and C. H. Mueller, Ferguson, assignors to Lincoln Engineering Company, St. Louis, Mo. Pump for removal of lubricants from containers. 2,454,343, Nov. 23.

Rouse, Glenn F.: *See*—
Zahl, Harold A., Rouse, and Gorham.

Rüdenberg, Reinhold, Belmont, Mass. Cathode-ray deflection tube with electron lenses. 2,454,345, Nov. 23.

Rumsby, George M., Toronto, Ontario, Canada. Lifting mechanism for dump bodies. 2,454,481, Nov. 23.

Rush, John W.: *See*—
McClure, Glenn T., and Rush.

Russell Electric Company, assignee: *See*—
Ballentine, Earle W.

Russo, Giuseppe, New York, N. Y. Lipstick holder. 2,454,718, Nov. 23.

Rutter, Alvah E., Rockford, Ill., assignor to J. I. Case Company, Racine, Wis. Disk plow. 2,454,482, Nov. 23.

Rysick, Walter J., Fort Wayne, Ind. Swivel connection or joint. 2,454,483, Nov. 23.

Sair, Louis: *See*—
Gunther, James K., and Sair.

Sanders, Royden C., Jr., Hightstown, N. J., assignor to Radio Corporation of America. Radio bomb release system. 2,454,673, Nov. 23.

Sandoz Limited, assignee: *See*—
Wehrli, Walter, and Petitjean.

Sauer, John C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Compositions of matter and making same. 2,454,294, Nov. 23.

Savastano, Antonio, Mount Vernon, N. Y. Reading stand. 2,454,526, Nov. 23.

Scarlett, Edward J., Monument, Colo. Nail pouch. 2,454,346, Nov. 23.

Scher, Joseph, New York, N. Y. Folding box. 2,454,573, Nov. 23.

Schettler, Gustav A., Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Maine. Staking machine. 2,454,347, Nov. 23.

Schilling, Lorell J., Galesville, Wis., assignor to Babson Bros. Co. Latch for electric fence gates. 2,454,348, Nov. 23.

Schneider, Beeason J.: *See*—
Adler, Leon, Johnson, and Schneider.

Schoenholz, Daniel: *See*—
Eisner, Robert S., and Schoenholz.

Schrader, Wendall H., Des Plaines, Ill. Receptacle and closure thereof. 2,454,674, Nov. 23.

Schultz, Arthur B., Wilmington, Del., assignor to All American Airways, Inc. Air delivery container. 2,454,616, Nov. 23.

Schulze, Walter A., and W. W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company. Manufacture of sulfur compounds. 2,454,409, Nov. 23.

Schwartz, William H.: *See*—
Lester, Nathan, and Schwartz.

Schwerdle, Arthur: *See*—
Sowa, Frank J., and Schwerdle.

Schwerdle, Arthur, assignor to F. J. Sowa, New York, N. Y. Treating aqueous liquors containing unsaturated organic compounds for recovering the same. 2,454,349, Nov. 23.

Scogland, Charles A., assignor to The Studebaker Corporation, South Bend, Ind. Making cored laminated plastic sheets. 2,454,719, Nov. 23.

Seiler, Charles J.: *See*—
Skow, Norman A., Seiler, Oriani, and Whitaker.

Selden, John C., Farmington, assignor to United Aircraft Corporation, East Hartford, Conn. Crankshaft torsional vibration damper. 2,454,720, Nov. 23.

Severance, Charles L.: *See*—
Severance, Vernon and C. L.

Severance, Vernon, Saginaw, and C. L. Severance, Akron, Mich. Poultry feeder. 2,454,721, Nov. 23.

Shannon, Paul B., assignee: *See*—
Smith, Merton J.

Shell Development Company, assignee: *See*—
Tamele, Miroslav W., Irvine, and Mahar.

Shoemaker, David P., Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Flow regulator. 2,454,574, Nov. 23.

Shores, William P., San Francisco, Calif. Beater. 2,454,350, Nov. 23.

Showalter, Galen R., Roanoke, Va. Disk harrow carrier. 2,454,675, Nov. 23.

Shure Brothers, Incorporated, assignee: *See*—
Bauer, Benjamin B.

Shutt, John C.: *See*—
Meyers, George L., and Shutt.

Siemers, Eric, assignor, by mesne assignments, to Lacey-Webber Co., Kalamazoo, Mich. Welding electrode holder. 2,454,617, Nov. 23.

Silene, Rudolph A., Los Angeles, Calif. Salesman's folding sample case. 2,454,575, Nov. 23.

Singer Manufacturing Company, The, assignee: *See*—
Momberg, James W.
Myers, Walter.

Skow, Norman A., Strafford, Pa., C. J. Seiler, Bloomfield, R. A. Oriani, Montclair, and J. S. Whitaker, East Orange, N. J., assignors to the United States of America as represented by the Secretary of War. Adhesive compositions. 2,454,676, Nov. 23.

Slack, William H., Houghton, Mich. Modeling tool. 2,454,576, Nov. 23.

Slamka, Joseph S., Milwaukee, Wis. License plate holder. 2,454,722, Nov. 23.

Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Shaker conveyer. 2,454,484, Nov. 23.

Smalley, Burt M., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill. Secondary rack. 2,454,677, Nov. 23.

Smith, Desmond E., Toronto, Ontario, Canada. Kaleidoscope. 2,454,577, Nov. 23.

Smith, Kline & French Laboratories, assignee: *See*—
Ullyot, Glenn E.

Smith, Lester H., Maplewood, N. J. Electric space charge device. 2,454,757, Nov. 23.

Smith, Merton J., Cleveland, Ohio, assignor of twenty-five per cent to P. B. Shannon, Chicago, Ill., twenty-five per cent to J. P. Geiger, Cleveland, and twenty-five per cent to R. W. Wilson, Rocky River, Ohio. Controlling mechanism. 2,454,578, Nov. 23.

Smith, Walter F., and H. G. White, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Mixture of a polyvinyl acetal with a diisocyanate-modified polyester or polyester-amide. 2,454,678, Nov. 23.

Smyth, Glen M., Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y. Gray acid anthraquinone dyestuffs. 2,454,679, Nov. 23.

Snell, Leonard S., Bedfont, Feltham, assignor to D. Napier & Son Limited, London, England. Control lever mechanism. 2,454,485, Nov. 23.

Snyder, Richard L., Jr., Princeton, N. J., assignor to Radio Corporation of America. Cathode beam tube and circuit therefor. 2,454,410, Nov. 23.

Societe Anonyme: Forges & Ateliers De Meudon, assignee: *See*—
Challcarne, Gabriel.

Sonneborn, L., Sons, Inc., assignee: *See*—
Faust, Jacob.

Sowa, Frank J., assignee: *See*—
Schwerdle, Arthur.

Sowa, Frank J., Cranford, N. J., and A. Schwerdle, New York, N. Y., said Schwerdle assignor to said Sowa. Production of alicyclic carboxylic acids. 2,454,351, Nov. 23.

Specialties Development Corporation, assignee: *See*—
Lerner, William H.

Speer Resistor Corporation, assignee: *See*—
Herrick, George G., and Veley.

Spencer, Robert B.: *See*—
Rosenthal, Lawrence L., and Spencer.

Spencer, Roderick A.: *See*—
Potts, Samuel F., and Spencer.

Square D Company, assignee: *See*—
Zingaro, Placido W.

Stackpole, Gerald B.: *See*—
Jones, Albert S., and Stackpole.

Standard Oil Development Company, assignee: *See*—
Blanding, Forrest H.
Harlan, John L.
Harney, William S., Jr., and Amick.
Hodges, Caleb E., and Cashman.
Le Roi, Earl J.
Lieber, Eugene, and Cashman.
Love, Robert M.
McArdle, Edward H.
Mosesman, Max A.

Standard-Thomson Corporation, assignee: *See*—
Woods, John E.

Stanton, George W., and C. E. Lowry, assignors to The Dow Chemical Company, Midland, Mich. Vulcanizable mixture of thermoplastic interpolymers. 2,454,486, Nov. 23.

Stauffer, Lynn H., Pattersonville, N. Y., assignor to General Electric Company. Carbon brush element. 2,454,579, Nov. 23.

Staunton, Le Roy W., Evanston, and R. L. Atkinson, Hinsdale, assignors to United Wallpaper, Inc., Chicago, Ill. Package for rolls and the like. 2,454,352, Nov. 23.

Steele, William E., Seattle, Wash. Detachable blade scalpel. 2,454,353, Nov. 23.

Stephens, Douglas S.: *See*—
Curtis, Cecil A., and Stephens.

Stephens, Marion F., Sullivan, Ind. Post-adjusting means for wire and mail directing apparatus. 2,454,680, Nov. 23.

Stewart-Warner Corporation, assignee: *See*—
Heymann, Seymour E.
Heymann, Seymour E., and Marshall, Jr.

Stiles, Richard H., Plainwell, Mich. Lubricator. 2,454,354, Nov. 23.

Stinne, Leslie W., Dallas, Tex. Clothespin. 2,454,723, Nov. 23.

Stoate, Norman P., Hampstead Garden Suburb, London, assignor to United Dairies Limited, London, England. Inspection apparatus for transparent vessels. 2,454,411, Nov. 23.

Stoate, Norman P., Hampstead Garden Suburb, London, assignor to United Dairies Limited, London, England. Inspection apparatus for transparent vessels. 2,454,412, Nov. 23.

Stocker, Emil: *See*—
Babey, Charles, Tommen, and Stocker.

Stone, John M., assignor to Operadio Manufacturing Co., St. Charles, Ill. Protective circuits for electronic equipment. 2,454,618, Nov. 23.

Storck, Clarence E., Jr., Lutherville, Md. Battery connector and fuse. 2,454,487, Nov. 23.

Storey, O. W., & Associates: *See*—
Ashton, Howard W.

Storey, Oliver W., assignee: *See*—
Ashton, Howard W.

Studebaker Corporation, The, assignee: *See*—
Scogland, Charles A.

Sukumlyn, Thomas W., Los Angeles, Calif. Light modulation by variable transmissivity receiver screen. 2,454,488, Nov. 23.

Sullivan, Jerry J., Huntington Park, Calif. Spanner wrench with means to grip the inner surface of pulley rims. 2,454,489, Nov. 23.

Sulzer Freres, Societe Anonyme, assignee: *See*—
Traupel, Walter.

Sunstein, David E., Elkins Park, Pa., assignor to Philco Corporation. Electric motor control system. 2,454,355, Nov. 23.

Super, Ralph K.: *See*—
Buckendale, Lawrence R., and Super.

Sutter, Theodor: *See*—
Widmer, Gustav, Sutter, Fisch, and Hochuli.

Swenson, Jonas A., Springfield, S. Dak. Window sash control. 2,454,619, Nov. 23.

Swift & Company, assignee: *See*—
Ramsbottom, John M., and Paddock.

Sylvania Electric Products Inc., assignee: *See*—
McCarthy, Henry J.
Quinn, Gerald S.

Tackett, James R., and V. G. Evans, Olive Hill, Ky. Machine tool shaper attachment. 2,454,490, Nov. 23.

Tallman, Emma S., assignee: *See*—
Tallman, Leslie R.

Tallman, G. I., assignee: *See*—
Tallman, Leslie R.

Tallman, J. L., assignee: *See*—
Tallman, Leslie R.

Tallman, Leslie R., assignor of forty-five per cent to G. L. Tallman, twelve and one-half per cent to J. L. Tallman, and twelve and one-half per cent to Emma S. Tallman, Shelbyville, Ill. Baler. 2,454,413, Nov. 23.

Tamele, Miroslav W., Oakland, V. C. Irvine, Richmond, and J. F. Mahar, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Molybdena catalysts, their preparation and use. 2,454,724, Nov. 23.

Taschereau, Marc A., Port Alice, British Columbia, Canada. Combined compact and flashlight. 2,454,527, Nov. 23.

Taylor, La Moll S., Kansas City, Kans. Doorstop and retainer. 2,454,414, Nov. 23.

Technical Glass Company, assignee: *See*—
Netschert, Franz.
Rosenthal, Lawrence L., and Spencer.

Temple, Robert, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del. Cable cutter. 2,454,528, Nov. 23.

Temple Velocity Equipment, Inc., assignee: *See*—
Temple, Robert.

Thielemann, Rudolf H., Schenectady, N. Y., assignor to General Electric Company. Manufacturing bladed rotors. 2,454,580, Nov. 23.

Thomas, Charles A., Fort Wayne, Ind., assignor to General Electric Company. Dynamoelectric machine. 2,454,581, Nov. 23.

Thomas, Joseph E., Los Angeles, Calif. Can piercer. 2,454,725, Nov. 23.

Thompson, Lloyd, Kansas City, Mo. Reproducing sound motion pictures in synchronism with the picture and sound on separate media. 2,454,491, Nov. 23.

Thompson, Louis W., Schenectady, and F. E. Crever, Scotia, N. Y., assignors to General Electric Company. Excitation system for alternating current dynamoelectric machines. 2,454,582, Nov. 23.

Thompson, Richard A., and E. E. Eriksson, Detroit, and J. Carlson, Grosse Pointe Farms; said Eriksson and said Thompson assignors to Orchard Industries, Inc., Detroit, Mich.; said J. Carlson assignor, by decree of court, to M. E. H. W. Carlson. Rear grip for fishing rod handles. 2,454,529, Nov. 23.

Thornhill, Homer E., Houston, Tex. Ring sealed joint. 2,454,356, Nov. 23.

Tiley, John W., Philadelphia, Pa., assignor to Philco Corporation. Phase adjuster for fixed-branch wave guide. 2,454,530, Nov. 23.

Timken-Detroit Axle Company, The, assignee: *See*—
Buckendale, Lawrence R., and Super.

Tolan, James E., Narberth, Pa., assignor to Warren Webster & Company, Camden, N. J. Finned radiator construction. 2,454,357, Nov. 23.

Tommen, Willi: *See*—
Babey, Charles, Tommen, and Stocker.

Tourshou, Simeon I., Philadelphia, Pa., assignor to Radio Corporation of America. Automatic gain control circuit. 2,454,415, Nov. 23.

Tott, Edwin H., San Leandro, Calif. Supporting head for abrasive disks. 2,454,726, Nov. 23.

Trail-A-Boat Company, assignee: *See*—
Eichner, Ferdinand R.

Traupel, Walter, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Output regulation of circuit type gas-turbine plants. 2,454,358, Nov. 23.

Troy Sunshade Company, The, assignee: *See*—
Roth, Alice.

Tung-Sol Works, Inc., assignee: *See*—
Braunsdorff, Reginald K.

Turnbull, William J., West Vancouver, British Columbia, Canada. Curling stone. 2,454,492, Nov. 23.

Turner Tanning Machinery Company, The, assignee: *See*—
Schettler, Gustav A.

Ullyot, Glenn E., assignor to Smith, Kline & French Laboratories, Philadelphia, Pa. Cyclohexylalkylamines. 2,454,746, Nov. 23.

Union Switch & Signal Company, The, assignee: *See*—
Baughman, George W.
Jefferson, Glen V.
O'Meara, Thomas J.

Union Wire Rope Corporation, assignee: *See*—
Zerr, Charles M.

United Aircraft Corporation, assignee: *See*—
Highberg, Axel L.
Lee, John G.
Selden, John C.

United Air Lines, Inc., assignee: *See*—
Buckthal, Elmer P.

United Dairies Limited, assignee: *See*—
Stoate, Norman P.

United Metal Box Co., Inc., assignee: *See*—
Hammer, Samuel.

United Shoe Machinery Corporation, assignee: *See*—
Blanchard, Benjamin B.
Fredericksen, James P.

United States Radium Corporation, assignee: *See*—
Byler, William H., and Carroll.

United States Rubber Company, assignee: *See*—
Howland, Louis H., and Brucksch.

United Wallpaper, Inc., assignee: *See*—
Staunton, Le Roy W., and Atkinson.

Universal Oil Products Company, assignee: *See*—
Held, Jacob B.

Upjohn Company, The, assignee: *See*—
Weisblatt, David I., and Myers.
Weisblatt, David I., Myers, and Wise.
Wise, Edwin C.

Upstill, Verla E., Minneapolis, Minn. Crochet frame. 2,454,493, Nov. 23.

Utility Appliance Corp., assignee: *See*—
Leo, Herbert S., and Breslow.

Van Brunt, John Deere, Company, assignee: *See*—
Hyland, William A.

Van Orden, Leo J.: *See*—
Dickinson, John T., Morfit, and Van Orden.

Van Sittert, Paul, Shaker Heights, M. Kostrubanic, Jr., Cleveland, and E. W. Lehman, East Cleveland, assignors to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Fastener. 2,454,416, Nov. 23.

Van Trine, Leona T., assignee: *See*—
Van Trine, Ralph.

Van Trine, Ralph, assignor of thirty per cent to L. T. Van Trine and thirty per cent to M. V. Davis, Durham, N. C. Bottle cap remover. 2,454,531, Nov. 23.

Veley, Hugh N.: *See*—
Herrick, George G., and Veley.

Verkuil, Leo L., Tottenville, N. Y., assignor to Edwards & Company, Inc., Norwalk, Conn. Push-button switch construction. 2,454,295, Nov. 23.

Vickers, Theodore W., Los Angeles, Calif. Electrical machine. 2,454,359, Nov. 23.

Vigilante, John: *See*—
Deutsch, Joseph J., and Vigilante.

Vischer, Alfred, Jr., Park Ridge, Ill., assignor, by mesne assignments, of twelve-thirtieths to A. Vischer, Jr., two-thirtieths to W. Vischer, two-thirtieths to A. Vischer, III, two-thirtieths to A. Vischer, Jr., as trustee, four-thirtieths to W. W. Zitzewitz, four-thirtieths to E. K. Zitzewitz, one-thirtieth to G. J. Zitzewitz, one-thirtieth to B. O. Zitzewitz, and two-thirtieths to G. W. Bouton. Flexible cover forming machine. 2,454,758, Nov. 23.

Vischer, Alfred, III, assignee: *See*—
Vischer, Alfred, Jr.

Vischer, William, assignee: *See*—
Vischer, Alfred, Jr.

Wallin, Fred E., assignor to National Slug Rejectors, Inc., St. Louis, Mo. Clamping apparatus. 2,454,681, Nov. 23.

Wallingford, Vernon H., Ferguson, and A. H. Homeyer, Webster Groves, assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Carbalkoxylation of organic compounds. 2,454,360, Nov. 23.

Walter, Henry E., assignor to Wood Conversion Company, Cloquet, Minn. Defibering lignocellulose while subjected to steam and a digestive chemical. 2,454,532, Nov. 23.

Walter, Henry E., assignor to Wood Conversion Company, Cloquet, Minn. Manufacture of fibrous products deriving from lignocellulose. 2,454,533, Nov. 23.

Walter, Henry E., assignor to Wood Conversion Company, Cloquet, Minn. Defibering lignocellulose while subjected to steam and alkali-metal hydroxide. 2,454,534, Nov. 23.

War, United States of America as represented by the Secretary of, assignee: *See*—
Davis, George B., Jr.
Michaelson, Marion L.
Skow, Norman A., Seiler, Oriani, and Whitaker.

Warner, Mary W., Fairfield, Conn. Breast shield. 2,454,535, Nov. 23.

Warren Webster & Company, assignee: *See*—
Tolan, James E.

Waselge, Charles R., Saint-Etienne, (Loire), France; vested in the Attorney General of the United States. Multidrive gear box for accessories on board aircraft. 2,454,293, Nov. 23.

Watson, Leland A., and P. C. Heljn, assignors to The Maico Company, Incorporated, Minneapolis, Minn. Bone conduction receiver. 2,454,494, Nov. 23.

Weber, Victor, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Temperature controlling device. 2,454,682, Nov. 23.

Wedemeyer, Eric, Floral Park, assignor to Hamilton Art Metal Corporation, New York, N. Y. Music box. 2,454,361, Nov. 23.

Wehrli, Walter, and C. Petitjean, assignors to Sandos Limited, Basel, Switzerland. Metallizable polyazo dyestuffs. 2,454,683, Nov. 23.

Weil, Alfred J.: *See*—
Parfentjev, Ivan A., and Weil.

Weisblatt, David I., D. R. Myers, and E. C. Wise, assignors to The Upjohn Company, Kalamazoo, Mich. Mixed alkyl esters of ascorbic acid. 2,454,747, Nov. 23.

Weisblatt David I., and D. R. Myers, assignors to The Upjohn Company, Kalamazoo, Mich. Ascorbic acid tetraester preparation. 2,454,748, Nov. 23.

Werner, Daniel R., Omaha, Nebr., assignor to American Telephone and Telegraph Company. Control apparatus for forced drainage. 2,454,536, Nov. 23.

Western Electric Company, Incorporated, assignee: *See*—
Merwin, Harry H., and Nystrom.

Westinghouse Air Brake Company, assignee: *See*—
Hewitt, Ellis E., and Larson.
McClure, Glenn T., and Rush.

Westinghouse Electric Corporation, assignee: *See*—
Furst, Albert J., Aakjer, and Dickerson.
Gordon, Clifford D., and Pawlishen.
Hayes, William A.
Iredell, Charles V., and Enrico.
Makenny, William.
McNall, John W., and Laidig.
Okress, Ernest C.
Whitmore, James B., Makenny, and Newcombe.

Wherry, Isaac M., Evansville, Ind., assignor to International Harvester Company. Refrigerating apparatus. 2,454,727, Nov. 23.

Whitaker, Joseph S.: *See*—
Skow, Norman A., Seiler, Oriani, and Whitaker.

White, Clarence A.: *See*—
Haws, James C., and White.

White, Henry G.: *See*—
Smith, Walter F., and White.

White, John L., Dallas, Tex. Cutting tool. 2,454,728, Nov. 23.

Whitehall Publishing Company, assignee: *See*—
Nudelman, Eoina.

Whitmore, James B., Bloomfield, W. Makenny, Mountain View, and F. A. Newcombe, Nutley, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Automatic molding press. 2,454,362, Nov. 23.

Widmer, Gustav, and T. Sutter, Basel, W. Fisch, Binningen, and E. Hochuli, Basel, Switzerland, assignors, by mesne assignments, to Ciba Products Corporation, Dover, Del. Aldehyde condensation products of aminotriazines and the manufacture thereof. 2,454,495, Nov. 23.

Wilde, Robert L., Englewood, Colo. Vibrator for use in connection with concrete. 2,454,620, Nov. 23.

Wilson, Robert W., assignee: *See*—
Smith, Merton J.

Wineman, Wade A., Michigan City, Ind., assignor to Joy Manufacturing Company. Compressor control mechanism. 2,454,363, Nov. 23.

Winther, Martin P., assignor to M. P. Winther, Waukegan, Ill., as trustee. Eddy-current torque apparatus. 2,454,364, Nov. 23.

Winthrop-Atkins Co., Inc., assignee: *See*—
Nichols, Gordon E.

Wise, Edwin C.: *See*—
Weisblatt, David I., Myers, and Wise.

Wise, Edwin C., assignor to The Upjohn Company, Kalamazoo, Mich. Lower alkyl esters of ascorbic acid. 2,454,749, Nov. 23.

Wisely, Robert, Chicago, Ill. Grating structure. 2,454,583, Nov. 23.

Wood Conversion Company, assignee: *See*—
Walter, Henry E.

Woodall Industries Incorporated, assignee: *See*—
Peltier, Walter J., and Diroff.

Woods, Edgar C., Gravesend, assignor to Henley's Tyre & Rubber Company, Darking, England. Tire for vehicles. 2,454,750, Nov. 23.

Woods, John E., Cohasset, assignor, by mesne assignments, to Standard-Thomson Corporation, Boston, Mass. Self-propelled circulating heater. 2,454,296, Nov. 23.

Woolery, Horace E., deceased, by M. L. Woolery, executrix, St. Paul, assignor to Woolery Machine Company, Minneapolis, Minn. Weed burning apparatus. 2,454,365, Nov. 23.

Woolery Machine Company, assignee: *See*—
Woolery, Horace E.

Woolery, Myra L., executrix: *See*—
Woolery, Horace E.

Worley, Richard H., assignor to Rice-Stix Dry Goods Company, St. Louis, Mo. Suitcase valance structure. 2,454,366, Nov. 23.

Worth, Weldon, Dayton, Ohio. By-passing valve for oil temperature control units. 2,454,297, Nov. 23.

Yanes, Francisco G., New York, N. Y.; A. F. Goddard, executrix of said F. G. Yanes, deceased. Molding halftone values in printing surfaces. 2,454,729, Nov. 23.

Yoder Company, The, assignee: *See*—
Morris, Howard I.

Youngstown Steel Door Company, The, assignee: *See*—
Beauchamp, Wilfred A.

Zahl, Harold A., and G. F. Rouse, Long Branch, and J. E. Gorham, Spring Lake, N. J. Electronic tube. 2,454,298, Nov. 23.

Zerr, Charles M., Independence, assignor to Union Wire Rope Corporation, Kansas City, Mo. Sling. 2,454,417, Nov. 23.

Zimmermann, Lukas, Birmingham, Mich. Hydraulic flow divider. 2,454,418, Nov. 23.

Zingaro, Placido W., Hartsdale, N. Y., assignor to Square D Company, Detroit, Mich. Hygrometer. 2,454,584, Nov. 23.

Zitzewitz, Barbara O., assignee: *See*—
Vischer, Alfred, Jr.

Zitzewitz, Elmer K., assignee: *See*—
Vischer, Alfred, Jr.

Zitzewitz, Gertrude J., assignee: *See*—
Vischer, Alfred, Jr.

Zitzewitz, Walter W., assignee: *See*—
Vischer, Alfred, Jr.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 23D DAY OF NOVEMBER, 1948

NOTE.- Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Antenna, Broadcast. P. S. Carter. Re. 23,051, Nov. 23.
Glass, Opthalmic. W. H. Armistead. Re. 23,049, Nov. 23.
Radio beacon. R. R. Brunner. Re. 23,050, Nov. 23.

LIST OF DESIGN INVENTIONS

Bottle. J. von Miklos. 151,862, Nov. 23.
Bottle, Wine. H. C. Berkowitz. 151,807, Nov. 23.
Bracelet or similar article. A. Katz. 151,840, Nov. 23.
Bracelet or similar article. A. Katz. 151,843, Nov. 23.
Bracelet or similar article. A. Katz. 151,849–51, Nov. 23.
Brooch or similar article. C. Arpels. 151,805, Nov. 23.
Brooch or similar article. A. Katz. 151,824–9, Nov. 23.
Brooch or similar article. A. Katz. 151,831–4, Nov. 23.
Cabinet for radio-phonograph combination. W. Schier and D. L. Doggett. 151,859, Nov. 23.
Chicken fryer. E. O. Mehline. 151,854, Nov. 23.
Coat. H. Goldberg. 151,818–20, Nov. 23.
Cooky jar. R. J. Falk. 151,810, Nov. 23.
Door panel or similar article, Adjustable screen. A. A. Klingbiel. 151,852, Nov. 23.
Earring or similar article. M. Boucher. 151,808, Nov. 23.
Fixture, Adjustable fluorescent lighting. C. Nitardy. 151,855, Nov. 23.
Hammer head. W. L. Ludwick. 151,853, Nov. 23.
Handbag and compact, Combined. F. H. Rath. 151,858, Nov. 23.
Ice bucket. M. S. Ziskin. 151,863, Nov. 23.
Jacket. J. Freedman. 151,813–14, Nov. 23.
Juice. O. E. Hammers. 151,822, Nov. 23.
Juicer collector, Sanitary. O. E. Hammers. 151,823, Nov. 23.
Lamp. A. Troskin. 151,861, Nov. 23.
Lamp or similar article. L. J. Gagnon. 151,815, Nov. 23.
Lamp, Planter. R. E. Gifford. 151,817, Nov. 23.
Necklace or similar article. A. Katz. 151,830, Nov. 23.
Necklace or similar article. A. Katz. 151,835–9, Nov. 23.
Necklace or similar article. A. Katz. 151,841–2, Nov. 23.
Necklace or similar article. A. Katz. 151,844–8, Nov. 23.
Ornament, Christmas. T. L. Gehr. 151,816, Nov. 23.
Shuffleboard cue head. C. E. Gunklach. 151,821, Nov. 23.
Slicer, Vegetable. A. W. Norman. 151,856, Nov. 23.
Staple removing tool, Wire. W. G. Pankonin. 151,857, Nov. 23.
Suit. J. Freedman. 151,811–12, Nov. 23.
Telephone stand and pad holder, Combined. S. J. Beitch and S. Fine. 151,806, Nov. 23.
Telephone transmitter. H. Dreyfuss. 151,809, Nov. 23.
Wrench, Momentum. R. L. Stoyer. 151,860, Nov. 23.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 23D DAY OF NOVEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetone, ethanol, and butanol, from aqueous solutions thereof, Distillation of. H. N. Darlington and H. Holdsworth. 2,454,734, Nov. 23.
Acid treatment of pyrene-quinone vat dyestuffs. J. F. Cullinan and L. D. Lytle. 2,454,433, Nov. 23.
Acrylonitrile, Production of. H. S. Davis and H. A. Newey. 2,454,308, Nov. 23.
Adhesive compositions. N. A. Skow, C. J. Seiler, R. A. Oriani, and J. S. Whitaker. 8,454,676, Nov. 23.
Adjustable multiple plate holder. F. R. Laureyns. 2,454,516, Nov. 23.
Adjuster for fixed-branch wave guide, Phase. J. W. Tiley. 2,454,530, Nov. 23.
Air control device. D. Rossman. 2,454,480, Nov. 23.
Air cooling apparatus. D. L. Kaufman. 2,454,654, Nov. 23.
Air delivery container. A. B. Schultz. 2,454,616, Nov. 23.
Aldehyde condensation products of aminotriazines and the manufacture thereof. G. Widmer, T. Sutter, W. Fisch, and E. Hochuli. 2,454,495, Nov. 23.
Alginate impression material containing chromic sulfate, E. J. Molnar. 2,454,709, Nov. 23.
Alicyclic carboxylic acids, Production of. F. J. Sowa and A. Schwerdle. 2,454,351, Nov. 23.
Alkaline earth metal petroleum sulfonate compositions. J. Faust. 2,454,736, Nov. 23.
Alkyd sizing composition, Modified. J. W. Robertson. 2,454,717, Nov. 23.
Alkyl chlorides, Production of. E. G. Galitzenstein and C. Woolf. 2,454,645, Nov. 23.
Alkyl esters of ascorbic acid, Lower. E. C. Wise. 2,454,749, Nov. 23.
Alkyl esters of ascorbic acid, Mixed. D. I. Weisblatt, D. R. Myers, and E. C. Wise. 2,454,747, Nov. 23.
Aluminum alloy sheets, High-strength corrosion-resistant. T. L. Fritzlen. 2,454,312, Nov. 23.
Anchorage with ball contact switch, Attachment cord. S. P. Morse. 2,454,667, Nov. 23.
Animal tissue, Treating. J. M. Ramsbottom and L. S. Paddock. 2,454,716, Nov. 23.
Animal trap. V. J. Price. 2,454,476, Nov. 23.
Antibodies, Production of. A. F. Coca. 2,454,752, Nov. 23.
Apparatus for bending work such as tubing into serpentine coils. A. W. Payne. 2,454,290, Nov. 23.
Apparatus for compacting and packaging materials. D. Ray. 2,454,477, Nov. 23.
Apparatus for coordinating the operating rate of forming thread with the drawing thereof. A. H. Burkholder. 2,454,731, Nov. 23.
Apparatus for heating ceramics. J. M. Middleton. 2,454,708, Nov. 23.
Apparatus for loading freight or the like. S. M. Nampa. 2,454,473, Nov. 23.
Apparatus for treating wells. P. J. Lehnhard, Jr. 2,454,740, Nov. 23.
Apparatus for vulcanizing flexible tubes. H. I. Morris. 2,454,666, Nov. 23.
Apparatus for welding. A. F. Pityo and H. E. Butterfield, Jr. 2,454,338, Nov. 23.
Aromatic nitro compounds for amines, Preparing. E. H. McArdle. 2,454,468, Nov. 23.
Ascorbic acid tetraester preparation. D. I. Weisblatt and D. R. Myers. 2,454,748, Nov. 23.
Ash receiver. C. Hendricks. 2,454,450, Nov. 23.
Automatic gain control circuit. S. I. Tourshou. 2,454,415, Nov. 23.
Automatic molding press. J. B. Whitmore, W. Makenny, and F. A. Newcombe. 2,454,362, Nov. 23.
Axle for vehicles, Drive. F. W. Avila. 2,454,685, Nov. 23.
Baby dining-play table. W. M. Dunson. 2,454,599, Nov. 23.
Baby's safety sheet. E. M. and E. L. Kromer. 2,454,463, Nov. 23.
Baler. L. R. Tallman. 2,454,413, Nov. 23.
Base and contact for electrical devices. W. Makenny. 2,454,326, Nov. 23.
Base for holding vernier calipers. F. Malsom. 2,454,327, Nov. 23.
Beater. W. P. Shores. 2,454,350, Nov. 23.
Blade scalpel, Detachable. W. E. Steele. 2,454,353, Nov. 23.
Board: *See*—
  Card shuffling and placement board.
Bolt holding tool. E. W. Davis. 2,454,309, Nov. 23.
Bottle cap remover. R. Van Trine. 2,454,531, Nov. 23.
Box: *See*—
  Folding box.
  Music box.
  Venetian blind head box.
Bracket: *See*—
  Shade roller bracket.
  Takedown type swing-out-of-the-way wall bracket.
Brush. R. S. Eisner and D. Schoenholz. 2,454,553, Nov. 23.
Brush mechanism, Current collector. E. A. Linke. 2,454,562, Nov. 23.
Bulb, Basing electric. R. K. Braunsdorff. 2,454,270, Nov. 23.
Butter cutter. E. A. Anderson. 2,454,421, Nov. 23.
Button stem for electron discharge devices. T. J. Henry. 2,454,384, Nov. 23.
Cable cutter. R. Temple. 2,454,528, Nov. 23.
Cable eye and splicing the same. J. Budzinski. 2,454,592, Nov. 23.
Can piercer. J. E. Thomas. 2,454,725, Nov. 23.
Cap and plug, Combination. H. P. Henderson and P. Kaplan. 2,454,555, Nov. 23.
Car-rail stop. J. L. Bowen, Sr. 2,454,500, Nov. 23.
Carbalkoxylation of organic compounds. V. H. Wallingford and A. H. Homeyer. 2,454,360, Nov. 23.
Carbon brush element. L. H. Stauffer. 2,454,579, Nov. 23.
Card shuffling and placement board. M. A. Ellingson. 2,454,691, Nov. 23.
Case: *See*—
  Salesman's folding sample case.
  Telescoping cigarette case.
Catalysts with cooling of the flue gases by water injection, Regeneration of fluid. E. J. Le Rol. 2,454,466, Nov. 23.
Catch for watch bracelets, Box. C. F. H. Fontaine. 2,454,439, Nov. 23.
Cathode-ray storage tube. H. Iams, A. Rose, and G. L. Krieger. 2,454,652, Nov. 23.
Cellulose ether composition. R. F. B. Cox. 2,454,273, Nov. 23.
Cement block machine. K. W. Gibbs and R. Hillman. 2,454,442, Nov. 23.
Centrifugal pump. O. Jacobsen. 2,454,390, Nov. 23.
Chair: *See*—
  Composite chair.
  Lounge chair.
Chess or checker board with game piece retaining means, Portable. R. W. Edwards. 2,454,639, Nov. 23.
Chuck, Pneumatic. G. Chalicarne. 2,454,593, Nov. 23.
Chuck, Tubular saw. R. N. Palmer. 2,454,522, Nov. 23.
Circuit: *See*—
  Automatic gain control circuit.
  Electromagnetic circuit.
Circuit breaker, Gas-blast electric. D. F. Amer. 2,454,586, Nov. 23.
Circuit controller. G. V. Jefferson. 2,454,702, Nov. 23.
Circuits for electronic equipment, Protective. J. M. Stone. 2,454,618, Nov. 23.
Clamping apparatus. F. E. Wallin. 2,454,681, Nov. 23.
Clamping means for vises and the like, Multiple toggle. A. U. Peterson and A. J. Meyer. 2,454,744, Nov. 23.
Cleaner: *See*—
  Portable self-contained drum cleaner.
  Vacuum cleaner.
Clothespin. L. W. Stinne. 2,454,723, Nov. 23.
Coffee concentrate, Forming a. W. A. Heyman. 2,454,510, Nov. 23.
Comb. M. L. Finman. 2,454,642, Nov. 23.
Combination step-by-step and induction motor. J. T. McNaney. 2,454,519, Nov. 23.
Compact and flashlight, Combined. M. A. Taschereau. 2,454,527, Nov. 23.
Compass, Drafting. B. R. Cameron. 2,454,305, Nov. 23.
Composite chair. F. Hirsch. 2,454,699, Nov. 23.
Composition of half-ester of styrenemaleic anhydride copolymer and a solvent. J. S. Kirk. 2,454,284, Nov. 23.
Composition of rubber-like qualities. A. C. Fischer. 2,454,506, Nov. 23.
Compositions of matter and making same. J. C. Sauer. 2,454,294, Nov. 23.
Compressor. W. V. Fischer. 2,454,600, Nov. 23.
Concrete vessels, Constructing. M. Palmieri. 2,454,403, Nov. 23.
Conductor and fabricating the same, Insulated electrical. L. A. Bondon. 2,454,625, Nov. 23.
Connection or joint, Swivel. W. J. Rysick. 2,454,483, Nov. 23.
Connector and fuse, Battery. C. E. Storck, Jr. 2,454,487, Nov. 23.

Construction of internal-combustion engines. E. P. Paxman. 2,454,612, Nov. 23.
Contact printer and enlarger, Combination. P. S. Atkinson. 2,454,422, Nov. 23.
Container: *See*—
Air delivery container.
Container feeder. F. W. Krueger. 2,454,285, Nov. 23.
Control apparatus. A. E. Baak. 2,454,588, Nov. 23.
Control apparatus. E. E. Hewitt and A. G. Larson. 2,454,509, Nov. 23.
Control apparatus, Brake. W. F. Penrose. 2,454,291, Nov. 23.
Control apparatus for forced drainage. D. R. Werner. 2,454,536, Nov. 23.
Control for engine cooling blowers. J. G. Lee. 2,454,324, Nov. 23.
Control lever mechanism. L. S. Snell. 2,454,485, Nov. 23.
Control mechanism, Compressor. W. A. Wineman. 2,454,363, Nov. 23.
Control mechanism for model airplanes, Stabilizing. I. H. Doyle. 2,454,598, Nov. 23.
Control system, Compressor. A. E. Baak. 2,454,424, Nov. 23.
Control system for transmission mechanisms. C. D. Peterson and A. H. Delmel. 2,454,614, Nov. 23.
Control valve device. G. T. McClure and J. W. Rush. 2,454,469, Nov. 23.
Controlling mechanism. M. J. Smith. 2,454,578, Nov. 23.
Converter, Fluid-cooled current. H. Mees. 2,454,665, Nov. 23.
Converter for ignition systems. J. T. Osterman. 2,454,714, Nov. 23.
Cooling produce by alternate dipping and draining, Method and apparatus for. F. J. McMichael. 2,454,704–6, Nov. 23.
Copolymer of a conjugated hydrocarbon diene and an acrylate of a cyclopentadienyl alcohol. D. T. Mowry and A. B. Craig. 2,454,743, Nov. 23.
Copolymers of hydrocarbon dienes and acrylates of alpha-hydroxy-methylethano-9,10-dihydroanthracene. E. W. Gluesenkamp and A. B. Craig. 2,454,737, Nov. 23.
Corsets, Ventilated. J. J. Kispert. 2,454,606, Nov. 23.
Coupler attachment. F. H. Kayler. 2,454,514, Nov. 23.
Coupling: *See*—
No-twist self-locking coupling.
Coupling device, Friction. L. R. Buckendale, R. K. Super. 2,454,271, Nov. 23.
Coupling for trailers, Fifth wheel. J. Borzell. 2,454,626, Nov. 23.
Cover and means for locking the same, Hatch. W. A. Beauchamp. 2,454,688, Nov. 23.
Cover forming machine, Flexible. A. Vischer, Jr. 2,454,758, Nov. 23.
Cover turning device, Platform. I. Galper. 2,454,441, Nov. 23.
Cracking of hydrocarbons, Catalytic. J. A. Ridgway, Jr., and P. Hill. 2,454,615, Nov. 23.
Crankshaft torsional vibration damper. J. C. Selden. 2,454,720, Nov. 23.
Crochet frame. V. E. Upstill. 2,454,493, Nov. 23.
Crude oil, Desalting. C. G. Kirkbride and M. C. Hopkins. 2,454,605, Nov. 23.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,454,328, Nov. 23.
Curl forming device, Tight. B. Kleinsmith. 2,454,558, Nov. 23.
Curling stone. W. J. Turnbull. 2,454,492, Nov. 23.
Curtain or panel and hanger structure therefor. C. G. Cunningham. 2,454,434, Nov. 23.
Cutter: *See*—
Butter cutter. Dough cutter.
Cable cutter.
Cutting of stainless steel, Combustion. G. E. Linnert. 2,454,325, Nov. 23.
Cutting tool. J. L. White. 2,454,728, Nov. 23.
Cyclohexylalkylamines. G. E. Ullyot. 2,454,746, Nov. 23.
Defibering lignocellulose while subjected to steam and a digestive chemical. H. E. Walter. 2,454,532, Nov. 23.
Defibering lignocellulose while subjected to steam and alkali-metal hydroxide. H. E. Walter. 2,454,534, Nov. 23.
Dentures, Making. C. Joannides. 2,454,457, Nov. 23.
Device for mixing fertilizer with soil and screening. J. Marsh. 2,454,662, Nov. 23.
Device for preventing excessive condensation in the insulating space of refrigerators. J. S. Palmer. 2,454,715, Nov. 23.
Device for preventing overtravel of operating mechanisms. A. C. Davis. 2,454,636, Nov. 23.
Device for removing extruded pinster from exterior surfaces of dental flasks. D. E. Belk. 2,454,427, Nov. 23.
Device for working thermoplastic materials. V. C. Ehnborn. 2,454,437, Nov. 23.
Discharge device, Ultra high frequency electric. J. W. Lafferty. 2,454,560, Nov. 23.
Discharge devices, Fabricating electron. W. A. Hayes. 2,454,318, Nov. 23.
Disk handling apparatus. F. G. Hirst. 2,454,556, Nov. 23.
Disk harrow carrier. G. R. Showalter. 2,454,675, Nov. 23.
Dispenser: *See*—
Drink dispenser.
Divider, Hydraulic flow. L. Zimmermann. 2,454,418, Nov. 23.
Door casement and forming the same. G. Philip. 2,454,523, Nov. 23.
Door chime control switch. W. H. Ross. 2,454,342, Nov. 23.
Door holder. E. L. Evans. 2,454,505, Nov. 23.
Door hook. T. O. Dean. 2,454,690, Nov. 23.
Door latch. F. Netschert. 2,454,754, Nov. 23.
Door latch. L. L. Rosenthal and R. B. Spencer. 2,454,672, Nov. 23.
Doorstop and retainer. L. S. Taylor. 2,454,414, Nov. 23.
Dough cutter. E. Haecks. 2,454,316, Nov. 23.
Drafting attachment, Perspective. F. L. Goff. 2,454,380, Nov. 23.
Drafting equipment. E. E. Hurst and J. W. Paxton. 2,454,388, Nov. 23.
Drain stopper, Electric. J. M. Moon. 2,454,333, Nov. 23.
Drill and drill jig bushing carrier attachment. H. R. Billeter. 2,454,372, Nov. 23.
Drink dispenser. W. F. Cramer, Jr. 2,454,505, Nov. 23.
Duplicating inks. M. J. Holik. 2,454,700, Nov. 23.
Dustpan, Hygienic. E. Cortés. 2,454,430, Nov. 23.
Dyestuffs, Gray acid anthraquinone. G. M. Smyth. 2,454,679, Nov. 23.
Dynamoelectric machine. C. A. Thomas. 2,454,581, Nov. 23.
Easel back. G. E. Nichols. 2,454,521, Nov. 23.
Educational device. H. R. Cohn. 2,454,632, Nov. 23.
Educational device. A. F. Kirschbaum. 2,454,655, Nov. 23.
Electric discharge tube. W. A. Reovers. 2,454,572, Nov. 23.
Electric range switch. F. P. Gates. 2,454,646, Nov. 23.
Electric switch. G. B. Benander. 2,454,540, Nov. 23.
Electrical apparatus. H. W. Ashton. 2,454,497, Nov. 23.
Electrical machine. T. W. Vickers. 2,454,359, Nov. 23.
Electromagnetic circuit. G. D. Craig, II. 2,454,634, Nov. 23.
Electromagnetic switch. B. Hinks. 2,454,451, Nov. 23.
Electronic device. E. C. Okress. 2,454,337, Nov. 23.
Electronic device having a metal collar and discal ring supporting an electrode from a resonator. A. J. Farst, J. J. Aakjer, and P. M. Dickerson. 2,454,313, Nov. 23.
Electronic tube. H. A. Zahl, G. F. Rouse, and J. E. Gorham. 2,454,298, Nov. 23.
Embroidery machine. B. G. Fortuna and E. Helliker. 2,454,379, Nov. 23.
Engine cooling means. A. L. Highberg. 2,454,696, Nov. 23.
Equation solver, Electronic. G. W. Brown and E. A. Goldberg. 2,454,549, Nov. 23.
Eraser, Pencil. C. F. Norlin. 2,454,399, Nov. 23.
Esters of glycols, Manufacture of mixed. A. J. Daly and W. G. Lowe. 2,454,274, Nov. 23.
Esters of polyhydroxy compounds, Manufacture of mixed. A. J. Daly and W. G. Lowe. 2,454,275, Nov. 23.
Excitation system for alternating current dynamoelectric machines. L. W. Thompson and P. E. Crever. 2,454,582, Nov. 23.
Explosion-proof motor. D. M. Berges. 2,454,371, Nov. 23.
Explosive compositions containing water-soluble salts, Gelatine blasting. S. Fordham and J. L. Moilliet. 2,454,643, Nov. 23.
Extrusion machine for plastic material. N. Lester and W. H. Schwartz. 2,454,661, Nov. 23.
Fastener: *See*—
Rail fastener.
Fastener. P. Van Sittert, M. Kostrubanic, Jr., and E. W. Lehman. 2,454,416, Nov. 23.
Fastening means and combination. S. Hammer. 2,454,695, Nov. 23.
Fats, Fractionation of. J. T. Dickinson, O. Morfit, and L. J. Van Orden. 2,454,638, Nov. 23.
Feeder: *See*—
Container feeder.
Feeding mechanism for agricultural machines. A. M. Buehler. 2,454,364, Nov. 23.
Fibrous products deriving from lignocellulose, Manufacture of. H. E. Walter. 2,454,533, Nov. 23.
Finishing machine for ornamental chains. F. Armbrust. 2,454,299, Nov. 23.
Fish gig. W. Koepke. 2,454,460, Nov. 23.
Fishing pole holder. H. C. Kaetker. 2,454,458, Nov. 23.
Fixture, Tool grinding. E. H. Monkley. 2,454,472, Nov. 23.
Flow regulator. D. P. Shoemaker. 2,454,574, Nov. 23.
Fluid controlled transmission, Automatic. R. F. Grebb. 2,454,694, Nov. 23.
Fluidized catalyst regeneration process which includes overhead cooling. F. H. Blanding. 2,454,373, Nov. 23.
Fluorescent coatings and the like, Method and means for protecting. G. S. Quinn. 2,454,745, Nov. 23.
Fluorodihalo esters. L. McGinty. 2,454,663, Nov. 23.
Flushing device for engine lubricating systems. E. N. Alderman. 2,454,585, Nov. 23.
Folding box. J. Scher. 2,454,573, Nov. 23.
Frame: *See*—
Crochet frame.
Fumaric acid, Manufacture of. L. H. Howland and W. F. Brucksch, Jr. 2,454,385–6, Nov. 23.
Game. M. R. Roberts. 2,454,478, Nov. 23.
Game pointer, Rotating. C. G. Rosenberger. 2,454,479, Nov. 23.
Garment, Maternity. R. M. Mahoney. 2,454,287, Nov. 23.

Gasket, Radio shielding sealing. A. A. Pierson, Jr. 2,454,567, Nov. 23.
Gauge: *See*—
Ionization-type vacuum gauge.
Gear box for accessories on board aircraft, Multidrive. C. R. Waselge. 2,454,293, Nov. 23.
Generator for ultra high frequencies, Tunable. D. G. Clifford and E. Pawlishen. 2,454,306, Nov. 23.
Glass composition. C. E. Leberknight and E. C. Ostrander. 2,454,607, Nov. 23.
Glide unit for furniture, Detachable. S. B. Hendrickson. 2,454,739, Nov. 23.
Gold- and silver-bearing ores, residues, and other products. Treatment of. A. F. B. Norwood. 2,454,336, Nov. 23.
Governor, Electrically controlled. C. A. Leonard. 2,454,659, Nov. 23.
Governor (speed responsive type). W. W. Peterson. 2,454,565, Nov. 23.
Governor, Wind electric. R. A. Foulston. 2,454,440, Nov. 23.
Grating structure. R. Wisely. 2,454,583, Nov. 23.
Grinding and polishing machine. C. Delafontaine and F. W. Kotler. 2,454,597, Nov. 23.
Grip for fishing rod handles, Rear. R. A. Thompson, E. E. Eriksson, and J. Carlson. 2,454,529, Nov. 23.
Grip for portable fire extinguishers, Squeeze. F. B. Allen. 2,454,621, Nov. 23.
Grip nut. E. M. Giles. 2,454,443, Nov. 23.
Guanidine nitrate, Purification of. C. E. Funk, Jr. 2,454,644, Nov. 23.
Guard attachment for ironing boards, Clothes. F. P. Hammell. 2,454,381, Nov. 23.
Gun supporting mechanism. J. C. Christian. 2,454,502, Nov. 23.
Hair curler. L. King. 2,454,459, Nov. 23.
Hanger for vehicles, Clothes. J. V. Auskelis and J. H. Martino. 2,454,368, Nov. 23.
Head for abrasive disks, Supporting. E. H. Tott. 2,454,726, Nov. 23.
Hearse. W. H. Pfeiffer. 2,454,566, Nov. 23.
Heat exchanger and reaction thrust apparatus. C. de Ganahl. 2,454,310, Nov. 23.
Heat-pressure operated warning switch. M. L. Michaelson. 2,454,288, Nov. 23.
Heater: *See*—
Self-propelled circulating heater.
Heater having variable output with constant temperature, Combustion air. S. E. Heymann and W. A. Marshall, Jr. 2,454,511, Nov. 23.
Heater, Including means to prevent fuel-contamination of the ventilating air, Aircraft. S. E. Heymann. 2,454,512, Nov. 23.
High-power oscillator tube. J. E. Gorham. 2,454,279, Nov. 23.
Hitch for vehicles, Safety. M. J. Figmick. 2,454,641, Nov. 23.
Holder: *See*—
Adjustable multiple plate holder.
Door holder.
Fishing pole holder.
License plate holder.
Lipstick holder.
Napkin holder.
Paintbrush holder.
Sandpaper holder.
Welding electrode holder.
Holder and carrier for bottles and the like. J. M. and C. T. Falk. 2,454,438, Nov. 23.
Holder for cigars and cigarettes. Z. Chneerson and A. Razdowitz. 2,454,631, Nov. 23.
Hook: *See*—
Door hook.
Hook guard. H. Hippler. 2,454,698, Nov. 23.
Hosiery handling and inspecting apparatus. E. R. Ammon. 2,454,622, Nov. 23.
Hydrocarbon distillates, Refining of. J. B. Held. 2,454,383, Nov. 23.
Hydrocarbon-substituted phenol-formaldehyde condensates modified in the phenolic hydroxyl. L. H. Bock and J. L. Rainey. 2,454,545, Nov. 23.
Hydrocarbons, Catalysis of. J. R. Bates. 2,454,369, Nov. 23.
Hygrometer. P. W. Zingaro. 2,454,584, Nov. 23.
Hygrometer and switch for radiosondes. J. Hornbostel. 2,454,320, Nov. 23.
Ice-cream scoop. J. J. Deutsch and J. Vigilante. 2,454,735, Nov. 23.
Illustrated matter. J. S. Abrams. 2,454,419, Nov. 23.
Indexing mechanism. S. G. Brady and J. L. Eling. 2,454,591, Nov. 23.
Indicating potential gradients, Method and apparatus for. E. P. Buckthal. 2,454,630, Nov. 23.
Indicator using light polarizing elements, Illuminated. G. K. C. Hardesty. 2,454,280, Nov. 23.
Inoculum and preparing and using same. F. D. Hager. 2,454,753, Nov. 23.
Inserting machine, Fastening. B. B. Blanchard. 2,454,302, Nov. 23.
Inspection apparatus for transparent vessels. N. P. Stoate. 2,454,411–12, Nov. 23.
Instrument panel for aircraft cockpits. H. W. Case. 2,454,272, Nov. 23.
Ionization-type vacuum gauge. R. B. Nelson. 2,454,564, Nov. 23.
Iron oxide-alkali metal pyroantimoniate catalysts and preparation. M. A. Mosesman. 2,454,398, Nov. 23.
Joint: *See*—
Ring sealed joint.
Joist and girder construction. E. A. Heim. 2,454,604, Nov. 23.
Kaleidoscope. D. E. Smith. 2,454,577, Nov. 23.
Keratin-containing material, Refining. S. Bakonyi. 2,454,730, Nov. 23.
Kerf-cutting machine. L. D. Hagenbook. 2,454,446, Nov. 23.
Kit, Shaving. P. Bowlin. 2,454,374, Nov. 23.
Knot tying mechanism. R. L. Dashew. 2,454,689, Nov. 23.
Lactone, Purifying a resinous. R. F. B. Cox. 2,454,376, Nov. 23.
Laminations, Making. E. A. Miller. 2,454,609, Nov. 23.
Lamp control system, Portable fluorescent. I. Pollack. 2,454,670, Nov. 23.
Landing gear for aircraft, Retractable auxiliary. L. Paraskevas. 2,454,611, Nov. 23.
Latch: *See*—
Door latch.
Latch for electric fence gates. L. J. Schilling. 2,454,348, Nov. 23.
Lens for cameras, Varifocal. F. G. Back. 2,454,686, Nov. 23.
Lens for lighting equipment. P. H. Mitchell and S. Malcolm. 2,454,332, Nov. 23.
Lever. W. A. Hyland. 2,454,701, Nov. 23.
License plate holder. J. S. Slamka. 2,454,722, Nov. 23.
Lifting device. E. J. Brinkert. 2,454,548, Nov. 23.
Lifting mechanism for dump bodies. G. M. Rumsby. 2,454,481, Nov. 23.
Light modulation by variable transmissivity receiver screen. T. W. Sukumlyn. 2,454,488, Nov. 23.
Lighter, Pyrophoric. E. J. Camm. 2,454,501, Nov. 23.
Lightning arrester. W. C. Hasselhorn and J. F. Jaap. 2,454,448, Nov. 23.
Lipstick holder. G. Russo. 2,454,718, Nov. 23.
Liquors containing unsaturated organic compounds for recovering the same, Treating aqueous. A. Schwerdle. 2,454,349, Nov. 23.
Loader, Tractor mounted. W. E. Knapp. 2,454,461, Nov. 23.
Lock nut and making same. O. J. Poupitch. 2,454,444, Nov. 23.
Lounge chair. A. Roth. 2,454,408, Nov. 23.
Lube additives made by solvent refining high molecular weight aliphatic-aromatic condensation products. C. E. Hodges and A. F. Cashman. 2,454,452, Nov. 23.
Lubricating oil composition. E. Lieber and E. P. Cashman. 2,454,394, Nov. 23.
Lubricator. R. H. Stiles. 2,454,354, Nov. 23.
Luggage carrier and protector. C. E. Meyerdick. 2,454,608, Nov. 23.
Machine for bending and shaping rolled irons and the like. E. Bugatti. 2,454,429, Nov. 23.
Machine for typing in the braille and abreu systems, Electric. J. de la Fuente Tejedo. 2,454,637, Nov. 23.
Machine tool shaper attachment. J. R. Tackett and V. G. Evans. 2,454,490, Nov. 23.
Magnesium oxide, Making dense. A. D. Dahl. 2,454,733, Nov. 23.
Maleic acid to fumaric acid, Isomerization of. L. H. Howland and W. F. Brucksch, Jr. 2,454,387, Nov. 23.
Margin justifying device for typewriters. O. O. Martin. 2,454,470, Nov. 23.
Mast for marine craft. F. R. Eichner. 2,454,640, Nov. 23.
Mat, Revetment. A. B. Pickett. 2,454,292, Nov. 23.
Materials for dental purposes. C. Joannides. 2,454,456, Nov. 23.
Matrix predrier. W. T. Moir. 2,454,334, Nov. 23.
Means for use in computing elapsed time and the like. G. W. Odell. 2,454,711, Nov. 23.
Mechanical galloping horse. A. A. Kollman. 2,454,656, Nov. 23.
Metalization on nonconductors. H. Narcus. 2,454,610, Nov. 23.
Metallizable polyazo dyestuffs. W. Wehrli and C. Petitjean. 2,454,683, Nov. 23.
Meter: *See*—
Miles-per-gallon meter.
Methyl ethyl ketone by azeotropic distillation under superatmospheric pressure, Dehydration of. W. S. Harney, Jr., and E. H. Amick, Jr. 2,454,447, Nov. 23.
Miles-per-gallon meter. C. A. Leonard. 2,454,393, Nov. 23.
Milling machine. H. M. Braucher. 2,454,269, Nov. 23.
Mine, Antipersonnel artillery. C. A. Hicks. 2,454,281, Nov. 23.
Mixture of thermoplastic interpolymers, Vulcanizable. G. W. Stanton and C. E. Lowry. 2,454,486, Nov. 23.
Modeling tool. W. H. Slack. 2,454,576, Nov. 23.
Mold for producing crankshafts I. Olsen. 2,454,712, Nov. 23.
Molding halftone values in printing surfaces. F. G. Yanes. 2,454,729, Nov. 23.
Molding machine. W. M. Lester. 2,454,561, Nov. 23.

Molybdena catalysts, their preparation and use. M. W. Tamele, V. C. Irvine, and J. F. Mahar. 2,454,724, Nov. 23.
Molybdenum, Manufacture of. C. V. Iredell and R. J. Enrico. 2,454,322, Nov. 23.
Mosaic, Interlocking. B. Cooley. 2,454,307, Nov. 23.
Motor: *See*—
Combination step-by-step and induction motor. Explosion-proof motor.
Motor control, Electric. J. M. Roberts. 2,454,671, Nov. 23.
Motor control system, Electric. D. E. Sunstein. 2,454,355, Nov. 23.
Motor control system, Electronic. H. Nygaard. 2,454,401, Nov. 23.
Mount: *See*—
Subcaliber gun mount.
Mounting for armored vehicles, Periscope. F. S. Brackett. 2,454,268, Nov. 23.
Mounting for spinning rings and the like. G. L. Meyers and J. C. Shutt. 2,454,707, Nov. 23.
Mounting for vacuum cleaners, Motor and fan unit. P. C. Rector. 2,454,569–70, Nov. 23.
Music box. E. Wedemeyer. 2,454,361, Nov. 23.
Napkin holder. W. J. Lisek. 2,454,517, Nov. 23.
Needle holder and sterilizer. F. F. Gunther. 2,454,602, Nov. 23.
No-twist self-locking coupling. F. Jacobson. 2,454,557, Nov. 23.
Nonskid device. F. G. Rosene. 2,454,407, Nov. 23.
Nutcracker with an adjustable sliding jaw. W. M. Gallagher. 2,454,601, Nov. 23.
Nut-shelling machine. E. P. Leonard. 2,454,660, Nov. 23.
Olefins from aromatic hydrocarbons, Removing. R. M. Love. 2,454,467, Nov. 23.
Oleomargarine coloring unit. L. Adler, H. G. Johnson, and B. J. Schneider. 2,454,420, Nov. 23.
Operating mechanism, Switch. P. T. Repka. 2,454,341, Nov. 23.
Oscillator, Positive grid. J. W. McNall and A. H. Laidig. 2,454,330, Nov. 23.
Output regulation of circuit type gas-turbine plants. W. Traupel. 2,454,358, Nov. 23.
Oven, Electronic baking. De G. Beaubien. 2,454,370, Nov. 23.
Oven with heat diverting means, Culinary. P. W. Rom. 2,454,571, Nov. 23.
Package for rolls and the like. L. W. Staunton and R. L. Atkinson. 2,454,352, Nov. 23.
Paintbrush holder. W. O. Nance. 2,454,474, Nov. 23.
Petroleum emulsions, Breaking. M. De Groote and O. H. Pettingill. 2,454,435, Nov. 23.
Petroleum emulsions, Resolving. J. L. Harlan. 2,454,382, Nov. 23.
Phase-shifting system, Electrical. J. R. Beckwith. 2,454,426, Nov. 23.
Picking motion for looms. J. Heaton. 2,454,603, Nov. 23.
Pigment green and producing the same. W. G. Huey and W. G. Drautz. 2,454,453, Nov. 23.
Pipe: *See*—
Smoker's pipe.
Pipe fitting. H. S. Leo and B. B. Breslow. 2,454,465, Nov. 23.
Piperazine, Preparation of. H. F. Pfann and J. K. Dixon. 2,454,404, Nov. 23.
Planer attachment for lathes. J. W. Miller. 2,454,331, Nov. 23.
Plastic sheets, Making cored laminated. C. A. Scogland 2,454,719, Nov. 23.
Plow, Disk. A. E. Rutter. 2,454,482, Nov. 23.
Plug valve. O. Jacobsen. 2,454,389, Nov. 23.
Pole motor and the like, Shaded. E. W. Ballentine. 2,454,589, Nov. 23.
Polyesters, Surface-active linear. L. H. Bock and J. L. Rainey. 2,454,546, Nov. 23.
Polymeric detergents. L. H. Bock and J. L. Rainey. 2,454,541–3, Nov. 23.
Polymeric detergents comprising water-soluble salts of the half-esters of dicarboxylic acids and the formaldehyde condensates of hydrocarbon-substituted phenoxy-polyalkoxy alkanols. L. H. Bock and J. L. Rainey. 2,454,544, Nov. 23.
Polymeric quaternary ammonium salts. L. H. Bock and A. L. Houk. 2,454,547, Nov. 23.
Polymerization of furfuryl acrylate. C. E. Rebberg and C. H. Fisher. 2,454,756, Nov. 23.
Polymethine dyes. L. G. S. Brooker. 2,454,629, Nov. 23.
Polyvinyl acetal with a diisocyanate-modified polyester or polyester-amide, Mixture of a. W. F. Smith and H. G. White. 2,454,678, Nov. 23.
Portable drying rack. H. F. Kuehn. 2,454,559, Nov. 23.
Portable self-contained drum cleaner. F. E. Neef, Jr. 2,454,289, Nov. 23.
Post-adjusting means for wire and mail directing apparatus. M. F. Stephens. 2,454,680, Nov. 23.
Potentiometer, Sealed. I. Gordy. 2,454,278, Nov. 23.
Pouch, Nail. E. J. Scarlett. 2,454,346, Nov. 23.
Poultry feeder. V. and C. L. Severance. 2,454,721, Nov. 23.
Power plant, Internal-combustion turbine. W. R. Hawthorne. 2,454,738, Nov. 23.
Press: *See*—
Automatic molding press.
Pressure switch. W. H. Gille. 2,454,647, Nov. 23.
Printed fabrics, Producing. A. S. Jones and G. B. Stackpole. 2,454,391, Nov. 23.
Projector, Nonintermittent cinematographic. F. F. Ehrenhaft. 2,454,504, Nov. 23.
Pump: *See*—
Centrifugal pump.
Pump for removal of lubricants from containers. L. C. Rotter, A. P. Fox, and C. H. Mueller. 2,454,343, Nov. 23.
Pump output regulator. J. Mercier. 2,454,563, Nov. 23.
Pyrazolone azo pigment. E. Armatys. 2,454,266, Nov. 23.
Pyridazone derivatives and preparing the same. J. F. Morgan. 2,454,742, Nov. 23.
Pyroligneous liquors for preserving food products and preparing the same. H. M. Guinot. 2,454,649, Nov. 23.
Rack: *See*—
Portable drying rack. Secondary rack.
Radar apparatus, Frequency modulated. B. R. Cole. 2,454,633, Nov. 23.
Radiator construction, Finned. J. E. Tolan. 2,454,357, Nov. 23.
Radio bomb release system. R. C. Sanders, Jr. 2,454,673, Nov. 23.
Rail fastener. M. D. Hughes. 2,454,454, Nov. 23.
Ratio-measuring system. D. W. Moore, Jr. 2,454,520, Nov. 23.
Reading stand. A. Savastano. 2,454,526, Nov. 23.
Receiver, Bone conduction. L. A. Watson and P. C. Heijn. 2,454,494, Nov. 23.
Receiver-transmitter system, Wave-signal. L. R. Malling. 2,454,396, Nov. 23.
Receptacle and closure thereof. W. H. Schrader. 2,454,674, Nov. 23.
Refrigerating apparatus. I. M. Wherry. 2,454,727, Nov. 23.
Refrigerating system, Two-temperature. L. W. Atchison. 2,454,537, Nov. 23.
Refrigeration system, Absorption. J. N. Roth. 2,454,344, Nov. 23.
Refrigerator, Portable. M. Brodheim. 2,454,303, Nov. 23.
Regulator: *See*—
Flow regulator. Pump output regulator.
Relay, Polarized electrical. T. J. O'Meara. 2,454,713, Nov. 23.
Removal of solids from liquids, with a control operating in response to viscosity or pressure, Method of and apparatus for the. E. A. Kamp. 2,454,653, Nov. 23.
Reproducing sound motion pictures in synchronism with the picture and sound on separate media. L. Thompson. 2,454,491, Nov. 23.
Resinous linear polyesters in crumblike form, Preparing. E. M. Beavers. 2,454,539, Nov. 23.
Resistor and making the same. G. G. Herrick and H. N. Veley. 2,454,508, Nov. 23.
Ring sealed joint. H. E. Thornhill. 2,454,356, Nov. 23.
Riveting machine, Portable. C. A. Dawson. 2,454,596, Nov. 23.
Rotor assembly for cylinder grinding machines, Flexible multibladed. A. Rebman. 2,454,406, Nov. 23.
Rotors, Manufacturing bladed. R. H. Thielemann. 2,454,580, Nov. 23.
Rubberlike materials, Manufacture of. C. A. Curtis and D. S. Stephens. 2,454,635, Nov. 23.
Salesman's folding sample case. R. A. Silene. 2,454,575, Nov. 23.
Sandpaper holder. M. D. Nissenbaum. 2,454,668, Nov. 23.
Sanding machine. F. Harris. 2,454,650, Nov. 23.
Scraper. B. F. Owen. 2,454,475, Nov. 23.
Screen: *See*—
X-ray screen.
Sealing element including a binder consisting of polyisobutylene and factice. E. G. King. 2,454,283, Nov. 23.
Secondary rack. B. M. Smalley. 2,454,677, Nov. 23.
Self-propelled circulating heater. J. E. Woods. 2,454,296, Nov. 23.
Servo unit. B. G. Carlson. 2,454,551, Nov. 23.
Sewing. J. P. Fredericksen. 2,454,277, Nov. 23.
Sewing machine drive. J. W. Momberg. 2,454,471, Nov. 23.
Shade roller bracket. J. C. Haws and C. A. White. 2,454,449, Nov. 23.
Shaft brake for fishing reels, Continuous. B. E. Berlinger. 2,454,590, Nov. 23.
Shaker conveyer. W. W. Sloane. 2,454,484, Nov. 23.
Sheet of molecularly oriented transparent linear high polymer dyed with dichroic substance and manufacture, Light-polarizing. E. H. Land. 2,454,515, Nov. 23.
Shield, Breast. M. W. Warner. 2,454,535, Nov. 23.
Shield for dental lathes. J. P. Honey. 2,454,513, Nov. 23.
Shockproof support. C. E. Bazley and C. Bangert, Jr. 2,454,538, Nov. 23.
Shoe closure. H. Nichols. 2,454,335, Nov. 23.
Shower unit, Portable. G. McCann. 2,454,518, Nov. 23.
Sight for firearms. H. F. Mossberg. 2,454,397, Nov. 23.
Signal for airplanes, Stall indicating warning. G. H. Arnold. 2,454,587, Nov. 23.
Signal system, Approach. G. W. Baughman. 2,454,687, Nov. 23.
Signaling and control system for carrier telephone trunk circuits. E. H. B. Bartelink. 2,454,498, Nov. 23.

Silver chloride articles, Production of welded. H. C. Kremers and R. E. Price. 2,454,462, Nov. 23.
6-methyl pteridines, Preparing. J. H. Boothe. 2,454,751, Nov. 23.
Skate, Convertible. J. W. Howard. 2,454,321, Nov. 23.
Sleeve stretcher or the like. M. Lopez. 2,454,395, Nov. 23.
Sling. C. M. Zerr. 2,454,417, Nov. 23.
Smoker's pipe. A. E. Dietz. 2,454,436, Nov. 23.
Sorting machine, Punched card. K. J. Braun. 2,454,628, Nov. 23.
Space charge device, Electric. L. H. Smith. 2,454,757, Nov. 23.
Spinning means and method. E. H. Jackson, Jr. 2,454,323, Nov. 23.
Splint, Traction. P. H. Henderson. 2,454,319, Nov. 23.
Sprayer. S. F. Potts and R. A. Spencer. 2,454,339, Nov. 23.
Spraying, Method and apparatus for. N. C. Christensen. 2,454,594, Nov. 23.
Spring construction. J. O. La Fond. 2,454,703, Nov. 23.
Staking machine. G. A. Schettler. 2,454,347, Nov. 23.
Stand: *See*—
Reading stand.
Stand for displaying posters, Sign. H. Green. 2,454,648, Nov. 23.
Stoker, Automatic. J. T. Norman. 2,454,400, Nov. 23.
Stop mechanism for sewing machines. W. Myers. 2,454,710, Nov. 23.
Stripper, Punch press. T. T. Crandall. 2,454,432, Nov. 23.
Subcaliber gun mount. G. B. Davis, Jr. 2,454,276, Nov. 23.
Suitcase valance structure. R. H. Worley. 2,454,366, Nov. 23.
Sulfur compounds, Manufacture of. W. A. Schulze and W. W. Crouch. 2,454,409, Nov. 23.
Support: *See*—
Shockproof support.
Support for milkers, Overhead. H. B. Babson. 2,454,300, Nov. 23.
Support for newspaper bags. R. S. Cathey and L. D. Clarke. 2,454,732, Nov. 23.
Support structure, Grid. L. B. Curtis. 2,454,377, Nov. 23.
Supporter, Athletic. C. J. Flaherty. 2,454,507, Nov. 23.
Suspension for pipe tongs. A. E. Hambly. 2,454,317, Nov. 23.
Switch: *See*—
Door chime control switch. Heat-pressure operated warning switch.
Electric range switch. Pressure switch.
Electric switch.
Electromagnetic switch.
Switch construction, Push-button. L. L. Verkuil. 2,454,295, Nov. 23.
Switch for airplanes, Safety. A. E. Baak. 2,454,423, Nov. 23.
Switch for internal-combustion engines, Timer. H. F. C. Rietschel. 2,454,524, Nov. 23.
Synchronizing system. J. H. Homrighous. 2,454,651, Nov. 23.
Table: *See*—
Baby dining-play table.
Takedown type swing-out-of-the-way wall bracket. R. E. McLean. 2,454,664, Nov. 23.
Takeup mechanism. H. H. Merwin and A. C. Nystrom. 2,454,329, Nov. 23.
Tank for thermoplastic material, Dip. W. H. Lerner. 2,454,286, Nov. 23.
Telegraph system. W. M. Bacon. 2,454,301, Nov. 23.
Telescoping cigarette case. J. W. Irwin. 2,454,455, Nov. 23.
Temperature controlling device. V. Weber. 2,454,682, Nov. 23.
Temperature responsive device. R. W. Cobean. 2,454,552, Nov. 23.
Tent structure. W. E. Lee. 2,454,464, Nov. 23.
Textile chrome-printing compositions and their manufacture. C. Babey, W. Thommen, and E. Stocker. 2,454,623, Nov. 23.
Thioglycol esters. M. A. Pollack. 2,454,568, Nov. 23.
Tire for vehicles. E. C. Woods. 2,454,750, Nov. 23.
Tobacco hogsheads and securing means for the heads thereof. H. G. Bell and J. D. Gay, Jr. 2,454,267, Nov. 23.
Tocopherol concentrate, Preparation of. N. D. Embree and N. H. Kuhrt. 2,454,692, Nov. 23.
Tool: *See*—
Bolt holding tool. Modeling tool.
Cutting tool.
Torque apparatus, Eddy-current. M. P. Winther. 2,454,364, Nov. 23.
Toxins and toxoids, Production of. I. A. Parfentjev and A. J. Weil. 2,454,755, Nov. 23.
Toy, Airplane control. C. H. Foster. 2,454,693, Nov. 23.

Electronic tube.
Tube and circuit therefor, Cathode beam. R. L. Snyder, Jr. 2,454,410, Nov. 23.
Tube apparatus, Cathode-ray. S. V. Forgue. 2,454,378, Nov. 23.
Tube forming device. H. L. Johnson. 2,454,282, Nov. 23.
Tube with electron lenses, Cathode-ray deflection. R. Rüdenberg. 2,454,345, Nov. 23.
Tubes, Producing radiator. M. G. Boerger. 2,454,624, Nov. 23.
Tumbler. J. P. Jorgenson. 2,454,392, Nov. 23.
Turbine, Fluid pressure. A. B. Broluska. 2,454,428, Nov. 23.
Ultra high frequency electronic tube. H. J. McCarthy. 2,454,741, Nov. 23.
Vacuum cleaner. E. W. Gent. 2,454,314, Nov. 23.
Valve: *See*—
Plug valve.
Valve for oil temperature control units, By-passing. W. Worth. 2,454,297, Nov. 23.
Valve lever, Double-action flush. B. R. Crampton. 2,454,431, Nov. 23.
Vaporizer. W. R. Kuzmin and S. J. Levine. 2,454,657, Nov. 23.
Venetian blind head box. F. J. Burns. 2,454,550, Nov. 23.
Vibrator for use in connection with concrete. R. L. Wilde. 2,454,620, Nov. 23.
Visor, Sun. W. J. Peltier and A. J. Diroff. 2,454,613, Nov. 23.
Water, Treating fish press. J. K. Gunther and L. Salr. 2,454,315, Nov. 23.
Wave generating system. M. Artzt. 2,454,367, Nov. 23.
Wedge actuator attachment for journal boxes. J. L. Gosnell. 2,454,445, Nov. 23.
Weed burning apparatus. H. E. Woolery. 2,454,365, Nov. 23.
Welding electrode holder. E. Siemers. 2,454,617, Nov. 23.
Wheel mechanism, Tail. D. M. Leitch. 2,454,658, Nov. 23.
Wheel operating means for airplanes. O. A. Brandt and F. G. Ellingsen. 2,454,627, Nov. 23.
Window sash control. J. A. Swenson. 2,454,619, Nov. 23.
Wrench with means to grip the inner surface of pulley rims, Spanner. J. J. Sullivan. 2,454,489, Nov. 23.
X-ray apparatus. T. H. Rogers and W. W. Fengler. 2,454,525, Nov. 23.
X-ray screen. W. H. Byler and C. C. Carroll. 2,454,499, Nov. 23.
Xylophone. L. Okrain. 2,454,402, Nov. 23.
Yarn feed for twisting machines. C. F. Powell. 2,454,405, Nov. 23.

CLASSIFICATION OF PATENTS

ISSUED NOVEMBER 23, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

1— 20: 2,454,302
49.7: 2,454,346
2— 34: 2,454,606
42: 2,454,535

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,712,274, W. H. Knowles, Closure; 1,895,225, same, Capping and sealing machine, D. C., S. D. N. Y., Doc. 44/649, *C. F. Knowles* v. *Standard Cap & Seal Corp.* Stipulation and order dismissing action with prejudice Sept. 4, 1948.

1,895,225. (See 1,712,274)

1,949,098, A. W. Becker, Windshield clearing device; 2,206,814, E. C. Horton, Windshield clearing system, filed Aug. 20, 1948, D. C., S. D. Iowa, Doc. 863, *Trico Products Corp.* v. *The Delman Corp.*

1,969,875, 2,092,244, E. P. Charak, Drop leaf table; 2,071,729, same, Extension table, suit for Declaratory Judgment Sept. 28, 1948, D. C., S. D. N. Y., Doc. 47/474, *The Albano Co., Inc.*, v. *Charak Furniture Co., et al.*

2,036,608, H. E. Rosenberg, Removable handbag cover, filed Sept. 20, 1948, D. C., S. D. N. Y., Doc. 47/391, *Edwards Bags, Ltd., et al.* v. *R. H. Macy & Co., Inc., et al.*

2,036,757, J. W. Hume, Adjustable balancer for vehicle wheels, D. C., E. D. Mich., S. Div., Doc. 7074, *H. C. Loney Co.* v. *John Bean Mfg. Co., et al.* Stipulation and order of dismissal without prejudice Sept. 27, 1948.

2,071,729. (See 1,969,875)

2,092,244. (See 1,969,875)

2,143,616, G. C. Adler, Column; 2,233,089, same, Beam construction, filed Sept. 28, 1948, D. C., S. D. Fla., Miami, Doc. 2662–M, *Uanel Blocks, Inc.*, v. *N. F. McMillen.*

2,191,717, H. A. Jeffery, Vacuum cleaner, filed Sept. 29, 1948, D. C., N. D. Ohio, E. Div., Doc. 25,909, *Hydro-Air Cleaning Systems, Inc.*, v. *Manuel Products, Inc.*

2,206,814. (See 1,949,098)

2,233,089. (See 2,143,616)

2,256,803, E. Hauser, Antenna system for a radio receiving set, D. C., S. D. N. Y., Doc. 45/102, *Eric Hauser* v. *Freed Radio Corp.* Stipulation of discontinuance Mar. 15, 1948.

2,258,803, J. S. Peles, Birdproofing, D. C., S. D. N. Y., Doc. 40,370, *Building Maintenance Corp.* v. *Stanley's Roofing & Building Service, Inc., et al.* Stipulation dismissing action with prejudice Aug. 5, 1948.

2,266,625, C. W. Cundiff, Terracer and grader, filed Sept. 8, 1948, D. C., N. D. Tex., Lubbock, Doc. 690, *Owensboro Ditcher & Grader Co., et al.* v. *Phares-Wilkins Mfg. Co., et al.*

2,314,733, F. M. Owen, Automatic cathead, D. C., W. D. Okla., Oklahoma City, Doc. 3612, *O. M. Gahagan, et al.* v. *American Iron & Machine Works Co., et al.* Judgment for plaintiffs (notice Sept. 22, 1948).

2,320,624, J. A. Love, Disk harrow, filed Sept. 27, 1948, D. C., E. D. Mich., S. Div., Doc. 7652, *Love Tractor, Inc.*, v. *Dearborn Motors Corp.*

2,406,500, G. E. Karl, Hoe wheel plate stamping, filed Sept. 15, 1948, D. C., S. D. W. Va., Doc. 883, *General Implement Corp. of America* v. *Burford Machine & Supply Co., Inc.*

2,425,705, D. A. Tetu, Method of removing manganese from calcium, D. C., S. D. N. Y., Doc. 46/224, *G. M. Marr* v. *Hearn Dept. Stores, Inc.* Consent order of discontinuance (notice Sept. 24, 1948).

T. M. 277,372, F. Morgenstern, Medicinal preparation for use in the relief of pains and inducing sleep; T. M. 424,226, Schering Corp., Mixtures of two or more sulfonamide drugs for the treatment of bacterial infections, filed Sept. 22, 1948, D. C. N. J., Doc. 11,663, *Morgenstern Chemical Co., Inc.*, v. *Schering Corp.*

T. M. 424,226. (See T. M. 277,372)

T. M. 431,791, W. G. Cummings, Special tool joint dressing; T. M. 431,792, same, Lead zinc tool joint dressing; T. M. 435,163, same, Dope brush, D. C., N. D. Okla., Tulsa, Doc. 2285, *W. D. Moore* v. *W. G. Cummings.* Dismissed with prejudice on application of plaintiff Sept. 21, 1948.

T. M. 431,792. (See T. M. 431,791)

T. M. 435,163. (See T. M. 431,791)

NOTICES

Interference Notice

Louis S. Richman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Cudahy Packing Co., 221 North La Salle Street, Chicago, Ill., for registration of a trade-mark and registration No. 388,367, issued June 24, 1941, to Louis S. Richman, 225 Grand Street, New York, N. Y., and the notice of such declaration sent by registered mail to the said Richman at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Richman, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Nov. 4, 1948.

Cancellation Notice

Mary Pardo, her assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Elizabeth Arden Sales Corporation, 681 Fifth Ave., New York 22, N. Y., to effect the cancellation of trade-mark registration of Mary Pardo, 552 Cabrini Place, Chicago, Ill., No. 347,316, dated June 22, 1937, and the notice of such proceeding sent by registered mail to the said Mary Pardo at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mary Pardo, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Nov. 5, 1948.

Vol. 616 • No. 4 Tuesday, November 23, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Classification Order No. 36

September 29, 1948

The following changes in the classification of inventions are hereby directed to take effect immediately:

IN THE MANUAL OF CLASSIFICATION

ABOLISH SUBCLASSES

In *class 15, Brushing, Scrubbing, and General Cleaning* (Division 27)

2 **Cleaning plants**
Machines
Combined
Beater and brush
6 Air blast or suction
7 Brush and air blast or suction
8 Carpet sweepers
9 Convertible
10 Nonrotary
11 Street sweepers
12 Beater and air blast or suction
13 Portables
14 Air blast and suction
15 Suction
16 Floor and wall cleaners
17 Hand pump
18 Traction pump
19 Street cleaners
20 Air blast
Implements
Pipe and tube cleaners
Outside
104.045 Fluid blast
Inside
104.055 Fluid blast
155 Nozzles, heads and shoes
156 Joints and couplings
157 Scrapers, guards and pick ups
158 With brush

In *class 119, Animal Husbandry* (Division 5)

Grooming devices
84 Pneumatic

In *class 175, Electricity—General Applications* (Division 48)

353 **Current amplifiers**

In *class 225, Dispensing Beverages* (Division 35)

Soda water apparatus
23 Faucets
24 Foam
25 Rotary valve
26 Mixing
27 Nozzles

In *class 230, Gas Pumps and Fans* (Division 9)

Fluid displacement
Jet pumps
94 Tube cleaners

CHANGE SUBCLASS TITLES

In *class 24, Buckles, Buttons, Clasps, etc.* (Division 41) change the title of subclass 124 to read:

Cord and rope holders
Couplings and sockets
124 Sleeve and nut clamp

In *class 95, Photography* (Division 7) change the title of subclass 61 to read:

Cameras
Shutters
Pivoted
Blade
61 Unidirectional rotary

In *class 175, Electricity—General Applications* (Division 48) change the title of subclass 21 to read:

21 **Electromagnets and permanent magnets**

ESTABLISH SUBCLASSES

In *class 15, Brushing, Scrubbing, and General Cleaning* (Division 27)

RICHARD A. WAHL, *Classifier*

Machines
300 With air blast and/or suction (to follow subclass 3.21)
301 **Fixed position cleaners or installed cleaning systems**
302 With liquid or other cleaning material application to work
303 With work handling or supporting
304 Hollow work internal cleaning, e. g., bag and/or bottle cleaners
305 Tumbling cylinders or cages
306 With means to guide or move the work to or through cleaning station or treating means
307 With work-width compensating features
308 With work agitator, e. g., brushing, beating, shaking
309 Plural diverse types, e. g., beating and brushing
310 Manual application of work to cleaning means
311 With moving work-agitating means
312 With fixed guide for ambulant air draft applying means
313 Installed in automobile or other vehicle for the cleaning thereof
314 With flexible conduit connection between ambulant air draft applying means and relatively stationary air pump or supply
315 Extensible and retractible conduit
316 Air blast only, e. g., boiler soot-blowers
317 With blowing element housing or protecting feature, e. g., embedded, disappearing or cooling
318 Moving nozzle with air supply control interlocked with nozzle motion means
319 With automatic control
320 With liquid or other cleaning material application to work
321 Manipulatable nozzle with flexible conduit connection to portable power and/or material supply unit, e. g., window washer
322 Nozzles
323 With storage facilities for tools or nozzles, conduits, etc., e. g., racks and cabinets
324 Illuminator for work area
325 With fender or bumper, i. e., furniture guard
326 With sound muffling feature
327 Tank type cleaner organizations
328 Convertible
329 To or from hand held and hand manipulated
330 Suction to or from blast
331 Plural selective air draft means, e. g., on-floor to off-floor
332 With agitator and/or fan interlock, e. g., floor or rug safety feature
333 Floor nozzle elevating
334 Floor nozzle air flow diverted to off-floor cleaning means
335 Tubular handle, e. g., "Air-Way" type
336 With supporting means, e. g., wall-mounted clamp
337 By insertion or attachment of additive converter
338 Converter attached to floor nozzle mouth
339 Combined, e. g., with signal or indicator
340 Power propelled vehicle or carrier
341 Traction or manual operation of air pump or fan
342 Rotary air impeller
343 Hand cranked
344 Hand supported and manipulated, e. g., miniatures or upholstery type
345 Air blast with suction
346 Closed circuit systems, i. e., air recirculating
347 With dust or dirt handling or storing or separating, e. g., filter bags
348 With conveying means additional to air stream
349 With receiver for dirt from rotary or moving agitator
350 Separator mounted on or attached to manipulating handle, e. g., push-broom type
351 Handle movable relative to floor tool air exhaust conduit
352 Separator element cleaning in situ and/or storage or removal of retained dirt
353 With liquid and/or deflection type separator
354 With work-contacting carriage or mount, and relatively adjustable nozzle
355 With agitator adjustable relative to nozzle
356 Interlocked or simultaneous adjustment
357 Suction responsive
358 With work surface contact or penetration sensing
359 Biased or floating nozzle
360 Urged away from contact with work
361 Handle operated or handle associated control
362 With nozzle carriage or mount having work-surface penetration control, e. g., differential area supporting wheels
363 With mechanical agitating means
364 Diverse agitating operations, e. g., brushing with beating or movable with stationary
365 Selective
366 Rotary only, e. g., "Hoover" type beating brush
367 Stationary or non-moving agitating means only
368 Adjustable with respect to nozzle
369 Responsive to translational movement of nozzle
370 Rotary agitator with radially adjustable elements, e. g., wear-compensating
371 Floating or resiliently biased contact with work surface
372 Rotary work contactor
373 Retractable, i. e., selective use
374 Oblique or V-shaped arrangement of agitator
375 With auxiliary ambient air inlet to nozzle, e. g., through air tunnel and/or agitator
376 Agitator bearing or drive air bleed
377 Auxiliary or separate, i. e., non-fan, driving motor
378 With guard to inhibit work entry into nozzle mouth
379 Vibrating nozzle or nozzle lips
380 Rectilinearly moving parallel to work surface, e. g., scrubbing
381 Oscillating agitator, e. g., sweeping
382 Striking beater, i. e., perpendicular movement
383 Rotary agitator
384 Tandem agitator units
385 Axis non-parallel to work surface
386 With eccentrically mounted turnable work contacting elements
387 Air current operated
388 Traction operated
389 Drive details
390 With clutch or other drive disconnect
391 Belt or drive housings or other protective features
392 Agitator bearings or supporting details
393 Stationary agitator
394 Work piece surrounding or opposed agitators, e. g., bar or slat cleaners
395 For opposed surfaces or hollow work internal cleaning
396 Hollow head with perforate reticulate supporting surface for agitator
397 With tubular air nozzles interspersed throughout work contacting surface
398 Bristle brush type
399 With bristle bridle or air seal or shroud
400 Nozzle attachment type
401 Scraper or squeegee type
402 Serrated or toothed, e. g., comb or rake type
403 Dry mop type, e. g., textile strand or sheep pelt
404 With pulsating air flow
405 Air blast only
406 For hollow work, internal cleaning, e. g., tube soot-blowers
407 Work operated valve
408 With induced flow of ambient air, e. g., jet-pump
409 Jet pump suction-devices
410 Handle features, e. g., limit stops or storage locks
411 Angular or lateral adjustment of cleaner by axial rotation of handle
412 Motor features, e. g., housing or casing assemblies
413 Air cooling by other than main air stream
414 Detachable and/or extension nozzles
415 Nozzles
416 With plural mouths selectively usable, e. g., "duplex" nozzles
417 Top and bottom reversible type
418 With area adjusting, e. g., restrictors
419 With air flow control means, e. g., work-operated valve
420 With notched or grooved lips for localized intensification of air draft
421 With auxiliary inlet for ambient air, e. g., vacuum relief
422 With guard to inhibit work entry into nozzle mouth

In *class 222, Dispensing* (Division 35)

T. L. STAM, *Classifier*

Plural sources, compartments, containers and/or with spaced jacket
144.5 With selecting means

222	144.5	225	26

IN THE DEFINITIONS

15, Brushing, Scrubbing and General Cleaning

abolish the definition of subclass 2,

in subclass 3, cancel the definition and substitute:

3. Apparatus under the class definition having means for contacting a work surface or object with an air blast and/or suction or with a beater, brush, broom, scraper, squeegee, wiper, shot or other non-abrasive type particulate or comminuted solid, or having means for shaking or vibrating the work, or any combination of the above, for the purpose of dislodging and/or removing unwanted foreign material therefrom, and the surface contact is accomplished by power or motion means other than or in addition to that which the apparatus would have if merely held or supported by the operator and manipulated or moved by him relative to the work.

(1) Note.—Subcombination or elemental devices apparently restricted in utility to use with machines under the above definition may be placed in this group of subclasses, such, for example, as the "nozzles" of air blast and/or suction cleaners which are found in subclasses 322 and 415+.

abolish the definitions of subclasses 6 through 20, 104.045, 104.055, and 155 through 158,

establish the following subclass definitions:

300. Devices under subclass 3 having claimed structure functioning to contact a work piece or work surface with a draft of air, steam, or equivalent gaseous fluid, for the purpose of dislodging and/or removing unwanted foreign material therefrom.

(1) Note.—In this and the indented subclasses, the term "air" is used generically to designate air, steam, or equivalent gaseous fluid.

(2) Note.—The draft of air need not be the primary cleaning or dislodging means; this and the indented subclasses include devices wherein means are provided for brushing, beating, shaking, or otherwise manipulating the work to dislodge the foreign material and wherein the draft of air acts to convey away the material so dislodged, or any part thereof, provided only that the draft of air must contact the work.

(3) Note.—Where an air draft is used as a means to feed material to or discharge material from an art device, the patent is in general classified with the device, even though a vacuum pick-up is used on an ambulant device; except that a gas separator of the class 183 type is classified in this class (15) if claimed in combination with means for applying an air-draft to a work piece or work surface.

(4) Note.—Where an air draft functions to perfect the operation of an art device, the patent is classified with the art device.

Search this class, subclass—
21 to **103**—for devices where a mechanical work contactor of the character there provided for delivers the foreign material to a place of collection not on the work surface and from which place an air draft is utilized to convey the material.

Search Class—
30—CUTLERY, especially subclass 124+, for cutlery devices combined with air blast or suction means for collecting or disposing of the severed material, and see (4) Note.
34—DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, for gas and vapor contact for drying and see (3) Note in the main class definition of class 34 for further statement of the line.
43—FISHING, TRAPPING, AND VERMIN DESTROYING, subclasses 139+ and 141, for air-blast and/or suction devices disclosed solely for trapping and/or destroying insects.
128—SURGERY, particularly subclass 297+, for receptor devices employing a vacuum or pressure and specialized for the purposes of that class.
131—TOBACCO, subclass 244, for cleaning smoking devices by the use of an air draft.
230—GAS PUMPS AND FANS, for the gas pumping subcombination of an air blast or suction cleaner. This and the indented subclasses in class 15 take air or gas pumps claimed in combination with a suction or a blast applying nozzle means, disclosed for cleaning, and also take pumps disclosed solely for cleaning having claimed structure which functions to contact or engage the work to promote or perfect the cleaning operation.
299—FLUID SPRINKLING, SPRAYING, AND DIFFUSING. The line is as follows: This and the indented subclasses in class 15 take air, steam, or equivalent gaseous fluid spraying or blowing devices disclosed solely for cleaning combined with claimed means for handling or supporting the work being contacted by the discharged fluid, or combined with claimed cleaning devices such as brushes, scrapers, wipers, beaters, shotters, or the like. Class 299 takes nozzle devices per se of the character indicated in subclass 107+ in that class, even though disclosed solely for cleaning by the use of gaseous fluids, except that class 15 takes such nozzle devices where there is claimed structure which functions to contact or to engage the work being contacted by the fluid, such contact or engagement usually serving to promote or perfect the cleaning operation.
302—CONVEYORS, FLUID CURRENT, for apparatus for conveying material by a gaseous fluid including material pickup, not specialized for cleaning.

301. Cleaning apparatus under subclass 300 in which the apparatus as a whole, when completely assembled and operating as a cleaner, is non-mobile or fixed in position, or is installed in or attached to a structure for the cleaning thereof.

(1) Note.—The air-draft applying means may itself be mobile during the cleaning operation, so long as the air-pump or supply remains fixed, and either or both the air-draft applying means and air pump or supply may be detachable when not cleaning.
(2) Note.—In this and the indented subclasses are placed, for example, patents for vacuum cleaning systems installed in or on buildings, vehicles, or art devices or structures for the cleaning thereof and including only so much of the building, vehicle, or device as is necessary to the operation, support, or location of the cleaning apparatus, with respect to that portion of the building, vehicle, or device being cleaned.
(3) Note.—The line with class 122, LIQUID HEATERS AND VAPORIZERS, is: Class 122 takes air or steam cleaners for boiler structure where any part of the boiler or furnace structure is modified to cooperate with the cleaner for the support or functioning thereof and such modification is claimed. The same line is followed with classes 23, CHEMISTRY; 122, LIQUID HEATERS AND VAPORIZERS; 196, MINERAL OILS; 202, DISTILLATION; and 257, HEAT EXCHANGE. This and the indented subclasses in class 15 take soot blowers when disclosed as being the type usually permanently connected with a boiler or other heat exchanger but claiming no modification of the boiler or heat exchanger.
(4) Note.—Mere ventilating hoods or offtakes are not here included but in general are classified with the art device with which associated; see Search Classes below.

Search this class, subclass—
336—for convertible cleaners, mostly of the "Air-Way" type, having racks, brackets, or the like for supporting the cleaner while in use for off-floor cleaning.

Search Class—
23—CHEMISTRY, subclass 250.2, see (3) Note.
28—TEXTILES, see (2) Note.
30—CUTLERY, subclass 124+, for cutters combined with vacuum pick-up for the cuttings and see (2) Note above and (4) Note to subclass 1.
51—ABRADING, subclass 268+, and see (4) Note.
57—TEXTILES, SPINNING, TWISTING, AND TWINING, subclasses 34.5 and 56+, and see (2) Note.
98—VENTILATION, subclass 115, for hoods and offtakes generally and see (4) Note.
122—LIQUID HEATERS AND VAPORIZERS, subclass 379+, and see (3) Note.
126—STOVES AND FURNACES, subclass 142, and see (4) Note.
144—WOODWORKING, subclass 252, and see (4) Note.
196—MINERAL OILS, see (3) Note.
202—DISTILLATION, see (3) Note.
255—EARTH BORING, for devices for use with rock drills for collecting dust or sludge, and see (4) Note to subclass 1.
257—HEAT EXCHANGE, see (3) Note.

302. Apparatus under subclass 301 having means to apply a liquid and/or particulate or comminuted solid cleaning material to the work.

Search Class—
68—TEXTILES, FLUID TREATING APPARATUS, for apparatus for cleaning textile materials when using a liquid. For a complete statement of the line relative to class 68, see the reference to this class (15) in the note to the main class definition of class 68.

303. Cleaning apparatus under subclass 301 substantially permanently located and in which the work is handled, as by presenting it to a non-mobile cleaning station or device either by hand or by guiding or supporting or conveying means, or in which the work is confined in or attached to a carrier and is operated on by a draft of air while so confined or attached.

304. Cleaning apparatus under subclass 303 specially constructed to clean the interior surfaces of hollow work or of passages or cavities in the work.

Search this class, subclass—
406+—for manipulatable air-blast devices for cleaning hollow work such as boiler flues.

Search Class—
223—APPAREL APPARATUS, subclass 43, for air blast or suction devices for turning inside out articles of wearing apparel, bags, or tubular fabrics where there are no additional means for cleaning.

305. Cleaning apparatus under subclass 303 in which the work is tumbled about within a drum or cage which is mounted for rotation on a horizontal or inclined axis.

(1) Note.—The drum or cage may have vanes or the like to cause circulation or movement of air in contact with the contained work.

Search Class—
34—DRYING AND GAS OR VAPOR CONTACT WITH SOLIDS, subclass 108+, for rotary drum driers.
51—ABRADING, subclass 163+, for rotary drum abrading tumblers.
68—TEXTILES, FLUID TREATING APPARATUS, subclass 20, for tumbler type textile washing machines including air drying.
69—LEATHER MANUFACTURES, subclass 30, for rotary drum for fluid treating apparatus.
131—TOBACCO, subclass 137, for rotary drum tobacco fluid treating apparatus.
209—CLASSIFYING, SEPARATING, AND ASSORTING SOLIDS, subclass 295, for rotating drum sifters with pneumatic agitation means.

306. Cleaning apparatus under subclass 303 having means to guide or move the work to or through operative relation with the cleaning station or device.

Search this class, subclass—
310—for apparatus where the work is entirely manually guided and/or moved.

307. Apparatus under subclass 306 in which there are means for adjusting or allowing for various widths of work presented to the apparatus.

(1) Note.—The adjustment may be made on the air draft feature or on any component of the apparatus such as brushes or beaters.
(2) Note.—The work is usually running lengths of material.

308. Apparatus under subclass 306 in which the action of the air draft is supplemented by work-contacting or work-manipulating means for dislodging foreign material.

Search this class, subclass—
363+—for non-installed cleaners having air blast and/or suction and work agitator means.

309. Apparatus under subclass 308 having means for performing two or more diverse agitating operations on the work.

310. Cleaning apparatus under subclass 303 in which the work is manually moved to and held in operative relation with the cleaning station or device.

311. Apparatus under subclass 310 including a moving agitator such as a brush, a beater, a shaker or the like.

312. Apparatus under subclass 301 in which the air draft applying means is arranged for bodily ambulatory or translatory movement and is guided by structure attached to or made part of the building, vehicle, machine or device being contacted by the air draft.

(1) Note.—Devices such as reaction whirlers wherein a non-ambulatory air draft applying means is mounted for rotation about a fixed axis, are excluded from this subclass even though the air nozzles may be mounted at the outer ends of radially extending arms or the like.

Search Class—
299—FLUID SPRINKLING, SPRAYING, AND DIFFUSING, subclasses 47+ and particularly 55, for liquid spraying or sprinkling devices having ambulatory discharging means with relatively fixed guides.

313. Apparatus under subclass 301 installed in a vehicle such as an automobile or aircraft and designed to be used for the cleaning thereof.

(1) Note—The motion of the vehicle through the ambient air may be the source of power for pumping the air, or an air pump may be driven by some part of the vehicle or the pump may be self-reliant such as spring-motor operated.

Search this class, subclass—
340—for power propelled vehicles or carriers designed for transporting cleaning apparatus used for the cleaning of work other than the vehicle or carrier, for example, street cleaners.

314. Apparatus under subclass 301 in which a hand held or manipulatable air draft applying means is mounted on or carried by a flexible conduit connected to a relatively stationary air pump or source of air supply.

Search this class, subclass—
327—for mobile or portable "tank type" cleaning apparatus; that is, cleaners of the character defined above but wherein the air pump or supply is carried about by the operator, or is movable by the operator by force applied thereto through the flexible conduit.

315. Apparatus under subclass 314 having provisions for storing the conduit so that it can be extended from such storage position for application of the applying means to the work to be cleaned.

(1) Note.—Usually the conduit is stored on a reel or drum and is released for use by check-controlled apparatus; frequently the device is in a cabinet or the like suitable for placing in a washroom or entrance hallway for grooming clothing on a person.

Search this class, subclass—
323—for ambulatory cleaning devices having provisions for stowage of items such as air hose.

316. Apparatus under subclass 301 in which the sole cleaning agency is a draft of air from a source of higher-than-atmospheric pressure.

(1) Note.—Soot blowers are located in this and indented subclasses when disclosed as being of the type installed in a boiler but claiming no modification of the boiler; see the reference to class 122 in the Search Class below.

Search this class, subclass—
314—for soot-blowers having a flexible conduit between the air source and the applying means.
405—for cleaning apparatus utilizing an air blast as the sole cleaning agency and not fixed or installed.

Search Class—
122—LIQUID HEATERS AND VAPORIZERS, particularly subclass 390+, for fluid agency cleaning devices combined with boiler structure, and see the reference to class 122 under the definition of subclass 301 above for a statement of the line and reference to other classes involving cleaning of tube type heat exchanging apparatus. See (1) Note.

317. Apparatus under subclass 316 having provisions for cooling the blower element, as by a draft of air or steam, or in which the blower is retracted or folded against or embedded in the furnace wall in non-blowing position and is projected or moved therefrom during the cleaning operation, or is otherwise protected from the furnace heat.

318. Apparatus under subclass 316 in which the blower element is movable and the fluid supply control is interlocked therewith.

Search this class, subclass—
317—for blowers movable to blowing position from an embedded, retracted, or protected non-blowing position in which the means for operating the fluid supply valve is interlocked with the means for projecting and retracting the blowing nozzle.

319. Cleaning apparatus under subclass 300 having means continuously operative to sense a condition or change of conditions and functioning to operate or control the apparatus to establish and/or maintain a condition or operation thereof as a result of the sensing.

(1) Note.—The condition sensed may be the presence or absence of a work piece or portion thereof or may be a physical condition of the work such as thickness. However, work-operated or work-sensing devices are not considered to be automatic unless the operating or sensing functions are continuous. Thus, nozzle adjustments for ambulant floor-type vacuum cleaners which function in a cyclic manner to sense the surface of the rug or floor and to adjust the nozzle for the condition sensed, but which are effective only when the cycle is set in operation by the attendant, are considered to be non-automatic.

Search this class, subclass—
307—for installed or fixed position cleaners having work-operated or work-sensing controls.
354+—for nozzle adjusting means non-automatic in character, and see (1) Note above.

320. Cleaning apparatus under subclass 300 having means to apply liquid and/or particulate or comminuted solid cleaning material to the work.

(1) Note.—Many of these devices pick up the liquid or other cleaning material by air draft means, such pick-up being the only air draft contact with the work.

Search Class—
51—ABRADING, subclass 8+, for sand blast apparatus and see the search notes thereto for related art.

321. Cleaning apparatus under subclass 320 in which a hand manipulated work-contacting device is attached by flexible conduit means to a portable air pump and material supply unit.

(1) Note.—The air pump and material sppply unit is considered to be portable only if it is movable by a force applied thereto by the operator through the flexible conduit, or if it can be carried about by the operator, while the pump is operating so that the cleaning operation can be carried on continuously.

Search this class, subclass—
327—for similar devices without liquid or other cleaning material application.

322. Nozzle devices under subclass 320 having means to supply water or other cleaning material to the work.

Search this class, subclass—
415+—for other elemental cleaning devices in the form of air-draft applying nozzles.

323. Cleaning apparatus under subclass 300 (1) having stowage facilities, or (2) combined with a rack or cabinet to provide stowage facilities, for stowing items used in connection with the operation or maintenance of the cleaner.

(1) Note.—The items to be stowed may be separable, such as nozzles, or may be items such as electric cords normally attached to the cleaner.
(2) Note.—A rack or cabinet for stowing an entire cleaner and its accessory items is included here provided that the arrangement is such that the cleaner may be operated and used for clearing purposes while associated with the rack or cabinet.
(3) Note.—The line with class 211, SUPPORTS, RACKS, is that in order to be classified herein there must be claimed features of the association of the cleaner with the rack or cabinet which cause or permit the cleaning apparatus to function as a cleaner while associated therewith. The same line is followed with classes 280, LAND VEHICLES, and 312, SUPPORTS, CABINET STRUCTURES.

Search this class, subclass—
257—for racks or cabinets per se for air-draft cleaning apparatus wherein there are claimed features which function to permit operation of an air-draft cleaner while associated with the rack or cabinet.
301+—particularly 315, for cleaning apparatus built into a rack, cabinet, or other supporting structure for stationary or non-ambulatory service.
327—for tank-type cleaner organizations not associated with a rack or cabinet.
336—for supports for air-conducting tubular handle cleaners convertible from on-floor to off-floor operations.

Search Class—
191—ELECTRICITY, TRANSMISSION TO VEHICLES, for apparatus there provided for not restricted to air draft cleaning apparatus.
211—SUPPORTS, RACKS, see (3) Note.
242—WINDING AND REELING, for apparatus there provided for not combined with air draft cleaning apparatus.
280—LAND VEHICLES, see (3) Note.
312—SUPPORTS, CABINET STRUCTURES, see (3) Note.

324. Cleaning apparatus under subclass 300 having means to illuminate the work.

Search Class—
43—FISHING, TRAPPING, AND VERMIN DESTROYING, subclasses 139+ and 141, for air blast and/or suction devices disclosed solely for trapping and/or destroying insects where an illuminator functions to attract the insects.
240—ILLUMINATION, subclass 2, for vacuum cleaners with illuminating means, and see the definition and notes thereto for a statement of the line.

325. Cleaning apparatus under subclass 300 having means functioning to protect the nozzle or other parts thereof and/or to prevent marring of furniture or walls during normal use of the apparatus when it is moved into contact with the furniture or walls or the like.

Search this class, subclass—
45—for carpet sweepers (non-air-draft) having cushioning devices mounted thereon to prevent injury to furniture or walls in the operation of the sweeper.

Search Class—
293—VEHICLE FENDERS, subclass 60+ and particularly 71, for buffers or bumpers mounted on the body-frame or under-frame of a vehicle, cushioned or covered bumpers being found particularly in subclass 71.

326. Cleaning apparatus under subclass 300 having means specially designed to muffle the noise of the air being discharged by the air pump.

(1) Note.—So-called dust traps in the form of short tubes extending into a filter bag from the pump exhaust opening act in a degree as mufflers but have not been classified in this subclass unless the muffling function has been claimed.

Search Class—
181—ACOUSTICS, subclass 85+, for fluid conducting or guiding mufflers, per se.
230—GAS PUMPS AND FANS, subclass 232+, for mufflers combined with the air pump.

327. Cleaning apparatus under subclass 300 in which a hand manipulatable air draft applying means, with or without means for agitating the surface being cleaned, is attached by means of a flexible conduit to a portable air pumping unit or source of air pressure.

(1) Note.—The pump unit is considered to be portable only if it is movable by a force applied thereto by the operator through the flexible conduit, or if it can be carried about by the operator, while the pump is operating so that the cleaning operation can be carried on continuously.

Search this class, subclass—
314—for cleaning apparatus of this character wherein the pump unit or pressure source is relatively stationary and not movable by the operator while cleaning.
321—for tank type systems including the use of a supply of water or other cleaning material.

328. Cleaning apparatus under subclass 300, which, by addition or removal or change in position of parts, may be converted in whole or in part (1) to non-cleaning apparatus, or (2) to cleaning apparatus without air-draft means; also, cleaners capable of applying an air-draft in two or more distinct types of operations, each being exercised alternatively and selected by addition or removal or change in position of parts.

Search this class, subclass—
368+—particularly 373, for air-draft cleaners employing a work-contacting agitator which is adjustable to a position of non-contact.

329. Cleaning apparatus under subclass 328 which is self-contained and may be held in the hand and manipulated for cleaning upholstery and the like, and may be converted, as by the addition of a long handle, for example, for manipulation on a floor or rug by a walking attendant.

Search this class, subclass—
344—for non-convertible "upholstery" type cleaners.

330. Apparatus under subclass 328 having provisions for applying selectively and alternatively suction or air blast.

331. Cleaning apparatus under subclass 328 having a plurality of alternatively usable provisions for applying an air draft and including means to select one or more of such means.

(1) Note.—For the purposes of this and the indented subclasses, the provisions for applying may be a mere port or orifice or may include a flexible conduit with or without a cleaning tool on the working end; the selecting means may be a movable closure for a port.

332. Apparatus under subclass 331 in which means are provided for interlocking or connecting an agitator and/or air pump with the means for converting so that conversion or selection acts to initiate, stop or alter the operation of the agitator or air pump.

(1) Note.—In many patents in this and the indented subclass, the agitator is interlocked so as to preclude operation thereof in contact with the work except when a cleaning function including use of the agitator has been selected.
(2) Note.—Where an air draft diverter only is interlocked so as to be controlled by conversion or selection, the patent is classified below on other than the interlock feature, such as on the diversion feature in subclass 334+.

Search this class, subclass—
334+—for cleaners wherein a diverter valve functions to divert the air flow from one to another air-draft applying means. See (2) Note.

333. Apparatus under subclass 332 wherein the agitator is raised out of contact with the work.

334 Apparatus under subclass 331 having a floor nozzle as one of the air draft provisions and in which the conversion or selection results in diverting or cutting off the air flow through the floor nozzle.

335. Apparatus under subclass 334 having a tubular handle through which air may be caused to flow as a result of diverting or cutting off the flow through the floor nozzle.

336. Apparatus under subclass 335 having means in the nature of supports for rendering the apparatus more stable for use as an off-floor cleaner.

(1) Note.—The supports may be attached to and carried by the apparatus or may be in the nature of separate stands, brackets, or wall-mounted clips.

Search this class, subclass—
323—for complete cleaners combined with a rack or cabinet having stowage for nozzles, wands, hoses, or similar air-draft applying accessories.

337. Apparatus under subclass 334 in which the insertion or attachment of a separable, additive converter element results in diverting or cutting off the floor nozzle air flow.

(1) Note.—In some cases the converter element actuates mechanism which in turn operates a diverter or cut-off, while in other cases the element itself acts as a diverter or cut-off.

Search this class, subclass—
333—for additive converter elements which divert or cut off floor nozzle air flow and also cause the floor nozzle to be raised off the floor.

338. Cleaning apparatus under subclass 328 having a floor nozzle and an air-draft applying means conduit attachment for the open mouth of the nozzle.

339. Apparatus under subclass 300 in which the means for cleaning is combined with apparatus for other purposes and not provided for above.

(1) Note.—The combined features are other than power propulsion for ambulent cleaners (e. g., subclass 340), means to handle, store, or separate the dislodged dirt (e. g., subclass 347+), or mechanical work agitating means (e. g., subclass 363+).

340. Cleaning apparatus under subclass 300 in which power means are provided for propelling a mobile cleaner during cleaning operations.

(1) Note.—The power for propelling may be used also for operating the air pump and other operating elements.
(2) Note.—The tractive effort of a rotary or other moving work-contacting agitating element is not considered to be power propulsion.

341. Cleaning apparatus under subclass 300 in which the air pump or fan is operated by traction or by manual means.

(1) Note.—Manual means here includes use of any part of the human body such as legs or shoulders as well as hands and arms.

Search this class, subclass—
338—for traction operated work-contacting agitators where the claims do not include traction operation of the air pump.

342. Apparatus under subclass 341 in which the air pump is a rotary air impeller.

(1) Note.—Many of these devices include one-way drive means to permit continuous rotation of the impeller while the cleaner is moved forward and backward over the work surface.

343. Devices under subclass 342 in which the air impeller is rotated by hand-operated cranks or the like.

344. Cleaning apparatus under subclass 300 having air draft producing and applying means and a hand grip, and usually including dirt separating and/or storing means, wherein all the components are assembled into a rigid unit, the arrangement being such that when the apparatus is in use, it is (1) entirely supported by the operator, or (2) incapable of self-support in operative relation to the work if provided with a work-engaging carriage or mount so that it must be supported at least in part by means of the handle.

(1) Note.—These devices are the so-called "upholstery," "miniature," or "wand" types.

Search this class, subclass—
329—for hand portable cleaners convertible to floor-type cleaners.

345. Cleaning apparatus under subclass 300 functioning to apply at one time both an air blast and a suction to substantially the same area of work.

346. Apparatus under subclass 345 in which the cleaning air is recirculated in a substantially closed circuit, usually the intake side of the pump being the source of suction and the outlet side being the source of pressure.

347. Cleaning apparatus under subclass 300 having means for collecting or storing or handling the dislodged dust and dirt or for separating the dust and dirt from the air draft.

Search Class—
183—GAS SEPARATION, for air-dirt separating means even though claimed as vacuum cleaners where no air-draft applying means or other work-contacting cleaning means is included in the claims; and see (3) Note to the definition of subclass 300 in this class (15).
302—CONVEYORS, FLUID CURRENT, for fluid current conveying apparatus not particularly adapted for cleaning. The line is largely one of disclosure.

348. Apparatus under subclass 347 having means other than the air stream acting to assist in conveying the dirt set in motion by the air draft or by other dirt dislodging means.

Search Class—
302—CONVEYORS, FLUID CURRENT, subclass 11+, for fluid current conveyers combined with other types of conveyors.

349. Apparatus under subclass 347 having a rotary or other moving agitator and having pans, trays, or the like for catching the heavier dirt particles which have been set in motion initially by the movement of the agitator but which cannot be entrained or removed by the air stream.

Search this class, subclass—
348—for conveying means acting in addition to the air stream, the conveyor generally handling heavier and/or larger particles while the lighter particles remain entrained in the air stream.

350. Hand manipulated apparatus under subclass 347 having a manipulating handle and an air-dirt separator, the separator being mounted on or attached at least in part to the handle.

(1) Note.—The separator and handle may be integrally constructed.

Search this class, subclass—
344—for hand held or wand type cleaners wherein the dirt separator is usually mounted on or attached to the hand grip portion of the cleaner.

351. Apparatus under subclass 350 in which the handle is pivotally or otherwise movably mounted with respect to the air-stream outlet of the air-draft applying means, the arrangement requiring flexibility of the separator or of its connection to the exhaust outlet or to the handle.

352. Apparatus under subclass 347 having provisions for cleaning the filter or other separator elements while assembled in the apparatus.

Search Class—
183—GAS SEPARATION, particularly subclasses 35+, 52+, and 76, for gas separator apparatus cleaning.

353. Apparatus under subclass 347 having liquid and/or deflection type separators.

354. Cleaning apparatus under subclass 300 having an air-draft applying nozzle supported on a work-contacting carriage or mount, the nozzle being movable with respect to the carriage or mount.

(1) Note.—The carriage or mount must be other than or in addition to the nozzle lips, i. e., in addition to that portion of the nozzle defining the work-contacting area of the air draft.
(2) Note.—The movement of the nozzle may result in adjusting the vertical height or the lateral disposition thereof.

Search this class, subclass—
333+—for cleaners convertible from on-floor to off-floor cleaning in which the nozzle is raised when converted to off-floor cleaning.
405+ and 415+—for devices such as tube cleaners having means functioning to engage the work for non-adjustably positioning the nozzle relative thereto.
418—for nozzles per se having provisions for adjusting the area of the mouth.

Search Class—
280—LAND VEHICLES, subclass 43+, for adjustable running gear for air-draft cleaning apparatus where no air-draft applying means is claimed.

355. Apparatus under subclass 354 including a mechanical agitator which is adjustable relative to the nozzle.

Search this class, subclass—
356—for nozzle supported agitators which are biased into contact with the work. The adjustment of the nozzle results in a simultaneous adjustment of the agitator.
368+—for agitators adjustable with respect to the nozzle but including no claimed feature of adjustability of the nozzle.

356. Apparatus under subclass 355 having a work-contacting agitator and in which adjustment of the nozzle also causes adjustment of the agitator.

(1) Note.—Included in this subclass are patents for devices wherein a nozzle-supported agitator is biased into contact with the work surface, the result being that adjustment of the nozzle necessarily effects an adjustment of the agitator relative thereto.

357. Apparatus under subclass 354 in which the nozzle adjustment is determined by the air pressure differential between the ambient atmosphere and the interior of the nozzle.

Search this class, subclass—
319—for nozzle adjustment continuously controlled by a sensing device continuously responsive to the air pressure in the nozzle.

358. Apparatus under subclass 354 having means functioning to sense the elevation of the plane of the covering or work surface with respect to the support-contacting plane of the nozzle mount and to adjust the nozzle to a predetermined or optimum elevation based on the sensed elevation.

(1) Note.—Where the sensing is continuous and the adjustment is continuously controlled thereby, the operation is regarded as being automatic and the patent is classified in subclass 319.

Search this class, subclass—
319—see (1) Note.
362—for cleaners wherein the nozzle height is controlled as a function of the surface penetration of the nozzle mount but the nozzle is not adjusted relative to the mount.

359. Apparatus under subclass 354 in which the nozzle is biased or urged toward an extreme position with respect to the work surface, or is so mounted as to float, that is, follow the contour of irregular surfaces.

(1) Note.—The bias or floating feature must be continuously operative; where there is provided means to hold or retain the nozzle in a fixed position, the patent is classified in other subclasses of this group.

360. Apparatus under subclass 359 in which the nozzle is biased or urged away from contact with the work.

(1) Note.—Usually, downward pressure on the nozzle exerted through the manipulating handle, results in adjusting or varying the nozzle height.

361. Apparatus under subclass 354 having a manipulating handle and in which the nozzle adjustment is controlled or operated by movement relative to the cleaner of the handle or means carried by or attached to the handle.

362. Cleaning apparatus under subclass 300 having a nozzle supported on, and non-adjustable or fixed with respect to, a work-contacting carriage or mount, the work-contacting portion of the mount being constructed and arranged to compensate for or prevent penetration into carpet pile or other yielding surfaces to thereby maintain the nozzle at optimum or substantially uniform spacing from the top of the pile.

363. Cleaning apparatus under subclass 300 of the kind adapted to be moved about over the surface being cleaned having, in addition to air draft applying means, means for brushing, beating, shaking, or otherwise contacting and agitating the work to dislodge and/or remove unwanted foreign material.

(1) Note.—Since nozzle lips usually have a floor covering pile agitating or deflecting action, the mere recitation of such is not considered to be significant agitator structure; but where the nozzle lips are modified to enhance their action as an agitator, classification will be in this or the indented subclasses.

Search this class, subclass—
303 + —for fixed position cleaners having work agitating means.
332 + —for cleaners convertible from on-floor to off-floor cleaning having an agitator and in which the agitator is disabled when converted to off-floor cleaning.
404—for devices wherein the air flow is pulsated to cause agitation of the work, there being no other work-contacting means.

Search Class—
30—CUTLERY, subclass 124 +, for cutlery devices combined with air blast or suction means for collecting or disposing of the severed material, as in plaster cast cutting devices.

364. Apparatus under subclass 363 having means for performing two or more diverse agitating operations on the work.

(1) Note.—The agitating operations need not be performed simultaneously.
(2) Note.—Association of an agitator of the stationary type, as defined in subclass 393 below, with a movable agitator is considered a diverse operations type for the purposes of this and the indented subclasses.

365. Apparatus under subclass 364 having provisions for selecting the operation of any one or more of the diverse agitating means, to the exclusion of the non-selected operations.

(1) Note.—An air draft must be utilized with each mode of operation; if a selected agitating operation is performed without an air draft, the device is considered to be convertible within the definition of subclass 328; see section (2) therein.

Search this class, subclass—
328—see (1) Note.
373—for cleaners wherein the entire agitating means may be retracted to a position of non-use.

366. Apparatus under subclass 364 in which the agitating is performed by rotary means only.

367. Apparatus under subclass 364 in which the only agitating means claimed are relatively fixed, that is, having no movement during cleaning except that due to translation of the cleaner relative to the work.

Search this class, subclass—
393—for non-diverse type stationary agitators.

368. Apparatus under subclass 363 in which the agitating means is movable relative to the air draft applying means for the purpose of adjusting its effectivity.

(1) Note.—Complete retraction of the agitating means to a position of non-use is included in this and indented subclasses.

Search this class, subclass—
355 + —for devices where the nozzle also is adjustable with respect to its mount.

369. Apparatus under subclass 368 wherein the position of the agitating means with respect to the nozzle is changed in response to translational movement of the nozzle as in forward and backward strokes used in cleaning floors.

370. Apparatus under subclass 368 having a rotary agitator and including provisions for adjusting the work-contacting elements radially.

(1) Note.—The radial adjustment usually is to compensate for wear on the work-contacting elements.

Search this class, subclass—
179 + —particularly subclasses 182 and 183, for rotary agitators per se having radially adjustable work-contacting elements.

371. Apparatus under subclass 368 in which the agitating means is yieldingly mounted with respect to the nozzle and biased outwardly thereof into contact with the work in normal positions of use during cleaning.

372. Apparatus under subclass 371 in which the agitating is performed by rotary work-contacting elements.

373. Apparatus under subclass 368 in which the agitating means may be adjusted to a position of non-use, that is, out of contact with the work during normal cleaning use.

Search this class, subclass—
332—for convertible cleaners embodying an agitator interlock whereby conversion to off-floor cleaning also acts to retract the agitator.
365—for means for adjusting one of a plurality of diverse type agitation to a non-use position.

374. Apparatus under subclass 363 in which the agitator contacts the work along a line generally oblique to the normal path of movement of the cleaner.

375. Apparatus under subclass 363 having air inlet means functioning to admit ambient air to the nozzle when the nozzle is in normal operating position with respect to the work, the additional air being other than that drawn through the work at the nozzle or drawn through the space between the work and the nozzle lips.

(1) Note.—The auxiliary air inlet generally functions to supply a quantity of air for moving the dirt dislodged by the agitator particularly when the main air draft through the nozzle mouth is severely reduced by sealing contact of the nozzle mouth with relatively non-porous work.
(2) Note.—The auxiliary air may function to operate air-driven turbines or the like.

Search this class, subclass—
421—for auxiliary air inlets to nozzles having no agitating means.

376. Apparatus under subclass 375 in which the auxiliary air is admitted at such locations that it serves to sweep off or protect from dust and dirt agitator bearings and drive mechanism.

377. Apparatus under subclass 363 in which the driving motor for the agitator is separate from the motor driving the air pumping means.

378. Apparatus under subclass 363 having a guard to inhibit or prevent flexible work such as a rug being drawn into the nozzle and into too close contact with an agitator in the nozzle.

Search this class, subclass—
422—for nozzles per se having work guards.

379. Apparatus under subclass 363 wherein the lips of the air-draft applying nozzle have vibratory motion.

(1) Note.—The entire nozzle may be vibrated, or there may be flexible lips with means to vibrate them.

380. Apparatus under subclass 363 in which the agitator moves in a plane generally parallel to flat work surfaces when the cleaner is in normal use position.

(1) Note.—There must be motion of the agitator relative to the work other than that due to translational motion of the cleaner relative to the work.

381. Apparatus under subclass 363 in which the agitator is mounted for oscillating or to and fro arcuate movement to effect tangential contacting of the work surface.

(1) Note.—Where the agitator rotates through more than 360°, the patent is classified on the basis of a rotary agitator in subclass 383 + even though such rotation be periodically reversed or stopped.

Search this class, subclass—
382—for pivotally mounted agitators functioning to strike a blow against the work with little, if any, tangential or sweeping motion on the work.
383 + —see (1) Note.

382. Apparatus under subclass 363 in which the agitator moves generally perpendicular to the work surface to deliver a blow for dislodging the dirt from the work.

(1) Note.—The agitator may move rectilinearly or pivotally, but in the latter case, there must be no appreciable component of movement parallel to the work surface.

Search this class, subclass—
379—for vibrating nozzle type agitator.

383. Apparatus under subclass 363 in which the agitating means has a rotary motion.

Search this class, subclass—
179—for rotary brushes per se, not limited to vacuum cleaner organizations.
366—for rotary agitating devices performing diverse agitating functions.
381—for agitators mounted for rotary motion but which are restrained to oscillating or rotary to and fro motion of not more than 360°.

384. Apparatus under subclass 383 having a plurality of distinct agitating units arranged in tandem with respect to the usual path of motion of the cleaner while in use.

385. Apparatus under subclass 383 in which the axis of rotation is non-parallel to the work surface.

(1) Note.—Usually the agitator is a radial face or disc type but this subclass also includes those agitators whose axis of rotation is at an acute angle with respect to the work surface.

386. Apparatus under subclass 383 in which the work-contacting element is mounted on the agitator body to turn about an axis spaced from the axis of rotation of the body.

(1) Note.—The elements need not be the sole work contacting means; the body on which they are mounted may in itself also contact the work.

Search this class, subclass—
366—for similar arrangements where diverse agitating operations are performed.

387. Apparatus under subclass 383 in which the agitator is rotated by a draft of air.

(1) Note.—The air used for driving the agitator may be distinct from that used for contacting the work.

Search this class, subclass—
375—for rotary agitators driven by a draft of ambient air admitted other than at the work-contacting portion of the nozzle.
382—for air-current operated striking beater type agitators.

388. Apparatus under subclass 383 in which the agitator is rotated by traction derived from translation of the cleaner over the work.

(1) Note.—There may be a traction wheel or the like with power transmitting means to the agitator, or the agitator may be rotated solely by its contact with the work surface.
(2) Note.—The linear velocity of the agitator may be equal to or greater or less than the translational speed of the cleaner with respect to the work.

389. Apparatus under subclass 383 in which the inventive feature resides in the drive means for imparting rotation to the agitator.

390. Apparatus under subclass 389 having a clutch or other drive disconnect means.

Search this class, subclass—
332 + —for cleaners convertible from on-floor to off-floor cleaning having agitators and in which the agitator drive is disabled when the cleaner is converted to off-floor cleaning.

391. Apparatus under subclass 389 having means for protecting the driving means such as belts from damage due to contact with the work or to dust, lint, etc.

(1) Note.—It is not necessary that the entire run of the belt be protected.

392. Apparatus under subclass 389 in which the inventive feature resides in the agitator support or bearings.

Search this class, subclass—
376—for agitator bearings in which a draft of air functions to clean the bearing.

393. Apparatus under subclass 363 in which the means for agitating is stationary relative to the cleaner and has no motion relative to the work except that which results from moving the cleaner bodily.

Search this class, subclass—
369—for stationary agitators which shift position bodily in the cleaner in response to forward and backward strokes of the cleaner while in use.

394. Apparatus under subclass 393 having opposed facing work contacting means arranged to be circumposed about the work.

395. Apparatus under subclass 393 having bristles or other work contacting means arranged to present diverging or oppositely extending work contacting surfaces.

(1) Note.—The cleaner is usually used between two work surfaces such as the slats of a "Venetian" blind.
(2) Note.—If a plurality of work contactors of the type covered by the above definition are assembled in a unitary device, the resulting device will be one which has opposed working surfaces in addition to those oppositely extending; this organization is not classified in this subclass but is placed above, in subclass 394.

Search this class, subclass—
394—see (2) Note above.

396. Apparatus under subclass 393 in which the air draft applying means includes a hollow head or manifold having a plurality of openings in the face or surface usually presented to the work, the agitating means being associated with the same face.

397. Apparatus under subclass 396 having tubular air ducts communicating with the manifold openings and interspersed throughout the working face of the apparatus.

398. Apparatus under subclass 393 in which the agitator is in the form of a bristle brush or broom.

(1) Note.—For a definition of bristle brush or broom, see subclass 159.

(2) Note.—The subclasses immediately preceding have many patents showing bristle brushes in the special arrangements there provided for; those patents have not been cross-referenced down into this and the indented subclasses; therefore the search to be complete must include the preceding subclasses.

Search this class, subclass—
394—see (2) Note.
395—see (2) Note.
396 + —see (2) Note.

399. Apparatus under subclass 398 in which there is included means to prevent undue spreading of the bristles and/or to form an air seal or shroud to minimize or prevent air flow through the bristles except at or adjacent to the point of contact with the work.

Search this class, subclass—
168 + —for bristle bridles in cleaning implements having no provisions for applying an air draft to the work.

400. Apparatus under subclass 398 in which the agitator is designed as an attachment to be readily attached to or detached from a nozzle or similar air-draft applying means.

(1) Note.—The nozzle may be specially constructed to cooperate with the attaching means.

401. Apparatus under subclass 393 in which the agitator is in the form of a relatively thin blade-like member which contacts the work edgewise and acts to scrape or squeegee the contacted surface.

(1) Note.—This and indented subclasses include patents wherein the nozzle lips are specially constructed or arranged to act as scrapers or squeegees.

Search Class—
30—CUTLERY, subclass 136 +, for knives and scrapers having material holder or disposal means.

402. Apparatus under subclass 401 in which the agitator is serrated or toothed and functions much like a comb or rake.

(1) Note.—Patents for tooth-type brushes, that is with relatively widely spaced teeth in lieu of bristle tufts, are classified here even though having a planar working face.

403. Apparatus under subclass 393 in which the agitator is of the dry mop type, that is, of strands of flexible and usually absorbent material.

(1) Note.—Sheep felt is included herein.
(2) Note.—Wipers not of the strand type, such as felt members, are not considered to be dry mops for this subclass and are found in the subclasses above.

404. Cleaning apparatus under subclass 300 having provisions for pulsating the air flow, the effect generally being to agitate the work such as the nap of a pile rug or the like.

(1) Note.—This subclass includes patents for nozzles having a plurality of air passages with means to apply the air draft successively to the passages, the effect as to any one passage being a pulsating or intermittent air flow even though there is a more or less constant air flow through the nozzle as a whole.

405. Cleaning apparatus under subclass 300 in which the sole cleaning agency is a draft of air from a source of higher-than-atmospheric pressure.

(1) Note.—An air blast device claimed as part of a non-cleaning device or process is classified with such device or process, for example, sand blast abrading is classified in class 51, ABRADING.

Search this class, subclass—
316 + —for installed or fixed position cleaners using air blast only.
330—for cleaners convertible to or from suction and air-blast.
345—for cleaners utilizing both air blast and suction.

Search Class—
51—ABRADING, subclass 8 +, for sand blasting apparatus and see the notes to the definitions thereof for related art. (See (1) Note.)
122—LIQUID HEATERS AND VAPORIZERS, particularly subclass 390 +, for fluid agency cleaning devices combined with boiler structure, and see the reference to class 122 under the definition of subclass 301 above for a statement of the line and reference to other classes involving cleaning of tube type heat exchanging apparatus.
230—GAS PUMPS AND FANS, for the gas pumping subcombination of an air blast cleaner. For a statement of the line, see the reference to class 230 in the definition of subclass 300 of this class (15).
299—FLUID SPRINKLING, SPRAYING, AND DIFFUSING for sprinkling or spraying devices of general utility. For a statement of the line, see the reference to class 299 in the definition of subclass 300 of this class (15).

406. Apparatus under subclass 405 especially adapted for cleaning the inside of hollow work.

(1) Note.—Many of these devices could be used for other than internal cleaning, but peculiarities such as, for example, radially outwardly directed air streams, or tapered nozzles or other devices for co-operating with the open ends of pipes, if disclosed as intended for internal cleaning, will be sufficient to cause classification in this or the indented subclasses.

Search this class, subclass—
409—for nozzle devices embodying a jet pump for inducing a flow of air through a tube.

407. Apparatus under subclass 406 wherein the air blast is controlled by a valve unseated by the pressure of the device against the work.

Search this class, subclass—
104—for non-air blast nozzle devices having a work-operated valve.

408. Apparatus under subclass 406 having provisions whereby the fluid blast induces a flow of ambient air into the tube or other hollow work at the same end of such tube or work as the power fluid is applied.

(1) Note.—The fluids may or may not commingle; in many cases the disclosure is that the induced fluid cleans the outermost end of the tube while the power fluid cleans the remainder.

(2) Note.—Patents for two-tube cleaners wherein a blast of air is directed into one tube and the blast is also used to induce a flow in an adjacent tube are classified in subclass 406 above.

409. Cleaning apparatus under subclass 300 in which the air-draft is induced by a fluid jet.

Search this class, subclass—
408—for air blast cleaning devices where the blast induces a flow thereinto of the ambient air.

Search Class—
230—GAS PUMPS AND FANS, subclass 92+, for jet pumps for producing suction at an inlet member, and for a statement of the line see the reference to class 230 in the definitions of subclass 300 of this class (15).
302—CONVEYORS, FLUID CURRENT, particularly subclass 58 for fluid current conveyor intake nozzles.

410. Cleaning apparatus under subclass 300 having a handle and in which the invention resides in the relation of the handle to the apparatus.

(1) Note.—This subclass includes locks and latches for handles whereby the handle may be secured in a position convenient for storage.

Search this class, subclass—
143+—for handles per se adapted for use with cleaning implements and devices.
329—for hand portable cleaners convertible to on-floor cleaners by the addition of a long handle or the like.
344—for miniature or upholstery type or wand type air draft cleaners having carrying and manipulating handles.
350—for hand-manipulated cleaners having a handle wherein a dust bag or the like is associated with the handle.
361—for cleaners having adjustable nozzles wherein movement of the handle relative to the cleaner acts to adjust the nozzle.

Search Class—
183—GAS SEPARATION, for air vacuum or blast cleaners claiming a handle and air separating means such as a filter but including no cleaning feature.
306—TOOL-HANDLE FASTENINGS, for handles for vacuum cleaners where no work-contacting cleaning feature or air-handling or pumping means is claimed.

411. Devices under subclass 410 in which the handle is so joined to the air draft applying device that by rotating or twisting the handle about its main longitudinal axis either or both (1) the angular position of the device is changed with respect to the axis of the handle, or (2) the device is bodily displaced laterally from the axis of the handle.

412. Cleaning apparatus under subclass 300 claiming a motor and in which the invention resides in the relation of the motor to the apparatus.

(1) Note.—This subclass includes patents for cleaner casings or housings specially fabricated as from stampings or castings to facilitate assembly with the motor.

413. Apparatus under subclass 412 including provisions for causing a draft of air other than the entire main cleaning air stream to contact the motor for cooling or ventilating.

(1) Note.—Patents in which the motor merely is located in the main air stream are excluded from this subclass. Such arrangements generally are found in "tank type" cleaners, see subclass 327 for example.

414. Cleaning apparatus under subclass 300 in which the air-draft applying nozzle means is detachable and/or is extensible.

Search this class, subclass—
328+—where the nozzle is removed or rendered inoperative for the purpose of converting the operation of the cleaner, the conversion feature being claimed.

415. Elemental cleaning devices or nozzles under subclass 300 constructed and arranged particularly for applying suction to a work piece or work surface for the cleaning thereof.

Search this class, subclass—
322—for nozzle devices having means to supply water or other cleaning materials to the work.
405+—for air blast nozzles and see the notes thereto for related art and a statement of the line with other classes.
410—for nozzles having a handle attached thereto for manipulating or steering the nozzle.

Search Class—
302—CONVEYORS, FLUID CURRENT, subclass 58, for fluid current conveyor intake nozzles.

416. Nozzles under subclass 415 having a plurality of distinct mouths alternatively and selectively usable for applying the air draft to the work.

417. Nozzles under subclass 416 having oppositely facing or diverging nozzle mouths and in which the nozzle unit is arranged so that one of the mouths can be brought selectively into a working position wherein the air-draft flows therethrough, the other mouths being isolated or cut off from the air flow.

418. Nozzles under subclass 415 in which the area of the nozzle may be varied or restricted.

Search this class, subclass—
416+—for nozzles wherein the area of one mouth is restricted by bringing into use a smaller mouth mounted therein.

419. Nozzles under subclass 415 having means to regulate the quantity or to cut off the flow of air therethrough.

Search this class, subclass—
328—for nozzles having agitators or the like wherein the air flow may be cut off to convert the nozzle into a non-air-draft device.
407—for air blast cleaning devices having a work-operated valve.

420. Nozzles under subclass 415 in which the work-contacting lips have re-entrant portions functioning to provide a locally intensified inrush of air between the work surface and the nozzle lip.

Search this class, subclass—
402—for nozzles having lips specially constructed or arranged to act as combs, or rakes, the construction being such that the air distribution is generally uniform throughout the nozzle with no locally intensified inrush of air.

421. Nozzles under subclass 415 having air inlet means functioning to admit ambient air to the nozzle when the nozzle is in normal working position with respect to the work, the additional air being admitted to the nozzle other than through the work or between the work and the nozzle lips.

(1) Note.—The air inlet may serve only as a vacuum relief device but usually the additional air assists in dislodging dirt from the work surface.

Search this class, subclass—
375+—for auxiliary ambient air inlets in organizations including an agitator.

422. Nozzles under subclass 415 having means other than or in addition to the nozzle lips acting to hinder or to prevent the work being drawn into the nozzle.

Search this class, subclass—
378—for mouth guards applied to nozzles having an agitator therein.
391—for devices acting to protect the belt of a belt-driven agitator, which incidentally may act also to prevent the work being drawn into the nozzle at that point.
401+—for nozzles incorporating therein a blade-like member functioning as a scraper or squeegee, the positioning of such blade within the nozzle having the effect of acting also to prevent the work being drawn into the nozzle.

24, Buckles, Buttons, Clasps, Etc.

cancel the definition of subclass 124 and substitute:

124. Subject matter under subclass 123 comprising a nut cooperating with a sleeve to compress the sleeve and thereby effect a clamping of the cord or the like.

30, Cutlery

in subclass 133, cancel the note, and the reference thereunder.

34, Drying and Gas or Vapor Contact with Solids

in subclass 92, in (5) Note, in the reference to class 15, cancel "subclass 15 and indented subclasses" and substitute: *subclass 300+, for air blast and/or suction cleaning apparatus.*

in subclass 160, cancel notes 1 through 4, and add:

Search this class, subclass—
15—for chamber sealing by a fluid stream, and see the notes thereto.
156—for apparatus where the blast guides or floats the web.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 300+ and particularly 303+, 316+, and 405+, for blast or suction removal of foreign material such as water from a work piece, and see the reference to class 15 in (3) Note in the main class definition of this class for a statement of the line.

43, Fishing, Trapping, and Vermin Destroying

in subclass 139, cancel the notes 1 through 4, and add:

Search this class, subclass—
113—for insect trapping devices using an illuminator; the combination of a suction device with illuminating means is classified in subclass 139 and cross-referenced in subclass 113.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 300+, for air blast and/or suction devices not limited to insect trapping or catching.

in subclass 141, cancel (1) Note and (2) Note, and add:

Search this class, subclass—
113—for insect trapping devices using an illuminator; the combination of a blast device with illuminating means is classified in subclass 141 and cross-referenced in subclass 113.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 300+, for air blast and/or suction devices not limited to insect trapping or catching.

51, Abrading

in subclass 174, under "Search Class" in the reference to class 15, cancel "5+, 7+," and after "machines" add:

, and subclass 300+ for such machines combined with air blast and/or suction application to the floor

57, Textiles, Spinning, Twisting and Twining

in subclass 56, under "Search Classes" in the reference to class 15, cancel "20 and" and after "160" insert:

for brush devices specially constructed for removing lint from spinning or twisting machines, and 301+ for air blast and/or suction devices for the same purpose and see (2) Note to subclass 301 for a statement of the line.

in subclass 145, change "filaments" to: *strands.*

99, Foods and Beverages

in the class definition under (18) Note, cancel "and 225, Dispensing Beverages,".

in subclass 79, cancel (6) Note, and substitute:

(6) Note.—Class 99, Foods and Beverages, subclass 275, takes apparatus for mechanically charging or carbonating liquids in combination with means to incorporate a flavoring material therewith to form a beverage.

in subclass 275, under "Search Classes" in the reference to class 225, cancel "and other".

103, Pumps

in subclass 6, under "Search Classes" cancel the reference to class 225.

119, Animal Husbandry

in subclass 83, insert:

(1) Note.—Groomers are usually distinguished from currycombs in that the former are usually constructed with soft rubbing or brushing elements or with a wide pneumatic nozzle, in each case the function being that of removing material loosely adhering to the animal, while the latter is provided with more or less rigid teeth or with plain or serrated knife-like bars designed to dislodge or loosen dirt, hair, filth, or vermin closely adhering to the epidermis, the grooming process usually involving (1) the use of the currycomb and (2) the use of brushes or similar grooming devices.

and under "Search Class" in the reference to class 15, after "indented subclasses" insert:

and for the combination of a currycomb or grooming device with air blast and/or suction means where the air draft is applied to the surface being combed or groomed, see subclasses 314+ for installed devices and 364+ for plural diverse type and 401+ for simple, single type combs and groomers

and add:

183—GAS SEPARATION, for dust collectors, dust traps, and devices for purifying the atmosphere.

abolish the definition of subclass 84,

in subclass 95, cancel "the fecal droppings" and substitute: *excrement such as dung and urine*

and add:

Search Class—
128—SURGERY, subclass 275+, particularly 283 and 295 for receptors.

122, Liquid Heaters and Vaporizers

in the class definition, under "(5) Search Classes" in the reference to class 15,

after "subclasses" insert:

for pipe and tube cleaners generally, 314, 316+, and 406+ for pipe and tube cleaners and boiler tube blowers using air or steam blast and/or suction.

and cancel the reference to class 230,

in subclass 379, under "(2) Search Classes" cancel the reference to class 230.

in subclass 390, cancel the second sentence and substitute:

Search this class, subclass—
361—for structure of headers with cleaners for water tube boilers.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, see the reference to this class (15) in "(5) Search Class" in the main class definition.

in subclass 391, in "(1) Search this class" after "392" change the comma to a period and cancel the remainder of the note,

in subclass 392, in the second sentence, after "391" change the semicolon to a period and cancel the remainder of the note.

128, Surgery

in subclass 283, add:

Search Class—
119—ANIMAL HUSBANDRY, subclass 95, for mere receptacle-type manure pouches for use on animals.

in subclass 295, add:

Search Class—
119—ANIMAL HUSBANDRY, subclass 95, for mere receptacle-type urine pouches for use on animals.

131, Tobacco

in subclass 244, cancel the note and add:

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclasses 304, 316+, 395, and 406+, for air blast and/or suction devices for cleaning hollow work other than smoking devices.

132, Toilet

in subclass 12, cancel notes 0.5, 1, and 2, and add:

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclasses 122–140.4, for brushes, wipers, and other applicators combined with material supply, 344 and 402, for combs and the like having an air blast and/or suction applying means.
128—SURGERY, subclass 24+, for massage devices in general, 172+ for devices for applying a medicament to the scalp.

134, Cleaning and Liquid Contact with Solids

in the class definition, in "(5) Index to Preceding Notes" cancel the reference to class 230,

in subclass 8, under "Search Class" in the reference to class 15, cancel "7, 14, 15, and 20," and add: *304, 316+, 395, and 406+,*

in subclass 21, under "Search Class" cancel the reference to class 15 and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 300+, for air blast and/or suction cleaning apparatus.

and cancel the reference to class 119.

166, Wells

in subclass 16, in (1) Note, cancel the reference to class 230.

195, Chemistry, Fermentation

in subclass 107, under "(2) Search Classes" in the reference to class 225, change "6, 8 and 24" to: *6 and 8*.

202, Distillation

in subclass 241, under "(3) Search Classes" cancel the reference to class 230.

222, Dispensing

in the class definition, under "4. Gas or Vapor Dispensers" under "Search Class" cancel the reference to class 15, and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 300+, for air blast and/or suction cleaning devices.

in "19. Puncturing Injectors and Other Nozzles, Spouts and Pouring Devices" under "Search Class" in the reference to class 15, cancel "155+" and substitute: *322 and 415+*,

in the reference to class 137 add:

See also subclass 69 for combinations of a nozzle with a valve when not including other structures provided for in this or some other class.

cancel the reference to class 225, and insert in numerical order:

259—AGITATING, subclass 18+, and particularly subclass 24, for nozzles or faucets having mechanical agitating structure combined therewith.

in the reference to class 299, add:

See also appropriate subclasses, and particularly subclass 141+, for all nozzles or faucets including claimed structure capable of selectively delivering either a high pressure stream or a low pressure stream.

in "24. Miscellaneous Notes . . . Definition" in the reference to class 225, cancel "sec. 19",

in the reference to class 259, after "9" insert: , *19*,

in subclass 129, under "Search Class" cancel the reference to class 225,

establish the following subclass definition:

144.5. Dispensers under subclass 129 having means common to a plurality of the sources, compartments, or containers, to dispense selectively from one or more of said sources, compartments or containers.

Search this class, subclass—
133—for similar selecting means combined with structure for delivering a measured quantity from one of the sources of material, and an indeterminate quantity from another, or selectively from one of the sources.

in subclass 459, insert:

(1) Note.—This subclass includes dispensers having fixed structure which inhibits compacting of the material in the vicinity of the outlet by providing a space into which the material may spread, such as a downwardly diverging side wall or a laterally disposed connecting compartment, so that pressure at the outlet is reduced and bridging or compacting is prevented.

223, Apparel Apparatus

in subclass 43, under "Search Class" cancel "subclasses 14, 15 and 20" and substitute: *subclass 304*,

in subclass 93 add:

Search this class, subclass—
90 and 91—for clamp type garment hangers in combined form.

in subclass 96 add:

Search this class, subclass—
90 and 91—for clamp type garment hangers in combined form.

230, Gas Pumps and Fans

in the class definition, under (4) Note, in the reference to class 15, change "1–20" to: *300+*,

in subclass 46, under "(2) Search Classes" in the reference to class 15, cancel "subclass 9" and add:

subclasses 328+ and particularly 331+, for air blast and/or suction cleaners having plural means selectively operable for applying the air draft.

abolish the definition of subclass 94.

242, Winding and Reeling

in subclass 118, under "Search Classes" cancel the reference to class 28.

255, Earth Boring

in subclass 50, cancel the note and the reference thereunder and substitute:

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 348, for air blast and/or suction cleaning devices having a conveying means for the dust and dirt in addition to the cleaning air draft.

in subclass 60, cancel (1) Note and (2) Note and substitute:

Search this class, subclass—
24+—for earth boring rigs having means for utilizing a fluid for loosening, softening, or removing the earth from the bore hole.
49+—for rock drilling machines utilizing a fluid for removal of cuttings from the hole.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 104.03+, for pipe and tube cleaners other than air blast or suction, and subclasses 304, 316+, 395, and 406+, for devices for cleaning hollow work by air blast and/or suction means.
122—LIQUID HEATERS AND VAPORIZERS, subclass 390+, for fluid jet devices for cleaning boilers of soot and ashes.

259, Agitating

in subclass 89, cancel "(2) Search Class" and the reference thereunder.

299, Fluid Sprinkling, Spraying, and Diffusing

In the class definition, at the end of the first paragraph add the following paragraph:

There are also included in this class, and especially in subclass 141+, claimed structures capable of selectively delivering different types of streams, as in fire hose nozzles, or carbonated beverage faucets, and this feature determines classification in this class unless some specialized class makes special provision therefor. Thus, in the case of a beverage faucet, even the inclusion of measuring means or means to select a chosen flavor does not indicate classification outside of class 299, if means to selectively form either a coarse or fine stream is claimed.

302, Conveyors, Fluid Current

in subclass 11, under "Search Classes" cancel the reference to class 15, and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 348, for air blast and/or suction cleaning devices having a conveying means for the dust and dirt in addition to the cleaning air draft.

in subclass 17, under the note, cancel the reference to class 15, and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, particularly subclasses 335+ and 347+, for cleaning apparatus including fluid current conveyor features.

and cancel the reference to class 119,

in subclass 58, under "Search Classes" cancel the reference to class 15, and substitute:

15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclasses 322 and 415+, for nozzles for air draft and/or suction cleaning apparatus.

and cancel the reference to class 119.

312, Supports, Cabinet Structures

in subclass 31, under "(3) Search Classes" insert in numerical order:

65—KITCHEN AND TABLE ARTICLES, subclass 45, for salt shakers having hygroscopic material.

318, Electricity, Motive Power Systems

cancel the definition and notes to subclass 20, which subclass was abolished in Classification Order No. 21,

in subclass 23.5, under "Search Class" cancel the references to classes 171 and 175 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, appropriate subclasses, for miscellaneous systems for controlling the output of electrical energy by means of a smaller quantity of electrical energy.

323, Electricity, Voltage Magnitude and Phase Control Systems

in the class definition in "XI. Conversion Systems" under "Search Class" in the reference to class 250, change "timers" to: *tuners*.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I. Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 12,720 through 13,028) are part of Schedule 2, Groups 28; 32.

Detailed information concerning specific abstracts should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

Patents Relating to Chlorohydrocarbons

Pat. 1,869,826. Separating Plant for Solutions in Volatile Solvents. Aug. 2, 1932. In a degreasing system, especially a vapor degreaser, an apparatus and method for regenerating solvent, such as trichloroethylene, from a mixture containing grease and for automatically ejecting grease residue from the solvent regenerator.

Pat. 1,869,845. Cleaning of Articles. Aug. 2, 1932. Metal to be cleaned is carried on a continuous carrier through a vapor degreaser (trichloroethylene), an acid pickling bath and finally through a rinsing bath.

Pat. 1,878,276. Composition of Matter. Sept. 20, 1932. Allyl alcohol added to methyl chloride in a refrigeration system to act as a warning agent in case of leakage.

Pat. 1,879,893. Refrigeration Composition. Sept. 27, 1932. Chloropicrin is added to methyl chloride for refrigeration systems to act as a warning agent in case of leakage.

Pat. 1,885,988. Quality Grading. Nov. 1, 1932. Sink-and-Float grading process utilizing a horizontally flowing stream of parting liquid.

Pat. 1,886,034. Odorant for Refrigeration. Nov. 1, 1932. The methyl, ethyl tertiary butyl and isopropyl esters of bromacetic acid are used as a warning agent for refrigerants such as methyl chloride.

Pat. 1,904,450. Stabilization of Halogenated Hydrocarbons. Apr. 18, 1933. Amylene as stabilizer for chlorohydrocarbons such as di-, tri- and perchloroethylene, tetrachloroethane, and methylene chloride.

Pat. 1,905,817. Odorant for Refrigeration. Apr. 25, 1933. Alkyl mercaptans, e. g. ethyl mercaptan, as warning agent for hydrocarbon and chlorohydrocarbons used as refrigerants.

Pat. 1,905,900. Process for Vapor Recovery. Apr. 25, 1933. Chlorohydrocarbon vapors (trichloroethylene) recovered by adsorption on dehydrated alumina gel.

Pat. 1,905,968. Methods and Apparatus for Cleaning Articles Particularly Metallic Goods. Apr. 25, 1933. Reissued May 11, 1937; Re. 20,359. Metal articles are traversed on a conveyor through a vapor solvent heavier than air, e. g. dichloroethylene, which is continuously supplied by heating a solvent body in the apparatus. Upper parts are cooled to prevent solvent loss and solvent is purified by distillation.

Pat. 1,907,875. Methods and Apparatus for Cleaning Articles. May 9, 1933. An apparatus for degreasing articles such as motor car parts which first vapor degreases and then subjects the articles to the action of a spray of hot liquid solvent. Trichloroethylene preferred as solvent.

Pat. 1,911,926. Improvements in Cleaning Baths Employing Volatile Solvents. May 30, 1933. A degreasing apparatus for vapor degreasing featuring a means for confining an air cushion between the vapor solvent and the ambient air.

Pat. 1,915,354. Manufacture of Chloroform. June 27, 1933. Acetaldehyde or acetone is flowed together with an excess of Ca hypochlorite solution to produce chloroform.

Pat. 1,925,602. Stabilized Solvent. Sept. 5, 1933. Chlorohydrocarbons, e. g. trichloroethylene, perchloroethylene and chloroform, are stabilized with triethylamine.

Pat. 1,938,841. Degreasing Systems. Dec. 12, 1933. A degreasing apparatus or system suitable for employing trichloroethylene featuring a vapor bath with a means to provide desired level of vapor and permitting continuous and rapid degreasing.

Pat. 1,978,010. Dewaxing of Oil. Oct. 23, 1934. Lubricating oil is treated with methylene chloride and the resulting mixture cooled to separate the wax. Isolation of the oil from the CH_2Cl_2 leaves an oil of low pour point.

Pat. 1,996,717. Stabilization of Halogenated Hydrocarbons. Apr. 2, 1935. Coffee extract and caffeine stabilize chlorohydrocarbons (trichloroethylene).

Pat. 2,008,680. Stabilization of Halogenated Hydrocarbons. July 23, 1935. Trichloroethylene, tetrachloroethane, and methylene chloride stabilized with phenols such as hydroquinone, p-cresol, resorcinol, etc.

Pat. 2,016,376. Cleaning Process. Oct. 8, 1935. Metal articles are cleaned and degreased by condensing thereon vapors of a high boiling solvent, then immersing the hot article in a liquid bath of a low boiling solvent so that evolution of vapors occurs on the surface of the article.

Pat. 2,024,749. Preparation of Halogenated Ethers. Dec. 17, 1935. Alpha-halogenated aliphatic ethers are reacted with olefines to give gamma-halogenated higher ethers. Metal chlorides, e. g. $BiCl_3$, $ZnCl_2$, etc. are used as catalysts.

Pat. 2,037,419. Manufacture of Halogenated Hydrocarbons. Apr. 14, 1936. Perchloroethylene is chlorinated in absence of light in liquid phase and in presence of a catalyst (I_2, $AlCl_3$, $FeCl_3$, $SbCl_3$) to produce hexachloroethane which is separated by vacuum distillation.

Pat. 2,053,271. Rubber Products. Sept. 8, 1936. Production of rubber products by reacting rubber with a chloromethyl ether.

Pat. 2,070,908. Dry Cleaning Compositions. Feb. 16, 1937. A soap, especially for use in dry cleaning with trichloroethylene, containing a polyglycol as blending agent.

Pat. 2,097,442. Process of Chlorinating 1,1-Dichlorpropene-1. Nov. 2, 1937. Chlorination of 1,1-dichlorpropene-1 to produce 1,1,1,2-tetrachlorpropane.

Pat. 2,110,842. Weed Killing Process. Mar. 8, 1938. Chlorohydrocarbons as weed killers.

Pat. 2,111,043. Dehydrochlorination of 1,1,1,2-Tetrachlorpropane. Mar. 15, 1938. 1,1,2-trichlorpropene-1 is prepared by the reaction of 1,1,1,2-tetrachlorpropane with a base.

Pat. 2,116,437. Dry Cleaning Process. May 3, 1938. Dry cleaning process using 1,1,2-trichlorpropene-1 as solvent.

Pat. 2,116,438. Degreasing Solvent. May 3, 1938. Use of 1,1,2-trichlorpropene-1 as a degreasing solvent, either alone or mixed with other solvents.

Pat. 2,119,484. Chlorination of Propylene Dichloride. May 31, 1938. Production of trichloropropane. Chlorination of propylene dichloride to produce 1,1,2- and 1,2,3-trichloropropane. Iron and ultra-violet light are catalysts.

Pat. 2,123,434. Process of Cleaning. July 12, 1938. Heat exchangers cleaned by forced circulation of a liquid solvent, e. g. trichlorethylene.

Pat. 2,125,381. Stabilization of Chlorinated Compounds. Aug. 2, 1938. Trichloroethylene is stabilized with triphenylguanidine.

Pat. 2,134,102. Dehydrochlorination of 1,1,2-Trichlorpropane. Oct. 25, 1938. 1,1,2-trichlorpropane is converted to 1,1-dichlorpropene-1 by splitting off HCl by means of alkali treatment or by means of a catalyst in the vapor phase.

Pat. 2,139,964. Dielectric Liquids. Dec. 13, 1938. Use of chlorinated cyclic hydrocarbons, e. g. tri-, tetra-, and penta-chlorethyl benzene as dielectric liquids.

Pat. 2,140,519. Chlorohydrocarbon Emulsion. Dec. 20, 1938. Lauryl amine and lauryl amine hydrochloride are utilized as emulsifying agents in the preparation of stable dilute emulsions of tetrachlorethane in water.

Pat. 2,142,995. Dry Cleaning System. Jan. 10, 1939. Spherical container for dry cleaning having two axes of rotation in a gimbel type mounting.

Pat. 2,150,899. Method of and Apparatus for Isolating Minerals. Mar. 21, 1939. Coal (minerals in general) containing indigenous impurities is immersed in a moving parting liquid (halohydrocarbon) of suitable density and coal and impurities are separated from the liquid, then scrubbed with water to remove parting liquid from the solids. Both apparatus and process claimed.

Pat. 2,150,917. Process of and Apparatus for Separating. Mar. 21, 1939. Concerns an apparatus and process for rapidly classifying coal (minerals in general) by transporting coal containing indigenous impurities in a moving halogenated hydrocarbon until a gravity classification is effected.

Pat. 2,150,918. Classification System. Mar. 21, 1939. A method and apparatus for separating coal from slate involving the use of the horizontal classifying action of a moving stream of water and the subsequent vertical classifying effect of a still body of liquid of intermediate specific gravity.

Pat. 2,150,946. Classification System. Mar. 21, 1939. A method and apparatus for separating coal from slate involving the use of the horizontal classifying action of a moving stream of water and the subsequent vertical classifying action of a moving stream of liquid of intermediate specific gravity.

Pat. 2,151,578. Method of and Apparatus for Isolating Minerals. Mar. 21, 1939. Covers the use of film stabilizers in aqueous solution for wetting coal and other indigenous impurities, prior to treatment with a parting liquid (Sink-and-Float process). The film stabilizers, such as emulsoid colloids, glucosides, etc. prevent loss of parting liquor by adherence to the coal.

Pat. 2,153,577. Process of Degreasing. Apr. 11, 1939. Degreasing metals with a solvent containing oleic acid to dissolve soaps and cutting oils.

Pat. 2,155,723. Stabilization of Trichloroethylene. Apr. 25, 1939. Trichloroethylene is stabilized with p-tert-butyl phenol or p-tert-amyl phenol.

Pat. 2,162,326. Safety Device. June 13, 1939. Safety valve for use with chlorhydrocarbon dry cleaning equipment having a ball float which operates to shut off solvent supply when solvent of less than a specified specific gravity enters float chamber.

Pat. 2,171,499. Dry Cleaning Machine. Aug. 29, 1939. Spherical container for articles in a dry cleaning system mounted in an outer container in such manner that the sphere can be rotated on two separate axes each independent of the other.

Pat. 2,171,855. Dielectric Compositions. Sept. 5, 1939. Dielectric compositions comprising mixtures of tri-, tetra-, and pentachlorisopropyl benzene.

Pat. 2,174,289. Dielectric Diluent. Sept. 26, 1939. A product essentially tetrachlorisopropylbenzene, prepared by chlorinating isopropylbenzene is used as a diluent and freeze point depressant for a dielectric mixture of tetra- and pentachlorethylbenzene.

Pat. 2,179,218. 1,1,1-Trichloropropane and Method of Preparation. Nov. 7, 1939. Ethyl chloroform is prepared by reacting 1,1-dichlorpropene-1 with hydrogen chloride in the presence of $AlCl_3$.

Pat. 2,183,835. Valve. Dec. 19, 1939. Valve for mixture of solids and liquid comprising a flexible tube with clamping members.

Pat. 2,183,837. Process and Apparatus for Extraction. Dec. 19, 1939. Process of extracting oils from solid materials with solvents such as chlorhydrocarbons involving crushing the material in the presence of the solvent and filtering the solution through incoming solid material.

Pat. 2,185,639. Heat Transfer Process. Jan. 2, 1940. Chlorinated ethyl benzenes, e. g. tetrachlorethylbenzene and pentachlorethylbenzene, as heat transfer agents.

Pat. 2,186,028. Refrigeration Process. Jan. 9, 1940. Triphenyl guanidine used as oxidation inhibitor in lubricating oil in refrigerator compressors for methyl chloride to prevent "copper plating".

Pat. 2,193,823. Chlorinated Aromatic Hydrocarbons. Mar. 19, 1940. Pentachlorostyrene prepared by dehydrochlorination of alpha-chloroethylpentachlorobenzene; which in turn is prepared by chlorination of ethylpentachlorobenzene.

Pat. 2,193,957. Apparatus for Washing. Mar. 19, 1940. Apparatus and process for separating parting liquid (halogenated hydrocarbons) from the surfaces of coal (minerals in general) and separated solids. Solids supported on a shaker screen are washed with strong streams of H_2O, the apparatus being hermetically sealed, and parting liquid is separated from the water.

Pat. 2,202,418. Classification System. May 28, 1940. Sink-and-Float apparatus with means for separating stream of classifying liquid into upper and lower channels which have endless screen belts for liquid discharge.

Pat. 2,208,758. Process of Classifying Minerals. July 23, 1940. Coal to be separated from indigenous impurities by the parting liquid method is first treated with an aqueous solution of an agent (e. g. starch acetate, CH_2O-naphthalene sulfonic acid condensation product, etc.) which forms an insoluble compound with the "active agent" which is to be used prior to treatment with the parting liquid. This method reduces the losses of parting liquid on coal.

Pat. 2,221,538. Classification System. Nov. 12, 1940. Sink-and-Float mineral separation apparatus, separate discharges for sinks and floats at top and bottom of a heavy liquid tank.

Pat. 2,228,014. Classification System. Jan. 7, 1941. Mineral classification system including a conical chamber for parting liquid, a hydraulic aspirator for ejecting solids from apex of said chamber and means for removing floating solids.

Pat. 2,253,102. Method of Reducing Shrinkage of Wool. Aug. 19, 1941. Shrinkproofing wool and keratinous fabrics generally by means of alpha-halogenated ethers, e. g. dichlordimethyl ether.

Pat. 2,257,389. Recovery of Levulinic Acid. Sept. 30, 1941. Extraction of levulinic acid with methylene chloride.

Pat. 2,264,390. Apparatus for Extraction. Dec. 2, 1941. Method and apparatus for extraction of oils, fats or waxes using a solvent, e. g. trichloroethylene or perchloroethylene, whose density is greater than that of the oil being extracted. Particularly relates to extraction of soya bean oil.

Pat. 2,266,840. Analysis of Minerals. Dec. 23, 1941. Apparatus for determining the ash content of coal by a sink-and-float separation method.

Pat. 2,268,146. Dielectric Compositions. Dec. 30, 1941. Dihydronaphthalene or a dimer thereof is used as a stabilizer for dielectric compositions comprising chlorinated aromatic compounds, particularly polychlorethylbenzenes.

Pat. 2,277,053. Apparatus for Recovery of Liquids from Solids. Mar. 24, 1942. A settling tank or separator for use in recovering parting liquid in mineral separation processes.

Pat. 2,278,906. Liquid Storage and Handling System. Apr. 7, 1942. System for storing and handling parting liquids for use in conjunction with mineral separation apparatus. The system includes a metering device between interconnected storage reservoirs.

Pat. 2,280,794. Purification of Tetrachloroethylene. Apr. 28, 1942. Perchloroethylene is refluxed with aqueous caustic to convert impurities such as beta-trichloroethylene and asymmetrical tetrachloroethane, to dichloroethylene and trichloroethylene which can be separated by fractional distillation.

Pat. 2,286,985. Analysis of Gas Mixtures. June 16, 1942. Photoelectric method and apparatus for detecting vapors, e. g. trichloroethylene, in air.

Pat. 2,290,758. Trichlorostyrene and Method of Preparing the Same. July 21, 1942. Chlorination of ethyltrichlorobenzene to monochloroethyltrichlorobenzene and conversion of the latter to trichlorostyrene.

Pat. 2,290,759. Tetrachlorostyrene and Method of Preparing the Same. July 21, 1942. Chlorination of ethyltetrachlorobenzene to monochloroethyltetrachlorobenzene and conversion of the latter to tetrachlorostyrene.

Pat. 2,291,375. Preparation of 2-Chlorobutene-2. July 28, 1942. Preparation of 2-chlorobutene-2 ex 2,3-dichlorobutane by dehydrochlorination with aqueous caustic or lime.

Pat. 2,308,489. Manufacture of Halogenated Olefines. Jan. 19, 1943. Substitution halogenation of olefines by reacting an olefine with a hydrogen halide and oxygen in presence of an oxidation catalyst at 250–600° C. For example, di-, tri-, and perchloroethylene are produced from ethylene, HCl and O_2 using CuO catalyst.

Pat. 2,311,507. Shrinkproofing Process. Feb. 16, 1943. Improvement in woolen textiles by treatment with a chlorinating agent such as N,N'-dichloro-5,5-dimethyl hydantoin dissolved in a solvent comprising dioxane.

Pat. 2,316,669. Dry Cleaning System and Method of Dry Cleaning. Apr. 13, 1943. Inner clothes container and outer casing of a dry cleaning system have fans so adjusted and controlled that regulated removal of dry cleaning solvent is secured without excessive removal of natural moisture of articles treated.

Pat. 2,317,112. Cleaning Composition. Apr. 20, 1943. A dry cleaning and degreasing composition comprising a liquid chlorinated aliphatic hydrocarbon solvent and an N-hydroxyalkylamide of an aliphatic monobasic monocarboxylic acid.

Pat. 2,321,923. Apparatus for Extraction. June 15, 1943. Weir discharge arrangement on an extraction apparatus for discharging miscella so as to prevent clogging of the screen at the point of discharge.

Pat. 2,327,174. Preparation of Halogenated Olefines. Aug. 17, 1943. Substitution halogenation of olefines by reacting an olefine with a halogen and oxygen in the presence of an oxidation catalyst at 250–600° C. For example, di-, tri-, and perchloroethylene are produced from ethylene, Cl_2 and O_2 using CuO catalyst.

Pat. 2,334,015. Solvent Recovery Apparatus. Nov. 9, 1943. Drier and steamer assembly for removing residual solvent from extracted meal.

Pat. 2,342,100. Preparation of Unsaturated Halogenated Aliphatic Hydrocarbons. Feb. 22, 1944. Preparation of unsaturated aliphatic halogenated hydrocarbons, e. g. perchloroethylene, trichloroethylene, or vinyl chloride by passing a mixture of oxygen and an aliphatic halogenated hydrocarbon, e. g. tetrachlorethane, beta-trichlorethane or ethyl chloride, containing at least two H atoms and two to four C atoms over an oxidation catalyst, e. g. metal oxides and particularly copper oxide, at 300–600° C.

Pat. 2,342,414. Method for Transmitting Power and Fluid Agent Therefor. Feb. 22, 1944. Power transmission fluids comprising a mixture of ethyl polychlorbenzene and trichlorbenzene.

Pat. 2,355,508. Dry Cleaning System. Aug. 8, 1944. Dry cleaning apparatus having a washer in an outer casing. The clothes washer is provided with special "Z" shaped imperforate partition to form two separate compartments.

Pat. 2,361,072. Manufacture of Trichloroethylene. Oct. 24, 1944. Trichloroethylene is produced from tetrachloroethane by heating the latter in the presence of a nitrogen base, e. g. triethylamine or quinoline.

Pat. 2,374,923. Manufacture of Unsaturated Halogenated Hydrocarbons. May 1, 1945. Substitution halogenation of an unsaturated aliphatic halide containing two to four C atoms by reaction with a hydrogen halide and oxygen in the presence of an oxidation catalyst.

Pat. 2,379,414. Manufacture of Unsaturated Halogen-Containing Compounds. July 3, 1945. Substitution halogenation of unsaturated aliphatic halides containing two to four carbon atoms by reaction with a halogen and oxygen in the presence of an oxidation catalyst at 200–600° C.

Pat. 2,396,788. Reaction and Products Therefrom. Mar. 19, 1946. Bis (polyhalovinyl) sulfides are produced by reacting a halogenated open chain olefine having at least two halogen atoms on the doubly bonded carbons and a hydrogen atom on at least one of said carbons (e. g. trichloroethylene) with sulfur monochloride in the presence of a Friedel-Crafts catalyst (preferably aluminum chloride). Dehydrohalogenation occurs during distillation of the reaction products.

Pat. 2,404,096. Chlorinated Methylene-Bis-Dimethyl Hydantoin. July 16, 1946. N,N'-dichloro-(methylene-bis-dimethyl hydantoin), a new product by reacting chlorine with methylene-bis-dimethyl hydantoin in a dilute aqueous alkaline medium.

Pat. 2,412,389. Halogenated Organic Compounds. Dec. 10, 1946. Nuclear chlorinated xylylene dichlorides containing from one to four nuclear substituted chlorine atoms and method for their production by reacting paraxylene with chlorine in the presence of a chlorination catalyst and then reacting the resulting product with chlorine in the presence of actinic radiation.

Pat. 2,414,704. Process for Shrinkproofing Wool. Jan. 21, 1947. Process of shrinkproofing wool by use of aqueous solutions of an N-chlorohydantoin of pH 1-3.

Pat. 2,422,255. Rinse Compositions. June 17, 1947. A germicidal rinse composition containing 1,3-dichloro-5,5-dimethyl hydantoin, 5,5-dimethyl hydantoin, sodium dodecylsulfate and sodium dihydrogen phosphate.

Patents Relating to Cyanides and Electroplating

Pat. 1,841,978. Tin Plating. Jan. 19, 1932. About 1.6 moles of alkali per mole of alkali stannate plus an additional amount of 0.2 to 0.4 moles of alkali is maintained in the electrolyte for the electrodeposition of tin.

Pat. 1,852,856. Process of Producing Cyanide. Apr. 5, 1932. Sodium calcium cyanide produced at 1400° C. by introducing the reactants (e. g. CaC_2, plus Na or Na-producing compound, or CaC_2 plus N_2 plus NaCN) beneath surface of molten Na-Ca cyanide at such rate that reaction occurs before loss of volatile materials.

Pat. 1,905,304. Cyanide Process. Apr. 25, 1933. Sodium cyanide produced by reacting $CaCN_2$ with carbon and Na at about 1000° C. according to the equation: $CaCN_2$ plus C plus 2Na equals 2NaCN plus Ca.

Pat. 1,908,319. Evolution of Hydrocyanic Acid from Calcium Cyanide. May 9, 1933. A fumigant mixture of $Ca(CN)_2$ and anhydrous NH_4CN, the latter to accelerate evolution of HCN.

Pat. 1,909,042. Calcium Cyanide. May 16, 1933. Unslaked lime is suspended in liquid HCN in presence of accelerating amounts of H_2O to form calcium cyanide.

Pat. 1,914,843. Process for Heat Treatment of Non-Cementable Metals. June 20, 1933. Non-cementable alloys containing zinc are heat treated in a salt bath containing charcoal and an alkali metal cyanide.

Pat. 1,915,425. Process for the Manufacture of Cyanate. June 27, 1933. Urea is reacted at elevated temperatures in absence of solvent with an alkali metal carbonate or hydride to produce alkali metal cyanates.

Pat. 1,919,000. Process for Electrodeposition of Tin. July 18, 1933. Ratio of caustic alkali to alkali metal stannate concentration in a tin plating bath is lowered by addition of a weak acid and hydrogen peroxide or a percompound.

Pat. 1,937,629. Black Finishing Metal Articles. Dec. 5, 1933. Black finishing of chromium plated articles is accomplished by treatment in molten salt bath containing an alkali or alkaline earth cyanide.

Pat. 1,943,580. Process for Conducting Catalytic Reactions. Jan. 16, 1934. Method used in regulating reaction temperature in catalytic production of ammonia. Fresh reactant gas is injected at right angles to flow of gas in reaction space and as it enters the zone it dilutes the partially reacted gas.

Pat. 1,947,570. Treatment of Sodium Calcium Cyanide. Feb. 20, 1934. Na-Ca cyanide is treated with liquid NH_3 which dissociates it and extracts the NaCN leaving $Ca(CN)_2$.

Pat. 1,950,879. Preparation of Calcium Cyanide. Mar. 13, 1934. CaO is suspended in an inert, non-aqueous liquid such as ether and HCN is added. Reaction to produce $Ca(CN)_2$ is accelerated by small amounts of H_2O and NH_3.

Pat. 1,950,899. Manufacture of Hydrocyanic Acid. Mar. 13, 1934. Mixture of a cyanide and a sulfite in solution treated with acid to simultaneously evolve HCN and stabilizing amounts of SO_2.

Pat. 1,961,569. Process of Producing Cyanide. June 5, 1934. Calcium cyanide is produced ex CaC_2 by mixing CaC_2 with a fluxing material, e. g. NaCl, melting the mixture and causing portions of the fused material to be repeatedly raised and freely dropped in an N_2 atmosphere.

Pat. 1,962,091. Case Hardening. June 5, 1934. Boron compounds such as B_2O_3 are added to alkali metal cyanide case hardening baths to decrease the carburizing action and increase the nitriding action. Bath may be used on iron or plain carbon steel as well as on alloy steels.

Pat. 1,966,253. Manufacture of Cyanides. July 10, 1934. Alkali metal cyanides are produced by passing HCN, NH_4CN or formamide, over an alkali metal carbonate, removing H_2O and/or NH_3 and/or CO_2 from off-gas and recirculating residual gas.

Pat. 1,970,852. Process and Composition for Treating Metals. Aug. 21, 1934. Ferrous metal articles are case hardened in a bath containing 30–60% $NaCl_2$ and more than 10% NaCN.

Pat. 1,971,149. Purification of Molten Metal. Aug. 21, 1934. Copper or copper alloys are treated in the molten state with copper cyanide to effect deoxidation or desulfurization after which the melt is degasified.

Pat. 1,977,210. Process for the Preparation of Thiourea. Oct. 16, 1934. CO_2 is passed into an aqueous solution of Ca cyanamide to form Ca cyanamide carbonate which is then reacted with H_2S to form thiourea.

Pat. 1,977,440. Manufacture of Lead Sulfocyanide. Oct. 16, 1934. Alkali metal sulfocyanide solution is treated to precipitate carbonate ferrocyanide and sulfide impurities, after which the purified solution is treated with a soluble lead salt to produce pure lead sulfocyanide.

Pat. 1,979,214. Case Hardening. Oct. 30, 1934. 20–30% or more of strontium salts is melted with NaCl to form an eutectic mixture to which 1–15% of alkali metal cyanide is added to give a non-scumming case hardening bath.

Pat. 1,984,415. Preparation of Cyanhydrins. Dec. 18, 1934. In the production of cyanhydrins from aldehydes or ketones and HCN (e. g. lactonitrile ex CHO and HCN) the cyanhydrin is used as reaction medium.

Pat. 1,996,065. Fumigant. Apr. 2, 1935. $Al_2(SO_4)_3$ and a cyanide are reacted with H_2O to evolve HCN. Composition may also contain Portland cement, plaster of Paris or CaO and light oil or a lower alcohol.

Pat. 2,000,134. Manufacture of Hydrocyanic Acid. May 7, 1935. HCN produced ex NH_3, hydrocarbons and carbon, by heating the mixture of gases with air to 400–1000° C., then passing the mixture through carbon at 1100–1500° C. Reaction heat maintained by oxidation of reactants, principally the carbon which is also a catalyst.

Pat. 2,003,745. Gas Generator for Fumigation. June 4, 1935. Gas generator for forming gas by reacting a solid with a liquid.

Pat. 2,004,130. Cyanide Process and the Product. June 11, 1935. Sodium-calcium cyanide is produced by heating crude calcium cyanamide with Na or NaCN to about 1400° C. and rapidly cooling.

Pat. 2,004,332. Treating Solids with Liquid. June 11, 1935. For fumigating a pulverant mixture of alkali cyanide with anhydrous $Al_2(SO_4)_3$ is suspended on cheese cloth. Porosity of the cloth permits addition of H_2O from beneath to generate HCN without leaving unwetted material or pasty mass.

Pat. 2,015,406. Generation of Toxic Gas. Sept. 24, 1935. Mixture of $Al_2(SO_4)_3$ and an alkali cyanide is reacted with water to evolve HCN for fumigation. Chalk, talc, sil-o-cel, wheat, bran, sawdust, etc., used as residue conditioners.

Pat. 2,015,668. Manufacture of Alkali Metal Cyanides. Oct. 1, 1935. Sodium cyanide and calcium carbide are produced by reacting calcium cyanamide with Na and C at 700–1000° C.

Pat. 2,029,826. Dehydration of Solutions. Feb. 4, 1936. Cyanide solutions are evaporated in a stream of inert gas by contacting the solution at a suitable rate with a surface the temperature of which is maintained above the boiling point of the solution so that instantaneous evaporation is effected.

Pat. 2,031,790. Method of Cooling Molten Material. Feb. 25, 1936. Method of rapidly cooling molten cyanide by impinging on a moving surface inclined from the horizontal (e. g. an inclined drum or endless belt).

Pat. 2,042,527. Process for Nitriding. June 2, 1936. A fused salt bath containing NaCN and as the active constituent an alkali metal cyanamide is used in nitriding steel at 400–600° C. without appreciable carburization.

Pat. 2,042,549. Process of Removing Water from Cyanide. June 2, 1936. Cyanide solutions containing more than 28% NaCN are evaporated by applying the solution in a thin film to a surface (e. g. rotating drum) heated above the boiling point of the solution so that evaporation is rapid. Produce is scraped from the surface.

Pat. 2,049,806. Carburization of Ferrous Metals. Aug. 4, 1936. Iron or steel articles are case hardened by treatment in a fused salt bath to which is added non-metallic carbon-nitrogen compounds, e. g. HCN polymer, hexamethylenetetramine, oxamide, cyanogen, alkyl amines, etc., at carburizing temperatures, e. g. 800–900° C.

Pat. 2,055,136. Process of Producing White Cyanide by Fusion. Sept. 22, 1936. Cyanide containing free carbon is heated to about 1200° C. to oxidize the carbon, then cooled slowly to near the melting point to produce a white fused product.

Pat. 2,062,609. Fumigating Gas Generator. Dec. 1, 1936. Gas generator for reacting a solid with a liquid to produce gas.

Pat. 2,069,543. Process of Polymerizing Hydrocyanic Acid and Product Thereof. Feb. 2, 1937. Production of HCN polymer ex aqueous solutions of HCN in the presence of a catalyst, e. g. NH_3 or NaOH.

Pat. 2,075,623. Zinc Plating. Mar. 30, 1937. Ductile zinc plated from purified cyanide bath at high current efficiencies.

Pat. 2,078,014. Screen Manufacture. Apr. 20, 1937. Wire screen having the wires soldered at intersecting points produced by electroplating and heat-treating out of contact with air, e. g. tin-plated screen is dipped in hot tallow.

Pat. 2,078,868. Electroplating Process. Apr. 27, 1937. Bright electroplated deposits of fusible metals, e. g. Sn, Cd, Zn, Pb, are produced by etching the base metal with acid, treating with an alkaline solution, electroplating and heat treating at a temperature above the fusion point of the plated metal in a non-oxidizing medium, e. g. in a tallow bath.

Pat. 2,078,869. Electroplating Process. Apr. 27, 1937. Production of alloy coatings by electrodepositing a layer of low m. p. metal (e. g. Sn), then depositing a thin layer of high m. p. metal (e. g. Cu) and heating to alloy the plated layers.

Pat. 2,085,543. Process for Coating Metals. June 29, 1937. Bright tin plate obtained by electroplating tin containing nickel or copper and then heat treating.

Pat. 2,101,704. Insecticidal Composition. Dec. 7, 1937. A copper cyanide composition capable of forming stable emulsions in water for insecticidal uses is prepared by precipitating CuCN in the presence of inert solids (e. g. sil-o-cel, carbon black), mixing the ppt. with a syrup (e. g. molasses) and drying.

Pat. 2,104,269. Metal Plating. Jan. 4, 1938. Articles electroplated with fusible metals are heat treated and again electroplated to produce bright crystalline or "spangled" deposits.

Pat. 2,108,292. Furnace and Method of Firing. Feb. 15, 1938. Down-draft furnace for heating cyanide pots, in manufacture of sodium cyanide from sodium, ammonia, and carbon.

Pat. 2,111,050. Agricultural Spray Material. Mar. 15, 1938. Agricultural sprays comprising aqueous suspensions of copper cyanide mechanically agitating CuCN, a protective colloid (e. g. gelatine, gum tragacanth) and water.

Pat. 2,125,377. Cyanide Manufacture. Aug. 2, 1938. Active sodium or other alkali metal carbonate reacted with HCN at 300–450° C. for the production of alkali metal cyanide.

Pat. 2,128,819. Method of Melting Cyanides. Aug. 30, 1938. Melting cyanide under reduced pressure to avoid excess decomposition.

Pat. 2,138,519. Cyanide Manufacture. Nov. 29, 1938. Continuous, counter-current process for producing NaCN ex HCN and Na_2CO_3.

Pat. 2,146,439. Zinc Plating. Feb. 7, 1939. In the production of bright zinc electrodeposits baths are purified by the addition of soluble sulfur compounds, e. g. thiocyanates, thiosulfates, xanthates, sulfides, thiourea.

Pat. 2,181,773. Brass Plating. Nov. 28, 1939. Brass plating solution containing high caustic soda concentration; includes white brass.

Pat. 2,194,438. Disposal of Waste Cyanide Solutions. Mar. 19, 1940. Decomposing waste cyanide solutions by reaction with lime-sulfur.

Pat. 2,211,251. Tin Plating. Aug. 13, 1940. Polyvinyl alcohol as addition agent in stannite tin plating baths.

Pat. 2,221,562. Electroplating. Nov. 12, 1940. White brass as undercoat for nickel plating.

Pat. 2,222,592. Purification of Copper. Nov. 26, 1940. Metal cyanides dissolved in a siliceous slag composition used to purify molten copper.

Pat. 2,224,823. Method for Devolatilizing Charcoal. Dec. 10, 1940. Method and apparatus for devolatilizing charcoal in which the required heat is obtained by burning the gases evolved from the charcoal.

Pat. 2,231,009. Heat Treating Process. Feb. 11, 1941. Fused cyanide or salt bath operated under inert gas atmosphere for heat treating steel.

Pat. 2,231,010. Heat Treating Process. Feb. 11, 1941. Controlling the carburizing activity of fused salt baths containing a cyanogen compound by maintaining bath under an atmosphere containing a controlled amount of oxygen.

Pat. 2,235,828. Prevention of Season Cracking of Brass. Mar. 25, 1941. Season cracking of brass prevented by washing with cyanide solution followed by treatment with solution of an organic sulfur compound, e. g. mercaptobenzothiazol.

Pat. 2,247,579. Recovery of Heat Treating Salts. July 1, 1941. Heat treating metals by immersion in fused salt bath and withdrawing metal before its temperature reaches melting point of bath so as to facilitate removal of adhering salt from the metal by flexing.

Pat. 2,287,654. Copper Plating. June 23, 1942. Bright copper plating process using bath containing NaOH, NaCNS and a carbohydrate, e. g. starch.

Pat. 2,315,568. Cleaning Steel Surfaces. Apr. 6, 1943. Sulfocyanide anodic cleaning process for cleaning steel articles.

Pat. 2,339,223. Method of Case Hardening. Jan. 11, 1944. Case hardening steel to obtain a deep carbon case by treatment in case hardening bath at high temperature, followed by nitriding at lower temperature. Cementite precipitation in the grain boundaries is avoided by this method.

Pat. 2,342,104. Manufacture of Light Armor Plate. Feb. 22, 1944. Armor plate is produced by forming composite steel plates having plies of varying carbon content and subjecting the plies to cementation at elevated temperatures to cause carbon diffusion at the juncture of the plies.

Pat. 2,347,448. Bright Copper Plating. Apr. 25, 1944. Plating bath for bright copper in which part of the Na ions are replaced by K ions. For example, NaOH is partially replaced by KOH.

Pat. 2,347,450. Electrodeposition of Copper from Fused Bath. Apr. 25, 1944. Electrodeposition of copper by electrolysis of a molten cyanide bath.

Pat. 2,364,292. Case Hardening. Dec. 5, 1944. Case hardening in cyanide baths activated with titanium cyanonitride or titanium carbide.

Pat. 2,371,725. Lead-Coated Steel. Mar. 20, 1945. Ferrous metal surfaces are coated with lead by first applying a coat of copper to the ferrous metal surface and then dipping the coated metal into molten lead. Preferably the molten lead is covered by a flux containing cyanide.

Pat. 2,380,284. Method of Cleaning Ferrous Metal Articles. July 10, 1945. Cleaning metal articles by contact with fused alkali metal hydroxide containing dissolved alkali metal cyanide.

Pat. 2,406,189. Method for Tin Plating. Aug. 20, 1946. Alkali metal-tin alloy anodes for stannate tin plating baths.

Pat. 2,410,844. Metal Plating Process. Nov. 12, 1946. Soluble metal salts of hydroxythiols as new compositions which are used in immersion and electroplating.

Pat. 2,419,190. Conditioning Treatment of Magnesium for Electroplating. Apr. 15, 1947. Magnesium is conditioned for electroplating by treatment in a bath comprising a monobasic unsaturated aliphatic acid, aliphatic ester thereof, or heavy metal salt thereof, at elevated temperatures. For example, linoleic acid at 270° C. may be utilized.

Pat. 2,429,970. Silver Plating. Oct. 28, 1947. Electroplating silver from a cyanide bath, using mercaptobenzothiazole as addition agent. Other thiazole compounds, e. g. thioacetanilide and trimercaptocyanuric acid may also be used.

Pat. 2,431,601. Production of Sodium Ferrocyanide. Nov. 25, 1947. Production of sodium ferrocyanide by reaction of aqueous sodium cyanide in finely divided iron, air being passed through the reaction mixture.

Pat. 2,432,718. Tin-Plating Process. Dec. 16, 1947. Tin plating by electrolyzing a potassium stannate solution containing 15 to 30 ounces per gallon of potassium carbonate.

Pat. 2,434,191. Removing Organic Impurities from Copper-Cyanide Electroplating Baths. Jan. 6, 1948. Organic impurities are removed from electroplating baths by addition of a soluble salt of an alkaline earth metal (including magnesium) to precipitate the hydroxide. A magnesium salt is preferred.

Pat. 2,436,244. Metalworking and Stripping-Plating Process. Feb. 17, 1948. Simultaneous stripping and plating of copper in a bath containing copper cyanide, sodium cyanide and phosphate ions.

Patents Relating to Cyclohexane-Cyclohexene

Pat. 2,054,099. Synthetic Resins. Sept. 15, 1936. Polymerizing cyclohexene oxide and dihydronaphthalene oxide with certain catalytic halides of metals whose hydroxides are amphoteric.

Pat. 2,116,439. Cyclic Oxides and Their Preparation. May 3, 1938. Preparation of cyclohexene oxide by reacting a mixture of cyclohexene chlorhydrin and cyclohexane with a base.

Pat. 2,119,485. Cyclohexene Chlorohydrin. May 31, 1938. Production of cyclohexene chlorhydrin by the reaction of hypochlorous acid on a mixture of cyclohexene and cyclohexane.

Pat. 2,154,049. Chlorination of Cyclohexane. Apr. 11, 1939. Stannic chloride as a catalyst for the chlorination of cyclohexane.

Pat. 2,183,574. Preparation of Unsaturated Cyclic Compounds. Dec. 19, 1939. Production of cyclohexene by passing a mixture of cyclohexane and chlorcyclohexane over a catalyst (e. g. $BaCl_2$, charcoal, aluminum oxide).

Pat. 2,187,006. Polymerization of Epoxy Compounds. Jan. 16, 1940. Polymerization of cyclohexene oxide, using acid-washed clay as catalyst.

Pat. 2,197,105. Alicyclic Hydroxy Ethers. Apr. 16, 1940. Hydroxy ethers made by reacting cyclohexene oxide with alcohols.

Patents Relating to Formaldehyde

Pat. 1,905,033. Concentration of Formaldehyde Solutions. Apr. 25, 1933. Distillation of formaldehyde by vaporizing under pressure and high temperatures and condensing in H_2O or dilute CH_2O solution to avoid formation of paraform.

Pat. 1,937,381. Oxidation Catalysts. Nov. 28, 1933. Catalyst comprising electrolytic silver crystals and up to 1% of an oxide of V, W, Mo, Ce, Th, Zn, Al, or Cr for use in oxidizing alcohols, e. g. CH_3OH to CH_2O.

Pat. 1,945,315. Formaldehyde Condensation Product. Jan. 30, 1934. Acetone-soluble condensation product of NH_4CNS and H_2CO.

Pat. 1,968,552. Oxidation of Alcohols. July 31, 1934. Aliphatic aldehydes (formaldehyde) produced by oxidation of alcohols with electrolytic Ag catalyst. Promoters may also be used.

Pat. 2,000,152. Stabilization of Formaldehyde Solutions. May 7, 1935. Aqueous formaldehyde solutions are stabilized with water-soluble organic nitrogen compounds capable of reversible reacting with formaldehyde to form a water-soluble compound. Stabilizers, aside from urea, are: thiourea, acetoxime, glycine, etc.

Pat. 2,002,243. Formaldehyde Solution. May 21, 1935. Hydrogen sulfide added to formaldehyde solutions to prevent polymer formation.

Pat. 2,005,645. Process of Oxidizing Aliphatic Alcohols to Aldehydes. June 18, 1935. Porous compacted silver obtained by reducing compacted silver oxide is used as catalyst for producing aldehydes (CH_2O) ex alcohols. Oxides of tungsten, etc. used as promoters.

Pat. 2,042,657. Preparation of Soluble Paraformaldehyde. June 2, 1936. A soluble paraformaldehyde is produced by adding sodium silicate to formaldehyde solution and drying the resultant gel.

Pat. 2,061,063. Tanning Process. Nov. 17, 1936. Formamide as an inhibitor for protein hardening agents.

Pat. 2,073,666. Method of Hardening Proteins. Mar. 16, 1937. Protein compositions containing a potential hardening agent, e. g. $Al(OH)_3$ and a material (e. g. formamide) capable of evolving a volatile base and thereby activating the hardening agent.

Pat. 2,081,236. Chlorinated Hydrocarbon in Non-Caking Powdered Form. May 25, 1937. Formaldehyde polymers, particularly paraformaldehyde and the polyoxymethylenes in finely ground form are used as anti-caking agents to prevent powdered paradichlorbenzene and hexachlorethane from caking upon standing.

Pat. 2,101,574. Hardening of Proteins. Dec. 7, 1937. Hardening proteins by the action of formaldehyde and formamide.

Pat. 2,121,697. Synthetic Resins. June 21, 1938. Formaldehyde-barbituric acid and formaldehyde-uracil resins.

Pat. 2,125,375. Vaporization of Formaldehyde. Aug. 2, 1938. SO_2 is added to formaldehyde solution to prevent precipitation of paraform on evaporation.

Pat. 2,135,063. Method of Producing Pentaglycol. Nov. 1, 1938. Pentaglycol ex condensation of formaldehyde with isobutyraldehyde.

Pat. 2,224,910. Process of Condensing Formaldehyde Compounds. Dec. 17, 1940. Hydroxyaldehydes and ketones from formaldehyde compounds wherein the condensation is carried out in aqueous medium at least 8% formaldehyde with an enediol present. The hydroxy aldehydes and ketones may be hydrogenated to polyhydric alcohols.

Pat. 2,269,935. Process for Producing Hydroxy Aldehydes and Hydroxy Ketones. Jan. 13, 1942. Production of hydroxyaldehydes and hydroxyketones by reacting aqueous formaldehyde with an enediol in the presence of a compound of an element of the fourth group of the periodic table.

Pat. 2,296,249. Polymers of Formaldehyde. Sept. 22, 1942. Plastic, high molecular weight formaldehyde polymers and their preparation by polymerizing formaldehyde in an inert solvent in the presence of an aliphatic acylethenone and an organic isocyanate.

Pat. 2,304,431. Method of Effecting Chemical Reactions. Dec. 8, 1942. Reactions of trioxane with formaldehyde acceptor materials, e. g. phenol, in an anhydrous medium in presence of a depolymerization catalyst to form CH_2O reaction products, e. g. phenol-CH_2O resins.

Pat. 2,308,696. Water Insoluble Resinous Condensation Products. Jan. 19, 1943. Resinous condensation product of formaldehyde with semi-carbazide.

Pat. 2,317,456. Formaldehyde-Crotonaldehyde Condensation Product. Apr. 27. 1943. Condensing a formaldehyde substance with crotonaldehyde in the presence of an alkaline catalyst and catalytically hydrogenating the condensation product, the formaldehyde substance and the crotonaldehyde being the sole reactants present in the condensation reaction.

Pat. 2,321,958. Formaldehyde Addition Products and Their Preparation. June 15, 1943. Addition products (methylol sulfamates) of formaldehyde with sulfamates, particularly calcium sulfamate, prepared by reactions in alkaline media.

Pat. 2,355,599. Acid Metal Treating Baths. Aug. 8, 1944. Trioxane as corrosion inhibitor in acid pickling and cleaning baths.

Pat. 2,355,600. Formaldehyde Reaction Product and Its Preparation. Aug. 8, 1944. Calcium methylol sulfamate is produced by reacting formaldehyde with calcium sulfamate under substantially anhydrous conditions at a pH of 8 to 10 in a reaction mixture having a pasty consistency. Preferably paraformaldehyde is utilized as a source of formaldehyde in the reaction. Methanol may be used to form the paste.

Pat. 2,369,439. Reactions Between Organic Nitrogen Compounds and Reaction Products of Formaldehyde with Sulphamates. Feb. 13, 1945. Reacting proteins or other organic nitrogen compounds with formaldehyde-sulfamate derivatives, e. g. calcium methylol sulfamate.

Pat. 2,369,503. Reactions Between Organic Nitrogen Compounds and Reaction Products of Formaldehyde with Sulphamates. Feb. 13, 1945. Reacting proteins or other organic nitrogen compounds with formaldehyde-sulfamate derivatives (e. g. calcium methylol sulfamate) prepared under alkaline conditions.

Pat. 2,373,777. Solubilization of Formaldehyde Polymers. Apr. 17, 1945. Use of hexamethylenetetramine for solubilizing formaldehyde polymers, particularly paraformaldehyde.

Pat. 2,379,555. Polyglyoxal Hydrate. July 3, 1945. Polymerized glyoxal hydrates are prepared by distilling an aqueous solution of glyoxal at a reduced pressure less than atmospheric and not exceeding 150 mm. of mercury.

Patents Relating to Formamide

Pat. 1,934,433. Vaporization of Formamide. Nov. 7, 1933. Process for flash vaporization of formamide by contact with surface heated to temperature above the boiling point.

Pat. 1,934,485. Treatment of Formamide. Nov. 7, 1933. Liquid formamide contacted with heated metal surface so that it is immediately vaporized, and removing vapor as formed.

Pat. 1,950,875. Process for the Vaporization of Formamide. Mar. 13, 1934. Liquid formamide is continuously added to a vaporizer which consists of a heated sloped metal surface which permits maintaining a shallow liquid pool on the heated surface.

Pat. 1,958,209. Manufacture of Ammonium Thiocyanate. May 8, 1934. Formamide, ammonia and sulfur are heated to 100–160° C. in the presence of a catalyst $(NH_4)_2S$ to form thiourea and ammonium sulfocyanide.

Pat. 1,984,411. Method of Case Hardening. Dec. 18, 1934. Ferrous metals are case hardened by subjecting them to formamide vapor at 1300–1800° F. Supplementary carburizing agents such as hydrocarbons or phenols may be used simultaneously.

Pat. 1,986,348. Apparatus for Effecting Gas Reaction. Jan. 1, 1935. Walls of a reaction chamber for endothermic gas reactions (e. g. $HCONH_2$ equals HCN plus H_2O) are made the closed secondary circuit of a step-down transformer, heat being generated in the walls by inductance.

Pat. 1,999,390. Apparatus for Vaporization of Formamide. Apr. 30, 1935. A vaporizer having a heated sloped metal surface which permits maintaining a shallow liquid pool on the heated surface during vaporization of a liquid such as formamide.

Pat. 2,037,423. Rubber Latex Composition. Apr. 14, 1936. Rubber latex solutions containing formamide as a preservative.

Pat. 2,037,878. Process for Making Mercapto Thiazole Compounds. Apr. 21, 1936. Formamide treated with S and aryl amine to give mercapto thiazole either as ammonium salt or as thiazole itself depending on the proportions used.

Pat. 2,042,451. Dehydration of Formamide to Produce Hydrocyanic Acid. June 2, 1936. Formamide is dehydrated to produce HCN by passage over a heated metal surface having an adherent coating of an oxide. The oxide coating is formed by oxidizing an adherent film of a metal (Zn, Al, Mn, Cr, or Sn).

Pat. 2,047,919. Cellulose Acetate Composition. July 14, 1936. Formamide-cellulose acetate compositions useful as textile finishes, leather dressing, etc.

Pat. 2,079,623. Tobacco Treatment. May 11, 1937. Treatment of tobacco with formamide.

Pat. 2,089,095. Soldering Flux. Aug. 3, 1937. Soldering flux containing formamide and a fluxing agent, e. g. $ZnCl_2$.

Pat. 2,104,264. Paint Composition. Jan. 4, 1938. A water paint containing formamide and a binding material, e. g. casein, rubber latex.

Pat. 2,130,807. Printing Composition. Sept. 20, 1938. Printing ink containing formamide and an adhesive, e. g. casein.

Pat. 2,146,448. Acetylene Solution. Feb. 7, 1939. Dimethyl formamide and other compounds having a carbonyl group and one or more dialkyl amino groups as solvents for acetylene.

Patents Relating to Hydrocyanic Acid

Pat. 2,043,930. Manufacture of Hydrocyanic Acid. June 9, 1936. Production of HCN by reacting nitric oxide with a hydrocarbon in the absence of water.

Pat. 2,069,545. Synthesis of Hydrocyanic Acid. Feb. 2, 1937. Process for producing HCN from NH_3 and hydrocarbons in which part of the required heat is supplied by preheating the reactants and the remander by simultaneous oxidation of part of the hydrocarbon. A free reaction space without catalyst is used.

Pat. 2,076,953. Manufacture of Hydrocyanic Acid. Apr. 13, 1937. HCN is produced by passing NO, inert gas and hydrocarbon gas over a Pt-Rh catalyst at 800–1400° C. A combination process includes oxidation of NH_3 to produce NO.

Pat. 2,079,404. Catalyst Preparation. May 4, 1937. Supported platinum alloy (e. g. Pt-Rh) catalyst formed by heating a platinum compound in a non-reducing gas. The catalyst is useful for producing HCN ex hydrocarbons.

Pat. 2,083,824. Manufacture of Hydrocyanic Acid. June 15, 1937. Production of HCN ex hydrocarbons and NO or NH_3 using a platinum metal catalyst prepared according to the method of U. S. P. 2,079,404.

Pat. 2,086,731. The Recovery of Hydrocyanic Acid. July 13, 1937. Aliphatic polyhydric alcohols, their esters, ethers, and mixed ether-esters are used as solvents for HCN in its removal from gases.

Pat. 2,086,732. Processes and Products Relating to the Recovery of HCN. July 13, 1937. Ethers, ether-esters of polyhydric alcohols which are normally liquid and which contain no more than three directly linked carbon atoms devoid of carbon atoms per molecule are used as solvents for HCN.

Pat. 2,184,062. Manufacture of Hydrocyanic Acid. Dec. 19, 1939. HCN is produced by reacting NO, inert gas and hydrocarbon gas at 800–1400° C. in the absence of a catalyst.

Pat. 2,194,370. Stabilization of Liquid Hydrocyanic Acid. Mar. 19, 1940. Phosphoric acid as a stabilizer for HCN.

Pat. 2,381,344. Synthesis of HCN and Catalyst Therefor. Aug. 7, 1945. Hydrocyanic acid by gas phase reaction of a nitrogen compound and a hydrocarbon wherein the gases are passed in contact with a platinum metal and thence through a contiguous bed of granular refractory material.

Pat. 2,387,577. Production of Hydrocyanic Acid. Oct. 23, 1945. In the production of hydrocyanic acid by vapor phase reaction of nitric oxide and a hydrocarbon the reaction gases are first passed into contact with a non-porous refractory material free from catalyst for the reaction and then into contact with a non-porous refractory material coated with a platinum metal.

Pat. 2,409,429. Production of Hydrocyanic Acid. Oct. 15, 1946. In production of hydrocyanic acid ex nitric oxide and hydrocarbon gas, preignition is prevented by periodically interrupting the reaction, abrading and recoating the refractory walls of the reaction chamber, replacing the refractory on top of the catalyst layer and resuming operation.

Patents Relating to Peroxide

Pat. 1,854,327. Process of Making Hydrogen Peroxide. Apr. 19, 1932. A method for distilling persulfates or persulfuric acid to produce H_2O_2 employing a distillation apparatus having a lead or acid resisting heat transfer portion whose surfaces are continuously covered by a film of the solution.

Pat. 1,868,513. Process and Apparatus for Treating Textile Materials. July 26, 1932. A bleaching kier and process, wherein bleach liquor is forced outwardly through a mass of textile material.

Pat. 1,922,187. Process for the Purification of Air. Aug. 15, 1933. Exhaled air is regenerated by contacting it with a mixture of an alkali metal trioxide and hydroxide to which may be added Na, CO or Cu oxide or catalyst.

Pat. 1,929,121. Process for the Preparation of Ammonium Perborate. Oct. 3, 1933. Ammonia is bubbled into concentrated solution of boric acid and H_2O_2 until an excess is present and ammonium perborate is precipitated.

Pat. 1,937,621. Electrolytic Apparatus. Dec. 5, 1933. Cell for the electrolytic production of persulfuric acid, etc., featuring narrow annular anode chamber and a reenforced platinum anode.

Pat. 1,937,710. Bleaching Animal Fibers. Dec. 5, 1933. Animal fibers, especially rabbit hair, is bleached in an acid solution of a percompound containing a soluble Al salt.

Pat. 1,953,526. Absorbent Material. Apr. 3, 1934. A surgical bandage which is impregnated with borax peroxide to act as a deodorant and disinfectant.

Pat. 1,953,567. Leavening Process. Apr. 3, 1934. Method of baking using percompounds as leavening agents in which the dough is let stand until H_2O_2 content is less than 0.08% of dry flour before baking.

Pat. 1,958,204. Stabilization of Peroxide Solutions. May 8, 1934. Peroxide solutions, such as H_2O_2, stabilized with tin compounds such as sodium stannate. The solution must be acid (pH 3.5–6.0) and a pyrophosphate is used to peptize the tin compound.

Pat. 1,978,953. Method of Preparing an Alkali Metal Perborate. Oct. 30, 1934. A solution of borax and H_2O_2 is evaporated under reduced pressure to produce borax peroxide.

Pat. 1,995,063. Stabilization of Hydrogen Peroxide Solutions. Mar. 19, 1935. H_2O_2 solutions are stabilized with hydroquinone or a hydroquinone derivative.

Pat. 1,996,292. Container Closure. Apr. 2, 1935. A bung closure for Al drums for H_2O_2 having a vent chamber with internal and external vents and a drain connection.

Pat. 1,998,883. Blue Printing. Apr. 23, 1935. Exposed blueprints are developed by treatment with a urea peroxide solution.

Pat. 2,004,809. Stabilizing H_2O_2 Solutions with Pyrophosphoric Acid Plus a Tin Compound. June 11, 1935. A compound made by heating together $SnCl_2$ and H_3PO_4 is used to stabilize acid 100–174 Vol. H_2O_2.

Pat. 2,006,967. Seed Treatment. July 2, 1935. The germination of seeds is accelerated by treatment with an aqueous solution of a percompound, e. g. H_2O_2.

Pat. 2,008,726. Storing and Handling Hydrogen Peroxide Solutions. July 23, 1935. Al containers for H_2O_2 which are first pickled with nitric acid solution are not pitted by H_2O_2 at a pH of 3.5–6.0 if 0.1–0.5 g. NH_4NO_3 is present per liter of H_2O_2.

Pat. 2,017,440. Purification of Hydrogen Peroxide. Oct. 15, 1935. Hydrogen peroxide is purified by adding to H_2O_2 solution at a pH of 1.4–3.5 a colloidal SnO_2 solution and removing the precipitated stannic hydroxide.

Pat. 2,021,384. Removal of Acid from Peroxide Solutions. Nov. 19, 1935. Sulfuric acid is removed from H_2O_2 solutions by addition of a basic barium compound such as $Ba(OH)_2$. Treatment also combined with tin solution purification treatment (see U. S. P. 2,017,440).

Pat. 2,026,068. Process for the Improvement of Cellulose. Dec. 31, 1935. Cellulose is first partially bleached with Cl_2, then treated with alkali, then with alkali metal peroxide and finally with an acid bath to give an improved, bleached cellulose for the production of viscose.

Pat. 2,027,838. Stabilizing Hydrogen Peroxide Solutions with Pyrophosphoric Acid. Jan. 14, 1936. Pyrophosphates used to stabilize H_2O_2 at a pH of 1–7.

Pat. 2,027,839. Purification of Hydrogen Peroxide Solutions. Jan. 14, 1936. H_2O_2 solutions purified by precipitation therein of stannic hydroxide at a pH of about 2. Aluminum salts may be added to coagulate the stannic hydroxide.

Pat. 2,028,481. Method of Distillation. Jan. 21, 1936. H_2O_2 is obtained from a persulfuric acid solution by distillation in vacuo in two or more stages, the liquid residue being diluted with H_2O between distillation stages.

Pat. 2,049,975. Process of Bleaching Sulfonated Oils. Aug. 4, 1936. Sulfonated oils, e. g. sulfonated castor oil, are bleached by treating with H_2O_2 using a small amount of a cobalt compound as a bleaching promoter.

Pat. 2,049,977. Container. Aug. 4, 1936. Drum with a gas venting bung.

Pat. 2,049,979. Treatment of Hydrogen Peroxide Vapors. Aug. 4, 1936. Sulfuric acid fog is removed from H_2O_2 vapors by passing the vapors over a solid surface which is wet with sulfuric acid. Preferred solid surface comprises a 15" layer of quartz fragments ¼" to ¾" in diameter.

Pat. 2,051,745. Leavening Process. Aug. 18, 1936. In the production of slow baked products, peroxide leavened dough is allowed to stand until the amount undecomposed peroxide is less than 0.5% of the weight of the dry flour.

Pat. 2,053,740. Process of Preserving. Sept. 8, 1936. Cream is preserved by adding H_2O_2 and heating to 61–63° C.

Pat. 2,065,744. Direct Process for Making Sodium Perborate. Dec. 29, 1936. Substantially dry alkali metal perborate prepared in one-stage process whereby a metal borate is reacted upon in a hydrogen peroxide solution with alkali metal peroxide. The amount of water is limited in the reacting products to a slight excess over that necessary for the type of hydrated perborate desired.

Pat. 2,067,364. Manufacture of Hydrogen Peroxide. Jan. 12, 1937. H_2O_2 produced by two-stage distillation of persulfuric acid: (1) concentration with partial hydrolysis, (2) steam distillation to complete hydrolysis.

Pat. 2,070,922. Manufacture of Baked Products. Feb. 16, 1937. In the production of H_2O_2-leavened baked goods an alkaline material (e. g. Na_2CO_3) is added to increase H_2O_2 decomposition at high temperatures.

Pat. 2,072,665. Bleaching Process. Mar. 2, 1937. In bleaching cattle hair, iron is removed by treating with a reducing agent (e. g. bisulfite) then with acid; the hair is then given an alkaline scour and bleached with alkaline H_2O_2.

Pat. 2,075,468. Leavening Process. Mar. 30, 1937. Peroxide leavened doughs are allowed to stand until the amount of undecomposed peroxide does not exceed 0.5% of the weight of the dry flour.

Pat. 2,082,656. Process of Purification of Sugar Solutions. June 1, 1937. Refining sugar by treating substantially neutral solutions with H_2O_2.

Pat. 2,091,178. Stabilizing Hydrogen Peroxide Solutions with Pyrophosphoric Acid Plus a Tin Compound. Aug. 24, 1937. Pyrophosphoric acid-tin stabilizer for H_2O_2 prepared by heating orthophosphoric acid and stannic chloride.

Pat. 2,091,186. Stabilization of Bleach Baths. Aug. 24, 1937. Acid peroxide baths used for bleaching wool and stabilized by filtering through cellulosic material, e. g. "Kimpak".

Pat. 2,092,746. Bleaching Fur. Sept. 14, 1937. Fur, e. g. rabbit fur, is bleached in an alkaline peroxide bath (H_2O_2 or Na_2O_2) containing a soluble oxalate.

Pat. 2,094,384. Electrolytic Apparatus and Process. Sept. 28, 1937. Electrolysis cell, e. g. for preparation of persulfuric acid, in which the anolyte and catholyte are maintained at approximately the same level.

Pat. 2,104,120. Bleaching Composition. Jan. 4, 1938. A dry solid mixture for use in bleaching, comprising sodium peroxide and boric acid (preferably metaboric acid).

Pat. 2,108,282. Process of Bleaching Beeswax. Feb. 15, 1938. Bleaching beeswax with H_2O_2 and Na_2O_2.

Pat. 2,113,433. Process of Bleaching Ester Type Wax. Apr. 5, 1938. Wax bleached with H_2O_2, or other percompounds.

Pat. 2,116,517. Stimulation of Mold Growth. May 10, 1938. Stimulating the growth molds by subjecting them to the action of hydrogen peroxide.

Pat. 2,122,421. Tobacco Treatment. July 5, 1938. Tobacco is treated with a solution of a wetting agent "Duponol" and then with alkaline H_2O_2 to extract undesirable constituents.

Pat. 2,125,274. Process and Apparatus for the Preparation of Solutions. Aug. 2, 1938. Sodium peroxide dissolver.

Pat. 2,125,383. Purification of Lactic Acid. Aug. 2, 1938. Lactic acid purified by steam distilling and adding H_2O_2 to the distillate.

Pat. 2,125,398. Process of Milk Sterilization. Aug. 2, 1938. Milk is sterilized by adding thereto H_2O_2 and KI.

Pat. 2,155,717. Process for Preparing Addition Products of Alkali Metal Perborates and Urea. Apr. 25, 1939. Production of urea perborate ex perborate and urea.

Pat. 2,159,999. Preventing the Caking of Sodium Perborate. May 30, 1939. Magnesium benzoate as anti-caking agent for perborate.

Pat. 2,160,391. Bleaching Process and Composition. May 30, 1939. Stabilization of peroxide bleach baths with magnesium compounds, e. g. magnesium silicate, which are rendered soluble by the successive addition of acid and alkali to the bath.

Pat. 2,176,508. Activator for Oxygen Baths. Oct. 17, 1939. Certain organic sulfonic acid compounds as activators for peroxide bleach baths and the like.

Pat. 2,187,016. Process of Treating Ground Wood. Jan. 16, 1940. Bleaching ground wood paper pulp with peroxide.

Pat. 2,199,376. Bleaching of Ground Wood Pulp. Apr. 30, 1940. Ground wood pulp bleached by use of Na_2O_2 in alkaline solution at 80–120° F.

Pat. 2,202,270. Preparation of Sodium Monoxide. May 28, 1940. Na_2O ex Na and NaOH.

Pat. 2,202,478. Bleaching of Cotton. May 28, 1940. Covers replenishment of peroxygen bleach baths which have been used by addition of more percompound and stabilizer before bath is again used.

Pat. 2,218,031. Preventing the Caking of Sodium Perborate. Oct. 15, 1940. Magnesium oxide as anti-caking agent for perborate.

Pat. 2,224,831. Electrolysis Cell. Dec. 10, 1940. Improved electrolysis cell for the preparation of persulfuric acid or persulfates. The cell is of the single-pass, single-flow type, employing but one electrolyte.

Pat. 2,224,834. Preventing the Caking of Sodium Perborate. Dec. 10, 1940. Magnesium sulfate as anti-caking agent for perborate.

Pat. 2,224,835. Storing and Handling Hydrogen Peroxide. Dec. 10, 1940. Anodically oxidized aluminum for H_2O_2 containers.

Pat. 2,257,461. Sodium Perborate Product. Sept. 30, 1941. Sodium perborate tetrahydrate in the form of a dense mass prepared by extruding the molten material into a cool saturated solution of the same which sets it.

Pat. 2,264,745. Improvement of Tobacco. Dec. 2, 1941. Quality of tobacco is improved by spraying with ammoniacal H_2O_2 solution maintained at a temperature of 10° C. or below.

Pat. 2,267,718. Textile Treating Process. Dec. 30, 1941. Method and apparatus for treating textile materials with alkaline liquors, e. g. for scouring or bleaching, wherein the material is saturated with the liquid, heated by direct contact with steam and then stored at elevated temperature.

Pat. 2,279,088. Purification of Sodium Monoxide. Apr. 7, 1942. Removal of free Na ex Na_2O by heating in inert atmosphere containing small amount of O_2.

Pat. 2,286,995. Purification of Acetic Acid. June 16, 1942. Decolorizing acids, e. g. acetic acid, with organic or inorganic monoperacids.

Pat. 2,290,601. Bleaching of Ground Wood Pulp With Preliminary Bisulfite Treatment. July 21, 1942. Two-stage bleaching of ground wood pulp involving treatment with acid bisulfite followed by treatment with an alkaline peroxide solution.

Pat. 2,304,098. Process of Preparing Zinc Peroxide. Dec. 8, 1942. Preparation of zinc peroxide ex Na_2O_2 using a manganese and/or copper compound as activator.

Pat. 2,304,104. Therapeutical Zinc Peroxide. Dec. 8, 1942. Preparation of zinc peroxide for therapeutic use ex Na_2O_2 and a zinc salt.

Pat. 2,304,435. Treatment of Dyed Textile Fabric. Dec. 8, 1942. Marked-off naphthol dye stains are stripped from partially bleached textile fabrics using peracids.

Pat. 2,304,474. Heat Treatment of Textile Fabrics. Dec. 8, 1942. U-shaped steaming tube for the heat treatment of textile fabrics. For use in continuous bleaching with peroxide.

Pat. 2,311,314. Purification of Water. Feb. 16, 1943. Iron and manganese impurities removed from water by oxidation with monopersulfuric (Caro's) acid, followed by pH adjustment to precipitate the metals as hydroxides.

Pat. 2,316,487. Container for the Storage of Solutions of Peroxygen Compounds. Apr. 13, 1943. Use of magnesium and alloys thereof as construction materials for surfaces of containers for alkaline solutions of peroxygen compounds.

Pat. 2,333,916. Stabilization of Bleach Baths of High Alkalinity. Nov. 9, 1943. Stabilization of peroxygen bleach baths of high alkalinity by addition of sodium pyrophosphate and magnesium sulfate.

Pat. 2,334,066. Textile Treating Process. Nov. 9, 1943. Method of bleaching textile materials with alkaline peroxygen bleach liquors wherein the textile goods are saturated with the liquor, quickly heated by passage through a steam tube and then stacked in a J-box where bleaching occurs (continuous bleach method).

Pat. 2,334,126. Refining of Sugar and Sugar Syrups. Nov. 9, 1943. Sugar decolorized by treatment with a peracid.

Pat. 2,341,535. Process for Improving Tobacco. Feb. 15, 1944. Treatment of tobacco involving stemming and steaming, spraying with aqueous alkaline H_2O_2 (high concn.), aging in a stack, and then drying.

Pat. 2,346,186. Heat Treatment of Textiles. Apr. 11, 1944. Apparatus for heat treatment of textile fabrics, having a U-shaped steaming tube in combination with means for expanding high-pressure steam to atmospheric pressure and means for reducing the temperature of the expanded steam by admixing air at room temperature. For use in continuous bleaching with peroxide.

Pat. 2,362,401. Detergent Compositions. Nov. 7, 1944. A dry stable detergent composition which yields in aqueous solution an oxidizing agent of high activity, said composition comprising a solid inorganic peroxygen compound, an organic acid anhydride, and a solid detergent.

Pat. 2,371,691. Preparation of Quinolinic Acid. Mar. 20, 1945. Quinoline is oxidized to copper quinolinate using a peroxide, e. g. H_2O_2, in the presence of an organic acid and the copper salt of an organic acid.

Pat. 2,377,038. Manufacture of Peracids. May 29, 1945. Peracids and their salts are prepared by reacting a dilute alkaline solution of an inorganic peroxide and an organic acid anhydride under conditions where the pH of the reaction mixture falls within the range 5.0 to 11.0.

Pat. 2,397,762. Storage Compartment in Shape of Catenary. Apr. 2, 1946. Textile-storage apparatus, the confining surfaces of which are arranged in the form of the mathematical curve known as the catenary. For use in bleaching operations.

Pat. 2,403,311. Textile Rope-Stacking Apparatus. July 2, 1946. A textile rope stacking apparatus comprising a container and a rope-forwarding roller having reverse helical rope-forwarding grooves, the bottom of the grooves forming an elliptical outline.

Pat. 2,426,142. Bleaching Cotton Textile Goods. Aug. 19, 1947. Cotton textiles are soured in aqueous peracid solution prior to bleaching with H_2O_2 or Na_2O_2.

Pat. 2,426,154. Stabilization of Peroxide Solutions. Aug. 19, 1947. Aqueous solutions of peroxides are stabilized in the acid range by the use of a weak organic acid buffering agent in addition to the usual stabilizing agents. Preferably dibasic carboxylic acids are used, e. g. malonic, succinic, glutaric, and adipic acids.

Pat. 2,429,971. Method of Preparing a Therapeutic Zinc Peroxide. Oct. 28, 1947. Zinc peroxide for therapeutic use containing as a catalyst a metal from the second and third transition series of Group VIII of the Periodic Table.

General Aniline & Film Corporation has placed more than 3,000 patents on the Register of Patents as being available for licensing. The patents are grouped in five sections. The following patents (Reg. Nos. 13,029 through 13,399) are in Section 3, relating to Miscellaneous Organic Compounds and Processes, including Vinyl Compounds and Iron Carbonyl, Groups 28; 33; 35. Inquiries concerning these patents should be addressed to the Patent Department, General Aniline & Film Corporation, 247 Park Ave., New York 17, N. Y.

SECTION 3

Miscellaneous Organic Compounds and Processes, Including Vinyl Compounds and Iron Carbonyl

Pat. 1,840,286. Metallic Core for Electromagnets. Jan. 5, 1932.

Pat. 1,841,973. Production of Metal Carbonyls. Jan. 19, 1932.

Pat. 1,842,989. Mediums for Inhibiting the Perishing of Artificial and Natural Varieties of Rubber. Jan. 26, 1932.

Pat. 1,843,434. Concentration of Aqueous Formic Acid. Feb. 2, 1932.

Pat. 1,844,015. New Condensation Products from Phosphine Oxides and Phenolic Compounds. Feb. 9, 1932.

Pat. 1,844,408. Production of Phosphoric Acid Esters of Aliphatic Alcohols. Feb. 9, 1932.

Pat. 1,845,198. Manufacture of Resinous Products. Feb. 16, 1932.

Pat. 1,845,563. Production of Amines of the Hydroaromatic-Aliphatic Series. Feb. 16, 1932.

Pat. 1,848,268. Process of Preparing Artificial Materials and Coatings of All Kinds. Mar. 8, 1932.

Pat. 1,849,428. Iron Oxide Pigments and Process of Producing the Same as By-Products of the Reduction of Aromatic Nitrocompounds. Mar. 15, 1932.

Pat. 1,850,144. Process of Preparing Hydrogenated Aromatic Carboxylic Acid Esters. Mar. 22, 1932.

Pat. 1,851,021. Production of Synthetic Tanning Agents. Mar. 29, 1932.

Pat. 1,851,040. Production of Chloropropionic Esters. Mar. 29, 1932.

Pat. 1,852,541. Production of Metal Carbonyls. Apr. 5, 1932.

Pat. 1,855,793. Production of Iron Having Valuable Magnetic Properties. Apr. 26, 1932.

Pat. 1,857,333. New Synthetic Resins. May 10, 1932.

Pat. 1,857,557. Production of Iron Oxide Pigments. May 10, 1932.

Pat. 1,857,655. Process of Preparing Secondary and Tertiary Aliphatic Amines from Primary Aliphatic Bases. May 10, 1932.

Pat. 1,857,879. Metal Powder. May 10, 1932.

Pat. 1,858,220. Production of Metal Carbonyls. May 10, 1932.

Pat. 1,858,627. Process for Manufacturing Artetrahydronaphthols and Their Esters. May 17, 1932.

Pat. 1,859,399. New Process for Introducing Sulphocyanic Groups in Aliphatic Compounds. May 24, 1932.

Pat. 1,860,441. Hardened Artificial Materials and Process of Preparing Them. May 31, 1932.

Pat. 1,860,479. Synthetic Resins. May 31, 1932.

Pat. 1,862,599. Catalytic Manufacture of Hexahydro Aniline. June 14, 1932.

Pat. 1,863,572. N-Substituted Dithiocarbamic Acids and the Salts Thereof. June 21, 1932.

Pat. 1,863,814. Synthetic Resins. June 21, 1932.

Pat. 1,865,191. Cellulose Nitrate Lacquer. June 28, 1932.

Pat. 1,865,405. Process of Preparing Acetic Anhydride. June 28, 1932.

Pat. 1,867,049. Ortho-Hydroxy-Carboxylic Acids of Fluorene. July 12, 1932.

Pat. 1,869,768. Production of Phosphoric Esters. Aug. 2, 1932.

Pat. 1,869,862. Vulcanization Accelerator. Aug. 2, 1932.

Pat. 1,873,934. Vulcanization Accelerator. Aug. 23, 1932.

Pat. 1,873,935. Accelerator for Vulcanization Processes. Aug. 23, 1932.

Pat. 1,873,936. Accelerator for Vulcanization Purposes. Aug. 23, 1932.

Pat. 1,873,945. Materials Coated with Lacquers, and a Process of Producing Coatings. Aug. 23, 1932.

Pat. 1,878,040. Water-Soluble Viscous Condensation Products of Aldehydes and Process of Preparing Them. Sept. 20, 1932.

Pat. 1,878,699. Manufacture of 1-Halogen-Aryl-Thiazoles. Sept. 20, 1932.

Pat. 1,880,447. Nitro-Halogenquinazoline and the Process of Producing Same. Oct. 4, 1932.

Pat. 1,880,564. Manufacture of Dithiocarbamates. Oct. 4, 1932.

Pat. 1,880,901. Production of Maleic Acid and Its Anhydride. Oct. 4, 1932.

Pat. 1,882,972. Production of Shaped Metallic Articles. Oct. 18, 1932.

Pat. 1,882,987. Process of Making Metal Articles. Oct. 18, 1932.

Pat. 1,883,060. Lacquer for Application by Brushing. Oct. 18, 1932.

Pat. 1,884,023. Production of Plastic Masses. Oct. 25, 1932.

Pat. 1,884,024. Production of Plastic Masses. Oct. 25, 1932.

Pat. 1,887,820. Sulphonated Isatoic Acid Anhydride and Process of Making Same. Nov. 15, 1932.

Pat. 1,888,794. Process of Preparing Salts of the Chloroethane Sulphonic Acid. Nov. 22, 1932.

Pat. 1,889,945. Production of Monocarboxylic Acids. Dec. 6, 1932.

Pat. 1,889,953. Colored Effect Paper. Dec. 6, 1932.

Pat. 1,891,055. Production of Saturated Fatty Acid Nitriles. Dec. 13, 1932.

Pat. 1,891,057. Production of Indole and Derivatives Thereof. Dec. 13, 1932.

Pat. 1,891,930. Production of Organic Compounds Containing Oxygen from Carbon Monoxide and Halogenated Monaromatic Hydrocarbons. Dec. 27, 1932.

Pat. 1,892,227. Hardened Artificial Materials and Process of Preparing Them. Dec. 27, 1932.

Pat. 1,894,781. Production of Compositions Resembling Celluloid. Jan. 17, 1933.

Pat. 1,897,741. Sulphuric Ester of Glycol Ethers. Feb. 14, 1933.

Pat. 1,898,627. Alkylation of Organic Hydroxy Compounds. Feb. 21, 1933.

Pat. 1,900,700. Cellulose Nitrate Lacquer. Mar. 7, 1933.

Pat. 1,900,734. Production of Driers for Varnishes, Lacquers, Oil Paints and the Like. Mar. 7, 1933.

Pat. 1,901,656. Stable Suspensions. Mar. 14, 1933.

Pat. 1,902,866. Acetals of Cyclic Ketones with Polyhydric Alcohols and Process of Preparing the Same. Mar. 28, 1933.

Pat. 1,902,889. Urea Condensation Products and Process of Making Them. Mar. 28, 1933.

Pat. 1,904,229. 2.4-Di(Nitrophenyl)-6-Halogen-1.3.5-Triazines and Method of Making the Same. Apr. 18, 1933.

Pat. 1,905,466. Process of Preparing Acetic Anhydride. Apr. 25, 1933.

Pat. 1,907,891. Production of Carbonic Acid Esters of the Glycols. May 9, 1933.

Pat. 1,908,376. Production of Sulphonated Products. May 9, 1933.

Pat. 1,908,935. Process for Preparing Disulphides. May 16, 1933.

Pat. 1,909,638. Manufacture of 1.4.1'.4'-Tetrahydroxy-2.2'-dianthraquinonyl. May 16, 1933.

Pat. 1,909,991. Production of Artificial Masses and Coatings Therefrom. May 23, 1933.

Pat. 1,910,818. Production of Ethyl Acetate. May 23, 1933.

Pat. 1,911,709. New Sulphurized Phenol. May 30, 1933.

Pat. 1,912,260. Water Soluble Condensation Product and Process for Preparing the Same. May 30, 1933.

Pat. 1,912,593. Synthetic Tanning Material and Process of Producing Same. June 6, 1933.

Pat. 1,912,608. Process of Preparing Vinyl Esters. June 6, 1933.

Pat. 1,912,812. Accelerating Vulcanization. June 6, 1933.

Pat. 1,913,794. Process of Preparing Ethionic Acid or Carbyl Sulphate. June 13, 1933.

Pat. 1,914,465. Process for Producing 1.1.2-Trichloro-Ethane. June 20, 1933.

Pat. 1,915,431. Process of Hydrogenating Polyhydroxy Compounds and Substances Obtainable. June 27, 1933.

Pat. 1,918,371. Preparation of Methyl Chloride and Methylene Chloride. July 18, 1933.

Pat. 1,918,466. Vulcanization of Artificial Rubber Like Masses. July 18, 1933.

Pat. 1,918,648. Process for Manufacturing Artetrahydronaphthol Ethers. July 18, 1933.

Pat. 1,919,575. Plastic Mass. July 25, 1933.

Pat. 1,919,592. Process for Manufacturing Ar-Tetrahydronaphthylamine Compounds. July 25, 1933.

Pat. 1,921,378. Production of Polymerization Products from Alkylene Oxides. Aug. 8, 1933.

Pat. 1,924,253. Condensation Product from Urea and an Alcohol or a Ketone and Process of Preparing Them. Aug. 29, 1933.

Pat. 1,924,566. Vulcanization Accelerator. Aug. 29, 1933.

Pat. 1,924,567. Vulcanization Accelerator. Aug. 29, 1933.

Pat. 1,929,044. Process of Vulcanizing Rubber Compounds. Oct. 3, 1933.

Pat. 1,931,858. Production of Unsaturated Ethers. Oct. 24, 1933.

Pat. 1,932,907. Process of Preparing Aminoalkylsulphonic Acids. Oct. 31, 1933.

Pat. 1,933,962. Preserving of Rubber. Nov. 7, 1933.

Pat. 1,933,986. Condensation Product of Polyvinyl Alcohol with Cyclic Ketones and a Process of Preparing It. Nov. 7, 1933.

Pat. 1,934,123. Process for the Manufacture of Condensation Products from Diolefines and Hydrocarbons. Nov. 7, 1933.

Pat. 1,935,209. Production of Aromatic Amines from Phenols. Nov. 14, 1933.

Pat. 1,937,328. Production of Carbamic Acid Chloride. Nov. 28, 1933.

Pat. 1,939,025. Aromatic Amino-Sulpho Chlorides, Substituted in the Amino-Group. Dec. 12, 1933.

Pat. 1,939,189. Production of Dioxane and Its Homologues. Dec. 12, 1933.

Pat. 1,939,422. Mixed Polymerization Products and a Process of Preparing Them. Dec. 12, 1933.

Pat. 1,940,065. Separation and Purification of Ortho, Meta and Para Xylene. Dec. 19, 1933.

Pat. 1,940,092. Condensation Products of Resinic Acids. Dec. 19, 1933.

Pat. 1,941,108. Production of Vinyl Ethers. Dec. 26, 1933.

Pat. 1,941,111. Production of Metal Carbonyls. Dec. 26, 1933.

Pat. 1,942,146. Impregnated and Superficially Smoothed Article. Jan. 2, 1934.

Pat. 1,942,790. Vulcanization Accelerator. Jan. 9, 1934. Re. 19,286, Aug. 21, 1934.

Pat. 1,942,812. Production of Organic Products from 7.18-Stearic Glycol. Jan. 9, 1934. Re. 19,194, June 5, 1934.

Pat. 1,942,833. Production of High-Quality Wax-Like Substances. Jan. 9, 1934.

Pat. 1,944,306. Process for Producing 1.1.2.-Trichloro-Ethane. Jan. 23, 1934.

Pat. 1,944,530. Phosphoric Acid Esters. Jan. 23, 1934.

Pat. 1,944,849. Production of Metal Carbonyls. Jan. 23, 1934.

Pat. 1,948,299. Derivatives of Montane. Feb. 20, 1934.

Pat. 1,948,667. Phenol Ethers and Process of Preparing Them. Feb. 27, 1934.

Pat. 1,951,712. Process for Improving Fibrous Materials. Mar. 20, 1934.

Pat. 1,955,050. Production of Monocarboxylic Acids. Apr. 17, 1934.

Pat. 1,955,060. Production of Dimethylol Ketones and the Product Thereof. Apr. 17, 1934.

Pat. 1,955,068. Production of Artificial Masses from Polymerized Vinyl Alcohols and Aliphatic Aldehydes and Products Obtainable Thereby. Apr. 17, 1934.

Pat. 1,956,415. Process of Solubilizing Compounds Which are Difficultly Soluble or Insoluble in Water. Apr. 24, 1934.

Pat. 1,959,185. Production of Adhesives. May 15, 1934.

Pat. 1,959,898. Production of Phthalic Anhydride. May 22, 1934.

Pat. 1,959,927. Production of Vinyl Ethers. May 22, 1934.

Pat. 1,959,930. Hydroxy-Alkyl Ethers of Polyhydric Alcohols and Their Production. May 22, 1934.

Pat. 1,961,987. Production of Ethers. June 5, 1934.

Pat. 1,963,258. Manufacture of Valuable Products of Oxidation and Decarboxylation of Aromatic Compounds. June 19, 1934.

Pat. 1,964,868. Process of Preparing Methylene Chloride. July 3, 1934.

Pat. 1,964,934. Protection of Animal Fibers Against the Effects of Alkaline or Acid Mediums. July 3, 1934.

Pat. 1,966,478. Production of Amines. July 17, 1934.

Pat. 1,969,396. Production of Metallic Articles. Aug. 7, 1934.

Pat. 1,970,972. New Rubber Preserving Media. Aug. 21, 1934.

Pat. 1,971,305. Production of Waxy Products. Aug. 21, 1934.

Pat. 1,971,662. Ether of Polyvinyl Alcohol. Aug. 28, 1934.

Pat. 1,972,459. Reesterification of Natural Waxes and the Product Thereof. Sept. 4, 1934.

Pat. 1,972,463. Welding. Sept. 4, 1934.

Pat. 1,972,465. Production of Nitriles. Sept. 4, 1934.

Pat. 1,976,682. Production of Addition Compounds of Formyl Halides. Oct. 9, 1934.

Pat. 1,977,178. Production of 1.3.5.-Trimethyl-Benzene. Oct. 16, 1934.

Pat. 1,979,601. Conversion Products of Casein. Nov. 6, 1934.

Pat. 1,980,959. Artificial Mass. Nov. 13, 1934.

Pat. 1,981,109. Metal Pickling Process. Nov. 20, 1934.

Pat. 1,981,605. Refining of Cotton Seed Oil. Nov. 20, 1934.

Pat. 1,982,195. Preparation of Monocarboxylic Acids. Nov. 27, 1934.

Pat. 1,982,196. Manufacturing Monocarboxylic Acids. Nov. 27, 1934.

Pat. 1,982,197. Producing Monocarboxylic Acids. Nov. 27, 1934.

Pat. 1,986,067. Urea Condensation Product and Process of Preparing It. Jan. 1, 1935.

Pat. 1,987,114. Artificial Mass. Jan. 8, 1935.

Pat. 1,988,021. Production of Unsaturated Ketones. Jan. 15, 1935.

Pat. 1,988,876. Production of Benzoic Acid. Jan. 22, 1935.

Pat. 1,989,325. Amine of High Molecular Weight. Jan. 29, 1935.

Pat. 1,989,626. Production of Improved Natural Waxes. Jan. 29, 1935.

Pat. 1,990,245. Production of Polyhydric Alcohols. Feb. 5, 1935.

Pat. 1,990,609. Process of Vulcanizing Rubber. Feb. 12, 1935.

Pat. 1,990,610. Vulcanization Accelerator. Feb. 12, 1935.

Pat. 1,992,615. Production of Amino Compounds. Feb. 26, 1935.

Pat. 1,993,375. Production and Purification of Sulphonated Products. Mar. 5, 1935.

Pat. 1,996,738. Production of Condensation Products from Aromatic Hydrocarbons. Apr. 9, 1935.

Pat. 1,996,739. Production of Condensation Products from Aromatic Hydrocarbons. Apr. 9, 1935.

Pat. 1,996,833. Manufacture of Metal Carbonyls. Apr. 9, 1935.

Pat. 1,998,540. Iron Oxide Pigment and Process of Producing the Same as By-Products of the Reduction of Aromatic Nitro Compounds. Apr. 23, 1935.

Pat. 1,998,541. Iron Oxide Pigment and Process of Producing the Same as By-Products of the Reduction of Aromatic Nitro Compounds. Apr. 23, 1935.

Pat. 1,998,583. Inorganic Acid Esters of the Condensation Products of a Glycol and Chlorinated Paraffin Hydrocarbons. Apr. 23, 1935.

Pat. 1,999,432. Production of Aminoalkyl Sulphonic Acids. Apr. 30, 1935.

Pat. 2,000,252. Production of Acetals. May 7, 1935.

Pat. 2,000,329. Process of Preparing Alkali Metal Alcoholates. May 7, 1935.

Pat. 2,001,171. Process of Preparing Acetic Acid from Acetaldehyde. May 14, 1935.

Pat. 2,001,201. Pyridino Compounds and Their Production. May 14, 1935.

Pat. 2,004,534. Separation of Metals. June 11, 1935.

Pat. 2,004,546. Sulphonic Acid. June 11, 1935.

Pat. 2,004,884. Production of Acenaphthylene. June 11, 1935.

Pat. 2,005,183. Catalytic Oxidation of Ketones. June 18, 1935.

Pat. 2,006,987. Magnetic Material and Process for Its Production. July 2, 1935.

Pat. 2,009,948. Production of Unsaturated Alcohols. July 30, 1935.

Pat. 2,012,177. Artificial Masses and Processes of Preparing Them. Aug. 20, 1935.

Pat. 2,012,801. Production of Alkyl Derivatives of Ammonia. Aug. 27, 1935.

Pat. 2,012,928. Synthetic Tans. Aug. 27, 1935.

Pat. 2,013,108. Production of Carboxylic Amides. Sept. 3, 1935.

Pat. 2,013,496. Abradant. Sept. 3, 1935.

Pat. 2,013,973. Apparatus for the Production of Phthalic Anhydride and Benzoic Acid. Sept. 10, 1935.

Pat. 2,013,988. Process of Preparing Acetyl Chloride. Sept. 10, 1935.

Pat. 2,013,989. Process of Preparing Acetyl Chloride. Sept. 10, 1935.

Pat. 2,014,502. Sulphonated Higher Fatty Acid Ester of Polyhydric Alcohols and Its Production. Sept. 17, 1935.

Pat. 2,016,102. Production of Conversion Products of Rubber. Oct. 1, 1935.

Pat. 2,016,490. Production of Mixed Polymerization Products from Vinyl Ethers. Oct. 8, 1935.

Pat. 2,016,784. Production of Organic Sulpho Halides. Oct. 8, 1935.

Pat. 2,017,355. Vinyl Ether. Oct. 15, 1935.

Pat. 2,017,537. Production of Hydroxy-Alkylamino Carboxylic Acid Compounds. Oct. 15, 1935.

Pat. 2,019,883. Dehydrogenation of Hydrogenated Heterocyclic Compounds. Nov. 5, 1935.

Pat. 2,020,453. Production of Assistants for the Textile and Related Industries. Nov. 12, 1935.

Pat. 2,021,869. Production of Vinyl Ethers. Nov. 19, 1935.

Pat. 2,021,873. Process of Preparing Vinyl Esters. Nov. 19, 1935.

Pat. 2,023,191. Abrasive. Dec. 3, 1935.

Pat. 2,023,768. Derivatives from Drying Oils. Dec. 10, 1935.

Pat. 2,026,131. Production of Methyl Chloride. Dec. 31, 1935.

Pat. 2,026,863. Mercaptobenzothiazyl-Aryldisulphides. Jan. 7, 1936.

Pat. 2,027,199. Condensation Product. Jan. 7, 1936.

Pat. 2,034,297. Binding Agents and a Process of Preparing Them. Mar. 17, 1936.

Pat. 2,037,389. Nitriles of Higher Unsaturated Fatty Acids and a Process of Preparing Them. Apr. 14, 1936.

Pat. 2,037,442. Producing Organic Compounds Capable of Splitting off Halogen. Apr. 14, 1936.

Pat. 2,037,974. Sulphonic Acids of Higher Aliphatic Ketones. Apr. 21, 1936.

Pat. 2,040,212. Water-Soluble Condensation Products. May 12, 1936.

Pat. 2,041,493. Pulverulent Alloy. May 19, 1936.

Pat. 2,043,667. Soaking of Hides. June 9, 1936.

Pat. 2,043,965. Producing Amines. June 9, 1936.

Pat. 2,044,730. Production of Artificial Materials. June 16, 1936.

Pat. 2,045,049. Process for the Manufacture of New Tanning Materials. June 23, 1936.

Pat. 2,045,111. Cyanuric Acid. June 23, 1936.

Pat. 2,045,393. Dressing and Polishing Agents. June 23, 1936.

Pat. 2,045,888. Preparation of Sulphene Amides. June 30, 1936.

Pat. 2,050,582. Process of Mercerizing Cellulose Material. Aug. 11, 1936.

Pat. 2,052,138. Stable Carbamic Acid Chlorides. Aug. 25, 1936.

Pat. 2,053,845. Production of Aldehydes. Sept. 8, 1936.

Pat. 2,054,019. Base for Coating Compositions. Sept. 8, 1936.

Pat. 2,054,131. Fibrous Filling Materials for Stuffing Purposes. Sept. 15, 1936.

Pat. 2,055,391. Process of Preparing Acetals. Sept. 22, 1936.

Pat. 2,056,915. Production of Chrysene. Oct. 6, 1936.

Pat. 2,060,412. Oil Varnish. Nov. 10, 1936.

Pat. 2,061,520. Cyanuryl Derivatives of Dithio-Carbamic Acids. Nov. 17, 1936.

Pat. 2,061,934. Rubber-Like Synthetic High Molecular Masses. Nov. 24, 1936.

Pat. 2,061,946. Artificial Masses. Nov. 24, 1936.

Pat. 2,063,620. Cellulose Ester Compositions. Dec. 8, 1936.

Pat. 2,063,934. Production of Assistants for the Textile and Related Industries. Dec. 15, 1936.

Pat. 2,063,963. Reaction Products of Amines with Strong Polybasic Mineral Acids. Dec. 15, 1936.

Pat. 2,064,395. Organic Disulphides. Dec. 15, 1936.

Pat. 2,064,797. Production of Organic Amino Compounds. Dec. 15, 1936.

Pat. 2,064,883. Mercerizing. Dec. 22, 1936.

Pat. 2,066,075. Vinyl Esters of Carboxylic Acids and Their Production. Dec. 29, 1936.

Pat. 2,066,076. Producing Vinyl Ethers. Dec. 29, 1936.

Pat. 2,066,160. Production of N-Vinyl Compounds. Dec. 29, 1936.

Pat. 2,067,706. Artificial Compositions. Jan. 12, 1937.

Pat. 2,068,132. Production of Monomethylamine and Dimethylamine. Jan. 19, 1937.

Pat. 2,069,336. Production of Derivatives of Polyhydric Alcohols. Feb. 2, 1937.

Pat. 2,071,301. Production of Methylamines. Feb. 16, 1937.

Pat. 2,072,465. Production of Polymeric N-Vinyl Compounds. Mar. 2, 1937.

Pat. 2,072,525. Condensation Products from Hydroxylated Cyclic Compounds and Acetylene. Mar. 2, 1937.

Pat. 2,073,589. Production of Ethane Dithio Ethers. Mar. 9, 1937.

Pat. 2,073,600. Heterocyclic Hydrazines. Mar. 16, 1937.

Pat. 2,075,109. Preparation of Acylated Polyalkylene Polyamines. Mar. 30, 1937.

Pat. 2,078,638. Purification of Sulphonation Products. Apr. 27, 1937.

Pat. 2,081,766. Thioethers and Their Production. May 25, 1937.

Pat. 2,082,105. Production of Aliphatic Amines. June 1, 1937.

Pat. 2,082,477. Synthetic Tans and Process of Producing the Same. June 1, 1937.

Pat. 2,085,429. Preparation of Phenol. June 29, 1937.

Pat. 2,086,506. Splinterless Materials, Particularly Splinterless Glass. July 6, 1937.

Pat. 2,086,881. Production of Nickel and Iron Carbonyls. July 13, 1937.

Pat. 2,087,079. Production of N-Vinyl Compounds. July 13, 1937.

Pat. 2,088,085. Production of Stable and Efficient Foam. July 27, 1937.

Pat. 2,088,929. Apparatus for the Production of Phthalic Anhydride and Benzoic Acid. Aug. 3, 1937.

Pat. 2,090,953. Production of Trialkylamines. Aug. 24, 1937.

Pat. 2,091,373. Acetals of β-Ketoaldehydes. Aug. 31, 1937.

Pat. 2,091,636. Production of Trimethylamine. Aug. 31, 1937.

Pat. 2,092,622. Artificial Tanning Substances and Process of Preparing Them. Sept. 7, 1937.

Pat. 2,093,159. Catalytic Hydrogenation of Esters of Aliphatic Carboxylic Acids. Sept. 14, 1937.

Pat. 2,093,519. Process for the Manufacture of Condensation Products of Crotonaldehyde. Sept. 21, 1937.

Pat. 2,094,064. Production of Ethyl Chloride. Sept. 28, 1937.

Pat. 2,094,213. Process for the Manufacture of Polymer. Carboxylic Acids and Derivatives Thereof. Sept. 28, 1937.

Pat. 2,094,467. Production of New Thio Ethers. Sept. 28, 1937.

Pat. 2,094,837. Process of Preparing Alkylene Sulphides. Oct. 5, 1937.

Pat. 2,094,914. Process of Preparing Alkylene Sulphides. Oct. 5, 1937.

Pat. 2,095,224. Production of Nitriles. Oct. 12, 1937.

Pat. 2,095,457. Production of Assistants for the Textile and Related Industries. Oct. 12, 1937.

Pat. 2,095,814. Production of Assistants in the Textile and Related Industries. Oct. 12, 1937.

Pat. 2,096,181. Condensation Products. Oct. 19, 1937.

Pat. 2,097,854. Cyclopentadienone Condensation Compounds and Process of Making Them. Nov. 2, 1937.

Pat. 2,098,108. Production of Polymerization Products of Vinyl Ethers. Nov. 2, 1937.

Pat. 2,099,717. Process for the Production of Water-Soluble Condensation Products. Nov. 23, 1937.

Pat. 2,099,765. Finishing Textiles. Nov. 23, 1937.

Pat. 2,101,332. Process of Producing Synthetic Resins. Dec. 7, 1937.

Pat. 2,101,333. Process of Producing Synthetic Resins. Dec. 7, 1937.

Pat. 2,102,179. Polymerization Products from Styrene and Their Production. Dec. 14, 1937.

Pat. 2,104,000. Production of Polymerization Products from Vinyl Ethers. Dec. 28, 1937.

Pat. 2,104,001. Production of Polymerization Products from Vinyl Ethers. Dec. 28, 1937.

Pat. 2,104,002. Production of Polymerization Products from Vinyl Ethers. Dec. 28, 1937.

Pat. 2,104,290. Treating Fibrous Materials with Alkaline Liquids of Mercerizing Strength. Jan. 4, 1938.

Pat. 2,105,792. Unsaturated Ketones. Jan. 18, 1938.

Pat. 2,105,845. Production of Organic Sulphur Compounds. Jan. 18, 1938.

Pat. 2,106,158. Purifying Chlorinated Hydrocarbons. Jan. 25, 1938.

Pat. 2,106,465. Mercapto-Thiazole Derivatives. Jan. 25, 1938.

Pat. 2,108,147. Production of Amines. Feb. 15, 1938.

Pat. 2,108,712. Heterocyclic Hydroxy Compounds. Feb. 15, 1938.

Pat. 2,108,857. Process for the Production of Artificial Masses from Vinyl Esters. Feb. 22, 1938.

Pat. 2,108,886. Sulphamic Acid Substance. Feb. 22, 1938.

Pat. 2,108,887. Sulphamic Acid Substance. Feb. 22, 1938.

Pat. 2,109,981. Process of Preparing Polyvinyl Esters. Mar. 1, 1938.

Pat. 2,110,834. Acceleration of Vulcanization of Rubber. Mar. 8, 1938.

Pat. 2,111,698. Process of Preparing Hydrophobic Cellulose Fibers. Mar. 22, 1938.

Pat. 2,111,820. Alkyl Aromatic Acetic Acid and Homologues Thereof. Mar. 22, 1938.

Pat. 2,112,361. Synthetic Tans and Process of Producing the Same. Mar. 29, 1938.

Pat. 2,116,182. Production of Mercaptans. May 3, 1938.

Pat. 2,117,207. Amino Acids. May 10, 1938.

Pat. 2,118,674. Recovering Trimethylamine. May 24, 1938.

Pat. 2,118,685. Rendering Textile Materials Substantially Resistant to Creasing. May 24, 1938.

Pat. 2,118,863. Mixed Polymerization Products. May 31, 1938.

Pat. 2,118,864. Polymerization Products from Vinyl Esters. May 31, 1938.

Pat. 2,118,945. Mixed Polymerization Products. May 31, 1938.

Pat. 2,118,946. Mixed Polymerization Products. May 31, 1938.

Pat. 2,118,995. Process of Preparing Sulphonic Acids of Aliphatic Ethers of High Molecular Weight. May 31, 1938.

Pat. 2,119,899. Producing Aliphatic Alcohols of High Molecular Weight. June 7, 1938.

Pat. 2,122,124. Water-Soluble Condensation Products and a Process of Producing Same. June 28, 1938.

Pat. 2,122,125. Water-Soluble Condensation Products and a Process of Producing Same. June 28, 1938.

Pat. 2,122,981. Treatment of Fibrous Materials and of Preparations Therefor. July 5, 1938.

Pat. 2,123,556. Aliphatic Halogen-Nitro-Alcohols and Process of Preparing Them. July 12, 1938.

Pat. 2,123,733. Production of N-Vinyl Compounds. July 12, 1938.

Pat. 2,123,734. Production of N-Vinyl Compounds. July 12, 1938.

Pat. 2,123,986. Matting of Artificial Silk. July 19, 1938.

Pat. 2,123,987. Producing Matting Effects on Artificial Silk. July 19, 1938.

Pat. 2,125,393. β-Halogenated Vinyl Ketones. Aug. 2, 1938.

Pat. 2,125,594. Floor and Wall Covering Material. Aug. 2, 1938.

Pat. 2,125,649. Production of Polymerization Products from Thiovinyl Ethers. Aug. 2, 1938.

Pat. 2,126,232. Diaryl Methane Water-Soluble Condensation Products. Aug. 9, 1938.

Pat. 2,127,236. Dyeing Artificial Shaped Articles. Aug. 16, 1938.

Pat. 2,127,297. Process of Tanning Hides and Pelts with the Aid of Iron Compounds. Aug. 16, 1938.

Pat. 2,127,476. Production of Quaternary Ammonium Bases. Aug. 16, 1938.

Pat. 2,128,025. Production of Improved Wax Emulsions. Aug. 23, 1938.

Pat. 2,129,146. Insulating Dielectric Media. Sept. 6, 1938.

Pat. 2,130,550. Tanning Matter. Sept. 20, 1938.

Pat. 2,131,121. Process of Increasing the Fastness of Dyeings. Sept. 27, 1938.

Pat. 2,131,998. Cyclic Acetal. Oct. 4, 1938.

Pat. 2,132,361. Process of Chlorinating Methyl-Aromatic Compounds. Oct. 4 1938.

Pat. 2,136,928. Manufacture of Amines of High Molecular Weight Which Are Rich in Nitrogen. Nov. 15, 1938.

Pat. 2.136,949. Acceleration of Vulcanization of Rubber. Nov. 15, 1938.

Pat. 2,136,997. Tanning Agents. Nov. 15, 1938.

Pat. 2,137,314. Process of Producing Quaternary Ammonium Compounds. Nov. 22, 1938.

Pat. 2,137,664. α,β-Dihalogenethylketones. Nov. 22, 1938.

Pat. 2,141,477. Process of Preparing Aluminum Salts of Lower Aliphatic Acids. Dec. 27, 1938.

Pat. 2,142,688. Artificial Silk Fabric. Jan. 3, 1939.

Pat. 2,143,228. Process of Preparing Condensation Products. Jan. 10, 1939.

Pat. 2,143,352. Process of Improving Textile Materials. Jan. 10, 1939.

Pat. 2,144,067. Splinterless Glass. Jan. 17, 1939.

Pat. 2,144,297. Manufacture of Tanning Materials. Jan. 17, 1939.

Pat. 2,145,050. Production of Synthetic Resins. Jan. 24, 1939.

Pat. 2,146,354. Process of Preparing Aliphatic Fluorine Compounds. Feb. 7, 1939.

Pat. 2,147,000. Production of New Tanning Agents. Feb. 14, 1939.

Pat. 2,147,154. Process of Producing Polymerization Products of Vinyl Chloride. Feb. 14, 1939.

Pat. 2,148,893. Process for Preparing Tanning Agents. Feb. 28, 1939.

Pat. 2,151,507. Plastic Compositions from Polymerized Vinyl Compounds. Mar. 21, 1939.

Pat. 2,153,987. Vinyl Esters and a Process of Preparing Them. Apr. 11, 1939.

Pat. 2,153,993. Process of Producing N-Vinyl Compounds. Apr. 11, 1939.

Pat. 2,154,231. Composition of Matter for the Preparation of Fire Extinguishing Foam. Apr. 11, 1939.

Pat. 2,154,626. Production of Pure Benzoic Acid. Apr. 18, 1939.

Pat. 2,154,922. Sulphonated Organic Compounds and Method of Making Them. Apr. 18, 1939.

Pat. 2,155,877. Process for the Manufacture of Imidazolines Containing at Least 10 Carbon Atoms. Apr. 25, 1939.

Pat. 2,155,878. Manufacture of Imidazolines Containing at least 10 Carbon Atoms. Apr. 25, 1939.

Pat. 2,156,039. Process of Chlorinating Methane and the Homologues Thereof. Apr. 25, 1939.

Pat. 2,156,093. Process of Preparing Vinyl Esters. Apr. 25, 1939.

Pat. 2,156,095. Production of Condensation Products from Hydrogen Sulphide and Acetylene. Apr. 25, 1939.

Pat. 2,156,177. Preparation of Chlorides of Higher Fatty Acids. Apr. 25, 1939.

Pat. 2,156,828. Friction Bodies. May 2, 1939.

Pat. 2,157,347. Production of Vinyl Ethers Derived from Carbohydrates. May 9, 1939.

Pat. 2,157,348. Production of Aliphatic Vinyl Ethers by Means of Acetylene. May 9, 1939.

Pat. 2,158,311. Process of Preparing Polymeric Products. May 16, 1939.

Pat. 2,160,574. Manufacture of Carbon Tetrachloride. May 30, 1939.

Pat. 2,160,578. Production of Aliphatic Amines. May 30, 1939.

Pat. 2.161,288. Manufacture of Tanning Substances. June 6, 1939.

Pat. 2,161,328. Nondusting Calcium Cyanamide and a Process of Preparing Same. June 6, 1939.

Pat. 2,163,176. Process for Making Organic Sulphides. June 20, 1939.

Pat. 2,163,181. Process of Producing Halogen-Alkyl Amines or their Salts. June 20, 1939.

Pat. 2,165,265. Process of Imparting Hydrophobic Properties to Cellulose Fibers. July 11, 1939.

Pat. 2,165,484. Condensation Product Having an Amide-like Structure. July 11, 1939.

Pat. 2,165,515. Production of Amines by the Catalytic Hydrogenation of Nitriles. July 11, 1939.

Pat. 2,165,962. Production of Alkylidene Diethers or Ether-Esters. July 11, 1939.

Pat. 2,165,997. Process of Preparing Fire-Extinguishing Foam. July 11, 1939.

Pat. 2,166,600. Oxygen Containing Nitriles of the C_5-Series and a Process of Preparing Them. July 18, 1939.

Pat. 2,166,971. Production of Amines. July 25, 1939.

Pat. 2,167,914. Process of Improving Regenerated Cellulose. Aug. 1, 1939.

Pat. 2,168,161. Production of Carboxylic Acid Amides. Aug. 1, 1939.

Pat. 2,168,260. Process of Preparing Monohalogenation Products. Aug. 1, 1939.

Pat. 2,170,380. Aliphatic Sulphonic Acid. Aug. 22, 1939.

Pat. 2,170,746. Production of Tertiary Aliphatic Amines. Aug. 22, 1939.

Pat. 2,171,963. Condensation Product and Aqueous Solution Thereof. Sept. 5, 1939.

Pat. 2,171,965. Oily to Resinous Condensation Products and a Process of Preparing Them. Sept. 5, 1939.

Pat. 2,172,305. Resins Soluble in Alcohol. Sept. 5, 1939.

Pat. 2,172,568. Process of Preparing Alkyl Halides. Sept. 12, 1939.

Pat. 2,173,066. α-Halogenvinylketone. Sept. 12, 1939.

Pat. 2,173,069. Process of Producing Quaternary Ammonium Bases. Sept. 12, 1939.

TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 23, 1948

[VOL. 616. NO. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 513,371. AMERICAN LUGGAGE WORKS, INC., Providence, R. I. Filed Nov. 29, 1946.

AMERICAN TOURISTER

"American" and "American Luggage Works," which appear on the drawing, are disclaimed apart from the mark.

FOR TRUNKS AND HAND LUGGAGE—NAMELY, SUITCASES; SHIRT CASES; TOURIST CASES, FITTED TRAVELING BAGS AND CASES, GLADSTONE BAGS; TRAVELING BAGS; ENVELOPE WARDROBE CASES; BELLOWS AND TELESCOPE SUITCASES; LAUNDRY CASES; HAT BOXES; COMBINATION SHOE AND HAT CASES; SHOE CARRIERS; COLLAR BAGS; PORTFOLIOS FOR HANDKERCHIEFS, NECKTIES; ETC.; MEN'S FITTED TOILET KITS AND CASES FOR TRAVELING; JEWEL CARRYING-BOXES AND CARRYING-CASES; UTILITY CASES; COSMETIC CASES; WRITING PORTFOLIOS AND CASES; BATHING SUIT BAGS; BEACH BAGS; ANIMAL PET CARRIERS, DESIGNED FOR TRAVELING; LUNCHEON KIT CASES AND PICNIC OUTFIT CASES; COMBINATION BAGS AND BRIEF CASES; PHYSICIANS', SURGEONS' AND NURSES' PROFESSIONAL HANDBAGS; SALESMEN'S CASES AND SAMPLE CASES; SATCHELS AND HANDBAGS DESIGNED FOR CARRYING TOOLS; SCHOOL BAGS; MUSIC ROLLS AND PORTFOLIOS AND SLIP COVERS FOR LUGGAGE.

Claims use since June 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 489,679. ELLSWORTH RANSOM, doing business as Cleveland Mfg. Co., Cleveland, N. Y. Filed Oct. 9, 1945.

POLLY-BRITE

The word "Brite" is disclaimed apart from the mark as shown.

FOR METAL SPONGE FOR CLEANING KETTLES AND THE LIKE.

Claims use since Oct. 1, 1939.

Ser. No. 518,092. BETH A. MORRISON, doing business as Morrison's, Aloha, Oreg. Filed Feb. 25, 1947.

ACTIV

FOR CLEANER FOR COPPER.

Claims use since Oct. 3, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,275. UNITED CIGAR-WHELAN STORES CORPORATION, New York, N. Y. Filed July 25, 1946.

Dispelent

FOR INSECT REPELLENT.

Claims use since Feb. 1, 1946.

Ser. No. 511,272. PAUL FRIXON, Paris, France. Filed Oct. 22, 1946.

B.Q.X.

FOR DISINFECTANTS, AND VETERINARY MEDICINES AND PREPARATIONS—NAMELY, BLISTER PREPARATIONS, BOVINE LAXATIVES, ELIXIRS, COUNTER-IRRITANTS, COLIC MIXTURES, MANGE LOTIONS, PITUITARY EXTRACTS, LINIMENT, AND SALVES.

Claims use since Feb. 2, 1944.

Ser. No. 514,049. LENTHERIC, INCORPORATED, New York, N. Y. Filed Dec. 11, 1946.

GOLDEN BLAZE

The word "Golden" is disclaimed apart from the mark.

FOR VANITY CASE CONTAINING ROUGE.

Claims use since July 5, 1946.

Ser. No. 518,016. MAHER COLOR AND CHEMICAL COMPANY, Chicago, Ill. Filed Feb. 24, 1947.

Hydroxamil

FOR CHEMICAL COMPOUND TO BE USED AS A COUPLING OR DEVELOPING AGENT IN THE DYEING OF DIAZATIZED COLORS ON VARIOUS FIBERS AND AS A DEVELOPING AND COUPLING AGENT FOR DIAZO COMPOUNDS.
Claims use since Nov. 15, 1946.

Ser. No. 520,246. THE ABIETSAM MANUFACTURING COMPANY LIMITED, London, England. Filed Apr. 7, 1947.

FLAROMA

FOR PERFUMES, FACE POWDER (NOT MEDICATED), BATH SALTS AND ESSENCES, TOOTH PASTE, HAIR OIL, EAU DE COLOGNE, BATH OILS, BATH POWDER, TOILET WATER, SKIN LOTIONS, FACIAL CREAMS, LIPSTICK, AND ROUGE.
Claims use since July 11, 1932.

Ser. No. 520,378. JULIO GONZALEZ CALDERON, Marysville, Calif. Filed Apr. 9, 1947.

Julio Gonzalez Calderon

The name "Julio Gonzales Calderon" is a facsimile signature of a member of the firm.
FOR PREPARATION FOR THE TREATMENT OF CORNS, CALLOUSES, ATHLETES FOOT, WARTS, AND ECZEMA.
Claims use since Oct. 12, 1946.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 515,444. NATIONAL HILIFE COMPANY, New York, N. Y. Filed Jan. 8, 1947.

ASHNAP

FOR ASH TRAYS, COMBINATION NAPKIN HOLDER AND ASH TRAY.
Claims use since September 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 522,006. TRI-SULEX CORPORATION, Nashville, Tenn. Filed May 7, 1947.

FOR HEAT AND SOUND INSULATING AND PROTECTIVE MATERIALS FOR METALS, APPLIED IN LIQUID OR PASTE FORM AND HAVING AN ASPHALT BASE.
Claims use since Dec. 27, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 519,990. THE STANLEY WORKS, New Britain, Conn. Filed Apr. 1, 1947.

FOR UPWARD ACTING GARAGE DOOR HARDWARE—NAMELY, ROLLER BRACKETS, DOOR PLATES, CARRIAGE BOLTS, JAMB PLATES, DOOR ARMS, REAR HANGERS, BUMPERS, TRACKS, SPRING BOLTS, PAWL STOPS, PAWL BRACKETS, AND OTHER PARTS SUCH AS BOLTS, HANDLES, SPRINGS, CLIPS, ROCKERS, BRACKETS, AND THE LIKE.
Claims use since Jan. 28, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 503,116. PANHANDLE REFINING COMPANY, Wichita Falls, Tex., assignor to Panhandle Producing & Refining Company, a corporation of Delaware. Filed May 31, 1946.

Equavis

FOR MOTOR LUBRICATING OILS AND LUBRICATING GREASES.
Claims use since Apr. 15, 1946.

Ser. No. 513,408. MAX GISLER, doing business as The Lubricosos Specialties Mfg. Co., Houston, Tex. Filed Nov. 29, 1946.

The applicant disclaims the wording included in the mark except "Lubricosos" and the letters "SOS."
FOR VALVE GREASES.
Claims use since Oct. 15, 1946.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,351. P. LORILLARD COMPANY, New York, N. Y. Filed July 1, 1947. Under 10-year proviso.

Le Roy

FOR CIGARS.
Claims use since October 1894.

Ser. No. 525,622. P. LORILLARD COMPANY, New York, N. Y. Filed July 2, 1947. Under 10-year proviso.

HOFFMAN HOUSE

The drawing is lined for the colors blue and brown.
FOR CIGARS.
Claims use since February 1885.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 479,123. HARVEY MACHINE CO., INC., Los Angeles, Calif. Filed Jan. 29, 1945.

Harcraft

FOR ELECTRICAL APPARATUS—NAMELY, RADIO RECEIVING AND TRANSMITTING SETS, MECHANISM TO SUPPLEMENT THE FEEDING OF AMMUNITION IN MACHINE GUNS, AND THE LIKE, ELECTRIC MOTORS, AND POWER DEVICES FOR OPERATING AIRCRAFT PARTS—NAMELY, ELECTRIC ACTUATOR UNITS FOR WING FLAPS, LANDING GEAR, AND THE LIKE.
Claims use since Jan. 27, 1944.

Ser. No. 517,741. PHIL-MAR PRODUCTS COMPANY, Cleveland, Ohio. Filed Feb. 18, 1947.

Glastron

FOR ELECTRIC LAMP SHADES MADE OF PLASTIC COATED GLASS FABRIC.
Claims use since June 1, 1946.

Ser. No. 518,943. ERICKSON STEEL COMPANY, Cleveland, Ohio. Filed Mar. 13, 1947.

SAFE-T-VOICE

FOR ELECTRON TUBE CIRCUIT AUDIO AMPLIFIER CABINET SETS AND PARTS THEREOF.
Claims use since Oct. 30, 1940.

Ser. No. 522,875. THE MERCURY BATTERY CHARGER CO., Kansas City, Mo. Filed May 23, 1947.

jitter GUN

The term "Gun" is disclaimed apart from the mark.
FOR ELECTRICAL WELDING MACHINES AND WELDING GUN THEREFOR.
Claims use since Apr. 2, 1947.

Ser. No. 525,455. TRAV-LER RADIO CORPORATION, Chicago, Ill. Filed July 1, 1947.

TRAV-LER

FOR RADIO RECEIVING SETS.
Claims use since Jan. 1, 1937.

Ser. No. 525,456. TRAV-LER RADIO CORPORATION, Chicago, Ill. Filed July 1, 1947.

TRAVEL WITH TRAV-LER

The words "Travel With" are disclaimed apart from the mark as shown.
FOR RADIO RECEIVING SETS.
Claims use since Jan. 1, 1937.

Ser. No. 525,540. CENTRAL ELECTRIC MANUFACTURING COMPANY, Boulder, Colo. Filed July 2, 1947.

CENTRALUX

FOR ELECTRICAL MACHINES FOR SOLDERING AND SPOT WELDING, SUCH MACHINES ALSO BEING ADAPTED TO BE USED IN HEATING AND DEMAGNETIZING OPERATIONS.
Claims use since June 17, 1947.

Ser. No. 525,541. CENTRAL ELECTRIC MANUFACTURING COMPANY, Boulder Colo. Filed July 2, 1947.

DUALUX

FOR ELECTRICAL MACHINES FOR SOLDERING AND SPOT WELDING, SUCH MACHINES ALSO BEING ADAPTED TO BE USED IN HEATING AND DEMAGNETIZING OPERATIONS.
Claims use since June 17, 1947.

Ser. No. 525,542. CENTRAL ELECTRIC MANUFACTURING COMPANY, Boulder Colo. Filed July 2, 1947.

SOLDERETTE

FOR ELECTRICAL MACHINES FOR SOLDERING AND SPOT WELDING, SUCH MACHINES ALSO BEING ADAPTED TO BE USED IN HEATING AND DEMAGNETIZING OPERATIONS.
Claims use since June 17, 1947.

Ser. No. 525,543. CENTRAL ELECTRIC MANUFACTURING COMPANY, Boulder Colo. Filed July 2, 1947.

SPOTLUX

FOR ELECTRICAL MACHINES FOR SOLDERING AND SPOT WELDING, SUCH MACHINES ALSO BEING ADAPTED TO BE USED IN HEATING AND DEMAGNETIZING OPERATIONS.
Claims use since June 17, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 507,568. NOLAN E. BOUGHTON, doing business as The Caddy-Roll Company, Three Rivers, Mich. Filed Aug. 17, 1946.

CADDY-ROLL CO.

The word abbreviation "Co." is disclaimed apart from the mark.
FOR CARTS FOR GOLF BAGS.
Claims use since June 1, 1940.

Ser. No. 521,051. ABRANBEE DOLL CO., New York, N. Y. Filed Apr. 21, 1947.

No claim is made to the words "Quality Doll" and "Skin" apart from the mark.
FOR DOLLS.
Claims use since Feb. 11, 1947.

Ser. No. 521,135. DEWEY S. JOHNSTON, doing business as Euclid Novelty Company, Fort Worth, Tex. Filed Apr. 22, 1947.

FOR GAME PADDLES HAVING A BALL ATTACHED BY AN ELASTIC CORD.
Claims use since Jan. 1, 1946.

Ser. No. 521,297. VAN HEE BROTHERS PRODUCTS, Detroit, Mich. Filed Apr. 24, 1947.

"Gurgling Joe"

FOR ARTIFICIAL FISH BAITS AND ARTIFICIAL FISH LURES.
Claims use since February 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 509,768. GILETTE SAFETY RAZOR COMPANY, Boston, Mass. Filed Sept. 26, 1946.

The drawing is lined for shading only. The representation if a safety razor and blade is disclaimed apart from the mark.
FOR SAFETY RAZOR BLADES.
Claims use since Sept. 16, 1946.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 504,948. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va. Filed July 1, 1946.

FOR NEEDLES MADE OF FIRED CERAMIC MATERIAL FOR SOUND REPRODUCING EQUIPMENT.
Claims use since June 20, 1946.

Ser. No. 504,950. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va. Filed July 1, 1946.

SAPPHIRITE

FOR NEEDLES MADE OF FIRED CERAMIC MATERIAL FOR SOUND REPRODUCING EQUIPMENT.
Claims use since June 20, 1946.

Ser. No. 526,259. LAPIN PRODUCTS, INC., Newark, N. J. Filed July 4, 1947.

TOYMONICA

FOR MUSICAL INSTRUMENTS—NAMELY, HARMONICAS.
Claims use since Mar. 1, 1947.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 510,250. THE HEARST CORPORATION, New York, N. Y. Filed Oct. 4, 1946.

WHAT A FAMILY!

NEWSPAPER CARTOON PAGE AND/OR STRIP.
Claims use since Sept. 7, 1946.

Ser. No. 512,734. EDITORIAL SIGMAR, Buenos Aires, Argentina. Filed Nov. 16, 1946.

FOR PERIODICALS AND PRINTED BOOKS FOR CHILDREN.
Claims use since September 1941.

CLASS 39

CLOTHING

Ser. No. 503,949. SOCIETE A RESPONSABILITE LIMITEE: ETABLISSEMENTS RENE BARBOTIN, Paris, France. Filed June 14, 1946.

The picture is a fanciful picture of a knight. The device "Sans Maille a Partir" is a Gallicism, meaning: There is not the least object to contend about. The notation "Tricots de Luxe" is disclaimed apart from the mark as shown.
FOR HOSIERY, UNDERWEAR FOR MEN, WOMEN, AND CHILDREN, DRESSES, SKIRTS, AND BLOUSES.
Claims use since Feb. 14, 1946.

Ser. No. 507,104. D. BYFORD & CO., LIMITED, Leicester, England. Filed Aug. 9, 1946.

Byford.

FOR STOCKINGS, SOCKS, AND THREE-QUARTER HOSE.
Claims use since Apr. 2, 1946.

Ser. No. 507,376. COHAN & ROTH, INCORPORATED, New York, N. Y. Filed Aug. 14, 1946.

Racing Colors

The word "Colors" is disclaimed apart from the mark.
FOR NECKTIES, CRAVATS, AND SCARFS.
Claims use since July 23, 1946.

Ser. No. 512,487. CARMEL BROTHERS, New York, N. Y. Filed Nov. 13, 1946.

Carmel
original

The word "Original" is disclaimed apart from the mark.
FOR LADIES' CLOAKS, COATS, AND SUITS.
Claims use since 1925.

Ser. No. 515,619. MINNIE GOLDFARB, administratrix of the estate of Joseph Goldfarb, New York, N. Y., assignor to Onyx Blouse Co., Inc., New York, N. Y., a corporation of New York. Filed Jan. 11, 1947.

Scholarship

FOR BOYS' AND GIRLS' OUTER BLOUSES, SHIRTS, AND SPORT POLO SHIRTS.
Claims use since May 1, 1919.

Ser. No. 516,311. REITER BROS., New York, N. Y. Filed Jan. 24, 1947.

The Indian head figure on the drawing is fanciful.
FOR TROUSER SUSPENDERS, GARTERS, AND ARM-BANDS.
Claims use since Dec. 9, 1946.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 507,965. BRADFORD DYEING ASSOCIATION, (U. S. A.), Westerly, R. I. Filed Aug. 24, 1946.

BRADCORSA

FOR PIECE GOODS OF RAYON AND WOOL, AND OF RAYON, COTTON, AND COMBINATIONS THEREOF.
Claims use since Aug. 13, 1946.

Ser. No. 519,049. BEAUNIT MILLS, INC., New York, N. Y. Filed Mar. 15, 1947.

BEAUCRUISE

FOR FABRICS IN THE PIECE OF RAYON FIBRES.
Claims use since Feb. 28, 1947.

Ser. No. 519,093. PEDIGREE FABRICS, INC., New York, N. Y. Filed Mar. 15, 1947.

Pedgee

FOR WOVEN FABRIC OF RAYON OR NYLON, OR MIXTURES THEREOF, SOLD BY THE PIECE.
Claims use since Feb. 17, 1947.

Ser. No. 520,295. PEDIGREE FABRICS, INC., New York, N. Y. Filed Apr. 7, 1947.

Pediswish

FOR WOVEN FABRIC OF RAYON OR NYLON, OR MIXTURES THEREOF, SOLD BY THE PIECE.
Claims use since January 1939.

Ser. No. 521,240. BOLAND MFG. CO., Chicago, Ill. Filed Apr. 24, 1947.

Crysto-Cleer

The word "Clear" is disclaimed apart from the mark as shown.
FOR SHOWER BATH CURTAINS.
Claims use since Apr. 6, 1945.

Ser. No. 521,829. DAVID SCHLISSEL, doing business as Phoenix Ribbon Co., New York, N. Y. Filed May 3, 1947.

The word "Quality" and the representation of the goods and of the spool are disclaimed apart from the mark as shown.
FOR RIBBONS OF COTTON, RAYON, SILK, AND COMBINATIONS THEREOF, SOLD BY THE PIECE, YARD, OR BOLT.
Claims use since Apr. 1, 1947.

Ser. No. 523,700. PEDIGREE FABRICS, INC., New York, N. Y. Filed June 6, 1947.

Pedigleam

FOR WOVEN FABRIC OF RAYON OR NYLON OR MIXTURES THEREOF, SOLD BY THE PIECE.
Claims use since April 1941.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 504,169. FLORASYNTH LABORATORIES, INCORPORATED, New York, N. Y. Filed June 19, 1946.

FRUITOSYNTH

Applicant owns registration Nos. 177,204 and 353,939.
FOR FLAVORINGS, KNOWN ALSO AS FLAVORING EXTRACTS FOR FOOD PURPOSES.
Claims use since May 1, 1946.

Ser. No. 507,108. COASTAL TRADING COMPANY, Seattle, Wash. Filed Aug. 9, 1946.

The representation of the fish is disclaimed apart from the mark.
FOR CANNED SALMON.
Claims use since June 5, 1946.

Ser. No. 515,151. ARKANSAS RICE GROWERS COOPERATIVE ASSOCIATION, Stuttgart, Ark. Filed Jan. 2, 1947.

RICELAND

FOR RICE.
Claims use since Sept. 15, 1946.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 512,095. EARLE M. TABER, East Orange, N. J. Filed Nov. 5, 1946.

The word "Button" is disclaimed apart from the mark as shown.
FOR SCHOOL INSIGNIA BUTTONS.
Claims use since January 1946.

Ser. No. 524,628. HARRY B. SHANES, also doing business as Crafts Center, Salisbury, Vt. Filed June 21, 1947.
The lines shown as shading the letters in the drawing are for shading purposes only.

METALEX

FOR PACKAGED OUTFITS CONTAINING THE FOLLOWING MATERIALS—NAMELY, A MIMEOGRAPH STYLUS, A WOOD OR METAL ROD, A PEN-HOLDER, A DOUBLE BALL LEATHER TOOL, CARBON-PAPER, METAL SHEETS, MIMEOGRAPHED DRAWINGS, INSTRUCTION SHEETS, WOOD MOLDING FOR FRAMES, NAILS FOR FRAMES, WOOD PARTS FOR PLAQUES, SCREWS AND HOOKS USABLE IN THE EDUCATIONAL DEVELOPMENT OF CHILDREN.
Claims use since Oct. 6, 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 513,448. MONARCH LEATHER COMPANY, Chicago, Ill. Filed Jan. 22, 1948.

YUCATAN

FOR LEATHER.
Claims use since 1914.

Ser. No. 528,945. OSCAR C. PALMER, doing business as Sno-Fluf Excelsior Manufacturing Company, Phoenix, Ariz. Filed July 19, 1947.

SNO-FLUF

FOR BALED EXCELSIOR, EXCELSIOR FOR PACKING FRESH FRUIT, EXCELSIOR FOR EVAPORATIVE COOLERS, AND EVAPORATIVE COOLER PADS MADE FROM EXCELSIOR.
Claims use since April 1938.

Ser. No. 539,884. GEO. LAUB'S SONS, Buffalo, N. Y. Filed Nov. 1, 1947.

BROWN-FLEX

The word "Brown" is disclaimed apart from the mark.
FOR LEATHER.
Claims use since September 1936.

CLASS 2

RECEPTACLES

Ser. No. 493,540. EISENSTADT MANUFACTURING COMPANY, St. Louis, Mo. Filed Aug. 29, 1947.

Priscilla

FOR UNFILLED COMPACTS OF BASE METAL, TRIMMED OR UNTRIMMED WITH CERAMIC OR OTHER WARE.
Claims use since January 1916.

Ser. No. 506,760. MARCALUS MANUFACTURING CO., INC., East Paterson, N. J. Filed Sept. 15, 1947.

MARCAL
PRODUCTS
ALL-WAYS DEPENDABLE

The words "Products All-Ways Dependable" are disclaimed apart from the mark.
FOR PAPER SANDWICH BAGS.
Claims use since August 1945.

Ser. No. 518,365. PLASTIC SHEET FABRICATION, INC., New York, N. Y. Filed Oct. 21, 1947.

PAILMASTER

The representation of the goods depicted on the drawing is disclaimed apart from the mark.
FOR HEAT INSULATING LINERS AND JACKETS FOR PAILS AND BUCKETS.
Claims use since Feb. 3, 1947.

Ser. No. 526,664. THE DILL MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

PRES-TO

FOR OILING DEVICE IN THE NATURE OF A SMALL OILING DEVICE SHAPED SIMILARLY TO A FOUNTAIN PEN AND ADAPTED TO BE CARRIED ON THE PERSON OF THE USER.
Claims use since May 1, 1938.

Ser. No. 544,264. HARTMANN-MALCOLM CO., doing business as Ever-Lasting Products Co., Chicago, Ill. Filed Dec. 13, 1947.

EPCO

FOR BURIAL CASKETS.
Claims use since Oct. 25, 1947.

Ser. No. 544,457. ODORA COMPANY, INC., New York, N. Y. Filed Dec. 16, 1947.

Odora-Whitmor

Applicant claims ownership of registrations Nos. 299,101, 315,565, 326,273, 347,068, and 350,123.
FOR GARMENT BAGS MADE OF PLASTIC FILM AND CARDBOARD BOXES COVERED WITH PAPER AND CARDBOARD BOXES COVERED WITH QUILTED FABRIC.
Claims use since Nov. 28, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 556,517. ALIDA V. ALLEN, doing business under the name and style of Alida Company, Jamaica, N. Y. Filed May 8, 1948.

ALIDA BAG

No claim is made for the word "Bag" apart from the mark as shown.
FOR LADIES' HAND AND SHOULDER BAGS.
Claims use since Dec. 3, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 522,714. GEORGE C. ROMBERGER, doing business as The Radium Hand Soap Company, Seattle, Wash. Filed Jan. 19, 1948.

RADIUM

FOR HAND SOAP IN PASTE FORM.
Claims use since November 1920.

Ser. No. 523,643. BEHR-MANNING CORPORATION, Troy, N. Y. Filed July 17, 1947.

RESINALL

FOR COATED ABRASIVES.
Claims use since Apr. 24, 1947.

Ser. No. 530,717. JOE C. BODE, JR., doing business as Manson Distributors, Aurora, Ill. Filed July 27, 1948.

"THAW-STICK"

FOR PREPARATION IN STICK FORM WHICH IS APPLIED TO WINDOWS TO PREVENT FOGGING AND FORMATION OF ICE IN COLD WEATHER.
Claims use since July 10, 1947.

Ser. No. 534,514. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed Sept. 15, 1947. Under section 2f of the act of 1946.

CUDAHY'S QUICK SUDZ

Applicant claims ownership of registration No. 181,852.
FOR SOAP IN SHREDDED FORM READILY SOLUBLE IN WATER AND SOLD IN BARRELS FOR USE IN LAUNDRY WASHING MACHINES.
Claims use since Feb. 22, 1922.

Ser. No. 535,645. STERLING JONES LABORATORIES, doing business as R. A. Myers & Company, St. Paul, Minn. Filed Nov. 7, 1947.

RAMCO
RAMCO

FOR CLEANING AND SCOURING COMPOUNDS FOR ALL SURFACES, AND HAVING INCIDENTAL DEODORIZING AND WATER SOFTENING PROPERTIES—NAMELY, DETERGENT ABRASIVE SCOURING AND CLEANING COMPOUND, LIQUID SPOT CLEANER FOR TAPESTRY, RUGS, CLOTHING, AND RUBBERIZED GARMENTS, ALL PURPOSE CLEANER IN POWDERED FORM, CHEMICAL CLEANER FOR ASPHALT TILE, LINOLEUM, TERRAZZO, AND MARBLE, NEUTRAL OIL CLEANER FOR PAINTED, VARNISHED AND ENAMELED WOODWORK AND WALLS, PORCELAIN, VITREOUS WARE, AUTOMOBILES, AND LEATHER, PASTE CLEANER FOR LINOLEUM, COMPOSITION FLOORING, TILE AND MARBLE FLOORING, BOWLS, SINKS, TUBS, WOODWORK, AND WALL SURFACES, WINDOW GLASS CLEANER, WINDOW SHADE CLEANER, GLASS CLEANER (DIP RINSE), VENETIAN BLIND CLEANER, EYE GLASS CLEANER, METAL POLISH AND CLEANER; AND SOAP—NAMELY, LIQUID TOILET SOAPS, HAND SOAPS IN POWDER, PASTE, LIQUID, AND BAR FORM, SURGICAL SOAP, AND RUG SHAMPOO.
Claims use since Jan. 1, 1929.

Ser. No. 543,638. MEM COMPANY, New York, N. Y. Filed Dec. 6, 1947.

MEM

Applicant claims ownership of registration No. 282,642.
FOR SOAPS.
Claims use since Mar. 29, 1921.

Ser. No. 543,779. CEREAL SOAPS COMPANY, INC., New York, N. Y. Filed Dec. 9, 1947.

Derbac

Applicant claims ownership of registrations Nos. 199,534 and 272,869.
FOR TAR MEDICATED SHAMPOO SOAP.
Claims use since September 1920.

Ser. No. 548,016. PLASTICRETE AGGREGATES CORPORATION, Hamden, Conn. Filed Jan. 26, 1948.

TRAX

FOR ABRASIVE MIXTURE CONTAINING CINDERS, WOOD FIBERS, AND A MINOR AMOUNT OF ROCK SALT, USED FOR PREVENTING SLIP OF AUTOMOBILES AND PERSONS ON ICY PAVEMENT.
Claims use since Dec. 29, 1947.

Ser. No. 548,366. HANSON-VAN WINKLE MUNNING COMPANY, Matawan, N. J., and elsewhere. Filed Jan. 30, 1948.

ROYLITE

Applicant claims ownership of registration No. 149,007.
FOR COMPOSITION FOR CLEANING METALS.
Claims use since Mar. 14, 1921.

Ser. No. 548,370. HANSON-VAN WINKLE-MUNNING COMPANY, Matawan, N. J., and elsewhere. Filed Jan. 30, 1948.

SISALIN

FOR POLISHING, BRUSHING, AND BUFFING WHEELS.
Claims use since Jan. 15, 1937.

Ser. No. 551,090. COSMET COMPANY, Minneapolis, Minn. Filed Mar. 3, 1948.

Cosma Kote

The term "Kate" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 409,161.
FOR LIQUID COATING FOR GLASS AND LENS SURFACES FOR RESISTING SMEAR AND DUST.
Claims use since Feb. 15, 1947.

Ser. No. 551,610. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Mar. 10, 1948.

Distinguished Service

FOR SHAVE SOAP.
Claims use since Jan. 13, 1948.

Ser. No. 558,353. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed June 3, 1948.

CUDA · SHEEN

Applicant disclaims the word "Sheen" apart from the mark as shown.
FOR CONCENTRATED LIQUID SOAP USED PRIMARILY FOR CLEANING FLOORS, WALLS, VARNISHED SURFACES, AND THE LIKE.
Claims use since Apr. 5, 1946.

Ser. No. 558,360. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed June 3, 1948.

GLISSENITE

FOR COMBINATION OF ALKALIS FOR USE IN MECHANICAL DISHWASHING MACHINERY.
Claims use since Mar. 31, 1938.

Ser. No. 558,363. THE CUDAHY PACKING COMPANY, Chicago, Ill. Filed June 3, 1948.

PANEX

FOR CLEANER FOR METAL SURFACES.
Claims use since Mar. 31, 1936.

Ser. No. 559,095. ENGINEERED PRODUCTS, INC., Denver, Colo. Filed June 12, 1948.

TOR-REX

FOR ABRASIVE COMPOSITIONS FOR SAND BLASTING AND THE LIKE.
Claims use since Feb. 11, 1948.

Ser. No. 563,015. R. P. SCHERER CORPORATION, Detroit, Mich. Filed Aug. 7, 1948.

G P

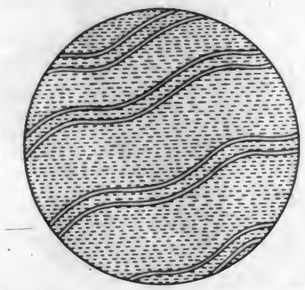
FOR CLEANSING AND DETERGENT COMPOSITIONS IN CAPSULE FORM FOR PERSONAL, HOUSEHOLD, COMMERCIAL, AND INDUSTRIAL USES WITH AND WITHOUT ADDED STERILIZING AND DEODORIZING INGREDIENTS.
Claims use since October 1933.

Ser. No. 563,016. R. P. SCHERER CORPORATION, Detroit, Mich. Filed Aug. 7, 1948.

GDP

FOR CLEANSING AND DETERGENT COMPOSITIONS IN CAPSULE FORM FOR PERSONAL, HOUSEHOLD, COMMERCIAL, AND INDUSTRIAL USES WITH AND WITHOUT ADDED STERILIZING AND DEODORIZING INGREDIENTS.
Claims use since October 1933.

CLASS 6



CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 492,925. KAY GASES CO., Chicago, Ill. Filed Apr. 17, 1948. Under section 2f of the act of 1946.
The drawing is lined to indicate red.

KAYGAS

FOR PROPANE, OXYGEN, HYDROGEN, ACETYLENE, CARBON DI-OXIDE AND COMPRESSED AIR.
Claims use since Feb. 1, 1934.

Ser. No. 500,891. MILLER PROTECTO PRODUCTS CO., Kalamazoo, Mich., a corporation of Michigan, assignee of Miller Protecto Products Co., Kalamazoo, Mich. Filed Aug. 21, 1947.

The drawing is lined for shading purposes only.
FOR BOTTLED LIQUID WHICH WHEN SPRAYED DEODORIZES AND FRESHENS THE AIR.
Claims use since Oct. 12, 1944.

Ser. No. 506,138. SUNSHINE PRODUCTS COMPANY, Seattle, Wash. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

PinEdle

FOR DEODORANT AND DISINFECTANT.
Claims use since Jan. 15, 1937.

Ser. No. 514,662. KENT A. LENSEN & SON CO., INC., Greencastle, Ind. Filed Sept. 29, 1947.

KALSCOMIN

FOR SUPPLEMENT TO LIVESTOCK AND POULTRY FEED, CONSISTING PRINCIPALLY OF MINERALS AND VITAMINS.
Claims use since Dec. 8, 1944.

Ser. No. 517,830. THE CHATTANOOGA MEDICINE COMPANY, Chattanooga, Tenn. Filed Sept. 27, 1947.

Sōltice

FOR EXTERNAL RUB FOR RELIEVING CONGESTION DUE TO COLDS, FOR MUSCULAR SORENESS, LUMBAGO, SPRAINS, BRUISES, TIRED AND ACHING FEET, SIMPLE HEADACHE, AND NON-POISONOUS INSECT BITES AND STINGS.
Claims use since Dec. 13, 1946.

Ser. No. 518,555. NOPCO CHEMICAL COMPANY, Harrison, N. J., now by change of name from National Oil Products Co. Filed Jan. 29, 1948.

VIADEX

FOR HIGH POTENCY VITAMIN-CONTAINING SOLID, AS A DIETARY SUPPLEMENT FOR FORTIFYING ANIMAL AND POULTRY FOODS AND FEEDS.
Claims use since Jan. 27, 1947.

Ser. No. 526,625. PATRICK E. HUGHES, doing business as Hughes Pharmacal Co., San Antonio, Tex. Filed July 5, 1947.

C-S-O

(Carbocuilfol)

Applicant claims ownership of registration No. 404,983.
FOR ANTISEPTIC EMULSION FOR USE AS A MOIST DRESSING, FOR SUPERFICIAL BURNS, SUNBURN, CUTS, AND COMMON INSECT BITES.
Claims use since Aug. 1, 1942.

Ser. No. 527,428. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

ESPERON

Applicant claims ownership of registration No. 370,414.
FOR PREPARATION FOR THE TREATMENT OF ESSENTIAL HYPERTENSION, ARTERIOSCLEROSIS, THROMBOSIS AND IMPAIRED CORONARY CIRCULATION, CARDIAC DISTURBANCES, AND ANGINA PECTORIS.
Claims use since October 1937.

Ser. No. 527,724. VITAMINERALS, INC., Los Angeles, Calif. Filed July 5, 1947.

Applicant claims ownership of registration No. 357,104.
FOR ANALGESIC BALM, ANESTHETIC OINTMENT, ASTRINGENT PREPARATION, BENZOCAINE, BILE SALTS, BONE MEAL FOR USE AS A SOURCE OF CALCIUM AND PHOSPHORUS, CALCIUM PREPARATIONS, CHLOROPHYLL, COLLOIDAL SULPHUR, DIGESTIVE ENZYMES, ESTROGENS, EXTRACT OF OX BILE, GARLIC EXTRACTS, IODINE PREPARATIONS, IRON PREPARATIONS, IRON SULPHATE PREPARATIONS, KELP EXTRACTS, LAXATIVES, LIVER PREPARATIONS, MINERAL CONCENTRATE PREPARATIONS, MINERAL OINTMENTS, MINERAL RECTAL SUPPOSITORIES, MULTIPLE VITAMIN PREPARATIONS, PANCREATIN, PAPAIN, PHOSPHORUS PREPARATIONS, VITAMINS A, B-COMPLEX, C, D, E, F, AND K.
Claims use since Aug. 1, 1933.

Ser. No. 529,888. FRITZSCHE BROTHERS, INC., New York, N. Y. Filed July 29, 1947.

CENTIFOLIOL

FOR ROSE PERFUME BASE USED IN THE PRODUCTION OF PERFUME.
Claims use since July 14, 1947.

Ser. No. 531,957. RALPH N. TAKAKI, Honolulu, Territory of Hawaii. Filed Aug. 20, 1947.

SHINJU GWAN

The Japanese characters usually termed as "Shinju" meaning "pearl," "Gwan" meaning "circle," and "Akadama" meaning "crimson jewel" or "gem."
FOR MEDICINE FOR DIARRHEA.
Claims use since July 25, 1940.

Ser. No. 532,787. WINTERSMITH CHEMICAL COMPANY, Louisville, Ky. Filed Aug. 28, 1947. Under section 2f of the act of 1946 as to "Wintersmith."

HIERRO VITAMINADO de WINTERSMITH

No claim is made to the exclusive use of the words "Hierro Vitaminado" apart from the mark. A translation of "Hierro Vitaminado" is "Vitaminized Iron." Applicant claims ownership of registrations Nos. 32,800, 90,612, and 121,995.
FOR VITAMINIZED IRON.
Claims use since April 1947.

Ser. No. 534,156. LUCIEN LELONG, INC., Chicago, Ill. Filed Sept. 11, 1947.

Applicant claims ownership of registration No. 323,521.
FOR PERFUMES, COLOGNES, DUSTING POWDERS, TALCUM POWDERS, AND SACHET POWDERS.
Claims use since March 1942.

Ser. No. 535,114. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Sept. 20, 1947.

DYKASOL

FOR ACID EMULSION FOR USE AS A SURFACE HOMOGENIZER IN THE PREPARATION OF DIE CASTINGS FOR SUBSEQUENT ELECTROPLATING AND HAVING INCIDENTAL CLEANSING PROPERTIES.
Claims use since Aug. 1, 1947.

Ser. No. 537,044. INTERNATIONAL CHEMICAL WORKERS UNION, Akron, Ohio. Filed Oct. 7, 1947.

No claim is made to the words "Int. Chemical Workers" and "A. F. of L." apart from the mark as shown.
FOR CHEMICALS AND CHEMICAL PRODUCTS.
Claims use since 1944.

Ser. No. 538,538. THE GUERLAIN PERFUMERY CORPORATION, New York, N. Y. Filed Oct. 21, 1947. Under section 2f of the act of 1946.

ROSE LIP BENGALE

The words "Rose Lip" are disclaimed apart from the mark shown. Applicant claims ownership of registration No. 412,601.
FOR LIP STICKS.
Claims use since 1921.

Ser. No. 539,379. AMERICAN LABORATORIES INCORPORATED, Richmond, Va. Filed Oct. 29, 1947.

Applicant claims ownership of registration No. 128,599.
FOR PETROLATUM.
Claims use since Apr. 16, 1919.

Ser. No. 540,845. ALEXANDRA DE MARKOFF, INC., New York, N. Y. Filed Nov. 12, 1947.

Alexandra de Markoff

The name, Alexandra de Markoff, shown on the drawing, is the name of a deceased person. Applicant claims ownership of registrations Nos. 280,660, 374,863, and 409,273.
FOR FACIAL PREPARATIONS—NAMELY, SKIN CREAM, LIQUID SKIN CLEANSER, CLEANSING CREAM, STIMULATION CREAM, SKIN TONIC, COLD CREAM, ASTRINGENTS, PERFUMES, FACE POWDER, ROUGE, LIPSTICK, COLOGNE, TOILET WATER, EYE SHADOW, AND DUSTING POWDER, TALCUM POWDER, HAND LOTIONS AND CREAMS, POWDER AND ROUGE COMPACTS, BATH OIL.
Claims use since October 1929.

Ser. No. 540,946. VITAMINS, INC., Chicago, Ill. Filed Nov. 12, 1947.

VITINC

FOR VITAMIN PREPARATION FOR INDUSTRY.
Claims use since May 6, 1941.

Ser. No. 542,363. JOHN C. STALFORT & SONS, INC., Baltimore, Md. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

Stalfort's '68

FOR SHOE DYE.
Claims use since Dec. 31, 1926.

Ser. No. 543,036. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Sept. 23, 1947.

SS

Applicant claims ownership of registration No. 307,398.
FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Apr. 17, 1933.

Ser. No. 543,505. M. F. C. CORPORATION, New York, N. Y. Filed Dec. 5, 1947.

MANAMINOS

FOR AMINO ACIDS AND COMBINATIONS THEREOF WITH HORMONES AND ENZYMES, PARTICULARLY FOR THE REINFORCEMENT OF HUMAN AND ANIMAL FOOD STUFFS.
Claims use since July 1, 1947.

Ser. No. 543,506. M. F. C. CORPORATION, New York, N. Y. Filed Dec. 5, 1947.

MANISTIDINE

FOR AMINO ACIDS AND COMBINATIONS THEREOF WITH HORMONES AND ENZYMES, PARTICULARLY FOR USE IN ANTIHISTAMIN MEDICATION.
Claims use since July 1, 1947.

Ser. No. 545,108. ENJAY COMPANY, INC., Wilmington, Del., and New York, N. Y. Filed Dec. 22, 1947.

PARADYNE

FOR CHEMICAL INGREDIENT USED AS AN ADDITIVE FOR LIQUID FUEL, USED, AMONG OTHER THINGS, AS INHIBITORS, LEAD STABILIZERS, AND FOR PREVENTING THE FORMATION OF GUM OR GUM FORMING MATERIALS IN THE FUEL, RETARDING OR PREVENTING HARMFUL DEPOSITS IN THE INDUCTION SYSTEMS AND ON VALVES OF INTERNAL COMBUSTION ENGINES, SOFTENING AND REMOVING OF PREFORMED GUMMY DEPOSITS ON VALVES, REDUCING AND PREVENTING VALVE STICKING AND PROVIDING SUPPLEMENTARY LUBRICATION TO PARTS NOT READILY SUPPLIED WITH LUBRICATION FROM THE OIL SYSTEM OF THE ENGINE.
Claims use since Mar. 7, 1947.

Ser. No. 546,722. NATIONAL LEAD COMPANY, Sayreville, N. J., and New York, N. Y. Filed Jan. 10, 1948.

CARBONOX

FOR COMPOSITION CONTAINING A WATER-DISPERSIBLE ORGANIC SALT FOR THE TREATMENT OF WELL-DRILLING FLUIDS.
Claims use since Oct. 1, 1947.

Ser. No. 547,641. THE MALTINE COMPANY, New York, N. Y. Filed Jan. 21, 1948.

RELARTH

FOR OVARIAN EXTRACT FOR USE IN OBSTETRICS.
Claims use since Dec. 10, 1947.

Ser. No. 547,642. THE MALTINE COMPANY, New York, N. Y. Filed Jan. 21, 1948.

RELEASIN

FOR OVARIAN EXTRACT FOR USE IN OBSTETRICS.
Claims use since Dec. 10, 1947.

Ser. No. 548,650. CHARLES C. HASKELL & CO., INC., Richmond, Va. Filed Feb. 3, 1948.

DIAMERAZOLE

FOR MEDICINE IN TABLET FORM CONTAINING THE THREE SULFONAMIDES—SULFATHIAZOLE, SULFADIAZINE, AND SULFAMERIZINE—USED IN THE TREATMENT OF SULFONAMIDE SUSCEPTIBLE INFECTIONS.
Claims use since Mar. 15, 1947.

Ser. No. 548,959. GLENDALE TOILETRIES, INC., Chicago, Ill. Filed Feb. 6, 1948.

Twain

FOR COLOGNE, HAND LOTION, COLOGNE DEODORANT, COLD CREAM, FACE POWDER, FACE AND COMPLEXION CREAM.
Claims use since Jan. 5, 1948.

Ser. No. 549,307. TWAYNE COSMETIC CO., Passaic, N. J. Filed Feb. 10, 1948.

Twayne

FOR LIPSTICKS.
Claims use since Dec. 18, 1947.

Ser. No. 549,683. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Feb. 13, 1948.

THERAFOLIN

Applicant claims ownership of registration No. 406,197.
FOR MEDICINAL PREPARATION OF VITAMINS USED IN THE TREATMENT OF NUTRITIONAL DEFICIENCIES.
Claims use since Jan. 26, 1948.

Ser. No. 559,907. COMPANIA SWIFT DE MONTEVIDEO, S. A., Montevideo, Uruguay. Filed June 22, 1948.

D
C S
M

Applicant claims ownership of Uruguay registration No. 46,037, dated Oct. 10, 1947.
FOR ABSORBENTS; ALTERATIVES; ANALGESIC PREPARATIONS; ANAPHRODISIACS; ANESTHETICS; ANODYNES; ANTACIDS; ANTIALLEGICS; ANTIANEMICS; ANTIARTHRITIC PREPARATIONS; ANTIASTHMATICS; ANTIBACTERIAL PREPARATIONS; ANTIBIOTICS; ANTICATARRHALS; ANTICHLORITICS; ANTIDOTALS; ANTIEMITICS; ANTIDYSENTERICS; ANTIEPILEPTICS; ANTIGONORRHEALS; ANTIHEMORRHAGICS; ANTIHYPNOTICS; ANTILEPROUS PREPARATIONS; ANTILEUKORRHEALS; ANTIMALARIALS; ANTINEURALGICS; ANTINEURITICS; ANTIPARASITICS; ANTIPERIODICS; ANTIPHLOGISTICS; ANTIPSORIATICS; ANTIPYRETICS; ANTIRHEUMATICS; ANTISCORBUTICS; ANTITUBERCULARS; ANTITUSSIVE PREPARATIONS; ANTISPASMODICS; ANTISYPHILITICS; ANTITETANIC PREPARATIONS; ANTIZYMOTICS; ASTRINGENTS; CARDIOTONIC PREPARATIONS; CHEMOTHERAPEUTIC AGENTS; CHEMOTHERAPEUTIC ANTIMONY COMPOUND; CHEMOTHERAPEUTIC ARSENICAL COMPOUND; CHOLAGOGUES; DIGESTANTS; DIURETICS; ENDOCRINES; EXPECTORANT PREPARATIONS; HEMOSTATIC PREPARATIONS; HYPNOTICS; IODINE COMPOUNDS; LAXATIVE PREPARATIONS; SEDATIVES; URETERAL RELAXANTS; URINARY ANTISEPTICS; VASOCONSTRICTORS; VASODILATORS; VITAMINS AND VITAMIN PREPARATIONS; EPIROCHETICIDES; APERIANTS; APHRODISIACS; CARDIAC SEDATIVES AND STIMULANTS; CATHARTICS; CEREBRAL DEPRESSANTS AND STIMULANTS; COUNTER-IRRITANTS; DEMULCENTS; DEPRESSANTS; EMETICS; EMMENAGOGUES; EXPECTORANTS; NARCOTICS; PARASITICIDES; PURGATIVES; PROPHYLACTICS; RESTORATIVES; RUBEFACIENTS; SOPORIFICS; STYPTICS; VERMICIDES; VESICANTS; ALCOHOL FOR MEDICINAL PURPOSES; PREPARATIONS FOR TREATING CORNS, CALLI, AND WARTS; GUM AND TOOTHACHE DROPS; COUGH AND COLD REMEDIES; VETERINARY MEDICINES AND PREPARATIONS—NAMELY, BLISTER PREPARATIONS, BOVINE LAXATIVES, ELIXIRS, COUNTER-IRRITANTS, COLIC MIXTURES, MANGE LOTIONS, PITUITARY EXTRACTS, LINIMENT, AND SALVES; ANTISEPTICS, DEODORANTS AND DISINFECTANTS FOR HOSPITAL, SURGICAL, AND HOUSEHOLD USE; ANY AND ALL OF THE AFOREMENTIONED PRODUCTS BEING IN ANY ONE OR ANOTHER OF THE FOLLOWING FORMS: AMPOULES, CRUDE DRUGS, CRYSTALS, ELIXIRS, EMULSIONS, EXTRACTS (SOLID AND FLUID), LINIMENTS, LIQUIDS, LOZENGES, MIXTURES, OINTMENTS, PILLS, POWDERS, SOLIDS, SOLUTIONS, SPIRITS, SUPPOSITORIES, SYRUPS, TABLETS, TINCTURES, AND TROCHES; ACIDS—NAMELY, ACETIC, ARSENOUS, BENZOIC, BORIC, CARBOLIC, CITRIC, GALLIC, HYDRIODIC, HYDROCHLORIC, HYPOPHOSPHOROUS, LACTIC, NITRIC, OXALIC, PHOSPHORIC, PICRIC, SALICYLIC, STEARIC, SULPHURIC, TANNIC; TARTARIC; ANILINE; FORMALDEHYDE; COCOA BUTTER FOR MEDICINAL PURPOSES; DENTIFRICES; PITCH, BALSAM, GUMS, AND RESINS FOR MEDICINAL PURPOSES; SKIN LOTIONS AND SKIN CREAMS; COLOGNES; PERFUMES; TOILET POWDERS AND TOILET WATER; NAIL POLISH; LIPSTICK AND ROUGE; HAIR DYES, RINSES, AND POMADES; DEPILATORIES; AND EYE SHADOW AND MASCARA.

CLASS 7
CORDAGE

Ser. No. 555,028. TUBBS CORDAGE COMPANY, San Francisco, Calif. Filed Apr. 19, 1948.

Flying Chief

FOR MANILA LARIAT ROPE.
Claims use since June 30, 1944.

CLASS 11
INKS AND INKING MATERIALS

Ser. No. 540,174. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Nov. 5, 1947.

COLUMBIA RIBBON & CARBON MFG. CO., INC. Columbia

The words "Carbon Paper," "Typewriter Ribbons," and "Ribbon & Carbon Mfg. Co. Inc." are disclaimed. Applicant claims ownership of registration No. 83,818.
FOR CARBON PAPER AND TYPEWRITER RIBBONS.
Claims use since Nov. 1, 1907.

Ser. No. 554,805. THE MULTISTAMP COMPANY, INC., Norfolk, Va. Filed Apr. 16, 1948. Under section 2f of the act of 1946.

MULTISTAMP

Applicant claims ownership of registrations Nos. 260,366, 260,367, 261,306, 297,491, 299,179, and 370,812.
FOR STAMPING OR STENCILING INKS, AND EMBOSSING POWDERS.
Claims use since May 13, 1928.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 520,319. BLUE RIDGE QUARRIES, INC., Slatington, Pa. Filed Oct. 24, 1947. Under section 2f of the act of 1946.

BLUE RIDGE

The drawing is lined to indicate the color "blue."
FOR ROOFING SLATES AND STRUCTURAL SLATE.
Claims use since Jan. 1, 1925.

Ser. No. 527,181. THE PRESSTITE ENGINEERING COMPANY, St. Louis, Mo. Filed July 5, 1947.

PERMAGUM

Applicant claims ownership of registration No. 356,814.
FOR SEALING COMPOUND IN BULK AND IN EXTRUDED BEADS AND RIBBONS, FOR MECHANICAL JOINTS IN MECHANICAL REFRIGERATORS, AUTOMOBILES, AND OTHER TYPES OF VEHICLES AND EQUIPMENT.
Claims use since Dec. 1, 1937.

Ser. No. 530,568. ROCK-TRED CORPORATION, Chicago, Ill. Filed Aug. 5, 1947.

FLOORDRESS

FOR MASTIC ASPHALTIC FLOOR COATING MATERIAL.
Claims use since June 1947.

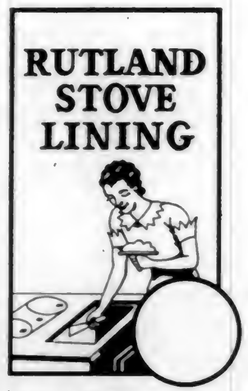
Ser. No. 531,285. ANGIER CORPORATION, Framingham, Mass. Filed Aug. 14, 1947.

ANSULATE

FOR STRAND REINFORCED, MULTI-PLY BUILDING PAPER.
Claims use since 1931.

Ser. No. 536,335. BAKER PAINT & VARNISH CO., Jersey City, N. J. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

SASHMILL PRIMELESS



Applicant claims ownership of registration No. 169,032.
FOR PUTTY.
Claims use since Mar. 1, 1922.

Ser. No. 537,656. THE BELIZE ESTATE & PRODUCE COMPANY, LIMITED, London, England. Filed Oct. 13, 1947.

BEC

FOR SAWN TIMBER.
Claims use since 1890.

Ser. No. 541,186. RUTLAND FIRE CLAY COMPANY, Rutland, Vt. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

The representation of the human figure is fanciful. No claim is made to the words "Stove" or "Lining" or to the representations of the stove and the plastic stove lining compound apart from the mark as shown. Applicant claims ownership of registrations Nos. 152,078, 161,832, 324,155, and 324,156.
FOR COMPOUND INCLUDING ASBESTOS TO BE MIXED WITH WATER TO MAKE A PLASTIC STOVE LINING.
Claims use since Jan. 1, 1928.

Ser. No. 541,207. SIMPLEX PAPER CORPORATION, Adrian, Mich. Filed Nov. 14, 1947.

SATAFIBRE

FOR PAPER AND/OR BOARD OF ONE OR MORE PLIES, MADE FROM FIBRE TREATED OR SATURATED WITH ASPHALT, FOR VARIOUS USES SUCH AS BUILDING PAPER, INDUSTRIAL PAPER, AUTOMOBILE PANELS, RADIO PARTS, FURNITURE PIECES, ETC.
Claims use since Oct. 1, 1936.

Ser. No. 546,142. LAWRENCE PORTLAND CEMENT COMPANY, New York, N. Y., and Siegfried, Pa. Filed Oct. 22, 1947.

No claim is made for the words "Rapid Hardening Superior Cement, Waterproof Absolutely," except in the setting and relation as shown. The drawing is lined to indicate the colors red and blue. Applicant claims ownership of registrations Nos. 74,139, 74,234, 322,806, and 270,877.
FOR BUILDING CEMENT.
Claims use since Oct. 1, 1927.

Ser. No. 556,738. VERMONT MARBLE COMPANY, Proctor, Vt. Filed Jan. 29, 1948.

MARKWA

Applicant claims ownership of registration No. 347,653.
FOR MARBLE TILE.
Claims use since Jan. 25, 1937.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 532,259. THE WILLIAMS-BOWMAN RUBBER CO., Cicero, Ill. Filed Aug. 23, 1947.

Wilbow

FOR PLUMBING SPECIALTIES—NAMELY, RUBBER TANK BALLS, TANK BALL STEMS, RUBBER STOPPERS, VALVE STEMS, RUBBER VALVE BALLS, TANK FLOATS, FLOAT RODS, ANTI-SPLASHERS FOR FAUCETS, ELBOWS, FURNACE BULBS, RUBBER BUMPERS FOR TOILET SEATS AND THE LIKE AND SUCTION CUPS.
Claims use since 1915.

Ser. No. 533,537. CARROLLTON MANUFACTURING COMPANY, Carrollton, Ohio. Filed Sept. 5, 1947.

VENUS WARE

The word "Ware" is disclaimed apart from the mark as shown.
FOR STAINLESS STEEL COOKING UTENSILS—NAMELY, SAUCE PANS, SAUCE POTS, STOCK POTS, DISH PANS, DOUBLE BOILERS, FRYING PANS, PUDDING PANS, SKILLETS, ROASTERS, MIXING BOWLS, CASSEROLES, COFFEE POTS, TEA KETTLES, PERCOLATORS, SERVERS, DUTCH OVENS, GRIDDLES, PITCHERS, COLANDERS, CAKE SAVERS, PIE PANS, CAKE PANS, INDIVIDUAL CASSEROLES, OBLONG SERVING TRAYS, ROUND BEVERAGE TRAYS, FOOTED BOWLS, DINNER PLATES, SOUP PLATES, SAUCERS, AND CUPS.
Claims use since 1931.

OILS AND GREASES

Ser. No. 535,708. INDEPENDENT REFINERS SERVICE CORPORATION, Wichita, Kans. Filed Sept. 25, 1947.

The word "Service" is disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 337,006.
FOR MOTOR LUBRICATING OILS AND GREASES.
Claims use since Apr. 8, 1935.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 523,397. P. LORILLARD COMPANY, New York, N. Y. Filed Sept. 3, 1947.

EMBASSY

FOR CIGARETTES.
Claims use since May 22, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 485,315. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo. Filed Oct. 29, 1947. Under section 2f of the act of 1946.

TRUETONE

FOR RADIO RECEIVING SETS AND RADIO TUBES.
Claims use since July 1, 1930.

Ser. No. 506,060. THE PURE OIL COMPANY, Chicago, Ill. Filed Dec. 11, 1947.

Puritan

FOR RADIO RECEIVING SETS.
Claims use since Apr. 18, 1946.

Ser. No. 519,060. CUTLER-HAMMER, INC., Milwaukee, Wis. Filed Oct. 23, 1947.

ULTRAFLEX

FOR ELECTRONIC MOTOR CONTROL EQUIPMENT—TO WIT: STARTING, STOPPING, REVERSING AND SPEED REGULATING APPARATUS FOR MOTORS.
Claims use since Dec. 30, 1946.

Ser. No. 522,203. THE METAL WARE CORPORATION, Two Rivers, Wis. Filed Mar. 8, 1948.

EMPIRE

FOR ELECTRIC PERCOLATORS, ELECTRIC TOASTERS, ELECTRIC SANDWICH TOASTERS, ELECTRIC WAFFLE IRONS, ELECTRIC HOT PLATES, ELECTRIC TEA KETTLES, ELECTRIC BOTTLE WARMERS, ELECTRIC RADIANT HEATERS AND ELECTRIC LANTERNS.
Claims use since 1922.

Ser. No. 528,959. SOUND RECORDER & REPRODUCER CORPORATION, Philadelphia, Pa. Filed July 19, 1947.

MAGNETSONIC

FOR MAGNETIC TAPE REPRODUCERS AND RECORDERS.
Claims use since June 2, 1947.

Ser. No. 529,810. NOBLITT-SPARKS INDUSTRIES, INC., Columbus, Ind. Filed July 28, 1947. Under section 2f of the act of 1946.

ARVIN

FOR RADIO RECEIVING SETS, PORTABLE ELECTRIC ROOM HEATERS, PORTABLE ELECTRIC GRILLS AND WAFFLE BAKERS, AND ELECTRIC SAD IRONS.
Claims use since June 15, 1931.

Ser. No. 529,909. MID-WEST REFINERIES, INC., Grand Rapids, Mich. Filed July 29, 1947.

EN-AR-CO

The lining on the drawing indicates the color blue.
FOR STORAGE BATTERIES.
Claims use since June 17, 1947.

Ser. No. 533,190. HARRY NABUT, New York, N. Y. Filed Sept. 3, 1947.

"THREE ZONE"

FOR ILLUMINATING REFLECTOR FOR AN ELECTRIC LAMP.
Claims use since June 20, 1945.

Ser. No. 534,593. BEAUTYTIME RADIO SERVICE COMPANY, Los Angeles, Calif. Filed Sept. 16, 1947.

Beautytime

FOR RADIO RECEIVING SETS.
Claims use since Aug. 28, 1947.

Ser. No. 538,257. THE ELECTRIC CONTROLLER & MANUFACTURING COMPANY, Cleveland, Ohio. Filed Oct. 18, 1947.

CONTRADYNE

Applicant claims ownership of registration No. 399,460.
FOR ELECTRIC CONTROLLERS FOR CONTROLLING THE ELECTRIC MOTOR WHICH DRIVES THE HOISTING MECHANISM OF CRANES.
Claims use since Oct. 4, 1947.

Ser. No. 542,227. MARS SIGNAL-LIGHT COMPANY, Chicago, Ill. Filed Aug. 15, 1947.

Applicant claims ownership of registration No. 368,964.
FOR ELECTRIC HEADLIGHTS AND SIGNAL LAMPS FOR STREET AND RAILWAY CROSSINGS, FIRE TRUCKS, EMERGENCY TRUCKS, AUTOMOBILES, DIESEL LOCOMOTIVES, RAILWAY ENGINES AND CARS, STREET CARS, AMBULANCES, AND REAR LIGHTS FOR RAILWAY CARS.
Claims use since June 1, 1924.

Ser. No. 542,653. PRITCHETT & GOLD AND E. P. S. COMPANY LIMITED, Essex, England. Filed Nov. 28, 1947.

PORVIC

Applicant claims ownership of British No. 620,729.
FOR STORAGE BATTERIES AND PARTS THEREOF.

Ser. No. 547,053. THE THOMAS & BETTS CO., Elizabeth, N. J. Filed Jan. 14, 1948.

INSULINER

Applicant claims ownership of registration No. 390,789.
FOR ELECTRICAL CONDUIT FITTINGS, PARTICULARLY INSULATING SLEEVES FOR USE IN CONNECTION WITH ELECTRICAL WIRING RACEWAY SYSTEMS.
Claims use since Nov. 14, 1939.

Ser. No. 547,058. THE THOMAS & BETTS CO., Elizabeth, N. J. Filed Jan. 14, 1948.

INSULETS

FOR INSULATING CONNECTORS FOR ARMOURED AND METALLIC SHEATHED CABLES.
Claims use since January 1927.

Ser. No. 499,053. LEON F. DOUGLASS, JR., Hollywood, Calif., assignee of Elliott Donnelley, doing business as Scale-Craft & Co. Filed Oct. 14, 1947.

SCALE-CRAFT
MODEL RAILROADS

No claim is made to the exclusive use of the representation of the goods nor to the words "Model Railroads" apart from the mark. Applicant claims ownership of registration No. 317,034.
FOR SETS OF PARTS FOR MODELS OF LOCOMOTIVES AND RAILWAY CARS FOR USE AS TOYS.
Claims use since October 1941.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 509,884. SELCHOW & RIGHTER COMPANY, Brooklyn, N. Y. Filed Sept. 23, 1947.

S&R
TRADE MARK

The words "Trade Mark" are disclaimed.
FOR PARAPHERNALIA FOR GAMES OF THE BOARD AND COUNTER, CARD, PURSUIT, SKILL, CAPTURE, CHANCE, PICTURE-PUZZLE AND FORTUNE TELLING TYPES.
Claims use since May 21, 1946.

Ser. No. 529,248. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed July 23, 1947.

MAM'SELLE

FOR COIN-CONTROLLED BALL ROLLING GAME.
Claims use since May 26, 1947.

Ser. No. 529,250. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed July 23, 1947.

VANITIES

FOR COIN-CONTROLLED BALL ROLLING GAME.
Claims use since May 26, 1947.

Ser. No. 534,141. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

Heddon

Applicant claims ownership of registration No. 374,978.
FOR FISHING RODS, FISHING REELS, ARTIFICIAL CASTING BAITS, FISH LINES, FISH HOOKS, FISH LURES, FISH STRINGERS, FISHING LINE FLOATS, STEEL SHAFTS FOR GOLF CLUBS.
Claims use on fishing rods, fishing reels, and artificial casting baits since January 1913; on fish lines since 1917; on fish hooks since 1923; on fish lures since 1924; on stringers and floats since 1931; and on steel shafts for golf clubs since 1937.

Ser. No. 534,143. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

WILDER-DILG

FOR ARTIFICIAL BAITS.
Claims use since 1923.

Ser. No. 537,628. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 11, 1947.

TRU-FLITE

Applicant claims ownership of registration No. 388,130.
FOR SHUTTLECOCKS, BASKETBALLS, GOLF CLUBS, GOLF BALLS, TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, TABLE TENNIS BATS, TABLE TENNIS BALLS, FOOTBALLS, SOCCER-BALLS, AND VOLLEYBALLS.
Claims use since 1941.

WARBLER

FOR TOY WHISTLES.
Claims use since Jan. 16, 1947.

Ser. No. 540,043. JOHN CALVIN CORB, INC., Huntington, W. Va. Filed Nov. 4, 1947.

YOGI-STICK

FOR EXERCISE BAR CONSISTING OF A WEIGHTED METAL BAR HAVING RUBBER TIPS ON EACH END AND USED IN CONNECTION WITH GYMNASTIC EXERCISES.
Claims use since Apr. 1, 1947.

Ser. No. 543,870. THE ASHLAND RUBBER PRODUCTS CORPORATION, Ashland, Ohio. Filed Dec. 10, 1947.

"Toytime"

FOR RUBBER TOY BALLOONS.
Claims use since Aug. 5, 1947.

Ser. No. 544,217. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Dec. 12, 1947.

PARAMOUNT

Applicant claims ownership of registration No. 284,815.
FOR TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS AND GOLF CLUBS.
Claims use since 1916.

Ser. No. 544,218. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Dec. 12, 1947.

DOT

Applicant claims ownership of registration No. 52,125.
FOR GOLF BALLS, TENNIS BALLS, AND TABLE TENNIS BALLS.
Claims use since July 1, 1905.

Ser. No. 544,219. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Dec. 12, 1947.

BULLET

FOR GOLF BALLS AND TABLE TENNIS BALLS.
Claims use since 1924.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 504,668. FARM & HOME MACHINERY CO., Orlando, Fla. Filed Apr. 7, 1948.

fARMCo

FOR GENERAL AGRICULTURAL IMPLEMENTS—NAMELY, PLOWS, CULTIVATORS, SPRAY OUTFITS, TRACTORS, IRRIGATION PUMPS, AND IRRIGATION PUMPING UNITS.
Claims use since July 1, 1939.

Ser. No. 528,719. C. HOWARD HUNT PEN CO., Camden, N. J. Filed July 16, 1947.

Ranger

FOR PENCIL SHARPENERS.
Claims use since Apr. 8, 1947.

Ser. No. 528,989. CLARK EQUIPMENT COMPANY, Buchanan, Mich. Filed July 21, 1947.

CELFOR

Applicant claims ownership of registration No. 82,206.
FOR DRILLS, REAMERS, DRILL SOCKETS, CHUCKS, BORING BARS, COUNTERSINKS, AND CUTTING TOOLS FOR LATHES.
Claims use since October 1909.

Ser. No. 529,210. THE THEW SHOVEL COMPANY, Lorain, Ohio. Filed July 22, 1947. Under section 2f of the act of 1946.

THEW

Applicant claims ownership of registrations Nos. 344,339 and 402,809.
FOR POWER CRANES, POWER SHOVELS AND POWER DRAGLINE MACHINES.
Claims use since 1900.

Ser. No. 529,212. THE THEW SHOVEL COMPANY, Lorain, Ohio. Filed July 22, 1947. Under section 2f of the act of 1946.

The words "Center Drive" and the representation of the gears are disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 344,339 and 402,809.
FOR POWER CRANES AND POWER SHOVELS.
Claims use since June 15, 1929.

Ser. No. 529,585. BRANICK MANUFACTURING COMPANY, INCORPORATED, Fargo, N. D. Filed July 26, 1947. Under section 2f of the act of 1946.

BRANICK

FOR TIRE TOOLS AND TIRE HANDLING APPARATUS—NAMELY, TIRE SPREADERS AND APPARATUS FOR REMOVING PNEUMATIC TIRES FROM THEIR RIMS.
Claims use since 1910.

Ser. No. 530,205. IVERS-LEE COMPANY, Newark, N. J. Filed Aug. 1, 1947. Under section 2f of the act of 1946.
Applicant claims ownership of registrations Nos. 360,178 and 362,523.

IVERS-LEE

FOR MACHINERY FOR HANDLING PACKAGING MATERIAL AND FOR PRODUCING AND FABRICATING PACKAGES AND WRAPPINGS—NAMELY, TABLET PACKAGING MACHINES, POWDER PACKAGING MACHINES, TEA BALL MACHINES, MACHINES FOR PACKAGING OTHER ARTICLES AND FLUENT SUBSTANCES IN ENVELOPE-LIKE PACKAGES MADE PRINCIPALLY OF TWO OPPOSED LAYERS OF SHEET MATERIAL THERMOPLASTICALLY SEALED TOGETHER AT THEIR MARGINS TO FORM A COMPARTMENT FOR THE ARTICLE TO BE PACKAGED, WITH OR WITHOUT FOLDED PAPER COVERS.
Claims use since 1919.

Ser. No. 530,579. SIMPLEX WRAPPING MACHINE COMPANY, Oakland, Calif. Filed Aug. 5, 1947.

SIMPLEX

FOR BAG MAKING MACHINES.
Claims use since Jan. 1, 1938.

Ser. No. 531,125. INSLEY MANUFACTURING CORPORATION, Indianapolis, Ind. Filed Aug. 12, 1947. Under section 2f of the act of 1946.

INSLEY

Applicant claims ownership of registrations Nos. 263,180, 418,628, 419,953, and 424,575.
FOR POWER DRIVEN EXCAVATING MACHINES—NAMELY, POWER SHOVELS, CRANES, DRAG LINES AND TRENCH HOES.
Claims use since January 1923.

Ser. No. 531,696. THE MONARCH MARKING SYSTEM COMPANY, Dayton, Ohio. Filed Aug. 18, 1947.

The stippling is for decorative purposes only. Applicant claims ownership of registration No. 385,844.
FOR TICKET OR TAG MARKING AND ATTACHING MACHINES.
Claims use since Oct. 7, 1946.

Ser. No. 531,728. THE SIDNEY MACHINE AND TOOL COMPANY, Sidney, Ohio. Filed Aug. 18, 1947.

MONOTROL

Applicant claims ownership of registrations Nos. 232,749 and 270,216.
FOR LATHES, COIL WINDING MACHINES AND VARIABLE SPEED POWER TRANSMISSIONS.
Claims use since Sept. 10, 1926, on lathes and transmissions; and since June 5, 1937, on coil winding machines.

Ser. No. 536,543. THE MONARCH MACHINE TOOL COMPANY, Sidney, Ohio. Filed Oct. 2, 1947.

MONARCH

Applicant claims ownership of registration No. 140,898.
FOR LATHES AND METAL TURNING MACHINES.
Claims use since Jan. 1, 1913.

Ser. No. 542,997. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Aug. 28, 1947.

CEM

Applicant claims ownership of registration No. 327,650.
FOR MACHINERY FOR CONVEYING CONTAINERS SUCH AS BOTTLES AND FOR FILLING, CAPPING AND AGITATING SUCH CONTAINERS, AND PARTS OF SUCH MACHINES.
Claims use since Sept. 1, 1932.

Ser. No. 542,998. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Aug. 28, 1947.

CEMCO

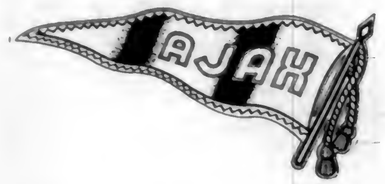
Applicant claims ownership of registration No. 317,299.
FOR MACHINES FOR FILLING AND CAPPING CONTAINERS AND FOR HANDLING AND CONVEYING CONTAINERS, BOTH CAPPED AND UNCAPPED, AND PARTS OF SUCH MACHINES.
Claims use since July 1, 1933.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 523,448. A & R Co., Omaha, Nebr. Filed Oct. 30, 1947.

A&R



FOR PRESS PLATES USED IN DRY CLEANING AND CLOTHING MANUFACTURING.
Claims use since Dec. 1, 1937.

Ser. No. 533,075. J. W. STEELE & Co., North Kansas City, Mo. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

TRUFOLD

FOR GARMENT FOLDING MACHINES.
Claims use since Jan. 1, 1931.

Ser. No. 545,569. WESTERN LAUNDRY PRESS, Salt Lake City, Utah. Filed Dec. 26, 1947.

FOR LAUNDRY PRESSES AND DRY-CLEANING PRESSES.
Claims use since May 1, 1931.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 529,400. PICKARD, INCORPORATED, Antioch, Ill. Filed July 24, 1947. Under section 2f of the act of 1946.

FOR POTTERY, EARTHENWARE, CHINA AND PORCELAIN—NAMELY, LARGE CUPS, SAUCERS, SOUP DISHES, VEGETABLE DISHES, PLATTERS, GRAVY BOATS, TEAPOTS, SUGARS AND CREAMERS, CANDY DISHES, COFFEE POTS, MAYONNAISE SETS, DIVIDED RELISH DISHES, CAKE PLATES, AND VASES.
Claims use since in the fall of 1928.

Ser. No. 529,401. PICKARD, INCORPORATED, Antioch, Ill. Filed July 24, 1947. Under section 2f of the act of 1946.

The word "China" per se is disclaimed.
FOR POTTERY, EARTHENWARE, CHINA AND PORCELAIN—NAMELY, LARGE CUPS, SAUCERS, SOUP DISHES, VEGETABLE DISHES, PLATTERS, GRAVY BOATS, TEAPOTS, SUGARS AND CREAMERS, CANDY DISHES, COFFEE POTS, MAYONNAISE SETS, DIVIDED RELISH DISHES, CAKE PLATES, AND VASES.
Claims use since June 1938.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 532,217. GENERAL WATER HEATER CORPORATION, Burbank, Calif. Filed Aug. 23, 1947.

Big-4

Applicant claims ownership of registration No. 242,310.
FOR GAS-HEATED HOT-WATER SYSTEMS AND HOT-WATER HEATERS.
Claims use since Oct. 13, 1927.

Ser. No. 532,254. SOUTHERN HEATER CORPORATION, Compton, Calif. Filed Aug. 23, 1947.

CHALLENGE

Applicant claims ownership of registration No. 266,477.
FOR WATER HEATERS USING GAS AS A FUEL.
Claims use since Aug. 1, 1928.

Ser. No. 536,864. AMERICAN GAS ASSOCIATION, INC., New York, N. Y. Filed Oct. 6, 1947. CERTIFICATION MARK.

The star in the drawing is lined to represent the color blue. Applicant disclaims any right to exclusive appropriation of each of the words shown on the mark apart from the combination of the words or arrangement thereof.

PLASTITE

FOR PREPARED ADHESIVE CLAY COMPOSITION HAVING THE PROPERTY OF FIRMLY ADHERING TO ANY SURFACE, UNDER WATER OR IN THE AIR, AND NOT BEING SOLUBLE IN WATER, USED FOR SUPPORTING OR ATTACHING FLOWER HOLDERS, FIGURINES, BRIC-A-BRAC, AND OTHER SMALL OBJECTS.
Claims use since Feb. 25, 1942.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 123,946. Registered Dec. 24, 1918. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NATIONAL

FOR COAL-TAR DYESTUFFS.
Claims use since Nov. 27, 1905.

Reg. No. 136,548. Registered Nov. 2, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

JONQUILINE

FOR FOOD-COLORS.
Claims use since Dec. 8, 1919.

Reg. No. 138,491. Registered Dec. 28, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

CELETINE

FOR FOOD-COLORS.
Claims use since Feb. 20, 1920.

Reg. No. 139,008. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

MONGOLA

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 139,009. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SULTA

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 139,010. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SITRO

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 139,011. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

KERINE

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 139,012. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

PLUMNA

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 139,013. Registered Jan. 18, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

BENGA

FOR FOOD-COLORS.
Claims use since Apr. 7, 1920.

Reg. No. 143,107. Registered May 24, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

VINTA

FOR FOOD-COLORS.
Claims use since June 23, 1920.

Reg. No. 144,877. Registered July 19, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

ROSEA

FOR DYESTUFFS—NAMELY, CERTIFIED FOOD-COLORS.
Claims use since Oct. 5, 1920.

Reg. No. 145,985. Registered Aug. 23, 1921. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FOR DYESTUFFS, INTERMEDIATES, AND CERTIFIED FOOD-COLORS.
Claims use since June 25, 1920.

Reg. No. 150,489. Registered Jan. 3, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

The words "Colors" and "New York" are disclaimed apart from the mark as shown.
FOR DYESTUFFS, CERTIFIED FOOD COLORS, AND INTERMEDIATES.
Claims use since May 7, 1920.

Reg. No. 151,553. Registered Feb. 7, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

ALIZAROL

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Apr. 29, 1909.

Reg. No. 151,556. Registered Feb. 7, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

DUROL

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Nov. 17, 1917.

Reg. No. 151,557. Registered Feb. 7, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

CARBANTHRENE

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Oct. 23, 1918.

Reg. No. 151,558. Registered Feb. 7, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

ALPHAZURINE

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Apr. 25, 1919.

Reg. No. 158,184. Registered Aug. 29, 1922. THE BIRD-ARCHER COMPANY, New York, N. Y., a corporation of New York, N. Y. Republished by registrant.

BACO

FOR BOILER CHEMICALS—TO WIT, POLARIZED, SOLID, ANTIFOAMING, ANTILEAK, FOR LOCOMOTIVE AND STATIONARY BOILERS, AND EXTRACT FORM AND LIQUID FORM FOR MARINE BOILERS.
Claims use since Sept. 1, 1919.

Reg. No. 225,383. Registered Mar. 15, 1927. THE NORTH AMERICAN FIBRE PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

MOGUL

FOR LIQUID COMPOUND FOR SCALE PREVENTING AND REMOVING FROM BOILERS.
Claims use since about July 1920.

Reg. No. 230,629. Registered Aug. 2, 1927. ANTONINO R. MARTINO, doing business as Italy Laboratories, New York, N. Y. Republished by Italy Laboratories, Inc., New York, N. Y., a corporation of New York.

SANA-ROID

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF HEMORRHOIDS AND PILES.
Claims use since Apr. 9, 1927.

Reg. No. 231,608. Registered Aug. 23, 1927. WESTERN CHEMICAL COMPANY, St. Joseph, Mo., a co-partnership. Republished by registrant.

Fly-Nip

FOR LIQUID INSECTICIDE SPRAY.
Claims use since May 18, 1925.

Reg. No. 241,356. Registered Apr. 24, 1928. WESTERN CHEMICAL COMPANY, St. Joseph, Mo., a co-partnership. Republished by registrant.

HY-POWER

FOR DEODORANTS.
Claims use since Jan. 1, 1924.

Reg. No. 287,316. Registered Sept. 22, 1931. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NACELAN

FOR DYES, DYESTUFFS, AND DYE COLORS.
Claims use since Mar. 13, 1931.

Reg. No. 305,546. Registered Aug. 22, 1933. JOHN H. WOODBURY, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Woodbury's

FOR TOILET PREPARATIONS—NAMELY, FACIAL CREAM, FACIAL POWDER, CLEANSING CREAM, COLD CREAM, TISSUE CREAM, ALMOND-ROSE CREAM, FACIAL FRESHENER, BLACKHEAD LOTION, SKIN TONIC AND ASTRINGENT, LILAC VEGETAL, LARGE PORE LOTION, WAVE SETTING LOTION, BRILLIANTINE, HAIR GLOSS, AFTER SHAVING LOTION, SKIN BALM, AND LIP-STICKS.
Claims use since Jan. 1, 1891.

Reg. No. 341,946. Registered Dec. 29, 1936. LOS ANGELES SOAP COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

Cosray

FOR CLEANSING CREAM, TISSUE CREAM, FACE LOTION, HAND LOTION, AFTER SHAVING LOTION, VANISHING CREAM, MUSCLE OIL, NAIL POLISH, TOOTH PASTE, AND LINIMENT FOR EXTERNAL USE.
Claims use since Sept. 27, 1935.

Reg. No. 359,706. Registered Aug. 30, 1938. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Mallinckrodt

FOR ACETALDEHYDE, ACETANILID, ACETIC ANHYDRIDE, AND ALL THE OTHER ITEMS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since about 1892.

Reg. No. 372,191. Registered Oct. 24, 1939. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FIBROLAN

FOR DYESTUFFS.
Claims use since Apr. 12, 1939.

Reg. No. 372,902. Registered Nov. 21, 1939. THE HENKEL-CLAUSS COMPANY, Fremont, Ohio, a corporation of Ohio. Republished by registrant.

ACCENT

FOR NAIL POLISH, NAIL POLISH REMOVER, AND CUTICLE REMOVER.
Claims use since May 8, 1936.

Reg. No. 373,086. Registered Nov. 21, 1939. TENNESSEE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant, present address New York, N. Y., and Atlanta, Ga.

Ferri-Floc

FOR PREPARATION FOR TREATMENT OF SEWERAGE AND SEWERAGE SLUDGES, AND FOR TREATMENT OF WASTES FOR TEXTILE MILLS, PAPER MILLS ELIMINATION OF ORGANIC MATTER, AND FOR THE TREATMENT OF DRAINING WATER SUPPLIES.
Claims use since May 1, 1939.

Reg. No. 387,020. Registered Apr. 29, 1941. PETER GORSE, South Heights, Pa. Republished by registrant.

GORSE'S

The portrait is that of the applicant.
FOR HAIR AND SCALP TONIC.
Claims use since July 1, 1940.

Reg. No. 389,011. Registered July 22, 1941. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

CHROMOLAN

FOR DYES, DYESTUFFS, AND COLOR IN THE NATURE OF TEXTILE DYES.
Claims use since Dec. 16, 1940.

Reg. No. 389,760. Registered Aug. 19, 1941. A. H. ZASTROW, Grants Pass, Oreg. Republished by registrant.

SCALPREP

FOR LIQUID PREPARATION FOR DANDRUFF SCALP SCALE AND ITCHY SCALP.
Claims use since Mar. 11, 1941.

Reg. No. 419,737. Registered Mar. 5, 1946. MARBLEHEAD LIME COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

UNIVERSITY

FOR MINERAL SUPPLEMENT FOR LIVE STOCK AND POULTRY FEED.
Claims use since Mar. 29, 1945.

Reg. No. 419,754. Registered Mar. 5, 1946. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

IOSOL

FOR DYESTUFFS FOR USE INDUSTRIALLY FOR COLORING GASOLINE, OILS, SOLVENTS, LACQUERS, AND NATURAL AND SYNTHETIC RESINS.
Claims use since Apr. 10, 1945.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 394,727. Registered Apr. 28, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR SMOKING STANDS, ASH RECEIVERS, SMOKERS' SETS, CIGARETTE SERVERS, ASH TRAYS, CIGARETTE BOXES, AND HUMIDORS.
Claims use since Sept. 20, 1933.

CLASS 10

FERTILIZERS

Reg. No. 349,384. Registered Aug. 24, 1937. RELIANCE FERTILIZER COMPANY, Savannah, Ga. Republished by The Reliance Fertilizer Company, Savannah, Ga., a corporation of Georgia.

USE RELIANCE BRANDS

The words "Use" and "Brands" are disclaimed apart from the mark as shown.
FOR FERTILIZER.
Claims use since 1910.

Reg. No. 377,688. Registered May 14, 1940. TENNESSEE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant, present address New York, N. Y., and Atlanta, Ga.

TC

FOR FERTILIZERS OF VARIOUS MIXTURES.
Claims use since January 1933.

Reg. No. 405,145. Registered Jan. 11, 1944. TENNESSEE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant, present address New York, N. Y., and Atlanta, Ga.

ES-MIN-EL

FOR MIXTURE OF MINERAL ELEMENTS CONSISTING OF SOLUBLE MINERAL SALTS WHICH CONTAIN COPPER, MANGANESE, ZINC, IRON, AND BORON, USED AS A SOIL FERTILIZER.
Claims use since Mar. 15, 1940.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 206,919. Registered Dec. 15, 1925. PHILLIPS RIBBON & CARBON CO., INC., Rochester, N. Y., a corporation of New York. Republished by registrant.

PHILCO

FOR CARBON PAPER AND TYPEWRITER RIBBON.
Claims use since March 1916.

Reg. No. 206,920. Registered Dec. 15, 1925. PHILLIPS RIBBON & CARBON CO., INC., Rochester, N. Y., a corporation of New York. Republished by registrant.

Type-Art

FOR CARBON PAPER AND TYPEWRITER RIBBON.
Claims use since January 1925.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 160,704. Registered Oct. 24, 1922. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CHALLENGE

FOR CALCINED GYPSUM, PLASTER OF PARIS, WALL PLASTER AND GAUGING PLASTER.
Claims use since 1887.

Reg. No. 160,710. Registered Oct. 24, 1922. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

IVORY

FOR WALL PLASTER AND CALCINED GYPSUM.
Claims use since 1887.

Reg. No. 160,711. Registered Oct. 24, 1922. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

IMPERIAL

FOR CALCINED GYPSUM, WALL PLASTER, AND FINISHING PLASTER.
Claims use since 1890.

Reg. No. 230,398. Registered July 19, 1927. THE ALLIANCE CLAY PRODUCT CO., Alliance, Ohio, a corporation of Ohio. Republished by registrant.

ALLIANCE

FOR FACE BRICK, COMMON BRICK, AND FIREPROOFING TILE.
Claims use since 1922.

Reg. No. 231,618. Registered Aug. 23, 1927. ASH GROVE LIME & PORTLAND CEMENT CO., Kansas City, Mo., a corporation of Maine. Republished by registrant.

QUIKARD

FOR HYDRAULIC CEMENT.
Claims use since Feb. 21, 1927.

Reg. No. 273,568. Registered Aug. 5, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HYDROCAL

FOR CALCINED GYPSUM.
Claims use since January 1930.

Reg. No. 293,021. Registered Apr. 5, 1932. NORTH AMERICAN PAINT & CHEMICAL CO. LTD., Los Angeles, Calif. Republished by Old Colony Paint & Chemical Co., Los Angeles, Calif., a corporation of Nevada.

OLD COLONY

FOR READY-MIXED COLD WATER AND PASTE PAINTS, DRY PAINT COLORS, PAINT THINNERS, WHITE LEAD, ZINC OXIDE PAINT PIGMENTS, PREPARED SHELLAC READY FOR USE, PAINT ENAMELS, LACQUERS, LACQUER THINNERS, FLOOR WAX, PUTTY, VARNISH, LINSEED OIL, TURPENTINE, CALCIMINE OIL AND JAPAN COLORS, OIL STAINS, CEMENT STAINS, WOOD FILLERS.
Claims use since Mar. 3, 1928.

Reg. No. 347,741. Registered July 6, 1937. SHEET METAL MANUFACTURING COMPANY, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

METCO

FOR LEADERS, GUTTERS, ELBOWS FOR EAVES, TROUGH LEADERS, STRAPS, MITRES, HANGERS, CUT-OFFS, OUTLETS, END CAPS, LEADER HEADS, CHIMNEY BASES, ROOF CEMENT, CORNER BEAD AND EDGING.
Claims use since Feb. 1, 1927.

Reg. No. 356,438. Registered Apr. 26, 1938. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant.

CELL-TITE

FOR STRUCTURAL MATERIAL OF RUBBER COMPOSITION USED FOR VIBRATION ABSORPTION, AND FOR HEAT AND SOUND INSULATION, AND IN JACKETS AND COVERINGS FOR CONDUITS, AND VALVES, AND IN CLOSURE SEALING GASKETS AND DOOR BUMPERS.
Claims use since Nov. 10, 1937.

Reg. No. 357,290. Registered May 31, 1938. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant.

CELL-TITE

FOR FLOOR RUGS OF RUBBER COMPOSITION AND DRAPABLE SHEET COVERINGS FOR PORTABLE USE AS HEAT INSULATION MADE OF RUBBER COMPOSITION.
Claims use since Nov. 10, 1937.

Reg. No. 372,325. Registered Oct. 31, 1939. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BRIDJOINT

FOR METALLIC CLIPS FOR ATTACHING BUILDING BOARDS, AND USED IN WALLS AND CEILINGS.
Claims use since December 1937.

Reg. No. 372,326. Registered Oct. 31, 1939. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FREFLOTE

FOR METALLIC CLIPS FOR ATTACHMENT OF BUILDING BOARDS AND USED IN WALLS AND CEILINGS.
Claims use since December 1937.

Reg. No. 372,333. Registered Oct. 31, 1939. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

QUIETONE

FOR ACOUSTICAL FIBER BOARD.
Claims use since September 1938.

Reg. No. 373,842. Registered Dec. 26, 1939. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HYDRO-STONE

The word "Stone" is disclaimed apart from the mark as shown.
FOR CASTING PLASTER COMPOSITION COMPRISING MAINLY CALCINED GYPSUM.
Claims use since January 1934.

Reg. No. 380,638. Registered Aug. 27, 1940. SELBY, BATTERSBY & COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

FORANAFT

FOR MATERIALS FOR PLASTIC AND MASTIC FLOOR AND DECK COVERINGS.
Claims use since Dec. 13, 1939.

Reg. No. 386,653. Registered Apr. 22, 1941. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CAL-SEAL

The word "Seal" is disclaimed apart from the mark as shown.
FOR CALCINED GYPSUM PLASTER FOR OIL WELL DRILLING.
Claims use since July 1938.

Reg. No. 386,747. Registered Apr. 22, 1941. PIONEER LOG CABIN COMPANY, INC., Pontiac, Mich., a corporation of Michigan. Republished by registrant.

PIONEER

FOR READY CUT-LOGS FOR BUILDINGS.
Claims use since Mar. 1, 1939.

Reg. No. 391,246. Registered Oct. 28, 1941. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MOTIF 'D

FOR ACOUSTICAL TILE.
Claims use since May 1941.

Reg. No. 401,047. Registered Apr. 20, 1943. STANDARD COTTON PRODUCTS CO., INC., Flint, Mich., a corporation of Michigan. Republished by registrant.

The words "Standard Cotton Insulation" and "Resists Heat, Cold and Fire" are disclaimed apart from the mark as shown.
FOR INSULATION BATTS.
Claims use since May 1942.

Reg. No. 401,120. Registered Apr. 27, 1943. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MASTICAL

FOR GYPSUM CEMENT COMPOSITIONS.
Claims use since October 1940.

Reg. No. 409,665. Registered Oct. 17, 1944. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR GYPSUM CASTING PLASTER.
Claims use since August 1940.

Reg. No. 410,589. Registered Dec. 5, 1944. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

KASTICAL

FOR GYPSUM PLASTER.
Claims use since October 1943.

Reg. No. 416,921. Registered Oct. 2, 1945. SELBY, BATTERSBY AND COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

KOMUL

FOR ANTI-CORROSIVE, IRREVERSIBLE EMULSION, OF COAL TAR PITCH FOR APPLICATION TO SURFACES OF METAL, WOOD, AND THE LIKE MATERIALS.
Claims use since Mar. 23, 1945.

Reg. No. 417,681. Registered Nov. 13, 1945. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

K-FAC

FOR HYDRAULICALLY BONDED ASBESTOS HEAT INSULATING BLOCKS.
Claims use since May 1943.

Reg. No. 420,024. Registered Mar. 19, 1946. SELBY, BATTERSBY AND COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

FILMIX

FOR LEVELING COMPOUND AND CRACK FILLER, APPLIED AS A TROWELED WET MIX FOR USE ON FLOORS AND WALLS.
Claims use since June 15, 1945.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 50,804. Registered Apr. 3, 1906. AMERICAN HOIST & DERRICK COMPANY, St. Paul, Minn. Republished by American Hoist & Derrick Co., St. Paul, Minn., a corporation of Delaware.

CROSBY

FOR ROPE CLIPS.
Claims use since 1887.

Reg. No. 244,575. Registered July 24, 1928. KING MANUFACTURING CORPORATION, Buffalo, N. Y. Republished by King Quality Products Co., St. Louis, Mo., a corporation of Indiana.

The word "Quality" is disclaimed apart from the mark as shown.
FOR AUTOMOTIVE PARTS—NAMELY, STEEBING-KNUCKLE BOLTS, SPRING-SHACKLE BOLTS, TIE-ROD YOKE BOLTS, AND PISTON-PIN SET SCREWS.
Claims use since about June 1924.

Reg. No. 366,094. Registered Mar. 28, 1939. THE AUTOYRE COMPANY, INCORPORATED, Oakville, Conn., a corporation of Connecticut. Republished by registrant.

AUTOYRE

FOR SOAP DISHES, TOWEL BARS, ROLL HOLDERS, TUMBLER AND TOOTHBRUSH HOLDERS, TOWEL RACKS, AND UTILITY HOOKS, ALL FOR ATTACHMENT TO A WALL OR OTHER SUPPORT, AND GLASS BATHROOM SHELVES AND SHELF BRACKETS THEREFOR.
Claims use since June 1912.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 194,139. Registered Jan. 13, 1925. DIAMOND MANUFACTURING COMPANY, Wyoming, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR PERFORATED METAL SHEETS AND PLATES.
Claims use since January 1921.

Reg. No. 240,220. Registered Mar. 20, 1928. BEARIUM BEARINGS, INC., Buffalo, N. Y. Republished by Bearium Metals Corporation, Rochester, N. Y., a corporation of New York.

BEARIUM

FOR LEAD AND ALLOYS USED FOR BEARING AND PACKING, METALS, IN INGOTS, CORED AND SOLID BARS, CASTINGS, AND RODS.
Claims use since Mar. 15, 1925.

Reg. No. 241,054. Registered Apr. 17, 1928. BEARIUM BEARINGS, INC., Buffalo, N. Y. Republished by Bearium Metals Corporation, Rochester, N. Y., a corporation of New York.

FOR LEAD AND ALLOYS USED FOR BEARING AND PACKING METALS IN INGOTS, CORED AND SOLID BARS, CASTINGS, AND RODS.
Claims use since Mar. 15, 1925.

CLASS 15

OILS AND GREASES

Reg. No. 113,179. Registered Oct. 10, 1916. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

AGATE

FOR KEROSENE AND ILLUMINATING OILS.
Claims use since Jan. 1, 1916.

Reg. No. 113,180. Registered Oct. 10, 1916. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

TRULITE

FOR KEROSENE, ILLUMINATING OILS.
Claims use since Jan. 1, 1916.

Reg. No. 113,181. Registered Oct. 10, 1916. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

TRUTEST

FOR LUBRICATING OILS.
Claims use since Jan. 1, 1916.

Reg. No. 113,182. Registered Oct. 10, 1916. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

CORALINE

FOR GASOLINE, FUEL OILS FOR INTERNAL COMBUSTION ENGINES AND MOTORS.
Claims use since Jan. 1, 1916.

Reg. No. 117,222. Registered June 19, 1917. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

FINANCE

FOR LUBRICATING OILS.
Claims use since Jan. 1, 1917.

Reg. No. 117,223. Registered June 19, 1917. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

PULOIL

FOR LUBRICATING OILS.
Claims use since Jan. 1, 1917.

Reg. No. 117,224. Registered June 19, 1917. TRUE'S OIL COMPANY, Spokane, Wash. Republished by True's Oil Company, Spokane, Wash., a corporation of Washington.

CHARTER

FOR LUBRICATING OILS.
Claims use since Jan. 1, 1917.

Reg. No. 373,746. Registered Dec. 19, 1939. MANNING MFG. CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

MANCO

FOR LUBRICATING OIL AND GASOLINE.
Claims use since Nov. 30, 1937.

Reg. No. 433,673. Registered Oct. 28, 1947. THE STAR OIL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR OILS AND GREASES FOR LUBRICATING PURPOSES.
Claims use since 1895.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 20,262. Registered Oct. 27, 1891. THE AMERICAN VARNISH COMPANY, Chicago, Ill., and New York, N. Y., a corporation of Illinois. Republished by registrant, present address Chicago, Ill.

FOR VARNISHES.
Claims use since about July 1889.

Reg. No. 58,489. Registered Dec. 18, 1906. HOLZAPFEL'S COMPOSITIONS COMPANY, LIMITED, Newcastle-upon-Tyne, England. Republished by International Paint Company, Inc., New York, N. Y., a corporation of New York.

DANBOLINE

FOR PAINTS, MIXED PAINTS, AND ENAMELS.
Claims use since Feb. 27, 1901.

Reg. No. 125,203. Registered Apr. 22, 1919. JESSE B. CORNISH, Chicago, Ill. Republished by Rockford Paint Manufacturing Company, Rockford, Ill., a corporation of Illinois.

AR-KI-TECK

FOR VARNISHES.
Claims use since Mar. 1, 1918.

Reg. No. 150,331. Registered Jan. 3, 1922. DETROIT GRAPHITE COMPANY, Detroit, Mich. Republished by Detroit Graphite Company, Detroit, Mich., and New York, N. Y., a corporation of Delaware.

DEGRACO

FOR READY-MIXED PASTE AND SEMIPASTE PAINTS, PAINT ENAMELS IN LIQUID FORM, AND VARNISHES.
Claims use since Sept. 1, 1914.

Reg. No. 164,331. Registered Feb. 20, 1923. DETROIT GRAPHITE COMPANY, Detroit, Mich., and New York, N. Y., a corporation of Delaware. Republished by registrant.

CEMTEX

FOR PROTECTIVE AND FIRE-RETARDING PAINTS.
Claims use since July 22, 1921.

Reg. No. 167,928. Registered May 8, 1923. CON-FERRO PAINT & VARNISH CO., St. Louis, Mo. Republished by Con-Ferro Paint & Varnish Company, St. Louis, Mo., and New York, N. Y., a corporation of Delaware.

EL-KAY

FOR READY-MIXED PAINTS, VARNISH STAINS, AND PAINT ENAMELS.
Claims use since Feb. 1, 1919.

Reg. No. 203,246. Registered Sept. 15, 1925. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

PENETREX

FOR OIL STAINS.
Claims use since March 1922.

Reg. No. 203,248. Registered Sept. 15, 1925. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

No. 843

FOR WHITE ENAMEL UNDERCOATING.
Claims use since September 1922.

Reg. No. 206,011. Registered Nov. 24, 1925. DETROIT GRAPHITE COMPANY, Detroit, Mich. Republished by Detroit Graphite Company, New York, N. Y., and Detroit, Mich., a corporation of Delaware.

SUPERIOR GRAPHITE PAINT

FOR PAINTS, DRY, PASTE, SEMIPASTE, AND READY MIXED.
Claims use since May 1, 1892.

Reg. No. 210,484. Registered Mar. 16, 1926. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SEA-SPAR

The word "Spar" is disclaimed apart from the mark as shown.
FOR VARNISHES.
Claims use since Apr. 11, 1925.

Reg. No. 210,749. Registered Mar. 23, 1926. DETROIT GRAPHITE COMPANY, Detroit, Mich. Republished by Detroit Graphite Company, New York, N. Y., and Detroit, Mich., a corporation of Delaware.

STIPLOID

FOR WASHABLE WALL FINISH.
Claims use since May 6, 1925.

Reg. No. 212,194. Registered Apr. 27, 1926. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Snowdrift

FOR PAINT ENAMEL.
Claims use since Apr. 7, 1925.

Reg. No. 212,323. Registered Apr. 27, 1926. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

HOMEGLOSS

FOR PAINT ENAMELS.
Claims use since July 25, 1925.

Reg. No. 221,175. Registered Nov. 23, 1926. CON-FERRO PAINT & VARNISH CO., St. Louis, Mo. Republished by Con-Ferro Paint & Varnish Company, St. Louis, Mo., and New York, N. Y., a corporation of Delaware.

"OUR OWN"

FOR HOUSE PAINT, PAINT ENAMELS, VARNISH STAINS, VARNISHES, BARN PAINT, AND GARAGE PAINT.
Claims use since Jan. 15, 1926.

Reg. No. 224,154. Registered Feb. 22, 1927. LEO A. GOLDBERG, doing business as Indian Varnish Company, Chicago, Ill. Republished by Great Lakes Varnish Works, Inc., Chicago, Ill., a corporation of Illinois.

RED MAN

FOR READY MIXED VARNISH, FURNITURE POLISH; DRY, READY MIXED, AND PASTE PAINTS; AND PAINT ENAMELS.
Claims use since April 1923.

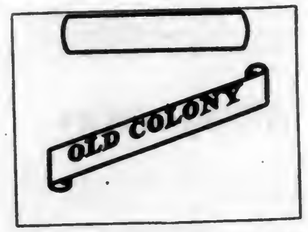
Reg. No. 224,320. Registered Feb. 22, 1927. DETROIT GRAPHITE COMPANY, Detroit, Mich. Republished by Detroit Graphite Company, Detroit, Mich., and New York, N. Y., a corporation of Delaware.

SILVR-COOL

The word "Silver" is disclaimed apart from the mark as shown.
FOR ALUMINUM PAINT, ALUMINUM-PAINT UNDERCOATER OR PRIMER.
Claims use since July 7, 1925.

Reg. No. 252,377. Registered Feb. 5, 1929. THE INTERNATIONAL PAINT & COMPOSITIONS COMPANY, LIMITED, London, England. Republished by International Paint Company, Inc., New York, N. Y., a corporation of New York.

GALVEX



FOR READY-MIXED PAINTS.
Claims use since July 1927.

Reg. No. 270,108. Registered Apr. 29, 1930. DETROIT GRAPHITE COMPANY, Detroit, Mich. Republished by Detroit Graphite Company, Detroit, Mich., and New York, N. Y., a corporation of Delaware.

AIRON

FOR READY-MIXED PAINT.
Claims use since Jan. 7, 1929.

Reg. No. 293,021. Registered Apr. 5, 1932. NORTH AMERICAN PAINT & CHEMICAL CO. LTD., Los Angeles, Calif. Republished by Old Colony Paint & Chemical Co., Los Angeles, Calif., a corporation of Nevada.

FOR READY-MIXED COLD WATER AND PASTE PAINTS, DRY PAINT COLORS, PAINT THINNERS, WHITE LEAD, ZINC OXIDE PAINT PIGMENTS, PREPARED SHELLAC READY FOR USE, PAINT ENAMELS, LACQUERS, LACQUER THINNERS, FLOOR WAX, PUTTY, VARNISH, LINSEED OIL, TURPENTINE, CALCIMINE OIL AND JAPAN COLORS, OIL STAINS, CEMENT STAINS, WOOD FILLERS.
Claims use since Mar. 3, 1928.

Reg. No. 335,286. Registered June 2, 1936. C. J. OSBORN CO., New York, N. Y., a corporation of New York. Republished by registrant.

NITROCOL

FOR CHIPS AND PASTES OF A COMPOSITION COMPRISING CELLULOSE ESTERS, PLASTICIZERS, AND PIGMENTS, WHICH COMPOSITION IS USUALLY MIXED WITH A COATING OR LIKE MATERIAL TO IMPART COLOR THERETO.
Claims use since Dec. 13, 1932.

Reg. No. 336,449. Registered July 7, 1936. CITY PAINT COMPANY, St. Louis, Mo. Republished by Con-Ferro Paint & Varnish Company, St. Louis, Mo., and New York, N. Y., a corporation of Missouri.

The word "Kolorful" is disclaimed apart from the mark as shown. The colors orange, blue, black, and white are claimed as features of the mark, no claim being made to the representation of the label per se.
FOR READY-MIXED PAINTS, VARNISH STAINS, QUICK DRYING ENAMELS, STOVEPIPE PAINT ENAMELS, SCREEN PAINT ENAMELS, TOUCH UP PAINT ENAMELS, GOLD-BRONZE PAINT, ALUMINUM BRONZE PAINT AND PREPARED SHELLAC.
Claims use since Jan. 2, 1936.

Reg. No. 393,536. Registered Feb. 17, 1942. INTERNATIONAL PAINT COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

DEKGRIP

FOR DECK PAINTS IN READY MIXED FORM.
Claims use since Sept. 11, 1941.

Reg. No. 394,577. Registered Apr. 14, 1942. OLD COLONY PAINT & CHEMICAL CO., Los Angeles, Calif., a corporation of Nevada. Republished by registrant.

NACO

FOR AUTOMOTIVE PAINT FINISHES.
Claims use since Feb. 1, 1930.

Reg. No. 416,973. Registered Oct. 9, 1945. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Plam-Lak

The word "Lak" is disclaimed apart from the mark as shown.
FOR LINOLEUM LACQUER.
Claims use since Jan. 31, 1945.

Reg. No. 417,905. Registered Nov. 20, 1945. DETROIT GRAPHITE COMPANY, Detroit, Mich., a corporation of Delaware. Republished by registrant, present address Detroit, Mich., and New York, N. Y.

SYN-GARD

FOR METAL PROTECTIVE PAINTS.
Claims use since Dec. 29, 1924.

Reg. No. 421,015. Registered May 14, 1946. SELBY, BATTERSBY AND COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

KOMUL

FOR COLD APPLIED STABLE EMULSION OF COAL TAR PITCH USED AS AN ANTI-CORROSIVE PROTECTIVE COATING FOR MASTIC FLOORS AND DRIVEWAYS AND STORAGE TANKS.
Claims use since Mar. 23, 1945.

Reg. No. 425,286. Registered Nov. 12, 1946. SELBY, BATTERSBY AND COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

FLOOR CRAFTERS

The word "Floor" is disclaimed apart from the mark as shown.
FOR FLOOR WAX.
Claims use since December 1932.

CLASS 17
TOBACCO PRODUCTS

Claims use since Mar. 30, 1932.

Reg. No. 304,832. Registered July 18, 1933. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio., a corporation of Delaware. Republished by registrant.

MAFALDA

FOR REFINED PURE VEGETABLE OIL, USED FOR SALADS AND COOKING AND MAYONNAISE PURPOSES IN CANS AND BARRELS.
Claims use since Sept. 1, 1932.

Reg. No. 307,056. Registered Oct. 10, 1933. DWIGHT EDWARDS COMPANY, San Francisco, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

NOB HILL

FOR COFFEE.
Claims use since Oct. 5, 1932.

Reg. No. 307,815. Registered Nov. 7, 1933. DWIGHT EDWARDS COMPANY, San Francisco, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

AIRWAY

FOR COFFEE.
Claims use since Dec. 16, 1927.

Reg. No. 308,629. Registered Dec. 12, 1933. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

KINGTASTE

FOR CHEESE, THOUSAND ISLAND DRESSING, MAYONNAISE, SANDWICH SPREAD, COOKING OIL, AND FRENCH DRESSING.
Claims use since June 1, 1928.

Reg. No. 320,167. Registered Dec. 18, 1934. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

MOONBEAM

FOR CHEESE.
Claims use since Sept. 18, 1933.

Reg. No. 320,788. Registered Jan. 8, 1935. C. H. MCKELLIPS, Mesa, Ariz. Republished by registrant, present address Phoenix, Ariz.

ARIZ-SUN

FOR FRESH CITRUS FRUITS.
Claims use since Feb. 1, 1934.

Reg. No. 326,423. Registered July 23, 1935. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

HY-MO

FOR HIGH MOISTURE EMULSIFIED AGENT FOR CAKE MIXTURES.
Claims use since Jan. 23, 1935.

Reg. No. 334,161. Registered Apr. 21, 1936. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

BUCKEYE

FOR VEGETABLE SHORTENING.
Claims use since Nov. 30, 1935.

Reg. No. 341,533. Registered Dec. 8, 1936. GENERAL FOOD PRODUCTS CO., Vernon, Calif. Republished by Glenfield Food Company, San Francisco, Calif., a corporation of California.

Real Roast

FOR PEANUT BUTTER.
Claims use since June 4, 1936.

Reg. No. 362,637. Registered Nov. 22, 1938. WESTERN STATES GROCERY COMPANY, Reno, Nev., and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

CHERUB

FOR EVAPORATED MILK.
Claims use since May 25, 1938.

Reg. No. 366,895. Registered May 2, 1939. SAFEWAY STORES, INC., doing business as General Foods Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

GLEN AIRE

FOR CANNED GRAPEFRUIT.
Claims use since Oct. 6, 1938.

Reg. No. 366,896. Registered May 2, 1939. SAFEWAY STORES, INC., doing business as General Food Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

SUNNY DAWN

FOR CANNED TOMATO JUICE.
Claims use since Oct. 6, 1938.

Reg. No. 366,897. Registered May 2, 1939. SAFEWAY STORES, INC., doing business as General Food Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

TOWN HOUSE

FOR CANNED GRAPEFRUIT JUICE FOR FOOD PURPOSES.
Claims use since Oct. 6, 1938.

Reg. No. 368,073. Registered June 6, 1939. RULE-JAYTON COTTON OIL CO., Stamford, Tex., a corporation of Texas. Republished by registrant.

CHUCK WAGON

FOR COTTONSEED CAKE AND MEAL USED FOR LIVESTOCK AND POULTRY FEED.
Claims use since Oct. 1, 1935.

Reg. No. 368,355. Registered June 13, 1939. THE LUCERNE CREAM AND BUTTER COMPANY, also doing business as Lucerne Cream and Butter Co., Vernon, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

Party Pride

FOR ICE CREAM AND SHERBET.
Claims use since Dec. 6, 1938.

Reg. No. 370,056. Registered Aug. 15, 1939. THE LUCERNE CREAM AND BUTTER COMPANY, Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

CREAM O' THE CROP

FOR EGGS.
Claims use since Sept. 14, 1935.

Reg. No. 370,064. Registered Aug. 15, 1939. THE LUCERNE CREAM AND BUTTER COMPANY, also doing business as Lucerne Cream and Butter Company, Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

Breakfast Gems

The pictorial representation of the eggs is disclaimed apart from the mark as shown.
FOR EGGS.
Claims use since Mar. 28, 1938.

Reg. No. 371,126. Registered Sept. 19, 1939. SAFEWAY STORES, INC., doing business as General Food Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

SUGAR BELLE

FOR CANNED VEGETABLES.
Claims use since Oct. 6, 1938.

Reg. No. 375,561. Registered Feb. 20, 1940. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio., a corporation of Delaware. Republished by registrant.

KINGTASTE

FOR PIE CRUST AND MIXTURE AND PURE VEGETABLE SHORTENING.
Claims use since Sept. 1, 1923.

Reg. No. 376,460. Registered Mar. 26, 1940. SAFEWAY STORES, INC., doing business as General Food Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

CASTLE CREST

FOR CANNED FRUITS.
Claims use since Feb. 2, 1938.

Reg. No. 377,200. Registered Apr. 23, 1940. SAFEWAY STORES, INC., doing business as General Food Products Co., Vernon and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

BRIAR GATE

FOR CANNED VEGETABLES.
Claims use since Oct. 6, 1938.

Reg. No. 379,613. Registered July 16, 1940. WASON BROS. COMPANY, INC., Seattle, Wash., a corporation of Washington. Republished by registrant.

SUGAR HOUSE

FOR SUGAR AND MAPLE SYRUP.
Claims use since Oct. 19, 1939.

Reg. No. 380,282. Registered Aug. 20, 1940. SAFEWAY STORES, INC., doing business as General Food Products Co., Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

EMERALD BAY

FOR CANNED VEGETABLES.
Claims use since Oct. 6, 1938.

Reg. No. 384,462. Registered Jan. 21, 1941. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

ALCO

FOR MAYONNAISE, SALAD DRESSING, SANDWICH SPREAD, FRENCH DRESSING, COTTONSEED OIL FOR SALAD AND COOKING PURPOSES, AND VEGETABLE SHORTENING.
Claims use since Jan. 15, 1918.

Reg. No. 384,529. Registered Jan. 21, 1941. WILLIAMSON CANDY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Oh Henry!

CHOICE BITS

The words "Choice Bits" are disclaimed apart from the mark or shown.
FOR CANDY.
Claims use since March 1940.

Reg. No. 387,175. Registered May 6, 1941. DAVIS BROS. FISHERIES CO. INC., Gloucester, Mass., a corporation of Massachusetts. Republished by registrant.

The expression "Deep Sea" is disclaimed apart from the mark as shown.
FOR CANNED FISH AND PACKAGED SALT FISH.
Claims use since on or about February 1940.

Reg. No. 387,176. Registered May 6, 1941. DAVIS BROS. FISHERIES CO. INC., Gloucester, Mass., a corporation of Massachusetts. Republished by registrant.

DEEP SEA DAVE

The expression "Deep Sea" is disclaimed apart from the mark as shown.
FOR CANNED FISH AND PACKAGED SALT FISH.
Claims use since on or about February 1940.

Reg. No. 387,824. Registered June 3, 1941. DAVIS BROS. FISHERIES, INC., Gloucester, Mass., assignor to Davis Bros. Fisheries Co., Inc. Republished by Davis Bros. Fisheries Co. Inc., Gloucester, Mass., a corporation of Massachusetts.

CODDIES

FOR FISH CAKES AND MIXTURES THEREFOR.
Claims use since on or about October 1934.

Reg. No. 387,858. Registered June 3, 1941. L. M. WASHBURN, Porterville, Calif. Republished by Omer G. Avery, Porterville, Calif.

The word "Vitamins" and the representation of the orange are disclaimed apart from the mark as shown.
FOR FRESH CITRUS FRUITS.
Claims use since Nov. 22, 1940.

Reg. No. 393,154. Registered Jan. 27, 1942. MODOC ORCHARD CO., Medford, Oreg., a firm. Republished by registrant.

MODOC

FOR FRESH PEARS.
Claims use since June 5, 1941.

Reg. No. 395,992. Registered June 23, 1942. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

FAMOUS FEED

The word "Feed" is disclaimed apart from the mark as shown.
FOR FEEDS FOR POULTRY, HOGS, STEERS, AND HORSES.
Claims use since Oct. 20, 1937.

Reg. No. 398,913. Registered Dec. 1, 1942. MODOC ORCHARD CO., Medford, Oreg., a firm. Republished by Registrant.

MOPAC

FOR FRESH PEARS.
Claims use since May 15, 1942.

Reg. No. 401,342. Registered May 11, 1943. SAFEWAY STORES, INC., OF NEVADA, also doing business as Table Products Company, Reno, Nev., and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

MONETA

FOR CHILI SAUCE.
Claims use since Dec. 24, 1941.

Reg. No. 403,680. Registered Oct. 12, 1943. SAFEWAY STORES, INC., OF NEVADA, also doing business as Table Products Company, Reno, Nev., and Oakland, Calif. Republished by Glenfield Food Company, San Francisco, Calif., a corporation of California.

WESTAG

FOR FOOD FLAVORING EXTRACTS.
Claims use since Feb. 9, 1938.

Reg. No. 404,558. Registered Dec. 7, 1943. SAFEWAY STORES, INC., OF NEVADA, also doing business as Table Products Company, Reno, Nev., and Oakland, Calif. Republished by Safeway Stores, Incorporated, Oakland, Calif., a corporation of Maryland.

Prince Leo

FOR CANNED SALMON.
Claims use since May 22, 1940.

Reg. No. 407,914. Registered July 4, 1944. FLOYD N. SMITH, Phoenix, Ariz. Republished by registrant.

BLUE CHIP

FOR FRESH VEGETABLES.
Claims use since Dec. 14, 1943.

Reg. No. 412,633. Registered Mar. 20, 1945. SAFEWAY STORES, INCORPORATED, doing business as Table Products Company, Baltimore, Md., and Oakland, Calif., assignor to Glenfield Food Company, San Francisco, Calif., a corporation of California, doing business as Table Products Company. Republished by Glenfield Food Company, San Francisco, Calif., a corporation of California.

Lunch Box

FOR SANDWICH SPREAD.
Claims use since Mar. 15, 1937.

Reg. No. 424,715. Registered Oct. 22, 1946. E & L FRUIT & PRODUCE DISTRIBUTORS, Los Angeles, Calif. Republished by Woo Gueyteung, Los Angeles, Calif.

COAST PRIDE

FOR FRESH VEGETABLES, FRESH CITRUS FRUITS, AND FRESH DECIDUOUS FRUITS.
Claims use since June 9, 1945.

Reg. No. 425,020. Registered Oct. 29, 1946. THE CAPITAL CITY PRODUCTS COMPANY, Columbus, Ohio, a corporation of Delaware. Republished by registrant.

Purity

FOR OLEOMARGARINE.
Claims use since 1887.

Reg. No. 432,663. Registered Sept. 9, 1947. CENTRAL MILLS, INC., Dunbridge, Ohio, a corporation of Ohio. Republished by registrant.

CENT-O-GREEN

The word "Green" is disclaimed apart from the mark as shown.
FOR LIVESTOCK FEEDS—NAMELY, ALFALFA MEAL MADE FROM DEHYDRATED ALFALFA HAY.
Claims use since Feb. 14, 1939.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 63,492. Registered June 25, 1907. G. HEILEMAN BREWING CO., La Crosse, Wis. Republished by G. Heileman Brewing Co., La Crosse, Wis., a corporation of Delaware.

FOR BEER.
Claims use since about Jan. 1, 1902.

Reg. No. 99,098. Registered Aug. 18, 1914. G. HEILEMAN BREWING CO., La Crosse, Wis. Republished by G. Heileman Brewing Co., La Crosse, Wis., a corporation of Delaware.

The drawing is lined for the color red.
FOR BEER.
Claims use since May 6, 1914.

Reg. No. 106,432. Registered Oct. 19, 1915. THE JAMES HANLEY BREWING COMPANY, Providence, R. I. Republished by The James Hanley Company, Providence, R. I., a corporation of Rhode Island.

PEERLESS

FOR ALE AND PORTER.
Claims use since January 1894.

Reg. No. 106,433. Registered Oct. 19, 1915. THE JAMES HANLEY BREWING COMPANY, Providence, R. I. Republished by The James Hanley Company, Providence, R. I., a corporation of Rhode Island.

ALE PEERLESS

FOR ALE AND PORTER.
Claims use since January 1894.

Reg. No. 106,435. Registered Oct. 19, 1915. THE JAMES HANLEY BREWING COMPANY, Providence, R. I. Republished by The James Hanley Company, Providence, R. I., a corporation of Rhode Island.

HANLEY'S ALE PEERLESS

FOR ALE AND PORTER.
Claims use since January 1894.

Reg. No. 137,560. Registered Nov. 30, 1920. BOSCH BREWING COMPANY, Lake Linden, Mich. Republished by Bosch Brewing Company (1933), Houghton, Mich., a corporation of Michigan.

GILT EDGE

FOR NON-INTOXICATING MALT BEVERAGE, CONTAINING LESS THAN ONE-HALF OF ONE PER CENT OF ALCOHOL BY VOLUME, SOLD AS A SOFT DRINK.
Claims use since December 1899.

Reg. No. 307,439. Registered Oct. 24, 1933. WESTERN STATES GROCERY COMPANY, Oakland, Calif. Republished by Beverage Distributors, Inc., San Francisco, Calif., a corporation of California.

BROWN DERBY

FOR BEER.
Claims use since June 5, 1933.

Reg. No. 319,501. Registered Nov. 27, 1934. G. HEILEMAN BREWING CO., La Crosse, Wis., a corporation of Delaware. Republished by registrant.

FOR BEER.
Claims use since Apr. 1, 1905.

Reg. No. 381,905. Registered Oct. 15, 1940. G. HEILEMAN BREWING CO., La Crosse, Wis., a corporation of Delaware. Republished by registrant.

HEILEMAN'S

The drawing is lined for the colors red and yellow.
FOR BEER.
Claims use since Sept. 1, 1936.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 317,938. Registered Oct. 9, 1934. LEROUX AND COMPANY, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR WHISKEY, GIN, BRANDY, RUM, APERITIFS, ALCOHOLIC CORDIALS, AND COCKTAILS.
Claims use since on or about Dec. 16, 1933.

Reg. No. 317,942. Registered Oct. 9, 1934. LEROUX AND COMPANY, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FIGARO

FOR ALCOHOLIC RUM STYLE BEVERAGE.
Claims use since on or about Dec. 16, 1933.

Reg. No. 328,928. Registered Oct. 8, 1935. PADRE VINEYARD COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

Vai Bros.

FOR BRANDY.
Claims use since Nov. 4, 1933.

Reg. No. 373,228. Registered Nov. 28, 1939. JULIUS LOESER & CO., INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

OAK-LORE

FOR WHISKEY.
Claims use since December 1914.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 78,975. Registered July 26, 1910. INGRAM-RICHARDSON MANUFACTURING COMPANY, Beaver Falls, Pa., a corporation of Pennsylvania. Republished by registrant.

ING-RICH

FOR ADVERTISING SIGNS.
Claims use since March 1903.

Reg. No. 321,895. Registered Feb. 19, 1935. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant.

SPONGEX

FOR RUG UNDERLAYS, BATH MATS, AND KNEELING PADS.
Claims use since on or about Feb. 11, 1932.

Reg. No. 357,290. Registered May 31, 1938. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant.

CELL-TITE

FOR FLOOR RUGS OF RUBBER COMPOSITION AND DRAPABLE SHEET COVERINGS FOR PORTABLE USE AS HEAT INSULATION MADE OF RUBBER COMPOSITION.
Claims use since Nov. 10, 1937.

Reg. No. 361,029. Registered Oct. 4, 1938. RALPH W. WILSON COMPANY, INC., New York, N. Y. Republished by Ralph W. Wilson, New York, N. Y.

"Glider"

FOR CAPS FOR RECEPTACLES.
Claims use since Apr. 15, 1938.

Reg. No. 414,715. Registered June 26, 1945. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant.

Texfoam

FOR FILAMENTARY WEB MATERIAL FOR USE AS SURFACE PADS, MATS, COVERINGS, RUG UNDERLAYS, AND THE LIKE.
Claims use since Oct. 26, 1943.

Reg. No. 430,621. Registered June 17, 1947. NORMAN L. CAHNERS, doing business as Materials Handling Laboratories, Boston, Mass. Republished by registrant.

CHUCKAWAY

FOR PORTABLE MATERIAL HANDLING PLATFORMS USEFUL IN LIFT TRUCK OPERATIONS.
Claims use since Apr. 3, 1946.

REISSUES

NOVEMBER 23, 1948

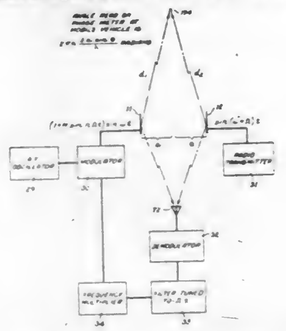
23,049
OPHTHALMIC GLASS

William H. Armistead, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Original No. 2,433,883, dated January 6, 1948, Serial No. 691,663, August 19, 1946. Application for reissue February 11, 1948, Serial No. 7,731

16 Claims. (Cl. 106—54)

1. An ophthalmic glass analytically containing 33% to 60% SiO_2, 1% to 7% B_2O_3, 4% to 15% ZrO_2, 0% to 25% BaO, .5% to 5% Li_2O, 1% to 15% Na_2O and 3% to 15% of an oxide of a metal of the second periodic group having an atomic weight between 40 and 66, the softening point of the glass being below 700° C., the refractive index (nD) being between 1.57 and 1.70 and the thermal expansion coefficient being between 83 and 10^{-7} and 95×10^{-7} cm. per cm. per degree C. between 0° and 300° C.



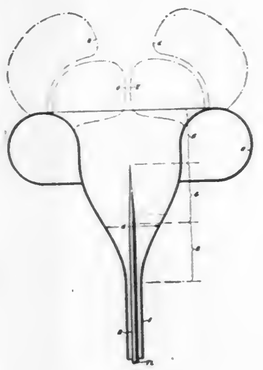
23,050
RADIO BEACON

Reed R. Brunner, deceased, late of Baltimore, Md., by Seismograph Service Corporation, Tulsa, Okla., a corporation of Delaware, assignee

Original No. 2,417,807, dated March 25, 1947, Serial No. 524,722, March 2, 1944. Application for reissue February 25, 1948, Serial No. 10,822

15 Claims. (Cl. 343—105)

(Original granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a radio beacon system, means for radiating wave energies of different frequencies from a plurality of spaced radiators, said energies differing in frequency by a predetermined frequency, and means jointly responsive to said radiated wave energies for radiating wave energy modulated by a harmonic of said difference frequency.

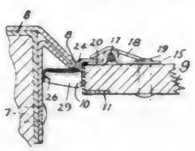
23,051
BROADCAST ANTENNA

Philip S. Carter, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Original No. 2,403,909, dated July 16, 1946, Serial No. 422,356, December 10, 1941. Application for reissue September 8, 1948, Serial No. 48,306

19 Claims. (Cl. 250—33.63)

14. A radiant energy transmission system including a hollow wave guide member having a transverse dimension such that propagation of the radiant energy field within said guide may take place without the presence of an inner conductor, said member being flared at one end to such an extent that the field within said guide is free from said system, and said flare being further continued so that the end of said guide is curved back on itself.

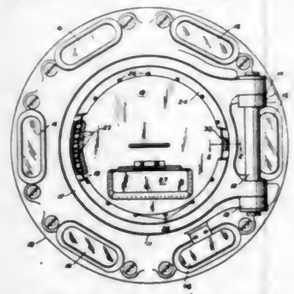


PATENTS

GRANTED NOVEMBER 23, 1948

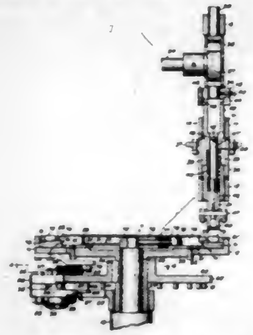
2,454,266
PYRAZOLONE AZO PIGMENT
Edward Armatys, New York, N. Y., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application June 4, 1943, Serial No. 489,715
2 Claims. (Cl. 260—147)

1. A new, golden brown pigment of excellent light-fastness, obtained by coupling 10 parts by weight of tetrazotized dichlor benzidine with 11 parts by weight of phenyl-methyl-pyrazolone in a weak caustic soda solution containing a dispersing agent and 37 parts by weight cupric hydroxide, neutralizing and separating the precipitate.



2,454,267
TOBACCO HOGSHEADS AND SECURING MEANS FOR THE HEADS THEREOF
Harry Guthrie Bell, Paris, and Jacob Douglas Gay, Jr., Lexington, Ky.
Application January 17, 1946, Serial No. 641,761
11 Claims. (Cl. 217—89)

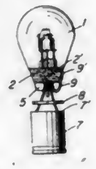
1. The combination with a barrel body having interior annular projections and a head of a diameter less than that fixed by the projections, of a plurality of latch members normally extending in parallelism with the plane of the outer face of the head yieldable outwardly of the head and projecting beyond the periphery of the head, the periphery of the combined members being substantially equivalent to that of the interior of the barrel and bearing extremities on said latch members engaging in their normal positions between the inner surface of the barrel and the contiguous edge of the barrel head.



2,454,268
PERISCOPE MOUNTING FOR ARMORED VEHICLES
Frederick S. Brackett, Chevy Chase, Md.
Application April 11, 1945, Serial No. 587,819
2 Claims. (Cl. 88—68)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

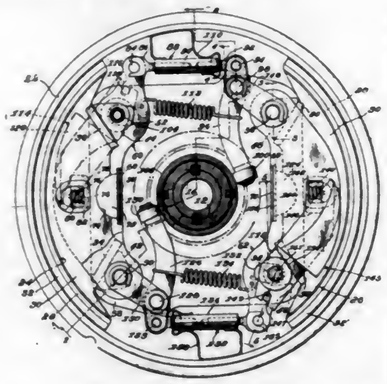
1. In an armored vehicle of the type having therein a hatch opening above an observer's station for periscopic observation, the combination with a hatch cover for closing said hatch opening, said hatch cover comprising a hinged annular ring outer cover portion having a central circular aperture therein and a single periscope-supporting circular inner cover portion closing said aperture and rotatably mounted therein about its vertical axis, of a vertical opening in said circular cover portion disposed eccentrically of said vertical axis for mountedly receiving a single periscope, and a single periscope extending vertically upward through and mountedly supported at said vertical opening, whereby an observer may, while merely turning his body and

otherwise remaining at said station, observe throughout 360 degrees of azimuth by rotating said circular inner cover portion.



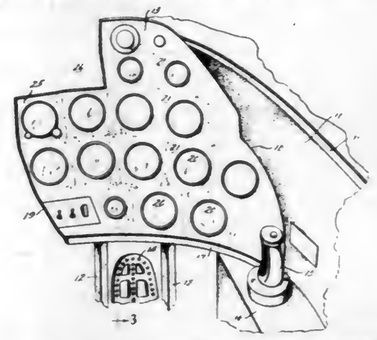
2,454,269
MILLING MACHINE
Harvey M. Braucher, Baltimore, Md.
Application August 12, 1944, Serial No. 549,243
5 Claims. (Cl. 90—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine for processing work pieces wherein a processing tool is moved intermittently into work engaging position, a work holder comprising a stationary housing, a stationary dial ring in said housing, a rotatable dial and means for rotating it with a step-by-step movement, said dial being provided with a plurality of inwardly opening radially arranged recesses whose outer ends overlie the dial ring and together with said ring form pockets for the work pieces, said dial ring being provided adjacent a point of stoppage of said dial with a cutaway portion, a slidable work holding clamp in each recess arranged to be moved at the point of stoppage of the dial to clamp the work piece, each clamp being provided with a shoulder in engagement with the inner periphery of said dial ring to hold said clamps open except when opposite the cutaway portion of the ring, and means for moving said clamp members to clamp the work when opposite said cutaway portion, said cutaway portion of the ring being



so shaped as to actuate the clamps to cause them to release the work pieces upon movement of the dial beyond the processing station of the work piece.

2,454,270
BASING ELECTRIC BULB
Reginald K. Braunsdorff, East Orange, N. J., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J., a corporation of Delaware
Application April 10, 1945, Serial No. 587,497
11 Claims. (Cl. 176—32)



9. An electric incandescent lamp having a glass bulb and a metallic base, said bulb having a metallized portion formed integrally with the glass and extending at least partially into the base part, and a ring of solder between the internal meeting surfaces of the base and the metallized portion with at least a part of it adhered to the base and metallized ring to form a seal and the ground wire of said bulb embedded in said ring of solder.

2,454,271
FRICTION COUPLING DEVICE
Lawrence R. Buckendale and Ralph K. Super, Detroit, Mich., assignors to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application March 27, 1944, Serial No. 528,276
6 Claims. (Cl. 192—76)

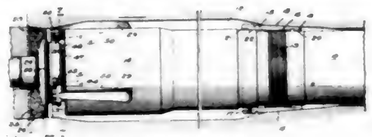
1. In a friction coupling device, driving and driven members, means for frictionally coupling said members together including a friction shoe and an actuating lever therefor pivotally anchored at one of its ends on one of said members, means for moving said lever in one direction to frictionally couple said members, and means mounted on said one member adjacent to the other end of said lever for angular movement relative thereto in response to centrifugal force and operatively connected with said lever to restrain said lever and friction shoe against movement to coupling position.

2,454,272
INSTRUMENT PANEL FOR AIRCRAFT COCKPITS
Harold W. Case, Dayton, Ohio
Application April 19, 1946, Serial No. 663,339
5 Claims. (Cl. 244—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An instrument panel having a horizontal curvature and a vertical curvature, the inner surface of said panel being divided by bend lines into a multiplicity of small plane areas substantially tangential to the curvature of panel, and no more than one instrument dial mounted in substantially each of said small plane areas whereby each instrument will be substantially perpendicular to the pilot's line of sight.

2,454,273
CELLULOSE ETHER COMPOSITION
Richard F. B. Cox, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 28, 1945, Serial No. 607,668
8 Claims. (Cl. 106—176)

1. A thermoplastic composition consisting of a cellulose ether, a plasticizer therefor, and from about 0.5% to about 7.5% of methoxy phenol lactone as a stabilizer therefor, based on the weight of the cellulose ether, said lactone being substantially gasoline-insoluble and having an empirical formula of $C_{20}H_{22}O_7$, said lactone further having two phenolic hydroxyl groups, one alcoholic hydroxyl group, one lactone group, and two methoxy groups and forming a triacetate derivative melting at about 161° C.

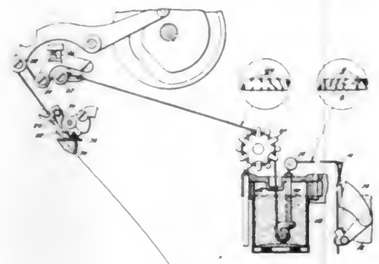


2,454,274
MANUFACTURE OF MIXED ESTERS OF GLYCOLS
Arthur John Daly and William Geoffrey Lowe, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 19, 1946, Serial No. 677,923. In Great Britain June 25, 1945
2 Claims. (Cl. 260—476)

1. Process for the manufacture of mixed esters of glycols having plasticising properties, which comprises heating a diester of a fatty acid containing 2 to 4 carbon atoms and a substance selected from the group which consists of alkylene and polyalkylene glycols together with an aromatic acid containing a benzene ring as the sole aromatic residue and continuously removing substantially the whole of the vapors produced.

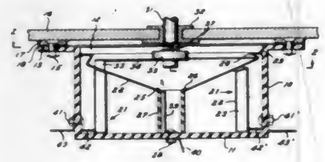
2,454,275
MANUFACTURE OF MIXED ESTERS OF POLY-HYDROXY COMPOUNDS
Arthur John Daly and William Geoffrey Lowe, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 19, 1946, Serial No. 677,924. In Great Britain June 25, 1945
4 Claims. (Cl. 260—476)

1. Process for the manufacture of a mixed ester of a polyhydric alcohol containing 3 to 6 hydroxyl groups with a fatty acid containing less than 5 carbon atoms and a mono-nuclear mono-carboxylic aromatic acid, which comprises heating the ester of the polyhydric alcohol and the fatty acid in which all the hydroxyl groups of the alcohol are esterified together with the aromatic acid to a temperature of 220° to 300° C., and removing from the reaction zone substantially the whole of the vapors produced.



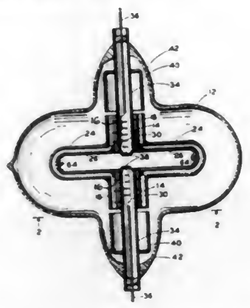
2,454,276
SUBCALIBER GUN MOUNT
George B. Davis, Jr., Green Acres, Md., assignor to the United States of America as represented by the Secretary of War
Application January 18, 1946, Serial No. 642,059
3 Claims. (Cl. 89—29)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an apparatus for mounting a subcaliber gun within the chamber of a larger caliber gun, the combination of a generally cylindrical collar threadedly engaged with the subcaliber gun and having at least two internal annular bearing surfaces in engagement with the subcaliber gun and an external bearing surface in engagement with the forward portion of the chamber of the large caliber gun, a set screw for releasably securing said collar against rotation on the subcaliber gun, a plurality of locking lugs, screw means adjustably securing said lugs to the rear face of the subcaliber gun, means forming a plurality of radially tapered, longitudinally extending grooves arranged equidistantly from each other in the outer periphery of the subcaliber gun of varying depth, a plurality of radially tapered wedges in said grooves and having outer bearing surfaces in engagement with the rear portion of the chamber of the larger caliber gun, means adjustably securing said wedges to said lugs, respectively, whereby the subcaliber gun is releasably held in concentric aligned position within the larger caliber gun.



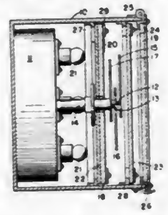
2,454,277
ART OF SEWING
James P. Fredericksen, Braintree, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 27, 1946, Serial No. 679,713
9 Claims. (Cl. 112—262)

1. That improvement in sewing, which comprises assembling parts to be operated upon, providing a thread loaded with accumulations of hardened adhesive in discrete form to enable the thread to retain its flexibility, transforming the adhesive into a flexible mass to cause it to penetrate the thread, and inserting with the thread



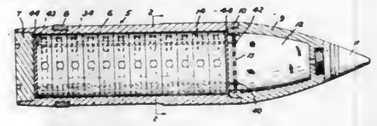
while flexible a seam connecting the parts to cause the thread thereafter to become rigidly bonded in place within the parts after the adhesive rehardens.

2,454,278
SEALED POTENTIOMETER
Irving Gordy, Eatontown, N. J.
Application July 29, 1946, Serial No. 686,829
7 Claims. (Cl. 201—55)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



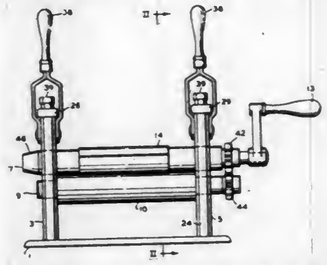
1. In a device of the class described, a casing having a casing wall and closed except for an opening at one end, electrical resistance means mounted within the casing, a metal sheet electrical contact member extending completely across the casing between said opening and said resistance means in juxtaposed spaced relation to the resistance means and having a flexible supporting and sealing portion adjacent the casing wall to secure it flexibly within the casing in spaced juxtaposed relation to the resistance means and protect and hermetically seal the resistance means within the casing between said metal sheet contact member and the closed end of the casing, terminal posts sealed in the casing wall between the flexible metal sheet contact member and the closed end of the casing and being each electrically connected at the inner end, one to the resistance means and another to the flexible metal sheet contact member, movable operating means supported in the open end of the casing, outwardly of said flexible metal sheet contact member, and operable upon said metal sheet contact member to force the portion thereof contacted by said operating means into contact with a selected portion of said resistance means, and thereby establish an electrical circuit between said terminal posts through the contact relation between the flexible metal sheet contact member and the resistance means.

2,454,279
HIGH-POWER OSCILLATOR TUBE
John E. Gorham, Spring Lake, N. J.
Application June 22, 1943, Serial No. 491,800
19 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An ultrahigh frequency tube comprising an evacuated glass envelope carrying a pair of electrode assemblies, each of said assemblies including a generally cylindrical cathode can closed at its inner end, said end comprising a flat surface perpendicular to the longitudinal axis of said cathode, a cathode lead-in extending outwardly from said can, a grid surrounding said cathode, and an anode surrounding said grid, said electrode assemblies being disposed end-to-end on a common axis colinear with the axes of the cathodes, with the flat surfaces of the cathode assemblies adjacent one another whereby said surfaces form a radio-frequency condenser providing capacitance loading for facilitating tuning of the cathodes.

2,454,280
ILLUMINATED INDICATOR USING LIGHT POLARIZING ELEMENTS
George K. C. Hardesty, Seat Pleasant, Md.
Application July 13, 1945, Serial No. 604,941
4 Claims. (Cl. 88—65)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In an indicating instrument, a casing, a source of light in said casing, a dial element mounted in said casing composed of a pair of overlapped sheets of polarizing material positioned in front of said light source with their axis crossed to exclude substantially all the light directed toward said sheets from said source, a fixed indicator element, a movable indicator situated between said sheets movable into various angular positions with respect to the optical axis of said sheets of polarizing material said movable indicator being composed of translucent depolarizing material, whereby at any angular position of the movable indicator, polarized light passing through the movable indicator will be depolarized in the sense of being reconverted to unpolarized light unaffected by the analyzer and, because of the translucent quality of the indicator a large portion of light incident on the side opposite the said source will be reflected in diffused form.

2,454,281
ANTIPERSONNEL ARTILLERY MINE
Clarence C. Hicks, Milwaukee, Wis.
Application November 1, 1945, Serial No. 626,157
3 Claims. (Cl. 102—68)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A mine-laying device comprising a container, a yieldable closure on one end of the container, an explosive ejection charge at the other end of the container, individual mines nested in the container between the closure and ejection charge, said mines having aligned openings longitudinally of the container, a rod member secured in the container at the end having the ejection charge, passing through said aligned openings and having a headed portion on the end adjacent the closure, an explosive charge in each mine and delay firing means, therefor, including a detent means lying in the path of and responsive to relative motion between said mines and the headed portion of said rod for release of said firing means.

2,454,282
TUBE FORMING DEVICE
Herbert L. Johnson, Peabody, Mass.
Application May 31, 1945, Serial No. 596,938
1 Claim. (Cl. 153—61)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A tube forming device comprising, in combination, a horizontal base, a first guideway extending vertically upward from said base, said first guideway comprising two U-shaped channels disposed in a spaced apart relationship and a spacing member secured at opposite ends thereof to the upper end of each of said channels, a second guideway extending vertically upward from said base at a position remote from said first guideway, said second guideway comprising two U-shaped channels disposed in a spaced apart relationship and a spacing member secured at opposite ends thereof to the upper end of said channels, a first and second bearing block dis-

posed within said first and second guideways, respectively, and supported on said base, said bearing blocks each comprising a substantially rectangular block formed with a cylindrical bearing surface at the upper end thereof, a first roll having a rigid core journalled in said cylindrical bearing surfaces in said first and second bearing blocks, said first roll having a yieldable covering surrounding said core and extending axially of that portion of said first roll intermediate said guideways, a second rigid roll disposed with the axis thereof parallel to the axis of said first roll and normally resting on the upper surface of said first roll, a third and a fourth bearing block slideably mounted within said first and said second guideways, respectively, each of said third and fourth bearing blocks being formed with a U-shaped bearing surface in the lower end thereof, said bearing surfaces in said third and fourth bearing blocks being adapted to engage a portion of the upper surface of said second roll and to maintain said second roll in said normally parallel relationship with said first roll, first and second stop members slideably positioned in said first and second guideways, respectively, and disposed above said third and fourth bearing blocks, first and second screw means extending downwardly through said spacing members in said first and second guideways, respectively, and adapted to limit the upward movement of said first and second stop members, respectively, a first cam member disposed intermediate said first stop member and said third bearing block, a second cam member disposed intermediate said second stop member and said fourth bearing member, means actuatable to move said first and second cam members, respectively, from a position permitting minimum spacing between said first stop member and said third bearing block and said second stop member and said fourth bearing block to a second position requiring greater spacing between said first and second stop members and said third and fourth bearing members, respectively, said third and fourth bearing blocks being adapted to permit removal of said second roll from said device without disassembling said device when said first and second cam members are in said first position, said cam members being adapted upon movement into said second position to force said second roll into the yieldable covering of said first roll, a first gear secured to one end of said core of said first roll, a second gear secured to one end of said second roll and adapted to engage said first gear when said cams are in said second position, and a crank member secured to one of said rolls and adapted to provide means of rotating the roll to which it is attached.

2,454,283

SEALING ELEMENT, INCLUDING A BINDER CONSISTING OF POLYISOBUTYLENE AND FACTICE

Ellis Gray King, Pittsburgh, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

No Drawing. Application December 31, 1943, Serial No. 516,590

10 Claims. (Cl. 260—23)

1. A sealing element including a binder consisting of polyisobutylene having an average molecular weight of from about 70,000 to about 200,000 and factice, said factice being present in amount equal to from about 65% to 80% by weight of the total weight of factice and polyisobutylene, the sealing element being substantially devoid of cold flow under the conditions of use and being resilient.

2,454,284

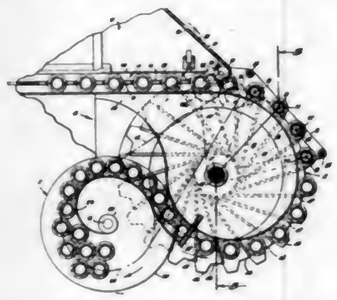
COMPOSITION OF HALF-ESTER OF STYRENE-MALEIC ANHYDRIDE COPOLYMER AND A SOLVENT

Joseph S. Kirk, Seven Hills Village, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 19, 1944, Serial No. 518,883

8 Claims. (Cl. 260—23)

1. A composition for the protection of metal surfaces comprising a half-ester of styrene-maleic anhydride polymer esterified with a saturated monohydric aliphatic alcohol of 12 through 18 carbon atoms, and a solvent for the said ester.



2,454,285

CONTAINER FEEDER

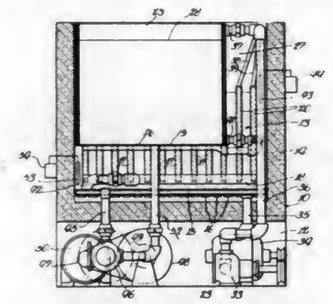
Frank W. Krueger, Atherton, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware

Application July 3, 1944, Serial No. 543,337

5 Claims. (Cl. 226—96)

1. In a container feeder the combination of: a relatively flat plate; means for rotating said plate about a substantially vertical axis; a series of relatively shallow guides provided on the upper surface of said plate, said guides extending outwardly from a central area of said plate; and a container guide rail disposed above said plate, said rail being disposed to shift along said guides containers deposited on said plate and engaged by said guides, so that, in a certain zone of their travel on said plate, said containers are disposed at spaced intervals determined by the spacing of said guides.

2,454,286



DIP TANK FOR THERMOPLASTIC MATERIAL

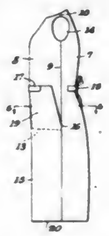
William H. Lerner, Lorain, Ohio, assignor, by mesne assignments, to Specialties Development Corporation, Belleville, N. J., a corporation of New Jersey

Application October 4, 1944, Serial No. 557,137

3 Claims. (Cl. 91—46)

1. Apparatus for handling thermoplastic material comprising, in combination, a housing having heat insulating walls, a first container within said housing having an open top and adapted to hold a supply of thermoplastic material, a plurality of heating elements mounted near the bottom of said container and extending across the container in spaced relation, a second container having an open top and hollow walls, said second container being smaller than the first container and being mounted along one side of the first container above said heating elements, said second container also having a weir in one wall adjustable to various positions below the level of the walls thereof and adapted to discharge into the first container, additional heating elements extending along one side of the second container within the first container to provide a preheating space for unmelted replacement thermoplastic material, indirect heating means for the thermoplastic material including said heating elements

and means for circulating heated fluid through said heating elements and said hollow walls, and means for pumping molten thermoplastic material from said first container into the second container for use from the second container and at a rate such that unused material continually flows back to the first container over said weir.



2,454,287

MATERNITY GARMENT

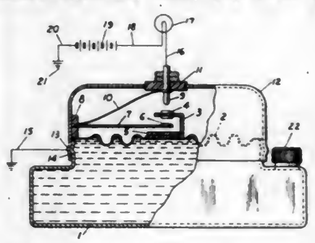
Ruth M. Mahoney, Santa Monica, Calif.

Application October 25, 1945, Serial No. 624,453

2 Claims. (Cl. 2—76)

1. A maternity garment comprising an upper back portion and a back skirt portion, a front upper waist portion having a lower extension terminating a substantial distance below the waistline and having its side edges secured to the side edge portions of the back, said upper front waist portion being more than one-half of the circumfeernce of the garment at the waistline so as to provide fullness thereat, a front skirt portion for said garment extending downwardly from the waistline, said front skirt portion being connected to said back portion along its vertical marginal edges from a point adjacent the bottom of said front waist portion to the bottom of the garment, the upper side edges of said lower front skirt portion being free and unattached to form a bib overlying the lower part of the upper front waist portion, and being adapted for adjustment in a direction away from the back of the garment as the full upper waist portion is expanded to accommodate different sizes of girth, and means for adjustably securing said bib about the waist.

2,454,288



HEAT-PRESSURE OPERATED WARNING SWITCH

Marion L. Michaelson, Ames, Iowa, assignor to The United States of America as represented by the Secretary of War

Application November 9, 1945, Serial No. 627,768

4 Claims. (Cl. 200—81.5)

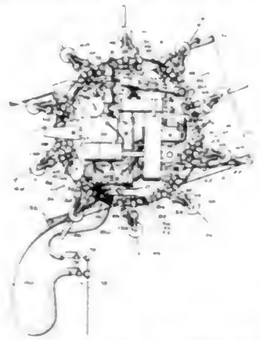
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a warning system employing a warning indicator actuated by the closing of an electrical circuit for indicating an excessive increase in pressure and/or temperature of fluid in a closed fluid system, a unitary switch automatically closing said electrical circuit upon a predetermined increase in pressure and/or temperature of said fluid, said switch comprising a housing, a diaphragm extending across the interior of said housing, said housing on one side of said diaphragm being in communication with said fluid system, a generally U-shaped supporting member on the opposite side of said diaphragm, a contact member on one of the legs of said generally U-shaped supporting member, a bimetallic member extending between the legs of said generally U-shaped supporting member, a second contact member in said housing spaced from said first mentioned contact member and from the same side of said diaphragm, and an electrical conductor between said bimetallic member and said second contact member, said bimetallic member being engageable with said first mentioned contact member to close said electrical circuit upon a predetermined increase in temperature of the fluid in said fluid system, and said first mentioned contact member being engageable with said second contact member to close said electrical circuit upon a predetermined increase in pressure of the fluid in said fluid system.

2,454,289

PORTABLE SELF-CONTAINED DRUM CLEANER

Frederick E. Neef, Jr., United States Army, Hartsdale, N. Y.



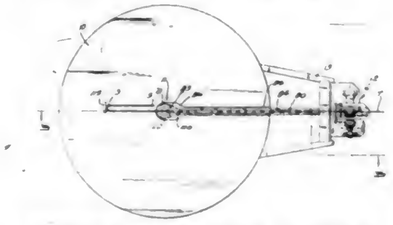
Application October 16, 1945, Serial No. 622,639

40 Claims. (Cl. 134—81)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A self-contained apparatus for cleaning the interiors of containers comprising in combination, a rotatable cleaning fluid reservoir, means for supporting a plurality of containers on said reservoir in position for cleaning, a plurality of cleaning nozzles adapted to be received in said containers for flushing said containers with cleaning fluid and evacuating the same therefrom, means connected with said nozzles and said reservoir for subjecting a portion of said cleaning fluid to pressure, means for applying suction to said nozzles for evacuating cleaning fluid from said containers to said reservoir, motor means for rotating said reservoir and for

operating said suction and pressure means, and control means operable upon rotation of said reservoir for controlling the pressure and suction flow between said reservoir and said nozzles to delay the application of suction to said nozzles



at the beginning of the cleaning cycle until a fluid level has been built up in said container and to continue suction at the end of a cleaning cycle a sufficient time to insure complete evacuation of the residual fluid from said containers.

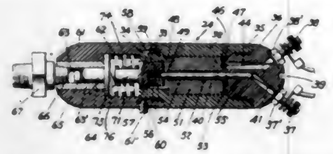
2,454,290

APPARATUS FOR BENDING WORK SUCH AS TUBING INTO SERPENTINE COILS

Arthur W. Payne, Detroit, Mich., assignor to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan

Application August 1, 1946, Serial No. 687,668
21 Claims. (Cl. 153—46)

1. Apparatus for shaping elongated work pieces, such as tubing, into coils of serpentine form having a succession of reverse bends, comprising an oscillatory head, two bending elements on the head spaced from the oscillating center thereof, said head having a starting position in which the elements lie on opposite sides of the work piece presented thereto so that the work piece may be advanced between the elements in said starting position, and means for oscillating the head in a four step cycle to wit: (1) rocking movement of the head from the starting position in one direction so that one element bends the work piece about the other element, (2) reverse rocking movement of the head to starting position in which position the work piece may be advanced, (3) rocking movement of the head in the opposite direction so that the said other element bends the work piece about the said one element, and (4) reverse rocking movement of the head back to starting position.



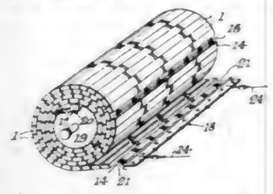
10. Apparatus for shaping elongated work pieces, such as tubing, into coils of serpentine form having a succession of reverse bends, comprising an oscillatory head, two bending elements mounted on the head in spaced relationship and eccentric of the axis of oscillation, means for guiding a work piece in between the said elements, means for oscillating the head first in one direction then the other for making opposite bends in the work pieces, said guiding means including a terminal piece with bearing parts thereon, and bearing parts on the head for seating on the bearing parts on the terminal piece as the head oscillates for causing movement of the guiding means incident to oscillation of the head.

2,454,291

BRAKE CONTROL APPARATUS

William F. Penrose, Summit, N. J., assignor to Empire Electric Brake Company, a corporation of New Jersey

Application July 31, 1945, Serial No. 608,031
7 Claims. (Cl. 201—51)



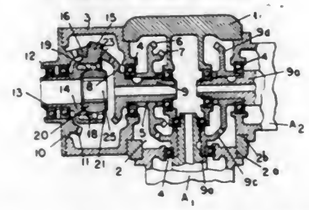
1. A fluid pressure actuated compression electric rheostat comprising a casing, a plurality of resistance elements arranged in pile contact relation within said casing at one end thereof, compression of which varies the effective electrical resistance between the ends of the pile thereof, means providing electrical contact with the ends of the said pile and electrical connections thereto respectively, plunger means for applying pressure to one end of said resistance element pile, a cylinder disposed within said casing at the other end thereof, a piston in said cylinder, means to connect said cylinder and said piston to a source of fluid pressure, spring means opposing the movement of said piston upon the application of fluid pressure to said cylinder, and a second spring means independent of said first interposed between said piston and plunger and adapted to transmit pressure resiliently from said piston to said plunger to drive the latter.

2,454,292

REVETMENT MAT

Andrew B. Pickett, United States Army

Application April 5, 1946, Serial No. 659,743
3 Claims. (Cl. 61—37)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A roll-type flexible revetment mat comprising, in combination, a drum and a revetment mat rolled on the drum, the revetment mat comprising a plurality of slat-like units arranged with their lengths extending transversely of the mat, the said mat thereby being made up of a plurality of rows of the said units, flexible reinforcing means for the said units extending continuously through the units lengthways thereof and flexibly interconnecting the units in end-to-end relation, complemental locking means on each longitudinal side of each unit adapted, when in locking engagement, to flexibly interlock each row in a direction longitudinally of the mat, the units of each row being of different lengths for staggering the units of one row relative to units of adjacent rows in a direction longitudinally of the mat, locking means on an end row of the units adapted to receive securing means for securing an end of the mat to a station of use, the said end row of units being the head or secured end of the mat when in service, anchoring means on an opposite end row of the units which defines a free end of the mat when in service, the said drum being provided with end recesses, and means flexibly securing the anchoring means to the free end row of units enabling the anchoring means to be housed in the recesses in the ends of the drum, the mat being wrapped on the drum in a roll in such manner that the mat and drum may be taken to a place of use, the head end secured to a shore to be protected and the mat unrolled down the shore to release the drum and the anchoring means therefrom responsively to termination of the unrolling movement of the mat to anchor permanently the free end of the mat in position.

2,454,293

MULTIDRIVE GEAR BOX FOR ACCESSORIES ON BOARD AIRCRAFT

Charles Raymond Waseige, Saint-Etienne (Loire), France; vested in the Attorney General of the United States

Application May 27, 1942, Serial No. 444,734
In France April 8, 1941
7 Claims. (Cl. 74—389)

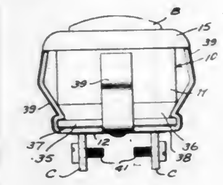
1. A self-contained gear-box for carrying and driving accessories on board aircraft, including a casing, a plurality of gears supported by and enclosed within said casing and operatively connected together to be rotated at the same time, a plurality of accessory elements carried by said casing and respectively connected to some of said gears to be driven thereby, a further accessory element operatively connected to another of said gears, an external driving element, and detachable means including gear means having a ratio differing from one between said latter accessory element and said external driving element.

2,454,294

COMPOSITIONS OF MATTER AND METHOD OF MAKING SAME

John C. Sauer, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 7, 1944, Serial No. 562,383
12 Claims. (Cl. 260—23)



1. A composition of matter comprising an interpolymer of a polyhydric alcohol mixed ester of a monocarboxylic acid containing an ethylenic double bond α,β to the carboxyl group and at least one other ethylenic double bond conjugated therewith and a monofunctional monocarboxylic acid of the group which consists of natural drying oils and semi-drying oils, and a monomeric polymerizable member of the group which consists of vinylidene compounds containing a single $CH_2{=}C<$ radical and saturated alcohol esters of butenedioic acids, in which the mixed ester constitutes from 25 to 95% and the monomeric polymerizable member constitutes 5 to 75% of the final product.

2,454,295

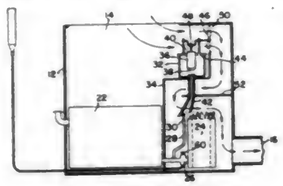
PUSH-BUTTON SWITCH CONSTRUCTION

Leo L. Verkuil, Tottenville, N. Y., assignor to Edwards & Company, Inc., Norwalk, Conn., a corporation of New York

Application June 5, 1946, Serial No. 674,449
7 Claims. (Cl. 200—159)

6. A push button switch construction adapted to be set into a hole in a wall, plate, or the like, and comprising a shell having a spring-opposed button and contactor means reciprocable within the shell and having connector-contact means carried by the shell for coaction with said contactor means, said shell having a peripheral flange to limit entry of the shell into said hole and said flange having recess means underneath it, said shell having recess means in its side wall spaced from said flange, and a frame having a plurality of yieldable arms extending along the sides of the shell and toward said first recess means, said arms having outward bulging intermediate portions to engage with the walls of said hole whereby they yield inwardly toward the sides of the shell and, upon movement of the arms inwardly toward said shell as said intermediate bulging portions engage the walls of said hole, substantially enter their ends into said first recess means, said arms having means interengaging with said second recess means and into which they are entered in response to movement of said arms inwardly toward said shell.

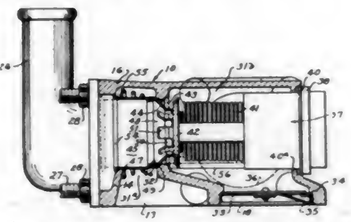
2,454,296



SELF-PROPELLED CIRCULATING HEATER

John E. Woods, Cohasset, Mass., assignor, by mesne assignments, to Standard-Thomson Corporation, Boston, Mass., a corporation of Delaware

Application December 22, 1945, Serial No. 637,005
4 Claims. (Cl. 263—19)



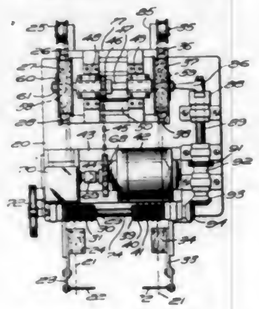
1. Heating apparatus comprising a casing having a cold air inlet and a warm air outlet, means forming an air passage between the inlet and outlet, a main burner for fluid fuel disposed to discharge its products of combustion into said passage, thermostatic control means for the main burner, a continuously operated auxiliary burner, a manually started external combustion hot air engine having a cylinder, means for supplying heat continuously from the auxiliary burner to

the hot end of the cylinder, the cold end of the cylinder being in heat exchange relationship

with cold air supplied through said cold air inlet, and a fan in said passage driven by the engine.

2,454,297
BY-PASSING VALVE FOR OIL TEMPERATURE CONTROL UNITS
Weldon Worth, Dayton, Ohio
Application December 8, 1944, Serial No. 567,289
8 Claims. (Cl. 236—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An automatic valve for use with an oil cooler having an inlet and an outlet, said valve comprising a body provided with a valve inlet and a valve outlet, the interior of said body having two passageways separated by a partition, the first from the valve inlet to the cooler inlet and the second from the cooler outlet to the valve outlet, a port in said partition providing the only direct communication between said two passageways, a pair of valve members movably mounted within said two passageways respectively, one valve member being spring-urged to a closed position stopping oil flow from the valve inlet to the cooler inlet while allowing oil flow through said valve inlet and thence through said port, the other valve member when seated closing said port and stopping oil flow therethrough, a thermal-responsive element within the second passageway for operating said other valve member and responsive to a rise in temperature of the oil passing through said second passageway to seat said other valve member, and said other valve member as it approaches port-closing position being adapted to contact and move said one valve member to open position.

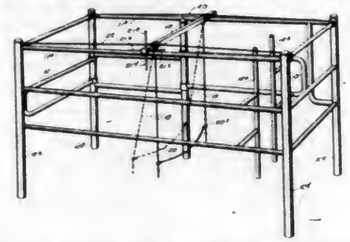


2,454,298
ELECTRONIC TUBE
Harold A. Zahl and Glenn F. Rouse, Long Branch, and John E. Gorham, Spring Lake, N. J.
Application July 29, 1943, Serial No. 496,654
4 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A cathode structure comprising a tubular member, a heating filament at one end of said member, a filament lead extending from the other end of said member to a point therein in the vicinity of said filament, said member having an

aperture at said point to permit entry of a tool for fastening said filament to said lead.

2,454,299
FINISHING MACHINE FOR ORNAMENTAL CHAINS
Ferdinand Armbrust, Hoxie, R. I., assignor to Armbrust Chain Company, a corporation of Rhode Island
Application May 16, 1947, Serial No. 748,481
4 Claims. (Cl. 51—137)

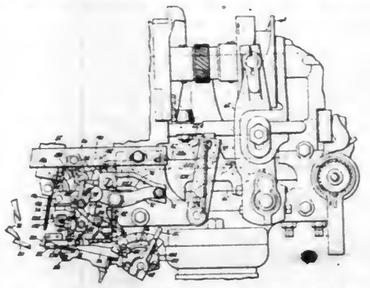


4. In a chain finishing machine, a power shaft, a finishing wheel shaft, a finishing wheel keyed to said finishing wheel shaft, means for positively driving said finishing wheel shaft from said power shaft, a chain feed shaft, chain feeding means on said shaft, means for driving said chain feed shaft at a reduced speed from said power shaft, including a reduction gearing and a belt driven pulley, means for guiding a chain fed by said chain feeding means into contacting engagement with said finishing wheel, means for maintaining the guided chain under tension, and means for reciprocating the guiding means in timed relation to the chain feeding means to move the contacting chain over the face of the finishing wheel, an idler pulley, a flexible finishing belt mounted on said idler pulley and said finishing wheel, and means for keeping said belt under tension.

2,454,300
OVERHEAD SUPPORT FOR MILKERS
Henry B. Babson, Chicago, Ill., assignor to Babson Bros. Co., a corporation of Illinois
Application August 30, 1943, Serial No. 500,509
11 Claims. (Cl. 31—58)

1. Apparatus for supporting a suspended milker from above a cow, including: a stall adapted to receive the cow; supporting means mounted on

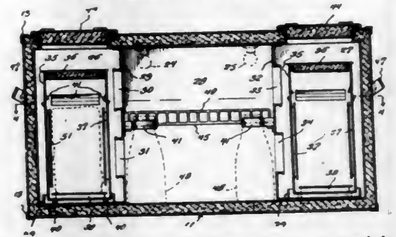
the top of the stall and movable longitudinally thereof, this means comprising a member extending across the top of the stall and provided with manual operating means on one end; means for maintaining the supporting means in desired re-



lation with the top of the stall; suspension elements depending from the supporting means at each side of the cow; and a carrying member extending beneath the cow, this member being carried by said elements and being adapted to carry the milker.

2,454,301
TELEGRAPH SYSTEM
Walter M. Bacon, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 7, 1943, Serial No. 482,074
17 Claims. (Cl. 178—2)

1. An improvement in telegraph systems comprising an outgoing channel of transmission, a plurality of pulse transmitters for transmitting over said channel one at a time, storage means for each of said transmitters, means for selectively directing to one or another of said storage means a group of message codes constituting a message, program means for assigning turns of transmission to those of said transmitters which have messages supplied to their storage means, means in said program means for assigning more turns of transmission to one transmitter than another, and manual switching apparatus for varying the number of said more turns assigned to said one transmitter.

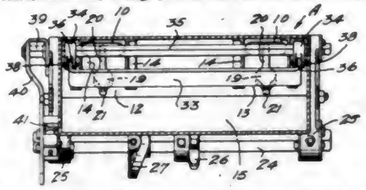


2,454,302
FASTENING INSERTING MACHINE
Benjamin B. Blanchard, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 18, 1945, Serial No. 594,448
10 Claims. (Cl. 1—20)

1. In a fastening inserting machine, fastening forming mechanism, a fastening inserting driver cooperating therewith, means including two relatively movable knives adapted to sever a fastening from fastening material fed into said mechanism, and means for moving the two knives as a unit into fastening severing position and thereafter for reversing the movement of one of the knives while holding the other knife stationary

thereby to sever the fastening from the fastening material.

2,454,303
PORTABLE REFRIGERATOR
Morris Brodheim, Philadelphia, Pa.
Application December 4, 1945, Serial No. 632,693
2 Claims. (Cl. 62—31)

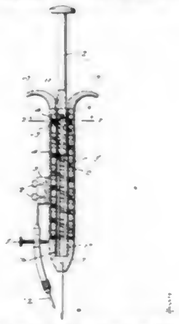


1. A portable ice refrigerator, comprising a substantially rectangular housing of heat insulating material, an upper longitudinal portion of said housing being inclined to define a sloping longitudinal surface, a first transverse partition wall positioned within said housing contiguous to and spaced from one end of the latter defining with the adjacent wall portions of the said housing a first ice compartment, a second transverse partition wall positioned within said housing contiguous to and spaced from the other end of the latter defining with the adjacent wall portions of said housing a second ice compartment, each partition wall having a circulating opening in its upper portion and another opening in its lower portion, said partition walls and the intermediate wall portions of said housing defining a food storage space between them, an ice receptacle positioned in each ice compartment, means for supporting each ice receptacle in substantially spaced relation to the wall surfaces of its compartment, and a door for said food compartment, said door being located in a vertical longitudinal wall of the housing and being aligned with and substantially the same length as said food compartment.

2,454,304
FEEDING MECHANISM FOR AGRICULTURAL MACHINES
Allan Moyer Buehler, Preston, Ontario, Canada, assignor to Eastern Steel Products Limited, Preston, Ontario, Canada, a company of Canada
Application May 5, 1945, Serial No. 592,253
3 Claims. (Cl. 222—267)

1. Feeding mechanism for agricultural machines comprising a hopper including a discharge

outlet adjacent the bottom thereof for discharging material therefrom, a restricted feed passage disposed in the bottom of said hopper and communicating with said discharge outlet, means in connection with said hopper for directing said material towards said feed passage, an oscillating agitator disposed in said passage in the path of said material flowing towards said outlet, said agi-



tator being swingably mounted on a vertically disposed pin, a lever arm carried by said pin exteriorly of the hopper, a rotary shaft carried by the hopper, a cam member carried by said shaft and means operatively connecting said cam member and said lever arm to cause uniform oscillation of the agitator upon rotation of said shaft in clockwise or counter-clockwise direction.

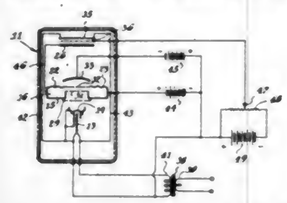
2,454,305

DRAFTING COMPASS

Byron R. Cameron, Mount Vernon, Ill.

Application August 14, 1945, Serial No. 610,746
2 Claims. (Cl. 33—27)

1. A drafting compass, comprising a rotatable tubular sleeve provided exteriorly with a compass point, upper and lower non-rotating collars positioned in alignment with said sleeve and adapted to contain the sleeve, finger grips projecting from the upper collar, a center mounted in said lower collar, a vertical plunger centered in said upper collar and projecting centrally in said sleeve, and means located within said sleeve and adapted to rotate the sleeve, said means adapted to be operated by the up and down movement of said plunger.



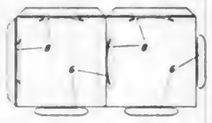
2,454,306

TUNABLE GENERATOR FOR ULTRA HIGH FREQUENCIES

David Gordon Clifford, Palo Alto, Calif., and Edward Pawlishen, deceased, late of New York, N. Y., by John Pawlishen, administrator, New York, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 30, 1942, Serial No. 470,582
9 Claims. (Cl. 315—5)

5. A discharge device comprising an evacuated envelope enclosing a main cathode, a cavity resonator through which an electron stream from said main cathode may pass, one of the walls of said resonator being distortable, bimetallic means operably connected to said distortable wall, a control cathode, a grid therefor, potential-source means coupled to said bimetallic means and control cathode for making said bimetallic means function as an anode for said control cathode, connections from said control cathode to



a source of current for effecting an independent discharge to said bimetallic means to quickly heat it to a desired extent, a manually-variable electrical supply source, and connections thereto from said control cathode and grid to control said independent discharge to vary the heating of the bimetallic element and thereby the physical dimensions thereof to accurately position said distortable wall and effect tuning of the resonator.

2,454,307

INTERLOCKING MOSAIC

Burnell Cooley, San Francisco, Calif.

Application November 7, 1946, Serial No. 708,410
1 Claim. (Cl. 41—10)

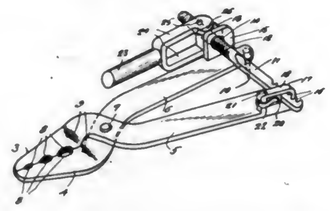
A mosaic unit comprising a blank having its margin formed of straight sides, tongues extending from two of the straight sides, slots formed adjacent and parallel to the other of the straight sides of said blank, said slots each having a straight portion parallel with its adjacent blank margin and a curved portion opposing the straight side slots terminating in relatively narrow portions the length of the slot along the curved line being identical with the length only of the connecting points of the tongue of the blank to the opposite end of the tongue substantially as shown.

2,454,308

PRODUCTION OF ACRYLONITRILE

Harold S. Davis, Riverside, Conn., and Herbert A. Newey, Richmond, Calif., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Original application April 30, 1946, Serial No. 666,197. Divided and this application April 1, 1948, Serial No. 18,494. In Canada August 1, 1946
8 Claims. (Cl. 260—465.3)



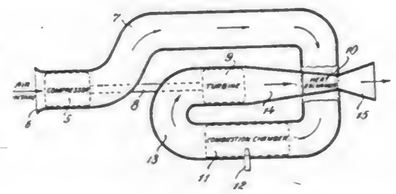
1. A method of producing acrylonitrile which comprises bringing acetylene together with hydrocyanic acid into contact with an aqueous acid reacting solution of a cuprous salt and zinc chloride, said solution also containing a salt of the class consisting of ammonium, amine, and alkali metal salts.

2,454,309

BOLT HOLDING TOOL

Evan W. Davis, Spokane, Wash.

Application April 16, 1945, Serial No. 588,678
2 Claims. (Cl. 81—13)



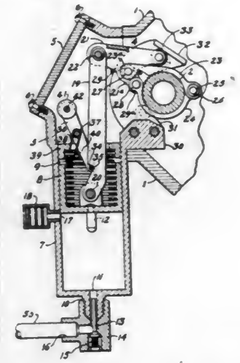
1. A bolt holding tool comprising jaws having handles extending rearwardly therefrom and pivoted in crossed relation to each other, said jaws being bent adjacent their rear ends and disposed in offset relation to the handles, a prong carried by one handle adjacent the rear end thereof for penetrating a wall through which a bolt gripped between the jaws passes and holding the tool and the bolt against turning movement, a bar extending between rear end portions of said handles, said bar being adjustably connected with one handle and slidably engaged with the other handle, a nut threaded upon said bar for engaging the last mentioned jaw and forcing the handles towards each other to move the jaws into gripping engagement with a bolt disposed between the jaws, and a handle for turning the nut pivoted to the nut and having cams for engaging the last mentioned jaw and exerting stress longitudinally of the bar to apply additional gripping force to the handles and the jaws.

2,454,310

HEAT EXCHANGER AND REACTION THRUST APPARATUS

Carl de Ganahl, Trenton, N. J., assignor to Kaiser Fleetwings, Inc., a corporation of California

Application May 24, 1944, Serial No. 537,140
3 Claims. (Cl. 60—35.6)



3. In an apparatus of the character described, an air compressor, a gas turbine, a driving connection between the compressor and turbine, a combustion chamber, a conduit for compressed air between the compressor and the combustion chamber, means for supplying fuel to the combustion chamber, a conduit for combustion products between the combustion chamber and turbine, a converging passage connected to the discharge of the turbine, a heat exchanger affording heat transfer between compressed air in the conduit therefor and the combustion products and a diverging discharge passage for the combustion products connected to the heat exchanger.

2,454,311

FLUID PULSATOR TRANSMISSION SYSTEM

George R. Ericson, Kirkwood, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware

Original application October 24, 1939, Serial No. 301,009, now Patent No. 2,317,594, dated April 27, 1943. Divided and this application June 6, 1942, Serial No. 446,153.
5 Claims. (Cl. 60—62.5)

4. In combination with an engine having a part movable at variable speeds, an accessory device driven by a fluid motor, and a pulsator device having a fluid connection to said motor, a connection to said engine part for operation of said pulsator device thereby to cause pulsation, means for disconnecting said pulsator device from said engine part, and means to operate said pulsator device independently of said movable part and at a uniform speed independent of the speed of the engine.

2,454,312

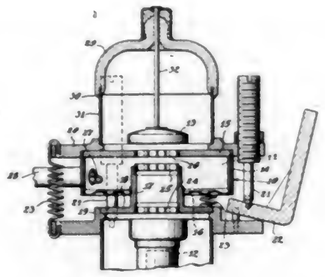
HIGH-STRENGTH CORROSION-RESISTANT ALUMINUM ALLOY SHEETS

Thomas L. Fritzlen, Florence, Ala., assignor to Reynolds Metals Co., Richmond, Va., a corporation of Delaware

No Drawing. Application October 26, 1943, Serial No. 507,752
2 Claims. (Cl. 29—197.5)

1. A clad aluminum alloy composed of a core of a Duralumin type alloy having a cladding of an alloy composed substantially entirely of Si .50–.90%, Mn .25–.75%, Mg .80–1.2% and the balance aluminum, the alloys of the core and cladding having similar responsiveness to the same heat treatments, there being not over .6% Fe in any impurity content present in the cladding alloy.

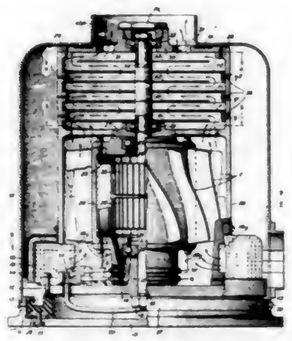
2,454,313



ELECTRONIC DEVICE HAVING A METAL COLLAR AND DISCAL RING SUPPORTING AN ELECTRODE FROM A RESONATOR

Albert J. Furst, Newark, and Jens J. Aakjer and Paul M. Dickerson, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 25, 1944, Serial No. 523,830
2 Claims. (Cl. 315—5)

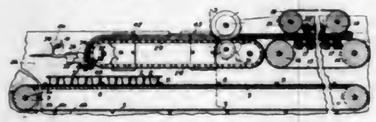


1. An electronic device comprising a cathode and an opposed electrode axially aligned there-

with; a cavity resonator having an end wall between said cathode and electrode transverse to the axis of said cathode and electrode; means supporting and enclosing said electrode comprising a stem extending from the electrode in a direction away from the cathode, a glass dome sealed to a part of said stem distant from said electrode, and a metal collar coaxially around said electrode having one rim directed away from

the cathode and sealed to the margin of said dome and having its other rim directed toward the cathode in a common plane with the edge of said electrode toward the cathode; and a discal ring interposed between said resonator wall and rim of said collar and defining the spacing of said wall and electrode and projecting radially outward from said collar and from said wall and providing support both for the resonator and for the said means.

2,454,314
VACUUM CLEANER
Edgar W. Gent, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 20, 1946, Serial No. 698,185
4 Claims. (Cl. 230—117)

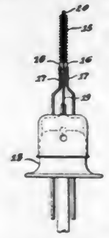


4. In a vacuum cleaner device, an electric motor having a stationary secondary member, a rotatable secondary member, a primary rotatable member common to each of said secondary members, a blower device of one character carried by said rotatable secondary member in one direction and a blower device of another character carried by said rotatable primary member rotatable in the direction of the first-mentioned blower at a different speed.

2,454,315
PROCESS FOR TREATING FISH PRESS WATER
James K. Gunther and Louis Sair, Decatur, Ind., assignors to Central Soya Company, Inc., Fort Wayne, Ind., a corporation of Indiana
No Drawing. Application January 12, 1946, Serial No. 640,998
15 Claims. (Cl. 99—2)

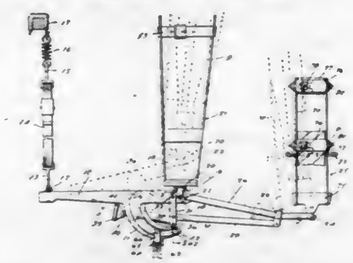
1. In a process for treating fish press water, the steps of subjecting the press water to the action of a proteolytic enzyme under conditions favorable to the action of the enzyme, to reduce the gel point of the press water, and concentrating the press water.

2,454,316
DOUGH CUTTER
Erwin Haecks, San Francisco, Calif.
Application October 3, 1947, Serial No. 777,675
4 Claims. (Cl. 107—21)



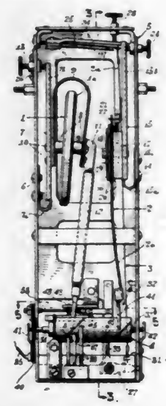
1. In a dough cutter, a conveyor for supporting an elongated sheet of dough, rotary knives spaced across the conveyor for dividing the dough into strips and trimming the edges of the sheet, means for deflecting the edge trimmings laterally, dough strip supporting belts diverging forwardly from beneath the spaces between said knives, and a pair of guide rollers positioned to receive the dough strips as they pass from the supporting belts and direct them downwardly.

2,454,317
SUSPENSION FOR PIPE TONGS
Allen E. Hambly, Huntington Park, Calif., assignor to Byron Jackson Co., Vernon, Calif., a corporation of Delaware
Application May 26, 1943, Serial No. 488,495
5 Claims. (Cl. 255—35)



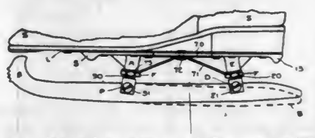
1. A pipe tong assembly for making and breaking joints in a string of pipe suspended vertically in a well derrick, said assembly comprising a pair of pipe tongs each having a laterally projecting lever, suspension means supported in the derrick, and means for independently supporting the tongs by the suspension means in vertically spaced relation in the derrick comprising a pair of hanger members each connected at its lower end to one of said tongs and at its upper end to the suspension means at a point directly above the center of mass of the tong, the intermediate portion of each of said hangers being offset laterally with respect to its upper and lower ends to define an open-sided recess of a depth at least equal to the width of the other tong lever and thus permit either tong to operate substantially directly above the other tong.

2,454,318
METHOD OF FABRICATING ELECTRON DISCHARGE DEVICES
William A. Hayes, Kearny, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 24, 1943, Serial No. 484,354
6 Claims. (Cl. 140—71.6)



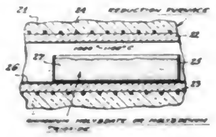
1. A method of manufacture of filamentary devices comprising mounting a coiled electrode on a destructively disintegrable unitary preformed hollow mandrel, applying a rod through the mandrel, welding said coiled electrode in place on said rod in said device while the coiled electrode and rod are held in spaced relation by said mandrel, destructively disintegrating the mandrel in place, and removing the product of disintegration from within the coil.

2,454,319
TRACTION SPLINT
Philip Harry Henderson, Los Angeles, Calif.
Application May 13, 1947, Serial No. 747,688
5 Claims. (Cl. 128—84)

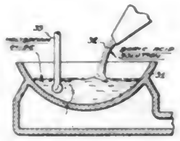


1. In a traction splint, an injured leg-engaging splint including a bone pin, a traction bar pivotally secured to the extremity of said splint, a jack bar pivotally secured to the other end of said traction bar, a sound leg-engaging boot pivotally secured to said jack bar, an offset portion extending from said jack bar, a cylinder having a radial threaded bore therethrough pivoted in said offset portion, a jack screw engaging in said bore, a link pivotally secured to the extremity of said jack screw, a pivotal connection between the other end of the link and said jack bar, a traction pressure bar pivotally secured at one end to an intermediate portion of said link and at the other end to said traction bar, and means for securing the free end of said jack bar.

2,454,320
HYGROMETER AND SWITCH FOR RADIOSONDES
John Hornbostel, Glen Ridge, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application May 15, 1943, Serial No. 487,425
8 Claims. (Cl. 200—52)

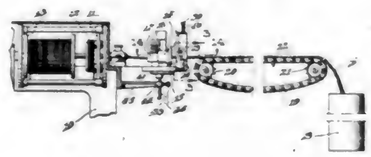


1. A temperature-compensated suspension for a hair hygrometer the strands of which tend to vary in length with changes in temperature within a predetermined range and tend to remain substantially fixed in length at temperatures beyond said range, comprising a spring member connected to said strands at one end and holding the strands under tension; and a temperature-sensitive member arranged to be operatively free from said spring member at temperatures outside said predetermined range and to be operatively connected to said spring member to influence the same to varying amount upon changes of temperature within said predetermined range.



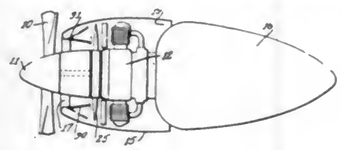
2,454,321
CONVERTIBLE SKATE
Jack W. Howard, Brigham, Utah
Application June 9, 1945, Serial No. 598,519
8 Claims. (Cl. 280—7.13)

8. An ice skate hanger post for use with a roller skate having a threaded hanger attaching post hole, said post having a shank threaded to fit said threaded hanger attaching post hole and a head with a skate blade attaching hole extending through it, a skate blade slot perpendicular to the skate blade attaching hole, and an attaching member which passes through the skate blade slot and the skate blade attaching hole.



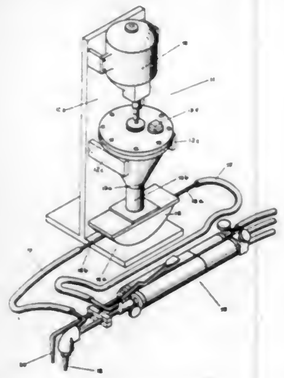
2,454,322
MANUFACTURE OF MOLYBDENUM
Charles V. Iredell, Essex Fells, and Robert J. Enrico, Union City, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 17, 1946, Serial No. 662,698
10 Claims. (Cl. 75—84)

1. The method of manufacturing molybdenum, comprising reducing a compound selected from the group consisting of molybdenum trioxide and ammonium molybdate to an oxide lower than said trioxide, doping with a small percentage of boric oxide, and reducing in hydrogen, whereby substantially all of the boron is removed as a hydride and the resulting metal has improved qualities.



2,454,323
SPINNING MEANS AND METHOD
Edward H. Jackson, Jr., Temple, Pa.
Application October 22, 1946, Serial No. 704,803
20 Claims. (Cl. 57—36)

1. In a spinning machine of the character described, the combination with a flier head, a nipper, and means for positively feeding to said nipper a sliver of the proper size to produce a strand of the desired tensile strength, of freely rotatable roller means positioned intermediate the nipper and sliver feeding means adapted to effect substantially parallel side-by-side arrangement of the individual fibers of the sliver before movement of the latter into the nipper.

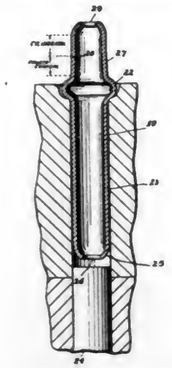


2,454,324
CONTROL FOR ENGINE COOLING BLOWERS
John G. Lee, Farmington, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 7, 1944, Serial No. 539,218
3 Claims. (Cl. 230—114)

1. In a device of the character described, a fan having an annular pumping region with outer and inner limits, means providing an annular opening for a stream of cooling air to reach said fan, and adjustable means comprising flaps pivoted at their forward ends and terminating adjacent said fan at the rearward ends of said

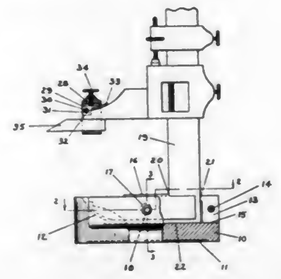
flaps, said flaps being adapted to cut off a predetermined annular portion of said region.

2,454,325
COMBUSTION CUTTING OF STAINLESS STEEL
George Edwin Linnert, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
Application February 17, 1945, Serial No. 578,535
7 Claims. (Cl. 148—9)



1. In a method of combustion-cutting stainless steel, the art which includes heating the metal to be cut to a temperature sufficiently high for supporting combustion with an oxygen cutting stream, injecting into said oxygen cutting stream a flux consisting of at least one carbonate of the group sodium carbonate and sodium bicarbonate, and subjecting said heated metal to the oxygen cutting stream and included flux.

2,454,326
BASE AND CONTACT FOR ELECTRICAL DEVICES
William Makenny, Mountainview, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1943, Serial No. 516,014
6 Claims. (Cl. 173—361)

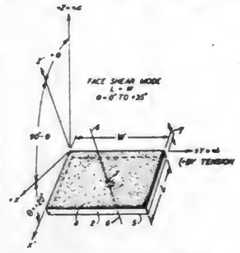


1. A hollow metal pin the outer surface of which is divided by a hollow peripheral collar, that portion of said pin on one side of said collar being relatively long and generally cylindrical, and that portion of said pin on the other side of said collar being preformed to taper therefrom slightly for about half the distance to the end of the pin to a smaller diameter and then continue generally cylindrical in order to provide a tight radial fit when inserted in a cylindrical aperture, of diameter slightly smaller than the

maximum diameter of said tapering portion, but slightly larger than said cylindrical portion, in

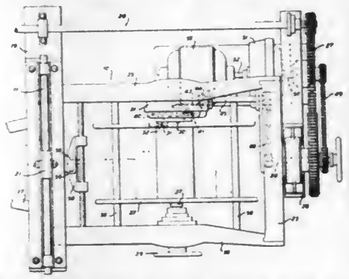
a base for an electrical device to form a contact therefor.

2,454,327
BASE FOR HOLDING VERNIER CALIPERS
Frank Maisom, Maplewood, N. J.
Application June 12, 1944, Serial No. 539,861
2 Claims. (Cl. 33—169)



2. A base for holding a vernier caliper, said base comprising a body having front and rear ends and a slot extending from said rear end to close to said front end to receive the stationary jaw of the vernier caliper, a gib comprising a plate located in said slot intermediate said ends and a flange adapted to extend over said jaw, said plate having a blind countersink on the side furthest from said jaw, a screw mounted in said body and adapted to enter said countersink to force said plate against the jaw, an insert located in said slot at said rear end and adapted to engage said jaw, and a pin carried by said body and holding said insert, said plate, said flange and said insert holding the vernier caliper upright in the base.

2,454,328
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 28, 1946, Serial No. 657,885
17 Claims. (Cl. 171—327)

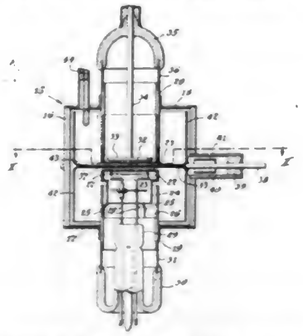


1. A rotated Z-cut type di-potassium tartrate hemihydrate crystal element of low temperature coefficient of frequency having a major plane

section disposed substantially parallel to the Y axis and inclined at one of the angles substantial-

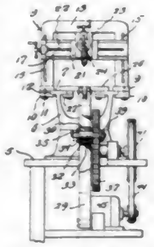
ly from +15 to +25 degrees with respect to the +X axis.

2,454,329
TAKE-UP MECHANISM
Harry H. Merwin and Axel C. Nystrom, Rutherford, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 28, 1947, Serial No. 788,466
3 Claims. (Cl. 57—69)



1. A takeup mechanism comprising a cradle, relatively movable centers carried by the cradle to support a takeup reel for rotation about its axis, means in the cradle to support the reel before the reel is mounted between the centers and after it is released from the centers, means to rotate the cradle about an axis extending transversely of the reel axis, and means to simultaneously drive one of the centers to rotate the reel about its axis to wind material thereon.

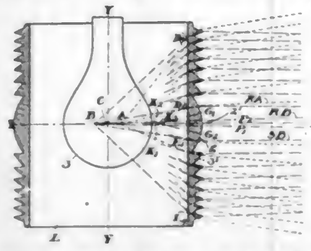
2,454,330
POSITIVE GRID OSCILLATOR
John W. McNall, East Orange, and Alfred H. Laidig, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 13, 1944, Serial No. 530,890
6 Claims. (Cl. 315—6)



1. An electronic device comprising a cylindrical outer wall having end walls, said cylindrical outer wall and end walls forming a hollow enclosure, collars projecting from said end walls toward each other within said enclosure coaxial with said cylindrical outer wall, an electron-pulling electrode within and next the inner end of one of said collars and electrically insulated therefrom, a grid fixed to the electrode-containing collar in spaced parallelism to said electron-pulling electrode, a second grid parallel to and spaced from the first said grid and having a part therefrom projecting radially through the said

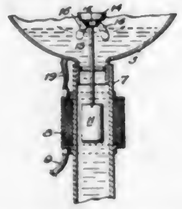
cylinder, and a cathode parallel to and on the opposite side of the second grid from the first

grid and axially aligned with said electron-pulling electrode for directing electrons through the said grids toward said electrode.



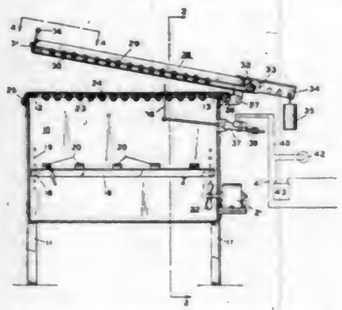
2,454,331
PLANER ATTACHMENT FOR LATHES
Joe W. Miller, Brunswick, Ga.
Application December 1, 1944, Serial No. 566,189
2 Claims. (Cl. 90—37)

1. A planer attachment for lathes comprising in combination a work-supporting bed slidably mounted on the lathe, a tool carrier, means for securing the carrier in longitudinally adjusted position on the lathe, said carrier having spaced parallel vertically extending slots, a horizontal tool rail, means for securing the ends of the rail in vertically adjusted position in said slots, a block slidably mounted on the rail for movement laterally of the lathe, a tool holder, and means connecting the tool holder to the block for vertical adjustment of the holder relative to the block.



2,454,332
LENS FOR LIGHTING EQUIPMENT
Percival H. Mitchell and Scott Malcolm, Toronto, Ontario, Canada
Application February 9, 1944, Serial No. 521,736
6 Claims. (Cl. 240—106.1)

6. A lens developed in a plane through its axis and by rotation about the axis describing an annular refracting member, the axis lying in the plane of development having a focal plane at right angles and an incandescent flat circular light source coincident with the focal plane and centered on the axis and the plane of development cutting the circular light source in two points on opposite sides of the axis each point being equidistant from the axis, the inner face of the lens system being a continuous line and the outer face of the lens system being composed of curvatures forming lens elements, the lens elements respectively having their focus at one of the two points on the circular filament in the plane of development and each lens portion having such inner



and outer cross-sectional boundary profiles in the plane of development which will refract and project incident rays from the source at the focus to be directed radially in planes having definite angular relation to the focal plane.

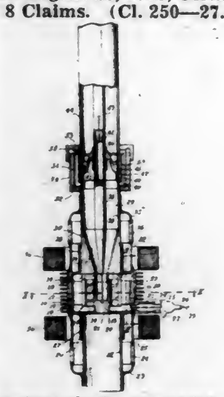
2,454,333
ELECTRIC DRAIN STOPPER
James M. Moon, Graham, N. C.
Application November 5, 1945, Serial No. 626,797
2 Claims. (Cl. 4—295)

1. A drain structure including a seat, a drain pipe, a magnetic means on the drain pipe, a core in the drain pipe, a stopper carried by the core, said stopper being provided with water operated legs adapted to spread out as they pass downwardly through water to butt the drain structure and support the stopper in unseated position.

2,454,334
MATRIX PREDRIER
William T. Moir, Sherwood, Oreg.
Application June 4, 1947, Serial No. 752,453
5 Claims. (Cl. 34—143)

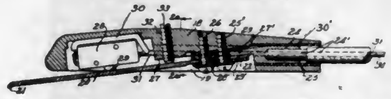
1. In a matrix dryer of the character described, a housing open at the top, heating means within said housing, spring elements stretched across the top of said housing, a matrix-supporting sheet of material stretched across the top of said housing and over the tops of said spring elements, a matrix-retaining cover member, means for hingedly mounting said cover member to the housing above said matrix-supporting sheet of material, said cover member including a frame, spring elements stretched across said frame, and a second sheet of material stretched across said cover below said second-mentioned spring elements, said cover member so arranged that, when a matrix is placed on said first-mentioned sheet and said cover member is then closed, the second sheet will rest against the upper face of the matrix.

2,454,335
SHOE CLOSURE
Hayden Nichols, Salt Lake City, Utah
Application July 19, 1947, Serial No. 762,096
2 Claims. (Cl. 24—140)



2. In a shoe having an upper terminating in contiguous flaps provided along their opposed edges with a plurality of eyelets arranged in opposed relation, means interconnecting the flaps for changing the distance between them, said means comprising a single lace threaded through all the eyelets, the ends of the lace being joined to form an endless lace loop, portions of the lace lying within the row of eyelets being straight when the flaps are at their maximum distance apart, at least one flap having an anchor device positioned exteriorly of the eyelets, whereby when said straight portions of the lace are moved out of straight line and engaged with an anchor device the distance between the flaps will be decreased.

2,454,336
PROCESS FOR THE TREATMENT OF GOLD- AND SILVER-BEARING ORES, RESIDUES, AND OTHER PRODUCTS
Arthur Frederick Bernard Norwood, Daikeith, Victoria, Australia
No Drawing. Application November 19, 1946, Serial No. 710,942. In Australia January 21, 1946
3 Claims. (Cl. 75—113)

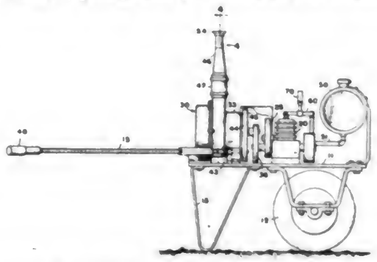


1. A process for the treatment of gold- and silver-bearing ores, residues and other products consisting of forming the finely divided material into a charge containing carbonaceous material, a source of sulphur, and a large amount of a soluble chloride such as common salt; roasting this charge at a temperature about, but not above 700° C. so as as to convert an economic proportion of the gold present into a form amenable to subsequent cyanide treatment; extracting the gold with cyanide; and then forming the treated residues into a charge containing carbonaceous material, a source of sulphur and a large proportion of soluble chloride such as common salt; roasting this charge, preferably at a higher temperature about 100 C. higher than previously; and extracting soluble gold from the roaster calcines obtained.

2,454,337
ELECTRONIC DEVICE
Ernest C. Okress, Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 28, 1945, Serial No. 613,068
8 Claims. (Cl. 250—27.5)

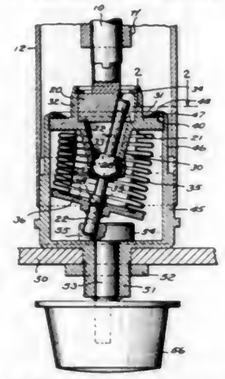
1. A magnetron device comprising a cylindrical housing having end walls, a sleeve of quarter wave length depth projecting outwardly from one of said end walls, anode supporting means extending coaxially of said sleeve and out of contact therefrom and having an end wall in the plane of said end wall of the housing having the sleeve, an anode mounted on said supporting means coaxially within the housing, and a cathode coaxially around said anode and within the housing.

2,454,338
APPARATUS FOR WELDING
Albert F. Pityo, Clifton, and Harry E. Butterfield, Jr., Maplewood, N. J.
Application June 13, 1947, Serial No. 754,410
6 Claims. (Cl. 219—4)



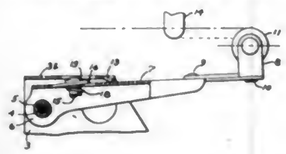
1. In welding apparatus, electrodes for receiving work between them and to receive current from a welding circuit, at least one of the electrodes being a resilient elongated blade, a handle carrying the resilient elongated blade electrode and extending longitudinally of the resilient electrode and overlapping therewith, a switch for closing the welding circuit mounted upon the handle and having a movable part arranged to be shifted by the flexing of the resilient elongated blade electrode, and an adjustable element mounted upon the handle and engaging the resilient elongated blade electrode to regulate its tension.

2,454,339
SPRAYER
Samuel F. Potts, Hamden, and Roderick A. Spencer, Stafford Springs, Conn.; dedicated to the free use of the People in the territory of the United States
Application October 31, 1947, Serial No. 783,424
5 Claims. (Cl. 261—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



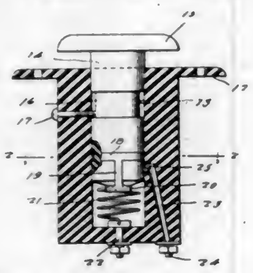
1. A sprayer provided with a blower for producing a high velocity and volume of air, a noz-

zle through which the air is ejected mounted on the blower, a pump for pumping liquid material into the air stream and a power means for operating the blower and pump, characterized in that the blower, pump and power means are mounted



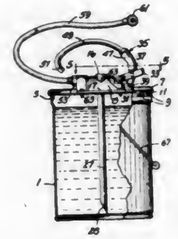
on a truck having projecting handles for guiding and propelling the same, the blower being mounted to pivot in a substantially vertical plane and a handle of the truck being provided with a control mechanism for pivoting the blower.

2,454,340
SEALED TRANSMITTING MECHANISM
Wladimir A. Reichel, Hackensack, N. J., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application July 18, 1945, Serial No. 605,743
3 Claims. (Cl. 286—29)



1. A fluid tight motion transmission coupling for making external connection to a rotative part within a casing, comprising a housing, a bearing plate fitting within and closing one end of the housing, a flexible bellows having a head sealed to one end and having its other open end entered within the joint between the housing and the plate and flanged over the edge of the plate outside the joint, a ring of solder applied externally at the joint and hermetically sealing the joint and securing the open end of the bellows both to the plate and the housing, the bearing plate having a bracket extending into the bellows and terminating in a spherical bearing, a nutatory shaft having a spherical part intermediate its ends mounted in the bearing, one end of the shaft being adapted for connection through the plate to the rotative part and the other end of the shaft protruding through the said head and being fastened and sealed thereto, a driving shaft journaled in the other end of the housing, and means eccentrically connecting the driving shaft with the protruding end of the nutatory shaft.

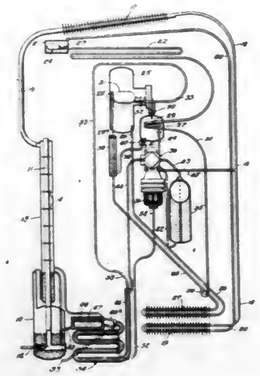
2,454,341
SWITCH OPERATING MECHANISM
Paul T. Repka, Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application September 7, 1944, Serial No. 552,963
11 Claims. (Cl. 200—153)



1. An over-travel actuator for a plunger operated electric switch comprising a bracket for attachment in a fixed position relative to the housing of the switch, an actuator arm pivotally supported on said bracket for rotation toward and away from the switch to operate the same, a metal member carried by and integral with said arm shaped and positioned to be bendable with respect to said arm, and means supported on said member for contacting the plunger to operate the switch, the bending of said member relatively to said arm being arranged to alter the angular position of the arm on its pivot at which the plunger is actuated.

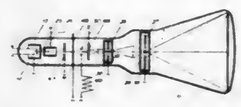
2,454,342
DOOR CHIME CONTROL SWITCH
William H. Ross, Phoenix, Ariz.
Application December 30, 1947, Serial No. 794,727
1 Claim. (Cl. 200—159)

A momentary action electric switch, comprising a casing formed of insulating material and provided with a cylindrical bore and having an end, an axially shiftable cylindrical plunger mounted within the bore and provided near its longitudinal center with an annular groove forming inner and outer stop shoulders, a stop secured to the casing and projecting into the groove and engageable by the shoulders to limit the inward and outward axial movement of the plunger, an annular conducting ring surrounding the plunger near its inner end and embedded in the plunger and flush with the periphery of the plunger, an axial conducting extension carried by the conducting ring and embedded in the plunger and extending axially inwardly to a point adjacent to the inner end of the plunger, a compressible conducting coil spring disposed within the bore inwardly of the plunger and having its outer end electrically connected to the axial extension and serving to bias the plunger outwardly, a terminal bolt mounted upon the end of the casing and extending into the bore and being electrically connected to the inner end of the spring, and a single generally axial conductor embedded in the wall of the casing and including a radial contact element extending into the bore near the longitudinal center thereof for momentary engagement by the conducting ring when the plunger is shifted inwardly and outwardly, the generally axial conductor forming a second terminal bolt at the end of the casing, the casing wall completely enclosing the generally axial conductor so that no part thereof is exposed at the outer surface of the casing.



2,454,343
PUMP FOR REMOVAL OF LUBRICANTS FROM CONTAINERS
Lutwin C. Rotter, Maplewood, Alexander P. Fox, University City, and Carl H. Mueller, Ferguson, Mo., assignors to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application September 8, 1944, Serial No. 553,224
7 Claims. (Cl. 222—82)

1. A lubricant pump adapted for attachment to the relatively light lid of a portable commercial lubricant container, comprising a body portion formed to provide a horizontal pad having a lower surface adapted to engage the upper surface of said lid and to be attached thereto, and also to provide a horizontal cylinder above said pad, a horizontally reciprocating plunger in said horizontal cylinder of said body portion, a linkage connecting the body portion and said plunger, said linkage including a pump handle, said handle being angled over the body portion for substantially vertical stroking in the plane of reciprocation of the plunger with operating thrusts being directed within the boundary of the lid, and a suction inlet extension on the underside of the body portion for extension through an opening in the lid and into the contents of the container.

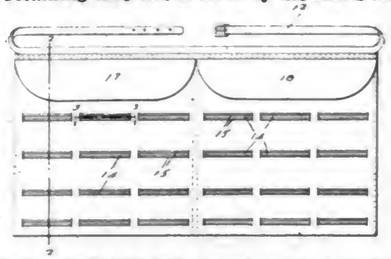


2,454,344
ABSORPTION REFRIGERATION SYSTEM
Joseph N. Roth, Belding, Mich., assignor, by mesne assignments, to Montcalm, Incorporated, Greensville, Mich., a corporation of Michigan
Application August 21, 1944, Serial No. 550,402
8 Claims. (Cl. 62—5)

1. In an absorption refrigeration system having a still adapted to have refrigerant vapor boiled out of liquid therein, a condenser, an evaporator, an absorber, and operative connections therebetween, these connections including liquid flow circuit connections between the still and the absorber, one of these latter circuit connections including a movable element for controlling the flow of fluid therethrough, control apparatus including; actuating means for moving said movable element, this means having a temperature responsive portion; means providing a first flow path for refrigerant vapor leaving the still this path being in heat exchange relation with said temperature responsive portion and coinciding in part with the path of flow of liquid returning from the absorber to the still; and means providing a second flow path for refrigerant vapor

leaving the still, the construction and arrangement being such that vapor flows through said second path only when vapor flow through said first path is blocked by liquil returning to the still.

2,454,345
CATHODE-RAY DEFLECTION TUBE WITH ELECTRON LENSES
Reinhold Rüdenberg, Belmont, Mass.
Application May 25, 1945, Serial No. 595,850
14 Claims. (Cl. 250—160)

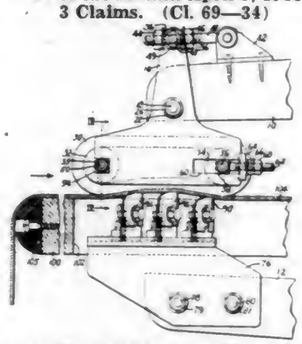


1. In a cathode-ray tube, an electron gun for producing a substantially homogeneous electron beam, a deflection system adapted to be submitted to charges varying according to the change with time of incoming signals and to produce corresponding varying deflections of said beam, a beam-responsive member, and a magnifying electron lens system between said deflection system and said beam-responsive member for projecting, by means of the supplemental field produced by said magnifying lens system, a magnified image of said deflections upon said beam-responsive member; in combination with a reducing electron lens system disposed in the path of said electron beam, between said electron gun and said magnifying lens system and adapted to reduce said beam to a fine spot on said beam-responsive member.

2,454,346
NAIL POUCH
Edward J. Scarlett, Monument, Colo.
Application August 22, 1947, Serial No. 770,094
3 Claims. (Cl. 1—49.7)

1. A nail pouch comprising a body of pliable material providing a receptacle having a reinforced front face, said face having a plurality of elongated slots for receiving the pointed ends of

nail-like articles, said slots having flexible lips for retaining nail-like articles by the heads there-



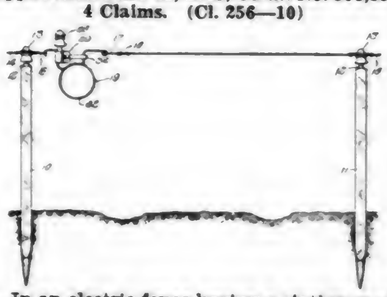
of and yieldable on the application of a moderate force to release said articles.

2,454,347

STAKING MACHINE

Gustav A. Schettler, Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Maine, a corporation of Maine

Application March 3, 1947, Serial No. 731,958
In Great Britain April 9, 1946
3 Claims. (Cl. 69—34)



1. In a leather staking machine of the character described having two opposed and cooperating jaws, one of said jaws being provided with rollers supporting an endless resilient belt, and the other jaw carrying a staking tool arranged to press a skin to be treated against said belt.

2,454,348

LATCH FOR ELECTRIC FENCE GATES

Lorell John Schilling, Galesville, Wis., assignor to Babson Bros. Co., a corporation of Illinois

Application June 11, 1945, Serial No. 598,837
4 Claims. (Cl. 256—10)

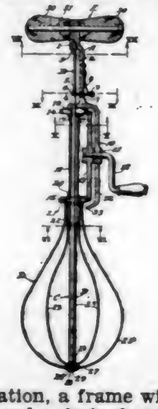
1. In an electric fence having a stationary wire portion and a movable gate wire portion, a latch for connecting said portions, comprising: a heavy wire member comprising a relatively large downwardly extending resilient loop having one end portion adapted to be normally permanently attached to said gate wire portion and having its other end portion adapted to be readily attached to and detached from said stationary wire portion; a support member extending upwardly from the last mentioned end portion of the heavy wire member; and a handle comprising a skirted insulator mounted on said support member, the center of gravity of said latch being below a line through its attachment portions.

2,454,349

PROCESS FOR TREATING AQUEOUS LIQUORS CONTAINING UNSATURATED ORGANIC COMPOUNDS FOR RECOVERING THE SAME

Arthur Schwerdle, New York, N. Y., assignor to Frank J. Sowa, New York, N. Y.

No Drawing. Application April 14, 1945, Serial No. 588,424
5 Claims. (Cl. 260—514)



1. In a process for the treatment of aqueous waste liquors containing maleic acid for the recovery of the maleic acid therefrom, the steps comprising bringing said aqueous waste liquor into contact with a conjugated diene selected from the group consisting of aliphatic, alicyclic and oxygenheterocyclic dienes, agitating said mixture, whereupon said diene condenses with the maleic acid in said waste liquor with the production of a water-insoluble alicyclic dicarboxylic acid and separating said acid from said waste liquor, said diene being used in an amount at least equal to the mole equivalent of said maleic acid.

2,454,350

BEATER

William P. Shores, San Francisco, Calif.

Application June 14, 1948, Serial No. 32,807
2 Claims. (Cl. 259—132)

1. In combination, a frame with a handle and having a bore and a fork-shaped portion registering with the bore, a stem having one end removably receivable in the bore and its other end provided with a pair of stepped shoulders, the stem when received in the bore also being engaged by the fork, means for removably securing the stem to the frame, a beating member rotatably mounted on the stem and having one end bearing on one of the shoulders, a gear and tubular shaft disposed at the other end of the member, a second beating member rotatably mounted on the stem and having one end bearing on the other shoulder and a gear mounted at

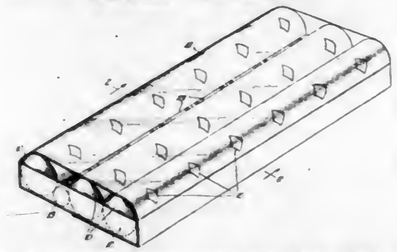
the other end and rotatable on the tubular shaft, a driving gear in mesh with the two other gears, and a crank carried by the frame and connected to the driving gear for rotating it.

2,454,351

PRODUCTION OF ALICYCLIC CARBOXYLIC ACIDS

Frank J. Sowa, Cranford, N. J., and Arthur Schwerdle, New York, N. Y.; said Schwerdle assignor to said Sowa

No Drawing. Application May 15, 1946, Serial No. 670,018
14 Claims. (Cl. 260—514)



1. A process for reacting conjugated dienes with 1,2 unsaturated aliphatic carboxylic acid which comprises the step of contacting the reactants in the presence of a polar solvent for a period not exceeding about 90 minutes while maintaining the pH value of the reaction mixture below 7.

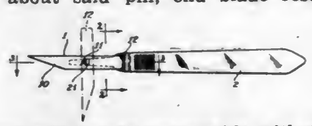
2,454,352

PACKAGE FOR ROLLS AND THE LIKE

Le Roy W. Staunton, Evanston, and Ralph L. Atkinson, Hinsdale, Ill., assignors to United Wallpaper, Inc., Chicago, Ill., a corporation of Delaware

Application March 29, 1946, Serial No. 658,016
6 Claims. (Cl. 206—47)

6. A package of the character described, comprising a plurality of cylindrical objects of two different diameters and lengths, all objects of the same diameter being of equal length and the objects having the smaller diameter being of a length which is an aliquot part of the length of the objects having the larger diameter, all said objects lying on a common plane disposed side by side with adjacent objects in contact with each other, said objects having the smaller diameter being longitudinally aligned to form at least one row of such objects of substantially the same length as each of said objects having the larger diameter, a tray associated with said objects for holding same, having width and length dimensions providing a snug fit for said objects collectively while the same are disposed in said tray in the manner described, said tray having a height less than the diameter of said objects, whereby portions of said objects are left uncovered by said tray, and a transparent wrapper for said objects and tray assembly, associated with the same and holding said objects against accidental displacement with respect to said tray.



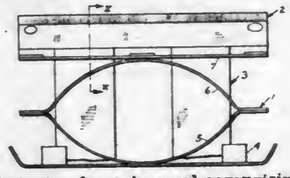
2,454,353

DETACHABLE BLADE SCALPEL

William E. Steele, Seattle, Wash.

Application June 4, 1946, Serial No. 674,209
4 Claims. (Cl. 30—339)

4. A detachable blade scalpel comprising a scalpel blade having a cutting end, a butt end and an aperture located between the side edges of the blade and generally centrally between said blade ends, a handle having a headed pin projecting laterally therefrom near one end thereof, the head of such pin being of a size to pass through the aperture in said blade and of a width transversely of the handle greater than the width, transversely of the blade, of that portion of the blade aperture adjacent to the butt end of the blade, side blade restraining means on said handle disposed close alongside opposite edges of the butt portion of the blade, when the blade is disposed substantially parallel to the handle, to restrain appreciable edgewise swinging movement thereof about said pin, end blade restraining



means on said handle engageable with the butt end of said blade to maintain said blade lengthwise with the edge of its aperture adjacent to the butt end of the blade substantially in engagement with the shank of said pin and with a portion of the blade adjacent to such aperture lodged beneath the head of said pin, and said handle having a raised portion spaced a substantial distance from said pin, underlying and engaging the butt portion of said blade and thereby springing such engaged blade portion under stress out of alignment with the portion of the blade at the opposite side of said pin and continually pressing the blade against the under side of the pin head.

2,454,354

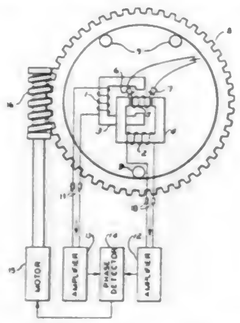
LUBRICATOR

Richard H. Stiles, Plainwell, Mich.

Application May 28, 1945, Serial No. 596,190
4 Claims. (Cl. 308—88)

1. A lubricator for a journal comprising: a pad of oil conducting material and a backing therefor of oil conducting material; a tubular member of oil conducting material having a split portion of which one element extends in one direction along the underside of said backing material and another element extends in the other direction along the underside of said backing material; the body of said tubular member depending downwardly from the underside of said pad; and a frame resiliently supporting said pad and associated member; whereby the whole assembly may be placed within a journal housing containing an oil reservoir and a portion of said wick may be submerged in or within said reservoir.

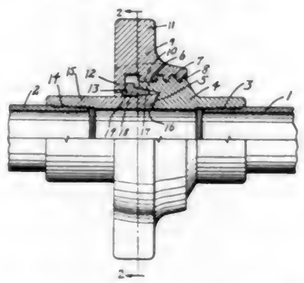
2,454,355



ELECTRIC MOTOR CONTROL SYSTEM

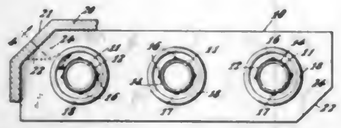
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania

Application July 7, 1945, Serial No. 603,604
14 Claims. (Cl. 318—31)



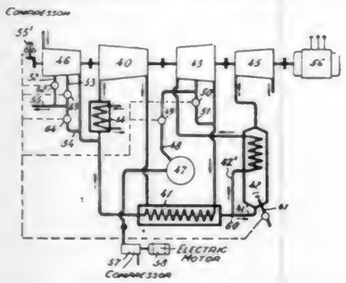
1. In a power follower, a first magnetic path having flux normally induced in a predetermined

direction along said path, means for angularly moving said path to change the direction of said flux, a pair of magnetic paths having pole faces angularly disposed with respect to each other, said first magnetic path, when in a predetermined position being in operative relation with one of said pairs of magnetic paths, with the pole faces of each in opposed relation for completing a magnetic circuit therewith, said same first magnetic path being at the same time in non-operative relation with the other of said pair of magnetic paths with their pole faces in right angle relation, the flux in said first magnetic cir-



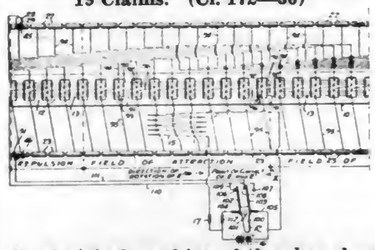
cuit dividing between said pair of magnetic paths as said first magnetic circuit is angularly moved to increase the flux flow from said first path to the second of said pair of paths and to decrease the flux flow from said first path to the first of said second pair of paths, a motor for rotating said pair of magnetic paths, and means controlled in accordance with the flux in each of said pair of magnetic paths for operating said motor to rotate said magnetic paths through an angle and in a direction determined by the change in direction of said flux in said first magnetic circuit.

2,454,356
RING SEALED JOINT
Homer E. Thornhill, Houston, Tex.
Application October 13, 1945, Serial No. 622,176
9 Claims. (Cl. 285—122)



1. In a device of the character described, a tubular member having an opening therein with an open end, the inner surface of said opening having a flared zone and said member having a stop thereon, a tubular part adapted to enter said opening and abut said stop means and having a zone of its outer surface opposite said flared zone when said tubular part is in engagement with said stop means, said zone of said outer surface being tapered in a direction to provide a wedge-shaped space between it and said zone within the opening, annular means having a wedge-shaped cross section adapted to fit within said space, and means carried by said first tubular member for forcing said last mentioned means into said space and holding it therein.

2,454,357
FINNED RADIATOR CONSTRUCTION
James E. Tolan, Narberth, Pa., assignor to Warren Webster & Company, Camden, N. J., a corporation of New Jersey
Application December 29, 1945, Serial No. 638,334
1 Claim. (Cl. 257—262.16)



Heat exchange apparatus comprising tubing carrying a multiplicity of spaced substantially parallel thin sheet metal heat exchanging fins of generally rectangular shape, one or more corners of each fin being bent over at right angles along a diagonal line, the tip of the corner being bent inwardly again substantially at right angles and into a plane extending along the surface of the next adjacent fin, to provide spacer means for the fins and to also provide a diagonal corner supporting surface for the fin assembly.

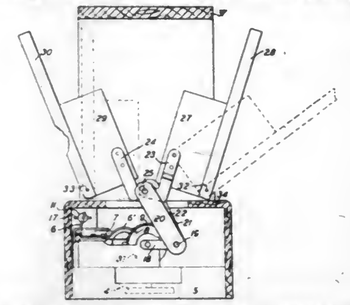
2,454,358
OUTPUT REGULATION OF CIRCUIT TYPE GAS-TURBINE PLANTS
Walter Traupel, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application January 28, 1944, Serial No. 520,049
In Switzerland May 18, 1943
14 Claims. (Cl. 60—49)

13. A gas turbine plant comprising compressor means, a gas heater, at least one gas turbine having at least two pressure stages; conduit means forming a circuit for the working gas through said compressor means, gas heater and gas turbine, means for changing the sequence of pressures in the circuit in accordance with the load on the plant, a pipe for delivering make-up working gas to the circuit for raising the sequence of pressures when the load becomes greater, the pipe supplying the make-up working gas to the circuit at least in part at a point between two stages of the gas turbine.

2,454,359
ELECTRICAL MACHINE
Theodore W. Vickers, Los Angeles, Calif.
Application July 24, 1945, Serial No. 606,852
19 Claims. (Cl. 172—36)

1. An electrical machine of the class described comprising: two electromagnetic elements; means mounting said elements in hypocyclic relationship for relative rotation to define an air gap between the elements increasing in length from a point therebetween; means for energizing one of said elements to create a non-changing magnetic field; one of said elements having a circular set of electromagnets operating in said magnetic field; means for supplying current to said magnets to create a rotating field in which a predetermined number of the magnets will be maintained at one polarity while the remaining magnets will be maintained at the opposite polarity, so that forces of attraction and repulsion will be created across predetermined portions of the air gap, to move the rotatable element; and means by which flux variations in the cores of the magnets occurring as the magnets are successively shorted during rotation of the rotatable element, are caused to be transferred by transformer action to other magnets in such positions as will produce more torque in the fields of attraction and repulsion without increasing the amount of current consumed by the machine for a given output.

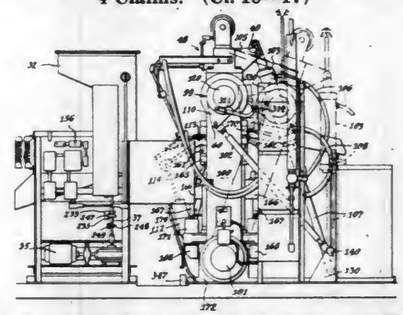
2,454,360
CARBALKOXYLATION OF ORGANIC COMPOUNDS
Vernon H. Wallingford, Ferguson, and August H. Homeyer, Webster Groves, Mo., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Original application July 30, 1942, Serial No. 452,916. Divided and this application January 10, 1945, Serial No. 572,262
7 Claims. (Cl. 260—475)



1. A process for simultaneously carbalkoxylating and metallating an ester of the type:

$$R—CH_2—COOR'''$$

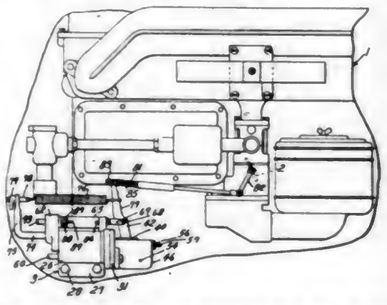
where R is an aryl radical and R''' is a hydrocarbon radical, which comprises mixing said ester with an anhydrous alkali metal alcoholate and a large excess of a dialkyl carbonate over that required as a reactant, whereby one of the hydrogens of the CH_2 group is replaced by a carbalkoxyl group and the other hydrogen is replaced by an alkali metal.



2,454,361
MUSIC BOX
Eric Wedemeyer, Floral Park, N. Y., assignor to Hamilton Art Metal Corporation, New York, N. Y., a corporation of New York
Application December 30, 1944, Serial No. 570,519
9 Claims. (Cl. 84—95)

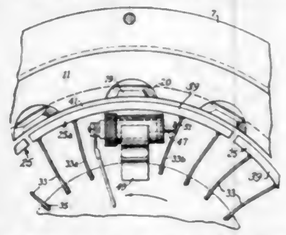
3. A music box system comprising, in combination, a box, a housing mounted on top of said box and having two opposed open sides, individual swing doors for individually closing said sides, each swing door comprising a container extending into said housing, a motor and a mu-

sical instrument driven thereby disposed in said box, and link means connecting said motor and said containers for simultaneously swinging in opposite directions and thereby opening and closing said doors by said motor.



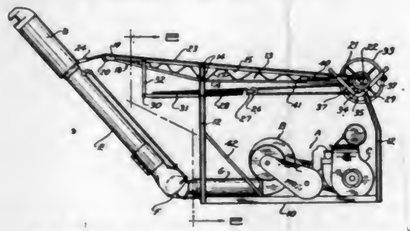
2,454,362
AUTOMATIC MOLDING PRESS
James B. Whitmore, Bloomfield, William Makenny, Mountain View, and Frank A. Newcombe, Nutley, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 21, 1942, Serial No. 439,893
4 Claims. (Cl. 18—17)

4. Apparatus for automatically molding plastic material comprising an upper mold block and a lower mold frame, a plurality of upper mold elements in said block and each provided with a depending prong, a corresponding number of lower mold elements in said frame and each comprising a shell portion and a lower portion provided with an upwardly-opening pocket to receive the prong of the registering upper mold element and form a hollow lug portion on an article to be molded, means mounting said upper mold block so that it is capable to being swung forwardly over and rearwardly from the lower mold elements, a switch so positioned on said mounting means that it is open when said upper mold member is retracted and closed when it is swung forwardly over the lower mold member, means mounting said lower mold frame so that it is capable of being moved up to and down from the upper mold elements when in their forward position, electrical mechanism for automatically controlling said apparatus, manually operable means for energizing said electrical mechanism to start automatic operation of the apparatus, mechanism operable under the control of said electrical mech-



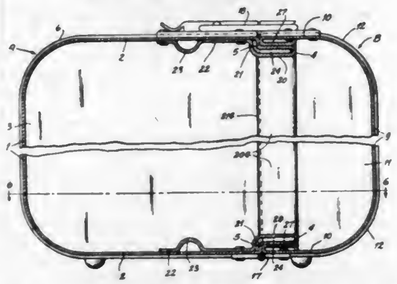
anism for delivering plastic pellets simultaneously to all of said lower mold elements, means for swinging the upper mold elements forward over the lower mold elements and after a predetermined time period returning them to normal position, a clock to time said period, means for moving the lower mold elements up to compress said pellets against the upper mold elements when the latter are in forward position to cause the prongs on the upper mold elements to partially enter the pockets in the registering lower mold elements to begin the formation of the lug and other portions of the articles being molded, means for then lowering the lower mold elements momentarily, to allow for the escape of gases trapped in said lower mold elements and in said pockets by the prong portions, and again raising them to fully compress the partially-formed plastic material against the upper mold elements while the latter are still in forward position, said momentary lowering and raising means comprising a shaft, a plurality of cams thereon, electrical switch devices which are opened and closed by said cams as turned with said shaft, a motor for driving said shaft at a desired speed, and wiring connecting said motor and switch devices to the circuit of said control mechanism, so that as the upper mold member is swung forward over the lower mold member its switch is closed to energize said motor and cause successive opening and closing of said switch devices whereby; first, as a safety measure a switch device is opened breaking a circuit of the control mechanism to keep the swingable upper mold member in forward operating position over the lower mold member; second, after the lower mold member has moved up almost to tight engagement with respect to said upper mold member about plastic material therein, a switch device is closed momentarily to cause it to drop for a breathing cycle; third, another switch device is closed to cause said lower mold member to return after said breathing cycle to tightly engage said upper mold member about said plastic material for a completion of the molding cycle, means operating after said timed period for moving said lower mold elements down to normal position, and means to raise said pocket-carrying portions in the shell portions of said lower mold elements and lift said articles therefrom for removal.

2,454,363
COMPRESSOR CONTROL MECHANISM
Wade H. Wineman, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application December 9, 1944, Serial No. 567,410
20 Claims. (Cl. 230—4)



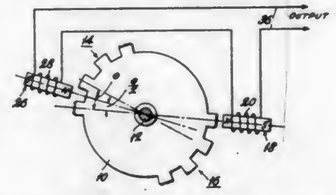
1. A speed regulating mechanism for a motor driven compressor comprising, in combination, means including a control element movable to vary the supply of operating fluid to the motor, means for yieldingly urging said control element in a direction to increase the supply of operating fluid, a plurality of pressure responsive devices for moving said control element against the action of said yielding means, said yielding means providing substantially the entire resistance to movement of said pressure responsive devices, means for subjecting one of said pressure responsive devices continuously to compressor discharge pressure, and means for subjecting another of said pressure responsive devices to compressor discharge pressure when a predetermined maximum pressure is reached.

2,454,364
EDDY-CURRENT TORQUE APPARATUS
Martin P. Winther, Waukegan, Ill., assignor to Martin P. Winther, Waukegan, Ill., as trustee
Application January 13, 1947, Serial No. 721,845
16 Claims. (Cl. 172—284)



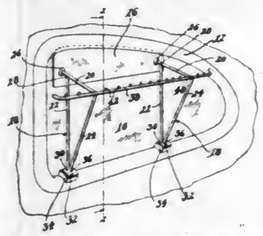
1. In apparatus of the class described, a driving member, a driven member, a field coil adapted to produce a flux field interlinking said members, the arrangement being such as to provide an inductive slip coupling between the driving and driven members whereby the driven member produces a reactive force upon the driving member, a circuit for said field coil, a control means in said circuit and mounted upon said driving member for movement therewith, a member resiliently mounted upon the driving member and responsive to said force to be deflected, and cooperative means between the resilient member and said control means such that force-induced deflection of the resilient means adjusts said control member to control current to said coil in a manner causing incipient reduction in said force.

2,454,365
WEED BURNING APPARATUS
Horace E. Woolery, deceased, late of St. Paul, Minn.; by Myra Lillian Woolery, executrix, St. Paul, Minn., assignor to Woolery Machine Company, Minneapolis, Minn., a corporation of Minnesota
Application January 26, 1946, Serial No. 643,714
6 Claims. (Cl. 126—271.2)



1. In a weed burning apparatus having an extending vertically swingable flame projector adjustable with respect to the forward end of a boom, means for raising and lowering the flame projector including a pulley at the outer end of the boom, a shaft at the rear end of the boom, a sprocket on said shaft, a chain connected at one end to the flame projector and trained over said pulley and sprocket, a spring anchored at one of its ends to the boom and having a movable connection at its opposite end to the chain to counterbalance the weight of the flame projector, and means for rotating the shaft and sprocket to raise and lower the flame projector.

2,454,366
SUITCASE VALANCE STRUCTURE
Richard H. Worley, St. Louis, Mo., assignor to Rice-Stix Dry Goods Company, St. Louis, Mo., a corporation of Missouri
Application June 27, 1945, Serial No. 601,852
3 Claims. (Cl. 190—28)



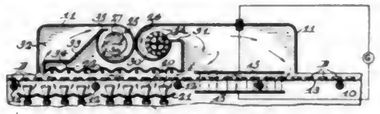
3. A suitcase or the like comprising a body having a bottom and side and end walls of sheet material, said side and end walls having integral marginal portions extending inwardly, thence upwardly and thence downwardly inside said body and in spaced relation to said upwardly extending portion to provide along the upper margin of said walls a hollow inwardly offset rim portion with a flat exterior ledge along the lower edge of said rim portion, said downwardly extending marginal portions of said side walls then extending outwardly so as to be positoned beneath said exterior ledge and thence downwardly therebelow.

2,454,367
WAVE GENERATING SYSTEM
Maurice Artzt, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1944, Serial No. 565,737
7 Claims. (Cl. 171—252)

1. In a tone generator, a tone wheel having a plurality of diametrically-opposed teeth arranged in groups, a pair of magnetic pick-up devices positioned adjacent the periphery of said tone wheel and offset from a diametrically-opposed relationship thereto, means for connecting said pick-up devices in series in an output circuit, means responsive to the passage of the individual teeth on said wheel when the latter is rotated to produce voltage changes in the said pick-up devices which are in phase addition in the said output circuit, and means responsive to the passage of the said groups of teeth on said wheel to produce voltage changes in the said pick-up devices which are in phase opposition in the said output circuit.

2,454,368
CLOTHES HANGER FOR VEHICLES
John V. Auskelis, Dorchester, and Joseph H. Martino, Mattapan, Mass.
Application October 4, 1947, Serial No. 777,922
6 Claims. (Cl. 224—29)

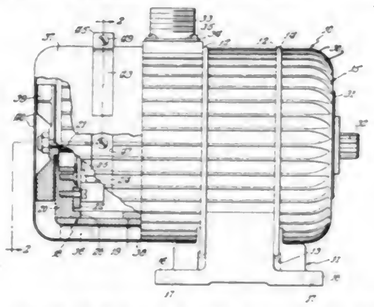
5. A hanger device for vehicles and the like, comprising a rigid plate having an upper marginal portion adapted for insertion upwardly into the glass-run-channel at the top frame portion of a vehicle window, a pair of legs rigidly secured to said plate at spaced locations therealong and extending downwardly therefrom in general parallelism, a foot on the lower end of each said leg for resting on the lower run of the window frame, a hanger rod, means extending between said rod and said plate and between said rod and the lower portion of each of said legs for supporting said rod rigidly in a generally horizontal plane outwardly of said plate, and means for adjusting the distance from said inserted margin of the plate to the frame-engaging surface of a said foot.



2,454,369
CATALYSIS OF HYDROCARBONS
John R. Bates, Swarthmore, Pa., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 22, 1944, Serial No. 541,659
10 Claims. (Cl. 196—52)

1. The process for the production of normally liquid low boiling hydrocarbons from heavier hydrocarbons by cracking comprising contacting said heavier hydrocarbons under cracking conditions with a calcined composite of precipitated hydrous silica containing deposited zirconia and beryllia.

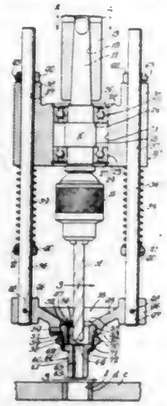
2,454,370
ELECTRONIC BAKING OVEN
de Gaspe Beaubien, Outremont, near Montreal, Quebec, Canada
Application June 25, 1946, Serial No. 679,144
1 Claim. (Cl. 219—35)



An apparatus for baking objects of food comprising, in combination, radiant-field heating means for removing moisture from said objects and toasting same, high-frequency dielectric-field heating means for baking said objects, an endless

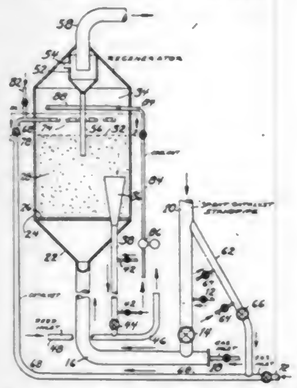
band movable successively into the fields of said heating means and adapted to carry said objects, a cover enclosing the band and heating means, transverse outlet and inlet ducts formed in parallel relation in said cover and communicable with the radiant field and dielectric field, respectively, an elbow connecting said ducts at

the extremities opposite said fields, a blower in one of said ducts for circulating air in the ducts and fields, and said outlet duct having a restricted communication with the radiant field whereby air entering the duct therefrom is caused to expand, the temperature decreasing and some of the vaporized moisture condensing thereby.



2,454,371
EXPLOSION-PROOF MOTOR
Donald M. Berges, Cleveland Heights, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application June 8, 1946, Serial No. 675,501
5 Claims. (Cl. 171—252)

1. Cooling means for a heat generating mechanism having adjustable parts and a rotatable shaft, supporting means for said mechanism having openings to provide access to said adjustable parts, a shell having heat radiating fins, said shell being removably secured about said supporting means and over said openings, a fan connected with said rotable shaft and positioned externally of said supporting means, said fan causing a flow of air along said heat radiating fins, covering means surrounding said fan and fitting over a portion of the heat radiating fins of said shell, a groove formed in the fins of said shell, clamping means formed integrally with said covering means and adapted to be releasably secured in said groove to retain the covering means in place, said adjustable parts being made accessible by removal of said covering means and by relative movement between said supporting means and shell to expose the openings in said supporting means.

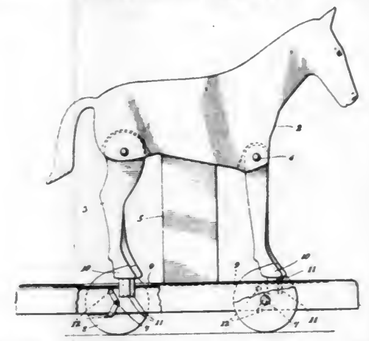


2,454,372
DRILL AND DRILL JIG BUSHING CARRIER ATTACHMENT
Henry Robert Billeter, Highland Park, Ill.
Application June 6, 1946, Serial No. 674,846
1 Claim. (Cl. 77—55)

A drill and drill jig bushing carrier assembly comprising a tool chuck shaft formed at one end for detachable engagement with a drill press spindle for support and rotation thereby and carrying a tool support at the other end for detachably receiving a tool, a drill jig bushing, a carrier for supporting said bushing in axial alignment with a tool in said tool support and for movement toward and away from the tool, and including a guide head, a guide element slidable in said guide head, a bushing holder carried at the end of said guide element away from said guide head and de-

tachably carrying said bushing, a spring acting between said guide head and said guide element for yieldingly urging said bushing holder away from said guide head, and adjustable stops on said guide element one of which serves as an abutment for said spring and the other of which is adapted to abut said guide head to determine the normal position of said guide element, and bearing means in said guide head journalling said tool support in said guide head.

2,454,373
FLUIDIZED CATALYST REGENERATION PROCESS WHICH INCLUDES OVERHEAD COOLING
Forrest H. Blanding, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 14, 1944, Serial No. 568,159
6 Claims. (Cl. 252—242)



1. In a process for regenerating finely divided catalytic material containing combustible deposits wherein one stream of spent catalytic material containing combustible deposits resulting from a conversion treatment is discharged into a lower portion of an enlarged regeneration vessel through which an oxidizing gas is passed upwardly at a velocity controlled to maintain a relatively dense phase layer of catalyst undergoing regeneration in the bottom portion of the regeneration vessel, a stream of regenerated catalyst is separately withdrawn from the lower portion of said regeneration vessel at a rate adjusted to maintain the upper level of said dense phase layer at a substantial distance below the top of said vessel to form a disengaging space in the top portion of said regeneration vessel containing a relatively dilute phase of spent regeneration gas and entrained catalytic material and wherein the spent regeneration gas passing from the upper level of said dense phase into said dilute phase contains between about 3% and 4% free oxygen and a relatively high concentration of carbon monoxide; the method of preventing secondary combustion of said carbon monoxide by said excess oxygen in said dilute phase which comprises dispersing a second stream of unregenerated spent catalytic material from said conversion treatment free of uncombined oxygen into said dilute phase to reduce the free oxygen contained in said spent regeneration gas below about 1.6% by burning combustible deposits from said second stream of spent catalyst.

2,454,374
SHAVING KIT
Pete Bowlin, Lewiston, Idaho
Application March 18, 1947, Serial No. 735,383
5 Claims. (Cl. 30—47)

1. A shaving kit comprising a tubular handle, a pin extending transversely and diametrically through said handle intermediate the length thereof, a helical spring in said handle having upper and lower eyes, the lower eye being engaged about said pin, a blade holder, a yoke extending longitudinally of the blade holder and having arms at its ends fixed to ends of the blade holder and intermediate its length being crimped to form a bill, the upper eye of said spring being engaged about said yoke and slidably mounting the blade holder for movement from a retracted position in which it extends longitudinally in the handle with a portion protruding from the front end of the handle to an extended position for use in which it extends transversely of the handle across the front end thereof, the front end of the handle being formed with aligned transversely extending slots in which the yoke fits, the upper eye of the spring being seated in the bill when the blade holder is in the extended position and exerting pull to maintain the yoke in the slots, and a cap screwed upon the front end portion of said handle and enclosing the protruding portion of the retracted blade holder.

2,454,375
MECHANICAL TOY
Herman Bush, Union City, N. J.
Application August 13, 1946, Serial No. 690,159
1 Claim. (Cl. 46—107)

A toy having a platform with a post thereon, a figure fixed to the top of the post, said figure having depending legs pivotally connected at their upper ends to said body, the platform having longitudinal slots therein adjacent the lower ends of said legs, and bearings on said platform, axles in said bearings, and wheels for said axles, the legs having free extensions at the lower ends going through said slots and the axles having cranks disconnected from the extensions but in operative proximity to the latter to make repeated contact with the extensions and impart a free swinging movement to same and said legs about the pivotal connection thereof with said body, as the toy is rolled about on said wheels.

2,454,376
METHOD OF PURIFYING A RESINOUS LACTONE
Richard F. B. Cox, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 28, 1945, Serial No. 607,667
10 Claims. (Cl. 260—344.6)

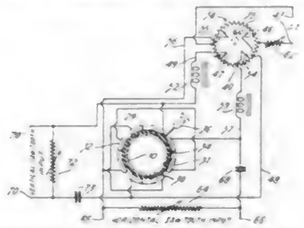
5. The method of producing a substantially colorless diguaiacol hydroxy lactone of the formula $C_{20}H_{22}O_7$ isolated from gasoline-insoluble pine wood resin which comprises forming a solution of said diguaiacol hydroxy lactone containing traces of color bodies in a water-soluble monohydric alcohol containing two to four carbon atoms, crystallizing said diguaiacol hydroxy lactone in the form of an alcoholate, separating said crystalline alcoholate, and removing the alcohol of crystallization from said alcoholate.

2,454,377
GRID SUPPORT STRUCTURE
Lucien B. Curtis, Verona, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 30, 1946, Serial No. 665,954
9 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising a first grid and a second grid, a support rod sup-

porting both said first grid and said second grid, said second grid completely enclosing said first

grid and forming with said first grid an unobstructed space therebetween, and a control electrode mounted within said space.



2,454,378

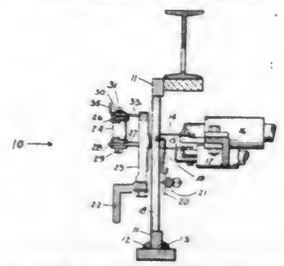
CATHODE-RAY TUBE APPARATUS

Stanley V. Forgue, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application May 28, 1945, Serial No. 596,206

7 Claims. (Cl. 315—31)

1. In combination, a cathode ray tube having a target and means for producing and directing a cathode ray beam toward said target, means for producing scanning deflection of said beam to cover a bidimensional pattern, means for insuring the landing of said beam when a deflection effect is absent at substantially the center of said target whereby said bidimensional pattern will be centered upon said target comprising means for producing a beam influencing field transversely of said tube, means to change the direction of said field, and means to change the polarity of said field.



2,454,379

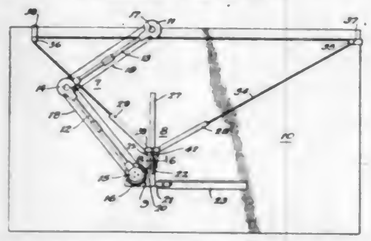
EMBROIDERY MACHINE

Bruno G. Fortuna and Emil Helliker, North Bergen, N. J.

Application April 4, 1945, Serial No. 586,482

5 Claims. (Cl. 112—95)

1. In an embroidering machine comprising a driver bar having slots formed therein, said machine further comprising a platen rod adapted to fit in said slots and a substantially arcuate spring clamp adapted to bear on said driver bar and platen rod to resiliently position said rod in said slots, said platen rod comprising an elongated body portion of substantially rectangular cross section and a sharply downwardly and outwardly curved tip portion extending parallel to said body portion and adapted to engage a shuttle guide of said machine, said platen rod further comprising at its opposite end a substantially vertically upward extending portion, said spring clamp further comprising an apron portion extending downward therefrom, the combination of recesses formed in the upper surface of said body portion adjacent said upward extending portion and finger portions formed on said apron portion and adapted to engage said recesses.



2,454,380

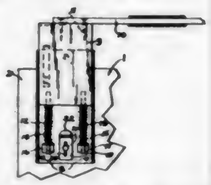
PERSPECTIVE DRAFTING ATTACHMENT

Francis Lee Goff, Bloomington, Ill., assignor of one-third to Edmund E. Hurst and one-third to John Warren Paxton, both of Bloomington, Ill.

Application January 17, 1947, Serial No. 722,495

2 Claims. (Cl. 33—77)

1. Drafting equipment comprising, a member formed with a shank adapted to fit a chuck, on a standard drafting machine a pair of straight-edges pivotally attached to said member, and positionable in various divergent angular relationships to represent the lines for a perspective drawing a bar superimposed on said member on a pin positioned between said straight-edge pivots with the ends of said bar disposed over the pivoted ends of said straight-edges, resilient means normally urging said bar out of contact with said straight-edge ends, a lever arm associated with said pivot pin and actuatable for depressing said bar against the action of said resilient means to contact said bar with said straight-edge pivoted ends for temporarily locking said straight-edges against accidental displacement during the drawing of lines therealong.



2,454,381

CLOTHES GUARD ATTACHMENT FOR IRONING BOARDS

Frederick P. Hammell, Washington, D. C.

Application June 23, 1947, Serial No. 756,482

6 Claims. (Cl. 38—111)

4. The combination of an ironing board and a fabric clothes guard therefor being detachably attached to said board on its lower side, means for supporting a pair of arms in parallel spaced relation at the opposite sides of the ironing board for movement laterally toward and away from said ironing board, arms on said means, a fabric guard strip supported on said arms, means for resiliently projecting said arms to their extended position, and a cushioning bumper for limiting the inward movement of said arms.

2,454,382

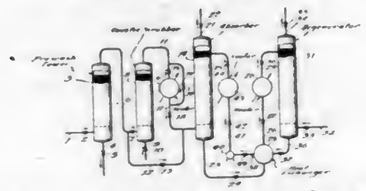
METHOD OF RESOLVING PETROLEUM EMULSIONS

John L. Harlan, Houston, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application September 14, 1945, Serial No. 616,457

4 Claims. (Cl. 252—334)

1. A process for breaking a petroleum emulsion of the water-in-oil type which comprises subjecting the emulsion to the action of a treating agent comprising a petroleum sulphonic acid body having an amino derivative attached to the hydrocarbon nucleous thereof.



2,454,383

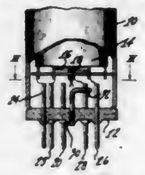
REFINING OF HYDROCARBON DISTILLATES

Jacob Benjamin Heid, Oak Park, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application September 29, 1945, Serial No. 619,409

2 Claims. (Cl. 196—32)

1. A process for refining hydrocarbon distillate containing mercaptans, hydrogen sulfide and an amount of carboxylic acids such that objectionable foaming occurs in the contacting of the distillate with caustic solution of a strength to remove the mercaptans, which comprises treating said distillate with a solution comprising a mixture of barium hydroxide and caustic of 5 to 15° Bé. to remove hydrogen sulfide and carboxylic acids, and thereafter treating said distillate with a caustic solution of 15 to 35° Bé. to remove mercaptans.



2,454,384

BUTTON STEM FOR ELECTRON DISCHARGE DEVICES

Thomas J. Henry, Newark, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application May 21, 1946, Serial No. 671,190

10 Claims. (Cl. 250—27.5)

1. An electron discharge tube comprising an envelope, a anode electrode, a control electrode and a cathode electrode, said electrodes being mounted within said envelope, a circular button stem portion sealed to one end of said envelope, a plurality of lead pins sealed in and extending through said stem portion, said lead pins mounted in a circle, means connecting a first one of said lead pins to said anode electrode, means connecting a second of said lead pins to said control electrode, a shield pin sealed through said button stem portion at the center of the circle, means within said envelope connecting said shield pin to said cathode electrode, said first and second lead pins being mounted in the same plane as said shield pin whereby said shield pin forms an electrostatic shield between said first and second lead pins.

2,454,385

MANUFACTURE OF FUMARIC ACID

Louis H. Howland, Watertown, and William F Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application April 27, 1946, Serial No. 665,631

6 Claims. (Cl. 260—537)

2. A method of converting a cis-alpha-beta unsaturated dicarboxylic acid to its trans isomer which comprises heating it to at least 50° C. in an aqueous medium in the presence of a compound of the formula

where R is a hydrocarbon group.

2,454,386

MANUFACTURE OF FUMARIC ACID

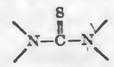
Louis H. Howland, Watertown, and William F. Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application April 27, 1946, Serial No. 665,632

1 Claim. (Cl. 260—537)

A method of converting maleic acid to fumaric acid which comprises heating the maleic acid in an aqueous solution with 4,5-dimethyl 2-mercaptothiazole.

2,454,387



ISOMERIZATION OF MALEIC ACID TO FUMARIC ACID

Louis H. Howland, Watertown, and William F. Brucksch, Jr., Bethany, Conn., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey

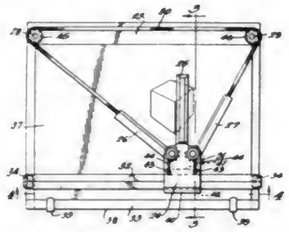
No Drawing. Application April 27, 1946, Serial No. 665,633

7 Claims. (Cl. 260—537)

1. A method of converting a cis alpha-beta unsaturated dicarboxylic acid to its trans isomer which comprises heating it in an aqueous medium with a compound containing the structural unit

2,454,388

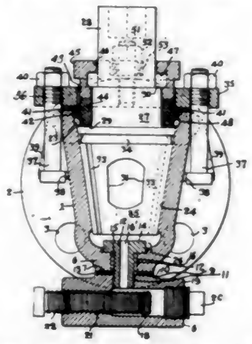
DRAFTING EQUIPMENT



Edmund E. Hurst and John Warren Paxton, Bloomington, Ill., assignors of one-third to Francis Lee Goff, Bloomington, Ill.

Application August 20, 1945, Serial No. 611,516

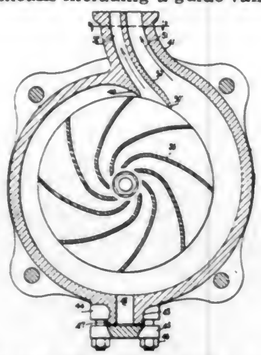
12 Claims. (Cl. 33—77)



8. Drafting equipment of the class described comprising, a support providing a drafting sur-

face, means mounted on said support and movable in a plane parallel to said drafting surface between opposite edges of said support, a pair of straight-edges pivotally attached to said means, other means attachable to said support at spaced

points thereon, and a coiled spring connecting said straight edges with said other means and forming a loop between the ends of said straight-edges and which spring is kept in tension when said member is moved about said drafting surface.



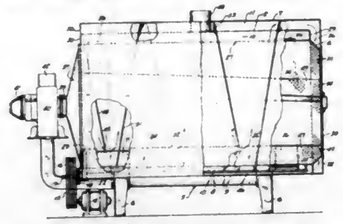
2,454,389
PLUG VALVE
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application July 8, 1944, Serial No. 543,994
4 Claims. (Cl. 251—103)

1. A valve for controlling the flow of fluid through a coupling, said coupling being provided with a main passageway and an angularly positioned bore communicating therewith, a valve plug within said bore adapted to rotate, said bore terminating in a recess immediately above the plug, a cover plate for the valve, and a washer of flexible material interposed between the cover plate and the top surface of the valve, said washer extending into said recess, and a sealing ring interposed between the inner edge of said washer and the plug.

2,454,390
CENTRIFUGAL PUMP
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application August 23, 1944, Serial No. 550,749
6 Claims. (Cl. 103—103)

1. In a pump, a casing of volute shape and having a single inlet and a single outlet passageway, an impeller mounted in the casing to force fluid from the inlet to the outlet passageway, a plurality of vanes mounted on said impeller, and means for preventing turbulence between the outlet passageway and the area immediately surrounding the impeller at the position where the passageway merges with the inter-vane space at the periphery of the impeller, said means including a guide vane extend-

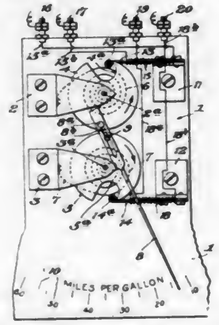
ing through the outlet passageway and beginning at a position near the periphery of the impeller closest to the outlet passageway, and a projection extending inwardly from the casing as far as the impeller to separate the suction and pressure effects of the impeller.



2,454,391
METHOD OF PRODUCING PRINTED FABRICS
Albert S. Jones, Dudley, and Gerald B. Stackpole, Oxford, Mass., assignors to Cranston Print Works Company, Cranston, R. I., a corporation of Rhode Island
No Drawing. Application September 23, 1944, Serial No. 555,596
1 Claim. (Cl. 117—15)

The method of producing pattern effects on textile fabrics comprising the steps of printing a pattern on the cloth with a wet printing paste containing essentially a polymerizable melamine formaldehyde resin resist which, upon polymerization, immobilizes the glazed fibres of a polished cloth, subjecting the cloth to heat without polymerizing the resin enough to immobilize the surface fibres so as to dry the printed cloth to a substantially dry condition and with such a low moisture content that the paste will not adhere materially to the rolls during polishing and be removed and transferred to other portions of the cloth, frictionally polishing the cloth between rotating, heated pressure rolls while it is in said dry condition and producing primarily a unidirectional glaze on the entire printed and unprinted areas of the cloth surface, heating the polished cloth and polymerizing the resin and thereby immobilizing the glazed surface fibres of the printed areas, and subsequently washing and drying the cloth and restoring a non-glazed condition to the unprinted areas, and thus forming a pliable printed cloth having a permanent pattern resulting from the contrast between the glazed and non-glazed areas.

2,454,392
TUMBLER
John P. Jorgenson, Wilmette, Ill., assignor to Kling Bros., Engineering Works, Chicago, Ill., a corporation of Illinois
Application February 5, 1945, Serial No. 576,332
8 Claims. (Cl. 34—133)

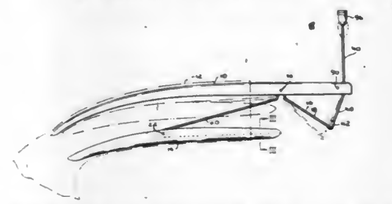


1. A tumbler comprising a garment-receiving cylinder mounted for rotation on a substantially

horizontal axis, means forming a heating chamber surrounding the periphery of said cylinder and within which said cylinder is rotatable, means forming a hot air chamber which is substantially an inverted U in cross section positioned radially outwardly from said heating chamber to which

heat is transferred from the heating chamber, heating means in the lower portion of the heating chamber which is not surrounded by the hot air chamber for directly heating the cylinder as the latter rotates, and means for causing circulation of heated air from said hot air chamber into and through the cylinder.

2,454,393
MILES-PER-GALLON METER
Charles Anthony Leonard, Cincinnati, Ohio
Application April 24, 1944, Serial No. 532,425
11 Claims. (Cl. 73—114)

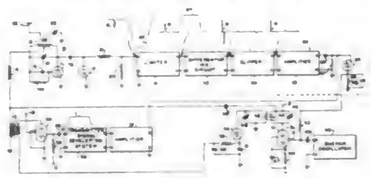


1. An efficiency meter comprising a plurality of independently movable members, first thermo-electric means responsive to the instantaneous rate of fuel supplied to the engine for moving one of said members, second thermo-electric means and independent from the first thereof responsive to the instantaneous speed of the engine for moving another of said members, and a pointer connected with said members and responsive to the combined movement of said members for indicating the instantaneous efficiency of said engine.

2,454,394
LUBRICATING OIL COMPOSITION
Eugene Lieber, New York, N. Y., and Edward P. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 7, 1945, Serial No. 615,081
2 Claims. (Cl. 252—50)

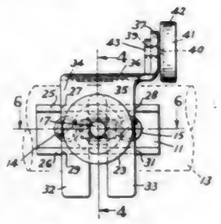
1. A lubricating oil composition comprising a major proportion of waxy mineral lubricating oil containing dissolved therein a minor but pour depressing amount of about 0.1 to 5% of a condensation product having an average molecular weight above about 1000 and derived by condensation of about 200 parts by weight of aliphatic nitriles of mixed fatty acids having about 16 to 18 carbon atoms, with about 50 to 100 parts by weight of naphthalene, in the presence of about 30 parts by weight of aluminum chloride and in the presence of about ½ to 10 volumes of inert chlorinated hydrocarbon solvent per volume of mixed reactants, at a reaction temperature of about 250° F. for about 2 to 3 hours, followed by hydrolysis and removal of the catalyst and distillation of the reaction products under reduced pressure up to about 600° F. to obtain the desired condensation product as distillation residue.

2,454,395
SLEEVE STRETCHER OR THE LIKE
Manuel Lopez, Akron, Ohio
Application August 25, 1947, Serial No. 770,473
3 Claims. (Cl. 223—74)



1. Apparatus for stretching and forming garment sleeves including a pair of relatively thin bars of slightly different length, the bars being curved longitudinally to substantially conform to the contour of a sleeve, a spring wire rod, means pivotally securing the rod at one end to approximately the center of the shorter bar, said means including an eye on the end of the rod, a roller inside the eye, and a pin secured to the bar and rotatably supporting the roller, the rod being bent to have an angularly offset end at the end remote from its pivotal connection to the shorter bar, means pivotally connecting the rod in the region of its bend to the longer bar a short distance from the end of the longer bar, said means including an eye on the rod, a roller inside the eye, and a pin secured to the bar and rotatably supporting the roller, a flexible element connected to the end of the angularly offset end of the rod, a releasable locking mechanism on the end of the longer bar and through which the flexible element extends, and a knob on the end of the flexible element, said locking mechanism including a pivotally mounted jaw adapted to have wedging locking action on the flexible element.

2,454,396
WAVE-SIGNAL RECEIVER-TRANSMITTER SYSTEM
Leonard R. Malling, San Diego, Calif., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application March 7, 1944, Serial No. 525,431
7 Claims. (Cl. 250—13)

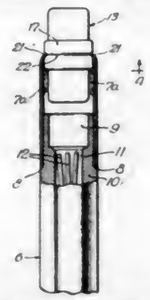


1. A radio receiver-transmitter system comprising: means at a point for receiving from a remote radio transmitting station during spaced receiving intervals radio signals having a field intensity at said point which may vary and for transmitting during intervals intervening said receiving intervals reply radio signals; means responsive to the field intensity of a radio signal received during a receiving interval for deriving

a control effect having a duration coextensive with the next succeeding interval during which a reply radio signal is transmitted; and a control system responsive to said control effect for con-

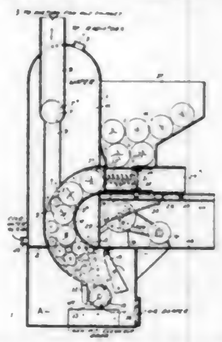
trolling the field intensity at said point of said reply radio signal, transmitted during said next succeeding intervening interval, inversely in accordance with the field intensity of said radio signal received during said receiving interval.

2,454,397
SIGHT FOR FIREARMS
Harold F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application April 17, 1944, Serial No. 531,471
4 Claims. (Cl. 33—56)



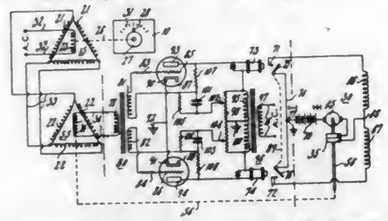
1. In a sight for firearms, a base member U-shaped in cross-section, the bottom portion of said base member being adapted to extend along a firearm part and be secured thereto, a sight member, and a one piece sight member support comprising a vertical first portion extending across said base, a horizontal second portion extending from the upper edge of said first portion, and a third portion extending along and vertically from a side edge of said second portion, means to secure the first portion of said support to and upon the outer edges of the U-shaped base for vertical adjustment, said sight member having a threaded stud adapted to extend through said third portion, and a nut screw-threaded onto said stud, said nut having a lower portion extended into engagement with said second portion of said support to prevent the nut from turning when said sight member is rotated.

2,454,398
IRON OXIDE-ALKALI METAL PYROANTIMONIATE CATALYSTS AND PROCESS OF PREPARATION
Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application December 20, 1946, Serial No. 717,584
10 Claims. (Cl. 252—231.5)



1. A method for preparing a catalyst adapted for use in a Fischer-Tropsch synthesis which includes the steps of preparing a mixture of iron oxide in an amount in the range between 80% and 99.8% by weight and an alkali metal pyroantimoniate in an amount in the range between 0.2 and 20% by weight, heating said admixture at a superatmospheric temperature of about 1000° F. in the presence of a free oxygen containing atmosphere, and subsequently contacting the admixture with reducing atmosphere at superatmospheric temperature in the range from 500° to 900° F.

2,454,399
PENCIL ERASER
Clarence F. Norlin, Chicago, Ill.
Application April 28, 1945, Serial No. 590,927
8 Claims. (Cl. 120—38)

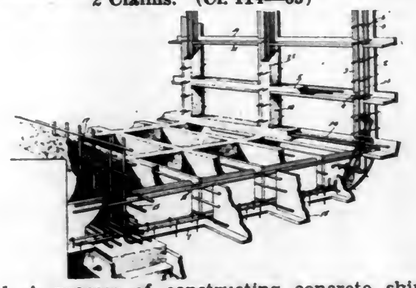


8. An eraser for attachment with the hollow cap structure of a pencil comprising a rubber, a resilient band secured centrally about said rubber, said band having a recess therein, said hollow cap structure having inwardly formed detent means adapted for engagement within said band recess to releasably attach the band to said pencil in a position exposing one portion of said rubber in usable relation with respect to said cap, and guide means carried by said cap and adapted to engage said eraser structure to steady same during use, said detent means preventing in and out displacement of said eraser structure while in normal use.

2,454,400
AUTOMATIC STOKER
Joseph T. Norman, Huntington Mills, Pa.
Application February 28, 1945, Serial No. 580,149
9 Claims. (Cl. 110—29)

1. A furnace having a shell enclosing a heating chamber and a fire box, said fire box being fixedly held and having an entrance at one side of the shell and extending inwardly therefrom and curved downwardly, said fire box at a location between its ends having flue openings; ducts within the heating chamber and connected to said fire box at each flue opening; a header within said heating chamber into which said ducts deliver products of combustion and an off-take duct from the header to the outside of the heating chamber; an upright grate at the outlet end of said fire box, means for forcing fuel into and along said fire box and expelling ashes from the same, and means to admit air to the exit end of said fire box for combustion purposes.

2,454,401
ELECTRONIC MOTOR CONTROL SYSTEM
Herman Nygaard, East Orange, N. J., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application February 12, 1945, Serial No. 577,426
20 Claims. (Cl. 318—30)



1. A position control system for a movable member comprising, in combination, an electric motor operable to position the member; switch means selectively operable to connect said motor to a source of power for rotation in either direction; a pair of electronic tube paths selectively controlling the operation of said switch means; means, including circuit connections, for impressing a control signal voltage on the control grids of said tube paths to selectively condition one of said tube paths to selectively operate said switch means; and means, in individual circuit connection with the anode of each of said tube paths, effective to render the selectively conditioned tube path less sensitive than the other tube path to effect deenergization of said motor before the movable member attains a position corresponding to the control signal to inhibit hunting of the movable member.

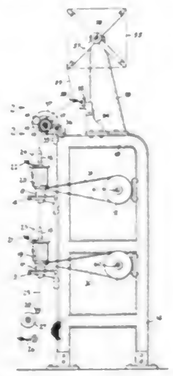
2,454,402
XYLOPHONE
Lazar Okrain, New York, N. Y.
Application November 4, 1946, Serial No. 707,641
4 Claims. (Cl. 84—404)

1. In a xylophone, a resonant chamber, a frame supported within said resonant chamber, said frame consisting of end bars connected together by means of longitudinal strips provided with hooks at spaced intervals, sounding bars of various lengths shaped to uniform length by bending over both ends, said sounding bars being suspended between said strips by means of a cord passing through said hooks and said sounding bars, a cover plate attached to said resonant chamber, said cover plate having a plurality of openings facing said sounding bars, a cord attached longitudinally to said cover plate, mallets mounted upon said cord in said openings, and means for attaching said xylophone to a crib, play pen or carriage.

2,454,403
METHOD OF CONSTRUCTING CONCRETE VESSELS
Mario Palmieri, Beverly Hills, Calif.
Application June 26, 1944, Serial No. 542,060
2 Claims. (Cl. 114—65)

1. A process of constructing concrete ships, comprising the erection of two-sided forms for the ribs, placing reinforcing steel in said forms, welding transverse and longitudinal bulkhead reinforcing steel to said rib steel, attaching a wire cloth to said bulkhead steel pneumatically shooting concrete under pressure into said forms to build up said ribs and pneumatically applying concrete in successive layers to build up said bulkheads, connecting said ribs and bulkheads to each other with a wire mesh screen to form the exterior shell and decks of said ship, pneumatically shooting concrete in layers on both sides of said mesh to form the exterior shell and decks of said ship and to bond said exterior shell, decks, ribs and bulkheads together.

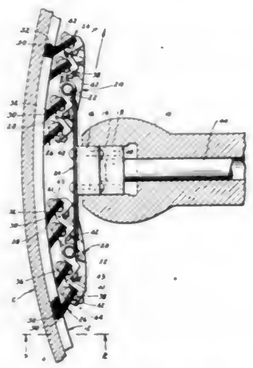
2,454,404
PREPARATION OF PIPERAZINE
Harry Fred Pfann, Greenwich, and James Kenneth Dixon, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 3, 1942, Serial No. 460,684
10 Claims. (Cl. 260—268)



1. A method of producing piperazines from alkylene amines which comprises vaporizing a material selected from the group consisting of the alkylene diamines and dialkylene triamines having two terminal primary amino groups and in which the amino groups are each separated by two carbon atoms, their volatilizable salts and mixtures of the same, heating the vaporized material at from about 350–400° C. and passing the heated vapors over a deamination catalyst maintained at elevated temperatures of from about 350–550° C. whereby cyclization of the alkylene amine is obtained and ammonia is eliminated, condensing the condensible reaction products, collecting the condensate and isolating the piperazine therefrom.

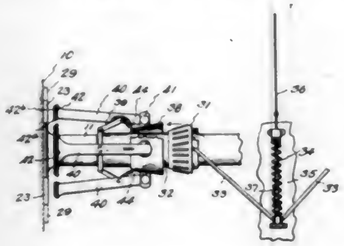
3. A method according to claim 1 characterized in that the catalyst is selected from the group consisting of the oxides of aluminum, silicon, thorium, titanium and zirconium and mixtures of the same.

2,454,405
YARN FEED FOR TWISTING MACHINES
Clayborn F. Powell, Monroe, N. C., assignor to Branson Company, Charlotte, N. C., a corporation of South Carolina
Application April 19, 1946, Serial No. 663,590
1 Claim. (Cl. 57—16)



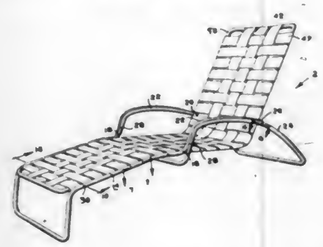
In a wrapping machine having upper and lower hollow spindles through which a core is

drawn and from which spindles the yarn is wrapped around the core, said machine having means for advancing the core through the spindles while the yarn is being wrapped thereon, comprising a wheel having a smooth concave periphery disposed above the uppermost spindle and having a second wheel provided with a smooth convex periphery resting by gravity in the smooth concave periphery of the first wheel



and between which the finished product is passed after leaving the spindles, said first wheel having a pinion fixedly mounted on one side thereof and the second wheel having a pinion fixedly mounted on one side thereof and meshing with the first-named pinion and means driven by the machine for driving the first wheel which in turn drives the second wheel to positively draw the yarn through the spindles and to feed it from the two wheels to suitable take-up means.

2,454,406
FLEXIBLE MULTIBLADED ROTOR ASSEMBLY FOR CYLINDER GRINDING MACHINES
Alfred Rebman, Richmond Hill, N. Y., assignor to Rockwood & Co., Brooklyn, N. Y., a corporation
Application July 27, 1945, Serial No. 607,418
9 Claims. (Cl. 241—102)

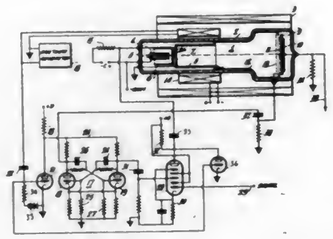


2. Grinding means of the character described for coaction with a cylindrical grinding surface, said means comprising a rod, a member pivotally mounted on said rod, said member extending in the direction of the circumference of said cylindrical surface and provided with a plurality of recesses confronting said surface, and a plurality of grinding members secured to said member and extending transversely thereof, said grinding members being positioned in said recesses, respectively, each of said grinding members having a plurality of longitudinally extending transversely flexible outer portions disposed in parallel face-to-face spaced relation and terminating in cylinder-engaging grinding edges.

2,454,407
NONSKID DEVICE
Frank G. Rosene, Pittsburgh, Pa.
Application May 11, 1945, Serial No. 593,126
11 Claims. (Cl. 301—47)

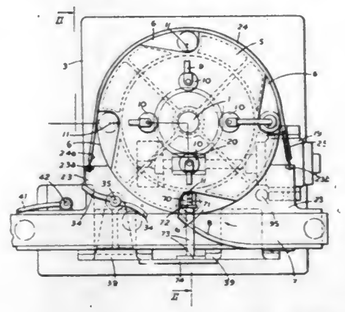
11. In combination with a wheel rotatably supported on an axle, a surface gripping mechanism including a plurality of surface gripping segments arranged about a circle adjacent the wheel periphery with their ends in overlapping relationship, a plurality of clutch segments, a plurality of substantially radially extending spring elements whose opposite ends are connected to said clutch segments and said surface gripping segments, respectively, at peripherally spaced points, there being a plurality of spring elements connecting each clutch segment and its corresponding surface gripping segment, and spring biased operating means including a plurality of clutch operating elements movable away from the axle into engagement with said clutch segments for moving said surface gripping elements radially outwardly into engagement with a roadway surface.

2,454,408
LOUNGE CHAIR
Alice Roth, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application December 26, 1946, Serial No. 718,445
7 Claims. (Cl. 155—1)



1. In a chaise lounge or the like; a frame portion comprising a horizontal bottom part and a rearwardly inclined back part; a first member extending down from the front of said bottom part to form a front support and lying along and secured to the sides of said bottom part, the other end of said first member extending upwardly and then rearwardly to form arms for the lounge; and a second member lying along and secured to the sides of said arms and extending downwardly and rearwardly therefrom to form a rear support.

2,454,409
MANUFACTURE OF SULFUR COMPOUNDS
Walter A. Schulze and Willie W. Crouch, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application October 19, 1943, Serial No. 506,902
8 Claims. (Cl. 260—609)

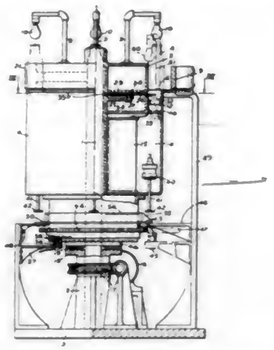


1. A process for synthesizing mercaptans which comprises contacting a reaction feed whose sole reactive components consist of hydrogen sulfide and at least one olefinic hydrocarbon, with a liquid catalyst comprising concentrated hydrofluoric acid containing at least 50 weight per cent hydrogen fluoride, at a temperature within the range of 32 to 100° F. and for a contact time not exceeding about 25 minutes, and maintaining in the reaction zone at all times a molal excess of hydrogen sulfide over the olefin with an H_2S: olefin mol ratio between about 1 and about 5 suppressing secondary reactions, thereby producing a resultant reaction mixture containing the mercaptan product resulting from addition of hydrogen sulfide to said olefinic hydrocarbon in quantities in substantial excess of the quantity of any unreacted olefin plus any secondary products.

2,454,410
CATHODE BEAM TUBE AND CIRCUIT THEREFOR
Richard L. Snyder, Jr., Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 20, 1945, Serial No. 600,498
7 Claims. (Cl. 315—12)

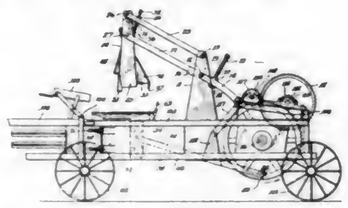
1. A signal storage system comprising a cathode beam tube having a gun, a signal plate having a dielectric target surface facing said gun, a screen having one of its sides adjacent to and facing said dielectric target surface, and a second screen adjacent to and facing the other side of the first screen, means for scanning the beam of said gun over said surface through said screen, a potential source for making the first screen positive in respect to the cathode of said gun and a source of alternating potential for making the second screen positive in respect to the first screen in one scansion of the beam over said surface and negative thereto in another scansion thereof.

2,454,411
INSPECTION APPARATUS FOR TRANSPARENT VESSELS
Norman Parker Stoate, Hampstead Garden Suburb, London, England, assignor to United Dairies Limited, London, England, a British company
Application September 14, 1945, Serial No. 616,300
In Great Britain September 19, 1944
13 Claims. (Cl. 250—41.5)



1. Apparatus for scanning the bottom of a transparent vessel to detect foreign bodies thereon, comprising in combination a photo-electric device, a source of light so disposed as to direct light longitudinally through the mouth and bottom of a vessel in scanning position and towards said photo-electric device, a screen disposed between the source of light and the photo-electric device, said screen having a number of apertures disposed to be at different radial distances from the centre of the bottom of a vessel in scanning position, the apertures having an area small in relation to that of a vessel bottom and being spaced apart from each other in a radial direction by distances such that, irrespective of its position on a vessel bottom, a foreign body of predetermined minimum size in a vessel will obscure a part at least of an aperture, and thereby reduce the intensity of the light falling on the photo-electric device below a predetermined value, means for locating a vessel in scanning position between the source of light and the photo-electric device, and means for rotating a vessel about its longitudinal axis relatively to said screen.

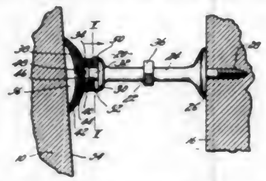
2,454,412
INSPECTION APPARATUS FOR TRANSPARENT VESSELS
Norman Parker Stoate, Hampstead Garden Suburb, London, England, assignor to United Dairies Limited, London, England, a British company
Application September 14, 1945, Serial No. 616,301
In Great Britain September 19, 1944
8 Claims. (Cl. 250—41.5)



1. Apparatus for scanning the bottom of a transparent vessel to detect foreign bodies thereon, comprising in combination a source of light, a photo-electric device, a movable assembly including a support for a vessel to be scanned and means for locating a vessel in scanning position thereon, a first screen disposed below the bottom of the vessel when said vessel is so located and provided with an aperture having an area small relative to that of the bottom of the vessel, a second screen provided with a slit which is disposed substantially radially of the vessel bottom when the vessel is in scanning position, the width of said slit being at least equal to the width of

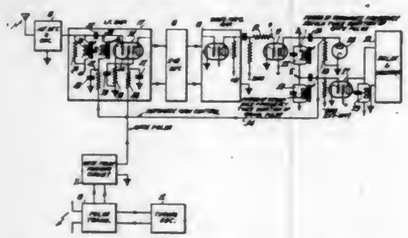
said aperture, said first and second screens being disposed between the source of light and the photo-electric device, means for rotating a vessel about its longitudinal axis relatively to said

support, and a fixed cam about which said assembly is rotatable, said cam being arranged to effect relative movement between said first and second screens so as to transverse the aperture along the slit as the vessel rotates.



2,454,413
BALER
Leslie R. Tallman, Shelbyville, Ill., assignor of forty-five per cent to G. L. Tallman, twelve and one-half per cent to J. L. Tallman, and twelve and one-half per cent to Emma S. Tallman, all of Shelbyville, Ill.
Original application May 10, 1944, Serial No. 534,869. Divided and this application February 18, 1946, Serial No. 648,470
5 Claims. (Cl. 100—19)

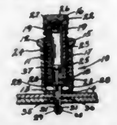
1. In a baler, the combination comprising a compression chamber, a reciprocating plunger therefor, guide means for said plunger mounted adjacent the bottom of said chamber and extending above the bottom and terminating at the forward limit of travel of said plunger whereby the end of said guide means will operate to retain in position compressed material, a shear bar mounted on the upper edge of said plunger, and a cooperating shear bar mounted adjacent said chamber at a slight angle to said first shear bar.



2,454,414
DOORSTOP AND RETAINER
La Moil S. Taylor, Kansas City, Kans.
Application May 12, 1945, Serial No. 593,459
6 Claims. (Cl. 292—70)

1. A door stop and retainer including a one-piece base member having means whereby it may be fixed to a building structure carrying a hinged door; and a suction cup, having an engaging face, removably and adjustably carried by said base member, whereby the angle of said engag-

ing face to the base member may be set to conform to the face of the door to be stopped.



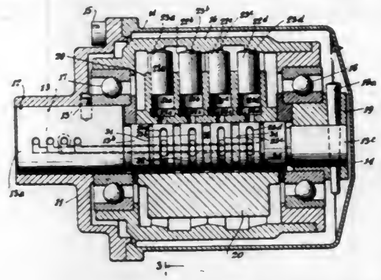
2,454,415
AUTOMATIC GAIN CONTROL CIRCUIT
Simeon I. Tourshou, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application February 24, 1945, Serial No. 579,587
6 Claims. (Cl. 250—20)

1. In a radio receiver wherein the receiver output energy comprises a received signal and accompanying noise, and wherein the duration of the received signal is short compared with that of the noise, means for receiving and demodulating the received signal to obtain a video frequency signal, said receiving means including an amplifier, a pair of parallel resonant circuits which are connected in series with each other and which are tuned to resonate at compartively low and comparatively high frequencies, respectively, means for applying said video frequency signal and the accompanying noise signal across said resonant circuits in series whereby integrated noise voltage appears across the circuit tuned to the low frequency and whereby the received signal accompanied by noise appears across the circuit tuned to the high frequency, means for controlling the gain of said amplifier in accordance with the amplitude of said integrated noise voltage to hold the noise output substantially constant, and means for applying the signal appearing across the high frequency tuned circuit to a utilization device.

2,454,416
FASTENER
Paul Van Sittert, Shaker Heights, Michael Kostrubanic, Jr., Cleveland, and Eugene W. Lehman, East Cleveland, Ohio, assignors to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application October 25, 1943, Serial No. 507,494
4 Claims. (Cl. 85—6)

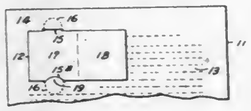
1. A device for temporarily clamping together perforated sheets in superposed relation comprising a body having a sheet engaging base provided with an opening, a sleeve movable relative to said body, a retainer locked in said sleeve for movement therewith, said retainer carrying means on one end projecting through said opening and adapted for engagement against the underside of the sheets being clamped, a spreader for said retainer resting on the inner face of said base, said spreader having means engageable with said

retainer for limiting upward movement thereof, and a spring having one end resting on said spreader and its other end locked to said sleeve for drawing said sleeve and retainer inwardly of said body to urge said one end of the retainer into sheet clamping engagement.



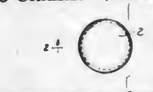
2,454,417
SLING
Charles M. Zerr, Independence, Mo., assignor to Union Wire Rope Corporation, Kansas City, Mo., a corporation of Missouri
Application June 23, 1947, Serial No. 756,359
7 Claims. (Cl. 57—142)

1. A sling of the character described comprising a plurality of ropes laid up to present a cable forming the body of said sling; and at least one loop formed by bending one end of the body upon itself, said one end of the body being secured to the standing part of the body by a splice, said ropes of the end of the body being twisted upon the ropes respectively of the standing part of the body to form said splice.



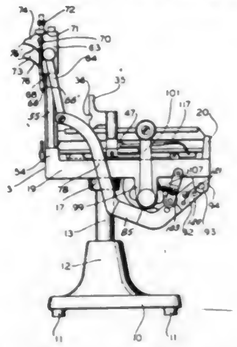
2,454,418
HYDRAULIC FLOW DIVIDER
Lukas Zimmermann, Birmingham, Mich.
Application January 15, 1944, Serial No. 518,425
8 Claims. (Cl. 103—1)

1. In a hydraulic flow divider, a pintle member, a rotor mounted for rotation thereon, at least two sets of cylinders formed within said rotor, pistons in said cylinders, means for causing rotation of the rotor on the pintle upon the occurrence of reciprocation of said pistons within their cylinders, an inlet passage and a plurality of outlet passages formed within said pintle, valving means for connecting the cylinders of each set seriatim with the inlet passage within the pintle at certain times whereby the pistons are caused to move outwardly of the cylinders and for connecting the cylinders, while the pistons move inwardly of the cylinders, with the outlet passages within the pintle related to the respective sets



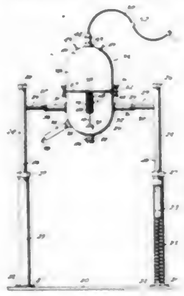
of cylinders, whereby fluid passing into the device will be divided and definite proportions thereof delivered to the several outlet passages.

2,454,419
ILLUSTRATED MATTER
Joseph S. Abrams, Montreal, Quebec, Canada
Application June 18, 1945, Serial No. 600,177
In Canada October 13, 1944
1 Claim. (Cl. 283—56)



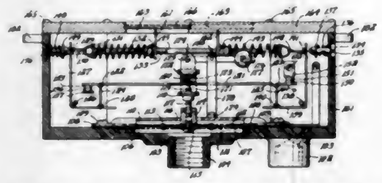
Matter of the character described, comprising, a body sheet having a plurality of slits therein, one of said slits being of substantially U-shape to form a tab, a plural-leaf unit comprising a bottom leaf superimposed upon said body sheet and at least one other leaf connected to said bottom leaf for swinging movement to and from superimposed relationship thereto, tongues projecting from different edges of said bottom leaf through said slits and underlying said body sheet to hold said unit as an entirety detachably connected to said body sheet, said tab extending into overlying relationship to a marginal portion of said bottom leaf, and a corresponding marginal portion of said other leaf, when the latter is swung into superimposed relationship to said bottom leaf, being engageable beneath said tongue, whereby said other leaf may be releasably held in superimposed relationship to said bottom leaf.

2,454,420
OLEOMARGARINE COLORING UNIT
Leon Adler, Harold G. Johnson, and Beeason J. Schneider, St. Louis, Mo., assignors to Dyestuffs & Chemicals, Inc., St. Louis, Mo., a corporation of Missouri
Application May 17, 1946, Serial No. 670,379
3 Claims. (Cl. 99—148)



1. An oleomargarine coloring unit adapted to be worked as a whole into the oleomargarine and consisting of an aggregate mass containing coloring material that is substantially soluble in the oleomargarine, and an oil-insoluble unitary coating enclosing said aggregate mass as a unit and all being dispersible in said oleomargarine.

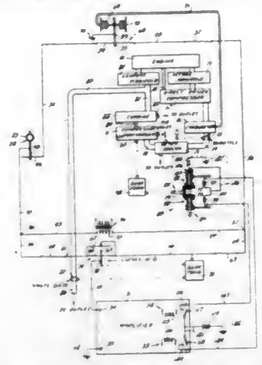
2,454,421
BUTTER CUTTER
Einar A. Anderson, Minneapolis, Minn.
Application May 22, 1944, Serial No. 536,805
4 Claims. (Cl. 31—24)



1. A butter cutter comprising a pedestal-supported table, means to support a block of butter thereupon and to advance it step by step in a direction longitudinally of the table, means to cut the butter longitudinally as it is advanced, a cutter head and cutting wire thereon mounted for reciprocation in a vertical plane, a pair of links pivoted to the sides of the cutter head for supporting and reciprocating it, a lever system consisting of two members, each having a bend so as to have two parallel portions straddling the pedestal and the table and having other parallel portions at their other ends secured together and pivotally supported from the rear of the table, and being pivoted at their front ends to the links and reciprocating the cutter head thereby, and means connected with the lever system between its pivots for oscillating it and causing the links in reciprocating the cutter head to move in substantially a vertical plane.

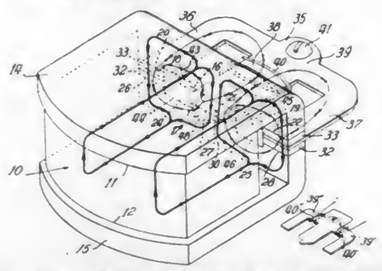
2,454,422
COMBINATION CONTACT PRINTER AND ENLARGER
Paul S. Atkinson, New York, N. Y.
Application December 23, 1946, Serial No. 717,873
2 Claims. (Cl. 88—24)

1. In a photographic enlarger, the combination, which comprises, a base having a flat upper surface upon which sensitized paper for enlargements may be positioned, spaced vertically disposed posts extending upward from the base, a vertically disposed housing with dome shaped upper and lower ends, positioned between the posts, said housing separated at a point substantially midway between the ends providing an upper and a lower section with the adjoining ends of the sections formed with outwardly extending flanges, clamping means removably mounting the upper section on the lower section, means supporting the lower section of the housing from the posts, a centrally disposed light socket in the upper end of the upper section of the housing, a reflector carried by said light socket spaced from the housing, an enlarging lens socket in the lower end of the lower section of the housing aligned with the light socket in the upper section, said enlarging lens socket having a threaded inner end for receiving a light bulb, a reflector on the said enlarging lens socket spaced from the housing, said lower section of the housing having a vertically disposed slot in one side thereof, a substantially horizontally disposed frame positioned in the lower section of the housing and spaced from the upper end thereof, said frame having a support extending from one side thereof through the slot in the lower section of the housing, a threaded collar carried by the outer end of the support of the frame, a screw threaded in said collar mounted on the outer surface of the lower section of the housing providing means for vertically adjusting the said frame, a negative-holding plate positioned on said frame, a second light socket provided in the lower section of the housing, a ground glass diffusing plate positioned in the upper section of the housing, and spring clips on the inner surface of the upper section of the housing supporting the said ground glass plate at a point substantially midway of the height of the upper section of the housing.



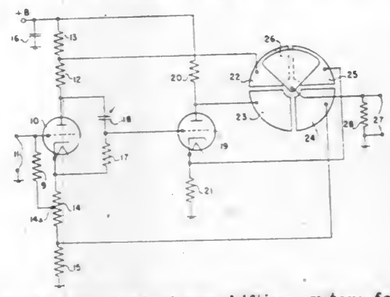
2,454,423
SAFETY SWITCH FOR AIRPLANES
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 2, 1942, Serial No. 467,597
24 Claims. (Cl. 200—81.5)

1. An instrument for use in an aircraft comprising, in combination, an acceleration responsive device and a control mechanism; said control mechanism including an actuating member, an aerodynamic condition responsive device operatively engaging said member at an intermediate point, first and second spring means connected to said member at opposite sides of said point for resisting movement of said member by said aerodynamic condition responsive device, and control devices actuated respectively by opposite ends of said member; said acceleration responsive device being connected to said control mechanism in counter-balanced relation thereto.



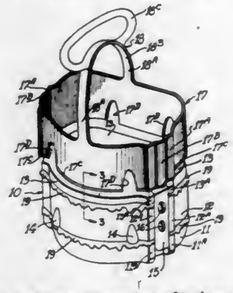
2,454,424
COMPRESSOR CONTROL SYSTEM
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 10, 1944, Serial No. 530,423
11 Claims. (Cl. 230—11)

1. In combination, a compressor, a motor for driving the same, a control device movable for controlling the speed of said motor and hence the compressing effect of said compressor, positioning means driven by said motor for positioning said control device, and control means adapted to respond automatically to a condition affected by



the outlet pressure of said compressor for controlling said positioning means, said positioning means being effective when a change in position of said control device is demanded by said control means to move said control device at a rate which increases with the speed of the motor.

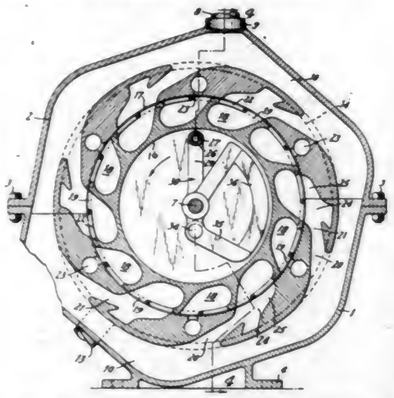
2,454,425
MAGNETIC TRANSLATING DEVICE
Benjamin B. Bauer, Chicago, Ill., assignor, by mesne assignments, to Shure Brothers, Incorporated, Chicago, Ill., a corporation of Illinois
Continuation of application Serial No. 424,282, December 24, 1941. This application December 23, 1943, Serial No. 515,463
17 Claims. (Cl. 175—339)



1. In a translating device, the combination of a constant flux magnetic member having opposed pole faces spaced apart to form a space therebetween, a variable flux magnetic member having a plurality of end portions extending in a generally similar direction and an intermediate portion connecting said end portions together, said intermediate portion being disposed outside of the volume encompassed by said constant flux magnetic member and said end portions being disposed in said space and in adjacent spaced relation to said pole faces to form with said constant flux magnetic member one or more variable flux ferromagnetic circuits which are substantially closed except for the spaces between said end portions and said pole faces, one of said end portions in said ferromagnetic circuit or in each of said ferromagnetic circuits being vibratable in said space to form an armature, means for substantially fixing the other of said end portions in said ferromagnetic circuit or each of said ferromagnetic circuits in position in said space out of ferromagnetic contact with said pole faces, and a winding surrounding a portion of said variable flux magnetic member.

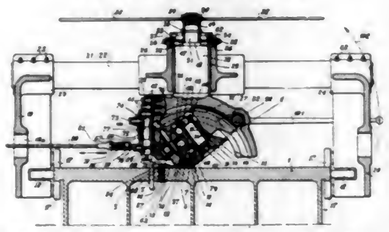
2,454,426
ELECTRICAL PHASE-SHIFTING SYSTEM
John R. Beckwith, Chicago, Ill., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application April 21, 1944, Serial No. 532,192
8 Claims. (Cl. 178—44)

2. An electrical phase-shifting system for deriving from a periodic input signal a plurality of phase-displaced signals comprising, a vacuum tube repeater having input anode and cathode electrodes, an input circuit for applying the input signal to said input electrode, an output circuit for said repeater including separate anode and cathode load impedances of like type for developing output signals of opposite polarity, a phase-splitting impedance circuit connected between said anode and cathode electrodes, and circuit connections for deriving two signals of opposite polarity from said anode and cathode load impedances and a signal of intermediate phase from said phase-splitting circuit.



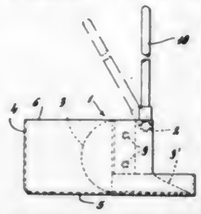
2,454,427
DEVICE FOR REMOVING EXTRUDED PLASTER FROM EXTERIOR SURFACES OF DENTAL FLASKS
Dell E. Bell, Omaha, Nebr.
Application September 15, 1947, Serial No. 774,054
5 Claims. (Cl. 32—38)

1. A dental flask cleaning device comprising a circuitous band shaped to closely conform to the sides of the flask and adapted to closely slidably engage the sides of the flask when the flask is embraced within said band and said band is moved downwardly to thereby scrape the excess plaster extruded through the joints between the



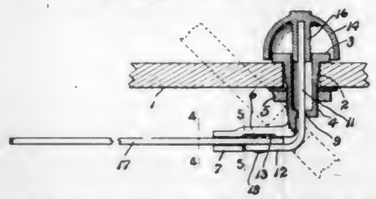
sections of the flask, said band having a lower cutting edge interrupted by upwardly extending spaced recesses to clear spaced lugs projecting from the sides of the flask, and a handle connected to the upper edge of said band.

2,454,428
FLUID PRESSURE TURBINE
Amel Ben Broluska, Detroit, Mich.
Application August 28, 1947, Serial No. 771,079
11 Claims. (Cl. 253—50)



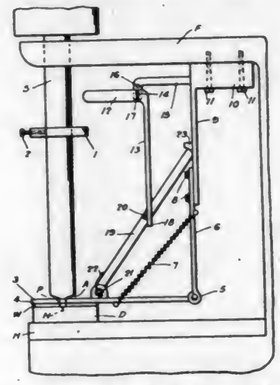
1. In a pressure fluid jet turbine having a casing and a driven shaft therein, a rotor loosely journaled on said shaft and having a series of cavities disposed around its periphery with inlet and exhaust openings abutting upon the inner surface of said casing, there being a plurality of pressure fluid jets in said casing adapted for registry with said inlet openings, and a plurality of outlet ports in said casing adapted for registry with said exhaust openings, operating means keyed to said shaft, and a lever loosely journaled on said shaft having its long end joined to said rotor and its short end joined to said operating means.

2,454,429
MACHINE FOR BENDING AND SHAPING ROLLED IRONS AND THE LIKE
Ettore Bugatti, Paris, France
Application September 11, 1945, Serial No. 615,635
In France May 31, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 31, 1964
11 Claims. (Cl. 153—28)



1. In a machine of the type described, the combination of a bed having a flat top service; a primary carriage adapted to travel on said bed; means on the bed cooperating with said carriage, for guiding the same along a predetermined rectilinear path; a secondary carriage adapted to travel on the primary carriage in overhanging position with respect to said bed surface; means on the primary carriage cooperating with the secondary carriage for guiding the same along a path located crosswise with respect to the first-named path; and an iron distorting head supported from the secondary carriage for pivotal movement about an axis perpendicular to said bed surface.

2,454,430
HYGIENIC DUSTPAN
Edmundo Cortés, New York, N. Y.
Application December 10, 1945, Serial No. 633,972
2 Claims. (Cl. 65—20)

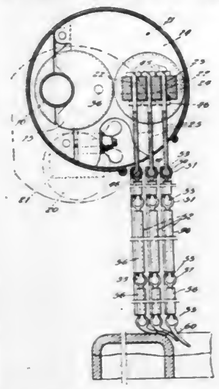


1. A device of the character described comprising an upright handle, a cross bar to which the lower extremity of said handle is pivotally secured, a pair of flat members having stepped front portions whose lower part is pointed and being at right angles to and attached on the extremities of said cross bar, pins extended from the inner side of each of said flat members, and an open receptacle having a bottom, a rear wall and side walls being detachably secured to said flat members and being fastened thereon by means of said pins which extend through inwardly folded portions of said side walls, all substantially as described.

2,454,431
DOUBLE-ACTION FLUSH VALVE LEVER
Basil R. Crampton, Grand Rapids, Mich., assignor, by mesne assignments, to Crampton Manufacturing Company, Grand Rapids, Mich., a corporation of Michigan
Application February 5, 1945, Serial No. 576,350
3 Claims. (Cl. 4—67)

1. In a structure as described, a fixture adapted to extend through an opening in a flushing tank wall, and having means engageable therewith to secure the fixture in a fixed relation to a tank wall through which it is passed, a bar passing through said fixture and extending beyond it at both ends, a handle connected with the outer end portion of said bar, stop means on the fixture engageable with said bar for limiting it in rocking movement about its longitudinal axis, said bar beyond the inner end of the figure being provided with an integral laterally extending arm, said arm at its free end and at its lower edge having a horizontally extending ledge, a second arm connected integral to the fixture at its inner end and located substantially parallel to and extending beyond the free end of the first mentioned arm, said last mentioned arm having a part at its lower edge extending therefrom in a direction opposite the extension of said ledge, the upper sides of said ledge and said mentioned part normally lying in the same plane, and a lift arm pivotally connected to said first arm and resting upon the ledge thereof and upon said laterally extending part of the second arm, said lift arm and first mentioned and second arms having a combined thickness less than the dimension of said opening whereby said structure is mounted as a unit by insertion through and securing to the flushing tank wall.

2,454,432
PUNCH PRESS STRIPPER
Theron T. Crandall, Canoga Park, Calif.
Application November 22, 1946, Serial No. 711,783
1 Claim. (Cl. 164—110)



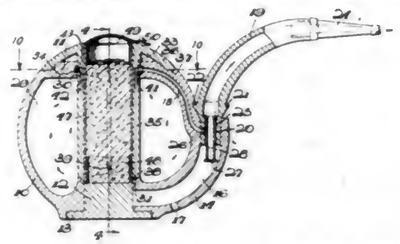
The combination with a reciprocating punch having an actuating lug, and a fixed frame, of an adjustable bracket and means for fixing it on the frame, a stripper pivoted on the bracket and having a forked free end engaging the punch, a lifting spring connecting the stripper with the bracket, a spring-pressed link pivoted on the stripper and an abutment on the frame for engagement by the free end of the spring-pressed link, an L-shaped trip lever having one arm in the path of said lug and pivoted on the frame, a second lever arm straddling the link, and a cross pin on the link in constant engagement with the straddling arm.

2,454,433
ACID TREATMENT OF PYRENE-QUINONE VAT DYESTUFFS
John F. Cullinan and Lawrence D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 13, 1944, Serial No. 526,347
5 Claims. (Cl. 260—362)

1. The method of converting a vat dyestuff, characterized by the presence of a dibenzopyrene-quinone nucleus, into very finely divided particles of substantially uniform size which comprises forming a slurry of the dyestuff with 20–40 parts of sulfuric acid of such concentration and under such condition of temperature that at least a part but not more than 10% of the total dyestuff is in solution at any one time, agitating this slurry until conversion of the dyestuff to the substantially insoluble sulfate is substantially complete and hydrolyzing the sulfate to the dyestuff.

2,454,434
CURTAIN OR PANEL AND HANGER STRUCTURE THEREFOR
Charles G. Cunningham, Chicago, Ill.
Application December 13, 1944, Serial No. 567,966
17 Claims. (Cl. 160—40)

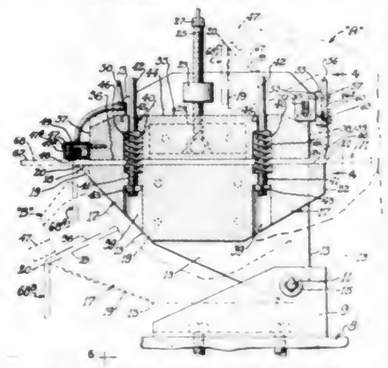
12. A device of the class described comprising, track means, a plurality of panels, means supporting each panel in a different vertical plane for separate sliding motion lengthwise of the track means, each panel having a flexible element on each upright margin extending therebeyond in direction of motion of the panels and adapted to sealingly engage the face of an adjacent panel for all positions of the panels, a flexible element on the bottom of each panel of a length greater than the length of the bottom of the panel but less than the length of a panel plus the dimension of both upright sealing elements in direction of motion, each panel being composed of a plurality of separate sections detachably interlocked so as to swing about a horizontal point of interlocking and said upright sealing elements acting as locks to prevent accidental detachment of the interlocked sections.



2,454,435
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, University City, and Owen H. Pettingill, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 12, 1947, Serial No. 734,212
9 Claims. (Cl. 252—331)

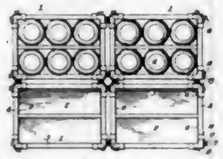
1. A process of breaking emulsions of the water-in-oil type, characterized by subjecting the emulsion to the action of a demulsifying agent comprising an oxyalkylated, drastically-oxidized treated cashew nutshell liquid.

2,454,436
SMOKER'S PIPE
Albert E. Dietz, Washington, D. C.
Continuation of application Serial No. 501,685, September 9, 1943. This application June 24, 1946, Serial No. 678,799
4 Claims. (Cl. 131—176)



1. A smoker's pipe including a shell having a smoke duct and provided with a boss having a drain passage terminating in a seat, a stem engaged in said seat and provided with a valve gravitating to close said duct and establish com-

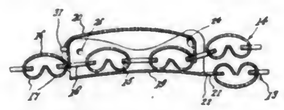
munication between the stem and said drain passage but operable by suction on the stem to close said communication and establish communication between the stem and said duct, a bowl fitting in the shell and provided with a smoke duct leading from the lower interior of the bowl to communicate with the duct of the shell, and a removable plug at the bottom of the shell blocking said passage and forming the bottom of the bowl.



2. A smoker's pipe including a shell having a smoke duct therein and provided with a stem to communicate with said duct, a bowl fitting into the shell and provided with a smoke duct leading from the lower interior of the bowl to communicate with said former duct, and a removable cage fitting in the bowl and provided with a portion overlying the lower terminal of the duct in the bowl and another portion forming a reticulate closure at the upper end of the bowl.

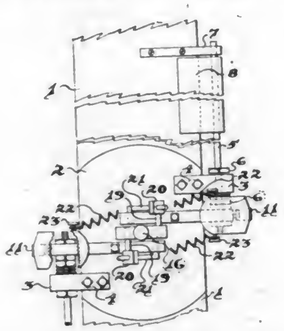
2,454,437
DEVICE FOR WORKING THERMOPLASTIC MATERIALS
Victor Clemens Ehnborn, Honolulu, Territory of Hawaii
Application July 3, 1946, Serial No. 681,241
6 Claims. (Cl. 18—19)

1. A device for working sheets of thermoplastic material comprising: a base, including a pair of horizontally-spaced angle brackets; trunnions journaled in said brackets; a pair of vertical end plates rotatably mounted upon said trunnions; a work-supporting member fastened to and extending between said end plates and having a work-supporting face normally uppermost, said face terminating in a sharp edge parallel to the axis of rotation of said work-supporting member; means for securing said work-supporting member at a pre-selected inclination of said face; a plurality of guide rods secured to and projecting from said work-supporting member perpendicularly to said face; a clamping member centered above said work-supporting member and slidably mounted upon said guide rods, said clamping member being of substantially lesser width than said face of said work-supporting member, whereby said sharp edge projects forwardly of the forward edge of said clamping member; a plurality of springs restrained between said clamping member and said work-supporting member; a plurality of screw means for moving said clamping member toward said work-supporting member against the resistance of said springs; an elongated insulated casing supported on said clamping member above, adjacent and parallel to said sharp edge; a longitudinal groove in the bottom face of said casing, the rear edge of said groove being vertically aligned with said sharp edge; and an electrically-heated coil extending longitudinally within said casing for emitting heat from the area of said groove, whereby an elongated comparatively narrow area of a portion of a thermoplastic sheet, clamped between said clamping member and said work-supporting member, extending outwardly beyond said sharp edge may be heated by the rays emitted through said casing groove and thereby, with the aid of gravity alone, cause said outwardly extending sheet portion to bend itself smoothly and evenly until said outwardly extending portion of said sheet depends vertically from said sharp edge.



2,454,438
HOLDER AND CARRIER FOR BOTTLES AND THE LIKE
Joseph M. Falk and Charles T. Falk, Kansas City, Mo.
Application April 30, 1945, Serial No. 591,212
1 Claim. (Cl. 217—13)

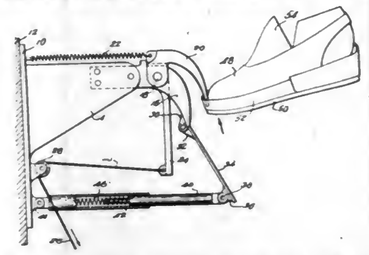
A rectangular box having parallel vertical side walls and parallel vertical end walls, abutted together at their ends and forming right-angle corners, and a horizontal bottom fitting and secured between said side and end walls, a right-angle vertical plate externally of and secured to each corner of the box and extending from the top of the walls to the bottom of the box, a pair of upright strips secured externally to each wall adjacent the respective corners of the box and the said right-angle shaped vertical plates and having inturned flanges or arms upon the top and against the bottom of the respective walls; the strips at one end of each side and end wall having their edge portions offset outwardly to form tongues and the strips at the other end of each side and end wall having their edge portions offset outwardly and reversely bent to form hooks; the hooks and tongues at opposite sides and ends of the box being equal distances from the adjacent corners of the latter.



2,454,439
BOX CATCH FOR WATCH BRACELETS
Clarence F. H. Fontaine, Newport, R. I., assignor to Marvel Jewelry Mfg. Company, Providence, R. I., a corporation of Rhode Island
Application June 5, 1947, Serial No. 752,696
1 Claim. (Cl. 24—191)

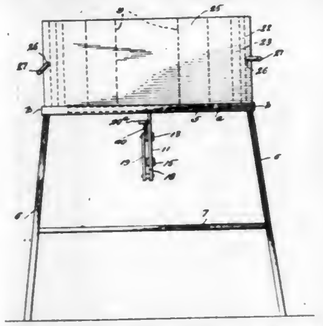
For use with a bracelet having slotted links arranged slidably in upper and lower runs, an improved box catch comprising a base section having means to which one end of the lower run is secured, an outer section hinged to the base section and having catches at the ends thereof for engaging in separated open links of the upper run, and means for locking the two sections of the

bracelet together with the two catches engaging such upper run, said means comprising perforated flanges on one section and outwardly extending pintles on one of the catches of the other section, said pintles rotatably fitted in the perforations of the flanges.



2,454,440
WIND ELECTRIC GOVERNOR
Roy Alexander Foulston, Tugaske, Saskatchewan, Canada
Application December 18, 1944, Serial No. 568,693
3 Claims. (Cl. 170—68)

1. A governor for wind electric machine blades comprising rods mounted for rotation parallel with and in advance of the leading edges of the blades, auxiliary blade sections carried by the rods, governor elements fixed to the rods movable under impulse of centrifugal force during travel of the blade to turn the rods, spring means opposing movement of the governor elements, and a stabilizer for the governor elements comprising a rod extending outwardly from the blade, a weighted slide movable lengthwise of the rod, the governor elements including legs, and rods connecting said legs and slide for movement of the slide when the governor elements are caused to move under impulse from the blade sections.

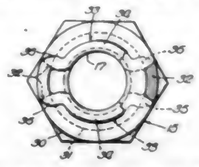


2,454,441
PLATFORM COVER TURNING DEVICE
Isa Galper, Manchester, N. H., assignor to Bee Bee Shoe Co., Manchester, N. H., a corporation of New Hampshire
Application April 3, 1947, Serial No. 739,103
4 Claims. (Cl. 12—1)

3. A cover turning device comprising a support, a bracket projecting from said support, a pair of hinged jaws secured to said bracket, means for opening and closing the jaws, a plate pivotally mounted on the tip of one of said jaws and extending beyond the jaw, a sleeve pivotally mounted on said support, a rod working in said sleeve and pivotally mounted on said plate,

and a compression spring contained within the sleeve and urging the rod outwardly thereof.

2,454,442
CEMENT BLOCK MACHINE
Kelly W. Gibbs and Roy Hillman, Ashland, Ky.
Application September 13, 1946, Serial No. 696,644
2 Claims. (Cl. 25—41)



1. A block forming machine comprising a frame having side bars and end bars formed with upstanding flanges, guide bars extending downwardly from the side bars and formed with vertical slots, one guide bar having an ear at its lower end, cross bars extending between the side bars, vertical cores rising from the cross bars, a bottom carried by said frame and having end sections and an intermediate section, the intermediate section constituting a pallet free from the frame and being formed with openings through which the cores pass, side and end walls removably resting upon the bottom and releasably held upright in engagement with each other, push bars extending downwardly from said pallet and spaced from each other transversely thereof, upper and lower horizontal bars secured to the push bars and extending transversely of said frame and carrying rollers engaged in the slots of the guide bars, a treadle pivoted to the upper horizontal bar and projecting outwardly from a side of the frame, and a link pivoted at its lower end to the ear and at its upper end to the treadle outwardly of the frame.

2,454,443
GRIP NUT
Eugene M. Giles, Western Springs, Ill., assignor, by mesne assignments, to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application October 11, 1943, Serial No. 505,830
6 Claims. (Cl. 10—86)

3. The method of making a nut of the class described which said method comprises forming a

nut body with an opening therethrough and with a ring-like extension at one end having an opening therethrough substantially larger than that of the nut body, then severing opposed arcuate portions of the ring-like extension from the nut body in a manner to leave the ring-like extension attached to the nut body at diametrically opposed places, then deforming the severed opposed arcuate portions and thereby forming smaller opposed

arcuate portions which conform substantially to the nut opening and forming at at least one of the aforesaid diametrically opposed places a U-shaped fold resiliently connecting adjoining ends of said smaller arcuate portions and then correspondingly internally threading the nut opening and said smaller arcuate portions, said smaller arcuate portions, after threading thereof, being contracted closer together.

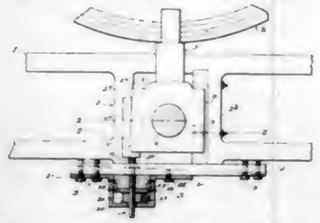
2,454,444

LOCK NUT AND METHOD OF MAKING SAME

Ougljesa Jules Poupitch, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois

Application April 24, 1944, Serial No. 532,385
4 Claims. (Cl. 10—86)

1. A lock nut including a rigid internally threaded body, circumferentially spaced lugs integral with and extending axially from the body at one extremity thereof, segmental locking sections superimposing the aforesaid extremity of the body and having arcuate thread engaging surfaces normally positioned inwardly with respect to the maximum diameter of the internal thread in the body, and connecting elements extending between said lugs and locking sections, said locking sections and connecting elements being sheared from an axially projecting portion of the body and shifted transversely with respect to the axis of said body, said lugs being spaced radially from the internally threaded portion of the nut body.



2,454,445

WEDGE ACTUATOR ATTACHMENT FOR JOURNAL BOXES

Jesse L. Gosnell, St. Joseph, Mo.

Application September 16, 1946, Serial No. 697,286
3 Claims. (Cl. 105—81)

1. In a locomotive having a reciprocable journal box and mounted journal wedge, means for adjusting the wedge with respect to the journal box comprising a gear box including a U-shaped bracket adapted to be secured to the locomotive frame, a second U-shaped bracket having its lower wall spaced above the lower wall of the first-named bracket and its side walls secured to the inner sides of the side walls of the latter, a horizontally-disposed worm wheel within the space between said bottom walls of said brackets, said worm wheel being provided with a concentric flat-sided hole therethrough, a sustaining block supported by said second bracket and provided with a threaded hole extending vertically there-

through, said bottom walls being provided with holes therethrough disposed in vertical alignment with said holes in said wheel and block, a vertically-extending wedge bolt having a squared lower end portion slidably received in the wheel-hole and its upper end portion threadedly engaged in the block-hole in said block, said upper end portion being engageable with the wedge, and means for meshing with said wheel for operating the same.

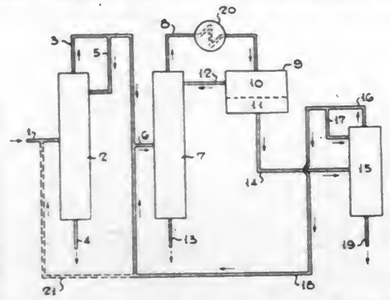
2,454,446

KERF-CUTTING MACHINE

Loy D. Hagenbook, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application January 9, 1947, Serial No. 721,086
6 Claims. (Cl. 262—30)

6. In a mining machine and in combination with a cuttings clearing device therefor, kerf-cutting mechanism for cutting a kerf in a mine wall including a projecting cutter bar having a cutter chain movable thereabout, said cutter bar having a longitudinally slotted central portion extending for a substantial portion of its length, and a flexible sweeping member mounted in said slotted portion of said cutter bar and extending above and below said cutter bar for substantially the full length of the slotted portion thereof and having yieldable engagement with the top and bottom of the kerf, for sweeping the kerf during the cutting operation to assure that said cutter chain expel substantially all of the cuttings from the kerf during cutting and carrying them for discharge to said cuttings clearing device and out of the path of said cutter chain.



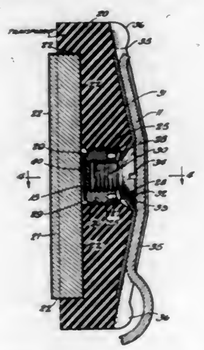
2,454,447

DEHYDRATION OF METHYL ETHYL KETONE BY AZEOTROPIC DISTILLATION UNDER SUPERATMOSPHERIC PRESSURE

William S. Harney, Jr., Elizabeth, and Erwin H. Amick, Jr., Linden, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application December 28, 1946, Serial No. 718,920
3 Claims. (Cl. 202—42)

1. A method of recovering substantially anhydrous methyl ethyl ketone from an aqueous mixture of the same which comprises conducting the aqueous mixture to a distillation zone, maintaining an absolute pressure of at least 20 lbs. per sq. in. in said distillation zone, condensing the distillate whereby a methyl ethyl ketone-rich phase



and a water-rich phase are formed, separating the resulting phases and refluxing the methyl ethyl ketone-rich phase to the distillation zone and recovering substantially anhydrous methyl ethyl ketone as bottoms from the distillation zone.

2,454,448

LIGHTNING ARRESTER

Walter C. Hasselhorn and John F. Jaap, Chicago, Ill., assignors to Cook Electric Company, Chicago, Ill., a corporation of Illinois

Application August 22, 1945, Serial No. 612,098
6 Claims. (Cl. 175—30)

1. A lightning arrester unit comprising an elongated molded body of insulating material, an elongated carbon block embedded and molded in one side of said body, said block having its outer face exposed for engagement with a circuit contact terminal, said block being coated with a moisture proof material except for the spark gap area on its inner face, a metal electrode threaded into said body opposed to said carbon block and having its inner end in adjustable spark gap relation therewith, means for rendering said threaded connection moisture proof, said metal electrode having a threaded hole therein opening exteriorly, a metal contact strip overlying said metal electrode on the outside of said body for engaging a circuit contact terminal, and a securing screw inserted through said contact strip and into said threaded hole to mechanically secure the strip, body and electrode together and to electrically connect the strip and electrode, said body and electrode forming a closed and sealed spark gap chamber for the arrester.

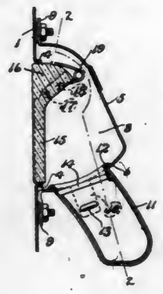
2. A lightning arrester unit comprising a molded body of insulating material, a relatively thin flat carbon block embedded and molded flatwise in one side of said body and permanently, tightly and rigidly retained therein by the grip thereon of the material of the body in shrinking including that around the peripheral edge of the block, the outer face of said carbon block being exposed for engagement with a circuit contact terminal and the inner face thereof within the body forming one of the opposed discharge surfaces of the spark gap of the arrester, said body having an aperture opposite said discharge surface of said block, an electrode positioned in said aperture, the space between the said block and electrode enclosed by the adjacent wall of said aperture forming a tightly closed spark chamber, and connecting means from said electrode to the outside of the body for engagement with another circuit contact terminal.

2,454,449

SHADE ROLLER BRACKET

James C. Haws and Clarence A. White, Sugarland, Tex.

Application October 1, 1945, Serial No. 619,598
2 Claims. (Cl. 248—267)



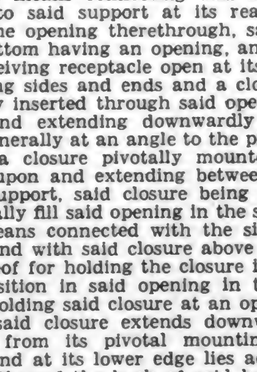
1. A shade roller bracket formed of a single piece of spring wire and comprising, a helical base, one end of the wire being formed into a tang which is extended rearwardly from the base and the other end of the wire being formed into a forwardly extended arm whose forward end terminates in a loop shaped to receive either the round pintle at one end of a shade roller or to receive the flat spring-tensioning pintle at the other end of said roller.

2,454,450

ASH RECEIVER

Cornelius Hendricks, Grand Rapids, Mich., assignor to Applied Arts Corporation, Grand Rapids, Mich., a corporation of Michigan

Application July 27, 1944, Serial No. 546,780
3 Claims. (Cl. 220—18)



3. In a construction of the class described, a substantially vertical sheet metal support having an opening therethrough, a housing of sheet metal having vertical sides, a back extending

downwardly and inwardly and a bottom extending from the back downwardly and forwardly, releasable means connecting said support and housing to said support at its rear side and around the opening therethrough, said housing in the bottom having an opening, an immediate ashes receiving receptacle open at its upper end and having sides and ends and a closed bottom removably inserted through said opening in the bottom and extending downwardly and rearwardly generally at an angle to the plane of said support, a closure pivotally mounted between its ends upon and extending between the sides of said support, said closure being adapted to substantially fill said opening in the support and spring means connected with the sides of said housing and with said closure above the pivotal axis thereof for holding the closure in operative closed position in said opening in the support and for holding said closure at an open position wherein said closure extends downwardly and inwardly from its pivotal mounting on said housing and at its lower edge lies adjacent the lower portion of the back of said housing with the immediate ashes receiving receptacle freely accessible for removal outwardly through the opening in said support and for replacement, said closure comprising a plate which in closed position has an outer side substantially flush with the outer side of the support, and at its inner side at each upper corner has an outwardly and inwardly extending arm, the central portion of the upper part of said closure above the pivots being rearwardly increased in thickness, and the opening in the support being of a generally rectangular form with a vertical extension thereto at its upper side between the vertical sides of said closure and narrower in width than the main portion of said closure, in which vertical extension the upper portion of said closure above the pivotal mounting thereof is located, and said spring means comprising coiled springs one connected to each of said arms at one end and at their other ends connected to adjacent sides of the housing.

2,454,451

ELECTROMAGNETIC SWITCH

Bernard Hinks, Willenhall, England
Application October 19, 1943, Serial No. 506,892
In Great Britain October 20, 1942
6 Claims. (Cl. 200—104)

1. An electro-magnetic motor starter switch of the type set forth comprising a switch frame, a stationary magnetic coil on the frame and energised from the electric supply line voltage, a twin divided magnetic yoke comprising a moving yoke portion with blade contacts connected therewith and with the contact surfaces substantially at right angles to the axis of the magnetic coil, and a second moving yoke portion which yoke portions are attracted into contact to form a complete yoke, "fixed" blade contacts and a spring device adapted to resiliently press the fixed blade contacts on the moving contacts when the switch is switched "on" and form a balancing resistance to the movement of the yoke with the blade contacts thereon inwardly of the coil, a spring device exerting a force on the said second magnetic yoke portion in the reverse direction to the magnetic force so that the complete yoke is floatingly supported in a balanced position between the opposing spring pressure of the said spring devices, and a second switch having a moving contact operated by the movement of the magnetic yoke comprising an auxiliary switch having fixed and moving contacts and mechanical means actuating the movement of the moving contact of the auxiliary switch by a multiplied movement of the said second yoke portion and for setting the position of the auxiliary switch moving contact according to the balanced position of the complete magnetic yoke.

2,454,452

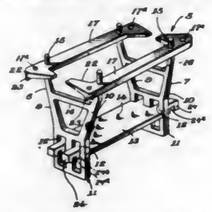
LUBE ADDITIVES MADE BY SOLVENT REFINING HIGH MOLECULAR WEIGHT ALIPHATIC-AROMATIC CONDENSATION PRODUCTS

Caleb E. Hodges, Roselle, N. J., and Aloysius F. Cashman, Staten Island, N. Y., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 19, 1946, Serial No. 697,920
15 Claims. (Cl. 252—58)

12. The process which comprises mixing together naphthalene, aluminum chloride and tetrachlorethane and adding thereto chlorinated paraffin wax containing about 25% chlorine, using about 3–8 mols of chlorinated wax per mol of naphthalene, about 1–3% of aluminum chloride based on the weight of the chlorinated wax and about 20–100 volumes of tetrachlorethane per 100 volumes of chlorinated wax, and maintaining the reaction mixture at a temperature between the approximate limits of 70–150° F. for a reaction time of about ¼ to 5 hours, treating the reaction mixture with a hydrolyzing agent, settling and removing the catalyst sludge therefrom, distilling the reaction products under reduced pressure to a temperature of at least 400° F. to obtain a high molecular weight wax-naphthalene condensation product soluble in mineral oils and having pour-depressing and viscosity-index improving properties as distillation residue, and extracting said distillation residue with ethyl acetate to reduce the chlorine content thereof to less than 2%.

2,454,453

PIGMENT GREEN AND PROCESS FOR PRODUCING THE SAME



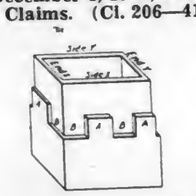
William G. Huey, Nassau, and Walter G. Drautz, Glenmont, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 28, 1945, Serial No. 637,784
6 Claims. (Cl. 106—304)

1. In a process for producing the iron complex of nitroso-β-naphthol wherein a salt of nitroso-β-naphthol is reacted with an iron salt and the thus-obtained iron complex of nitroso-β-naphthol is precipitated, the improvement which comprises incorporating in the reaction mixture before precipitation of the pigment, from 2–6% of a water immiscible oleaginous liquid, and thereafter precipitating said iron complex, in the absence of dispersing agents and insoluble substrates, and recovering and drying the same.

2,454,454

RAIL FASTENER

Marion D. Hughes, Wilmot, Ark.
Application December 6, 1946, Serial No. 714,432
4 Claims. (Cl. 238—314)



1. A clamp for securing a rail to a crosstie, comprising vertical end members for contact with the vertical sides of the tie, clamp bars for contact with the flanges of the rail, means for securing the clamp bars to the upper ends of the end members, a bottom plate for contact with the lower side of the tie, and means for securing the bottom plate to the end members, said first and second means being adapted to secure said end members together at selected distances apart for ties of different widths and adapted to secure said clamp bars and bottom plate at selected distances apart for ties of different heights.

2,454,455

TELESCOPING CIGARETTE CASE

James W. Irwin, Washington, D. C.
Application December 4, 1945, Serial No. 632,747
5 Claims. (Cl. 206—41)

1. A cigarette case rectangular in cross-section composed of two open ended portions telescopingly engaging each other in frictional engagement, the first portion provided with outwardly projecting abutments arranged in longitudinally offset parts adjacent its open end with spaces between said parts, the second open ended portion provided with abutments and spaces similar to the abutments and spaces on the first portion and offset to cooperate with the abutments and spaces on the first portion; said last named abutments fitting into said first named spaces when the two portions are in telescoping position for containing short length articles, and the abutments on both portions abutting each other in edge to edge position when the second open ended portion is rotated 180° about a vertical axis from the position in which the abutments interfit and telescoped over the first open ended portion for containing greater length articles.

2,454,456

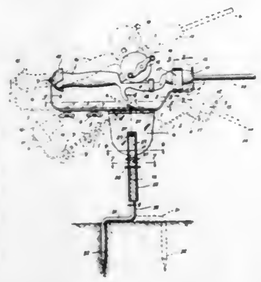
MATERIALS FOR DENTAL PURPOSES

Christe Joannides, Edgware, England
No Drawing. Application February 11, 1944, Serial No. 521,970. In Great Britain March 12, 1943
4 Claims. (Cl. 260—765)

1. A vulcanizable rubber compound having sufficient strength and sufficiently low specific gravity for the manufacture of whole dentures, which contains 40 to 60% crude rubber, 12 to 18% sulphur, 6 to 14% cadmium red and 16 to 34% titanium dioxide.

2,454,457

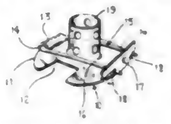
METHOD OF MAKING DENTURES



Christe Joannides, Edgware, England
No Drawing. Application February 25, 1944, Serial No. 523,817. In Great Britain March 12, 1943
2 Claims. (Cl. 18—53)

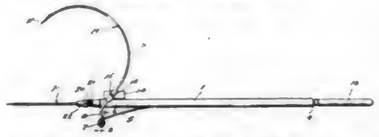
1. A method of making a denture which comprises mixing crude rubber, red and white pigments and sulphur, the sulphur and crude rubber being present in such proportions that when the mix is vulcanised a hard rubber is produced containing at least 40% by weight of crude rubber, and the pigments in the mix being present in a quantity such that the vulcanised mixture is of colour darker in shade than that finally required, moulding and vulcanising the said mixture, polishing the exposed surface of the vulcanised denture, and treating said exposed surface to lighten the color thereof to the desired shade of pink by applying a solution of a substance selected from the group consisting of benzoyl peroxide and hydrogen peroxide.

2,454,458



FISHING POLE HOLDER

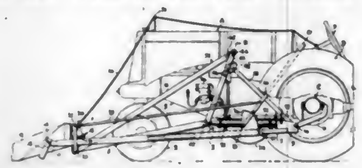
Howard C. Kaetker, Cincinnati, Ohio
Application May 19, 1945, Serial No. 594,714
4 Claims. (Cl. 248—42)



1. A fishing pole holder comprising an elongated bracket, elements at the ends of said bracket for engaging and holding the handle of a fishing pole, a spring device attached to said bracket for engaging and preventing displacement of said fishing pole handle from said elements, a holding plate attached to and extending downwardly from said bracket, a tube pivotally connected with said holding plate, a releasable clamping device for holding said tube and said holding plate relatively immovable, a bearing device supported by said tube, and a ground stake adapted to be extended into said tube into engagement with said bearing device and thereby pivotally support said bracket for turning movements about the axis of said tube.

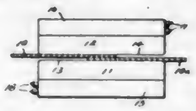
2,454,459
HAIR CURLER
Lucille King, Bartow, Fla.
Application May 28, 1947, Serial No. 750,961
1 Claim. (Cl. 132—40)

A hair curler comprising a base plate having a centrally located core extending upwardly therefrom, said base plate at one edge thereof providing a knuckle, a clamp formed from an elongated piece of resilient wire bent substantially U-shaped to provide a bight portion journalled in the knuckle and parallelly extending arms adapted to extend transversely of the base plate on opposite sides of the core, a keeper plate formed integral with the base plate on the edge thereof opposite the knuckle, said keeper plate having formed therein oppositely located keeper slots for the reception of the end portions of the arms to yieldably latch the arms over hair disposed between the arms and the base plate.



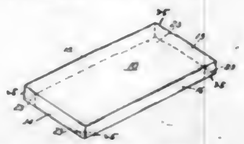
2,454,460
FISH GIG
Walter Koepke, Baytown, Tex.
Application January 16, 1945, Serial No. 573,005
2 Claims. (Cl. 43—5)

1. A fish gig of the character stated comprising a relatively long handle member, a hook consisting of a pair of spaced parallel arcuate members having transversely extending cross members connected therebetween, the arcuate members at one end of the hook being pointed and at the opposite end being in straddling relation with an end of the handle, a pivot pin extending between the members at said opposite end of the hook and transversely of and connected with said handle, means carried by the handle and connected with said other end of the hook for effecting the oscillation of the hook, the pointed ends of the members making up the hook being movable across and in spaced relation with the said one end of the handle, and a prong carried by the said end of the handle and extending longitudinally therefrom, the prong being of a length to extend beyond the radius of the hook when the hook is oscillated to a position to extend across said end of the handle, the pointed members of the hook straddling the prong.



2,454,461
TRACTOR MOUNTED LOADER
William E. Knapp, Moline, Ill., assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware
Application July 2, 1945, Serial No. 602,784
3 Claims. (Cl. 214—141)

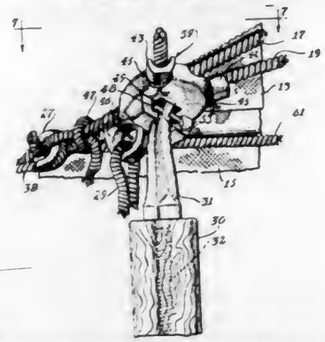
1. In a tractor mounted loader, a longitudinally extending boom disposed at each side of the tractor, each boom comprising two telescopic sections the rear one of which is pivoted at its rear end on the tractor and supporting the forward section for up and down movements at its forward end, a load carrier supported by the forward ends of the booms, a swinging frame structure supported on the tractor above each boom, and including a power lift actuated member connected to the forward section of the boom to raise the same, each frame structure also including a lon-



gitudinally extended push bar connected to said forward section of the boom and movable forwardly during a part of the lifting operation to extend the boom in a forward direction, and a generally horizontal fluid actuated piston and cylinder device connected at one end to the swinging frame structure and at its other end to the tractor.

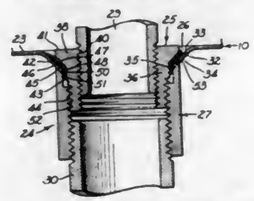
2,454,462
PRODUCTION OF WELDED SILVER CHLORIDE ARTICLES
Harry C. Kremers, Cleveland Heights, and Robert E. Price, Cleveland, Ohio, assignors to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio
Application January 11, 1946, Serial No. 640,604
6 Claims. (Cl. 154—116)

5. A method of welding silver chloride sheet comprising compressing two overlapping portions of silver chloride sheet between polished die surfaces maintained at a temperature from 150° C. to 250° C., said surfaces being inert to silver chloride at the temperature employed and the compressive force employed being from 1000 to 10,000 lbs. per sq. in.



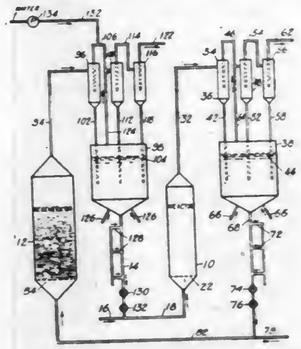
2,454,463
BABY'S SAFETY SHEET
Esther M. Kromer and Edward L. Kromer, Chicago, Ill.
Application October 25, 1946, Serial No. 705,604
1 Claim. (Cl. 5—334)

A baby's safety sheet comprising a rectangular body portion, a pair of opposite end portions and a pair of opposite side portions, said end portions spaced from said side portions, said side and said end portions both extending outwardly from said body portion for substantially the same distance, a pair of integral spaced triangular extensions extending outwardly beyond each of said end portions in prolongation of the side



edges of said end portions, said side portions attached to adjacent end portions forming rectangular corner portions, said extensions folded inwardly and attached to adjacent side portions forming box like bottom anchoring portions, said rectangular corner portions and said box like anchoring portions forming pockets on the four corners of said sheet adapted to removably engage a mattress, and when in position on said mattress to prevent accidental removal by the baby therefrom.

2,454,464
TENT STRUCTURE
Walter E. Lee, Chicago, Ill.
Application October 22, 1946, Serial No. 704,903
10 Claims. (Cl. 135—15)

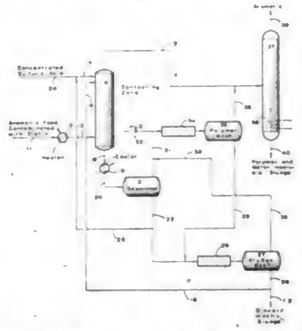


1. Fastening means for securing the rope elements in a tent structure comprising, a fixture having a platform provided with rope cradling recess means on its upper surface, an eyelet portion at one end and at the bottom thereof, and an open pocket portion below the said platform and provided with a depending lip portion; and a support provided with a threaded extension for securing the same to a tent post, and further provided with a pair of trunnions constructed and arranged to rest within the said pocket portion, the said support having also a tongue extension at its top constructed and arranged to abut the said depending lip portion.

2,454,465
PIPE FITTING
Herbert S. Leo and Ben B. Breslow, Los Angeles, Calif., assignors to Utility Appliance Corp., Los Angeles, Calif., a corporation of California
Application September 16, 1946, Serial No. 697,188
5 Claims. (Cl. 285—30)

1. In combination: a container formed of relatively thin material and having a wall depressed in an annular zone to provide a conical inner surface and a conical outer surface, said conical surfaces extending inwardly toward an opening through said wall; a hollow plug member having a hollow head providing a conical surface substantially conforming in shape to said conical inner surface and having a hollow externally threaded neck extending through said opening; a sealing member providing a conical collar disposed between said head and said conical inner surface and providing a neck depending in said opening around said neck of said plug member; and an internally threaded sleeve screwed on said neck of said plug member and providing a conical upper surface engaging said conical outer surface of said receptacle wall within the periphery of said conical collar of said sealing member to compress said conical collar between said conical inner surface and said head of said plug member.

2,454,466
REGENERATION OF FLUID CATALYSTS WITH COOLING OF FLUE GASES BY WATER INJECTION
Earl J. Le Roi, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 3, 1944, Serial No. 520,958
8 Claims. (Cl. 252—242)

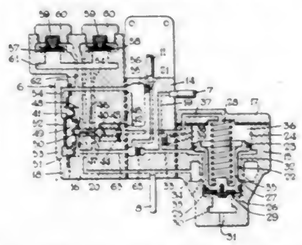


1. In a process for regenerating contact particles suspended in a gaseous regenerating medium by burning combustible deposits from the particles wherein a body of contact particles is maintained in a dry fluidized relatively dense condition in a regeneration zone and regeneration gases while leaving said regeneration zone contain entrained contact particles and the regeneration gases also contain combustible material and oxygen, the step of injecting outside said regeneration zone a non-combustible vaporizable liquid into the regeneration gases containing entrained contact particles to reduce the temperature of the regeneration gases and to control after-burning of the combustible gas in the regeneration gases outside said regeneration zone.

2,454,467
PROCESS FOR REMOVING OLEFINS FROM AROMATIC HYDROCARBONS
Robert M. Love, Baytown, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 11, 1945, Serial No. 610,338
9 Claims. (Cl. 260—674)

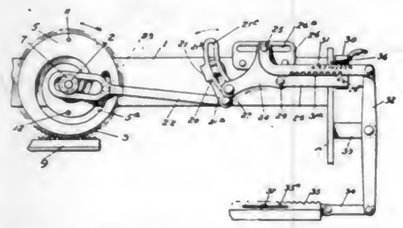
1. A process for treating a predominantly aromatic hydrocarbon feed stock contaminated with a minor portion of hydrocarbons comprising not substantially more than 3% of olefins including the steps of vaporizing said feed stock at a temperature substantially above atmos-

pheric, contacting the vaporized feed stock with a mixture comprising aryl sulfonic acid and concentrated sulfuric acid in a contacting zone, said mixture comprising a major portion of aryl sulfonic acid and a minor portion of sulfuric acid having a strength in the range between 90%



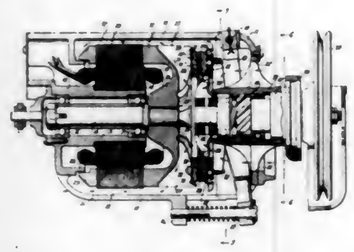
and 100% H_2SO_4 separately removing a vapor phase and a liquid phase from the contacting zone, cooling said liquid phase to a temperature no greater than approximately atmospheric to separate it into a hydrocarbon liquid phase and an aryl sulfonic acid liquid phase and separating said liquid phases under the influence of gravity.

2,454,468
METHOD FOR PREPARING AROMATIC NITRO COMPOUNDS AND AMINES
Edward H. McArdle, Linden, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 18, 1943, Serial No. 499,067
6 Claims. (Cl. 260—580)



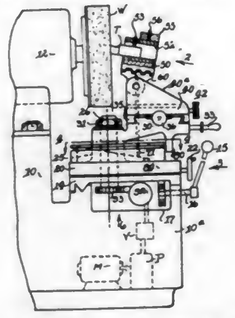
1. A process for the preparation of aromatic mono-nitro hydrocarbons which comprises nitrating aromatic hydrocarbons in the presence of an excess of the aromatic hydrocarbon.

2,454,469
CONTROL VALVE DEVICE
Glenn T. McClure and John W. Rush, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 9, 1946, Serial No. 653,329
8 Claims. (Cl. 303—69)



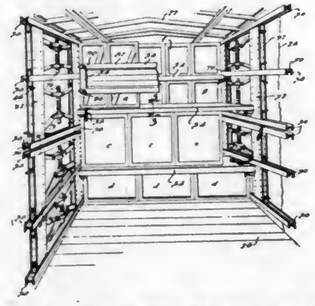
1. The combination of a vent valve device normally in a position establishing a communication through which fluid under pressure may be supplied to a fluid pressure receiving device and operative, in response to a rapid reduction of a control fluid pressure, to a different position closing said communication and establishing a different communication through which fluid under pressure is released from the fluid pressure receiving device, a valve operative to initiate said rapid reduction of the control fluid pressure so as to cause operation of the vent valve device to its said different position, and means effective in cooperation with said vent valve device, while in its said different position, to cause said valve to remain operative to continue the rapid reduction of the control fluid pressure for a certain length of time thereby to maintain said vent valve device in its said different position for a corresponding length of time.

2,454,470
MARGIN JUSTIFYING DEVICE FOR TYPEWRITERS
Oliver O. Martin, Montrose, Calif.
Application May 1, 1944, Serial No. 533,518
23 Claims. (Cl. 197—84)



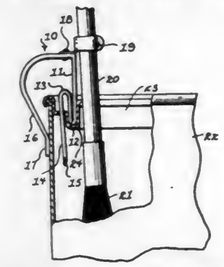
1. In a margin justifying device for a typewriter having a frame and a carriage movable thereon, an escapement rack, a circular member on the carriage, means secured to the typewriter frame and adapted to rotate said member in response to carriage movements, said member having a spiral cam slot, and means riding in said slot and extending to said rack for moving the latter longitudinally on the carriage upon rotation of the member.

2,454,471
SEWING MACHINE DRIVE
James W. Momberg, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application December 21, 1946, Serial No. 717,791
9 Claims. (Cl. 172—36)



1. In an electric motor drive, a cylindrically shaped casing having ventilating openings in the ends thereof, an inwardly extending tubular support formed on one of the ends of the casing, a stator carried by said tubular support, a shaft journaled in said support and carrying a cup-shaped rotor at one end thereof, the sides of said rotor being spaced from said casing to form an air passageway and extending over said stator and cooperating with a portion of the casing to enclose the internal parts of the motor, and air impelling means formed on said rotor for drawing air through the openings in the casing and forcing it outwardly through said passageway.

2,454,472
TOOL GRINDING FIXTURE
Edward H. Monkley, Worcester, Mass.
Application January 25, 1946, Serial No. 643,373
3 Claims. (Cl. 51—234)



1. A tool grinding fixture comprising a base, a tool holder, a member supporting said holder and mounted to swing about a substantially vertical stationary axis in said base, and means to rock said tool holder in said supporting member in a plane at a slight angle to said vertical axis, said latter means comprising cam plates mounted on said base and concentric with said stationary axis and a pair of actuating rods slidably mounted in said supporting member and engaging said tool holder at their upper ends and said cam plates at their lower ends, and said rods being axially shifted by said cam plates to rock said tool holder as said supporting member is swung about its vertical stationary axis.

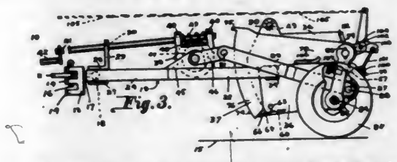
2,454,473
APPARATUS FOR LOADING FREIGHT OR THE LIKE
Sulo M. Nampa, Detroit, Mich., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application June 3, 1943, Serial No. 489,445
16 Claims. (Cl. 105—369)

1. In a freight loading system for a freight chamber such as a freight car, the combination of elongated supports in said chamber which are spaced apart in a direction transversely to their length, and a pair of supporting members associated respectively with the said supports, each supporting member comprising a pair of relatively movable parts, at least one of which is constructed for anchoring engagement with the corresponding support so as to enable the other part, by application of force between it and the corresponding anchored part, to be advanced along the corresponding support to a desired adjusted position, freight holding means extending between and carried by said supporting members, and cooperating holding means on said freight holding means and on said supporting members for enabling said freight holding means to be so carried in any of a plurality of different positions of adjustment with respect to said supporting members.

2,454,474
PAINTBRUSH HOLDER
Wilbur O. Nance, Ardmore, Okla.
Application September 15, 1947, Serial No. 774,117
2 Claims. (Cl. 248—113)

1. A holder of the type described, comprising an elongated strip of springy metal, having a straight portion, a supporting loop formed at one end of said portion, and a semi-heart shaped clamping portion formed at the other end at right angles thereto, a clamping loop formed on the upper end of said supporting loop, and a straight portion formed by a continuation of the free end of said clamping loop, a straight jaw portion on the free end of said clamping portion which is adapted to contact the outer surface of the wall of a receptacle, while the straight portion on the clamping loop is adapted to contact the inner surface of the wall of the receptacle to retain the holder on a paint receptacle and means on said clamping portion for engaging the handle of a paint brush.

2,454,475
SCRAPER
Benjamin F. Owen, Omaha, Nebr.
Application September 15, 1943, Serial No. 502,483
12 Claims. (Cl. 37—133)



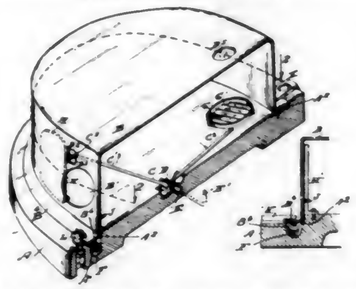


Fig. 3.

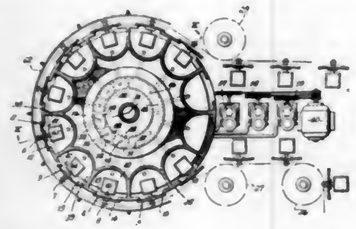
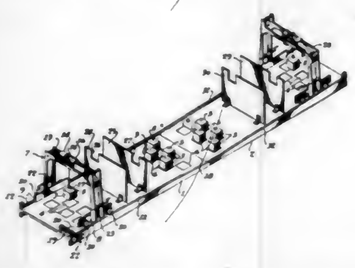
1. An earth moving device comprising a tongue having an end arranged to be pivotally attached to the rear of a towing tractor; a bucket having side walls and a rear wall, said walls being rigidly attached together and to the other end of said tongue; said rear wall being provided with a door hingedly connected thereto; said bucket being provided with a front wall and a bottom each being pivotally attached thereto for vertical swinging movements; links having ends pivotally con-

nected to said door and bottom for causing relative movements thereof; means for latching said door and bottom together; a cutter secured to the front edge of said bottom; vertically swingable legs having ends pivotally attached to the sides of the bucket; revoluble wheels attached to the other ends of said legs for supporting the bucket above said earth during transportation of the bucket; means for raising said wheels and front wall above said cutter for permitting the latter to engage said earth for loading said bucket during a forward movement of the bucket; and means for releasing said latch for permitting said load to move outwardly of the bucket.



2,454,476
ANIMAL TRAP
Vernon J. Price, West Dearborn, Mich.
Application January 28, 1944, Serial No. 520,046
3 Claims. (Cl. 43—60)

1. A device of the character described comprising a base plate having an annular groove; a rotatable chamber having a flange lodged in the annular groove of the base plate; an inlet opening in the wall of the chamber to admit rodents into the chamber; a stationary door; a spring adapted to rotate the chamber; a stop pin extending inwardly from the wall of the chamber to limit the rotation of said chamber upon the inlet opening of the chamber registering with the stationary door; a manually operated rock-shaft fitted with a pair of rocker arms; a bearing for the rocker arms attached to the base plate; one of said rocker arms having a laterally extending knife edge at its outer end; a slotted opening in the wall of the chamber, through which said knife edge may enter to engage the wall of the chamber, whereby said chamber is held under tension of the spring until released; and means including a bait supporting pan attached to the other arm, whereby a rodent upon attempting to remove the bait will cause the arms to rock, thereby releasing the rotatable chamber under tension of the spring, whereby the inlet opening into the chamber is closed upon registration with the stationary door against the escape of rodents from the trap.

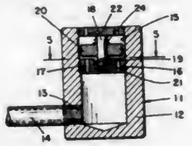


2,454,477
APPARATUS FOR COMPACTING AND PACKAGING MATERIALS
Don Ray, Beverly Hills, Calif.
Original application July 14, 1941, Serial No. 402,392. Divided and this application June 20, 1945, Serial No. 600,526
5 Claims. (Cl. 226—56)

1. In an apparatus of the character described: a rotatable compacting and sealing mechanism including a rotatable body provided with a multiplicity of circumferentially arranged chambers, each of the chambers being provided with an outwardly directed port; means for connecting such chambers progressively with sources of decreasing subatmospheric pressure during predetermined portions of rotation of said body and with atmospheric pressure at other portions of rotation of said body; means positioned within each of said chambers for folding and sealing a container; means for energizing such folding and sealing means at a predetermined portion of rotation of said body and while said chambers are in communication with a source of subatmospheric pressure, said means including a push rod operably connected to each of said folding and

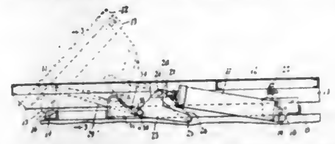
sealing means and extending from each chamber, and a stationary cam in operative engagement with said push rods; and a continuous conveyor peripherally engaging said rotatable body and movable therewith, said conveyor being provided with a multiplicity of longitudinally arranged, pivotally mounted door elements adapted to operably close ports to said chambers, and a foraminous carrier removably attachable to each of said doors and adapted to extend into a chamber in operative position with respect to the folding and sealing means in such chamber; and centering means within each chamber for cooperation with the carriers and doors for guiding the carriers into operative position.

2,454,478
GAME
Melvin R. Roberts, Los Angeles, Calif.
Application June 26, 1945, Serial No. 601,662
3 Claims. (Cl. 46—40)



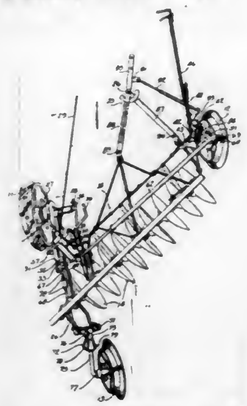
1. In game apparatus: a base; a travelling crane thereon; a hoist supported on the crane; manual means for moving the crane with respect to the base; manual means for moving the hoist with respect to the crane; manual means for operating the hoist; and one or more barriers located at an intermediate part of the base, each barrier having a slot in its upper edge, each of said barriers having an upper edge which, except for the slot, prevents passage of the hoist when loaded.

2,454,479
ROTATING GAME POINTER
Clyde G. Rosenberger, Fort Wayne, Ind.
Application January 7, 1946, Serial No. 639,574
4 Claims. (Cl. 273—141)



2. In a device of the kind described, a support for game disks, a disk-like dial fixably mounted on said support, said disk-like dial having radially disposed line markings on its upper face to provide scoring faces therebetween, scoring indicia within said faces, and a disk-like rotor rotatably supported on the support above said dial, said disk-like rotor having a plurality of peripherally spaced outwardly tapered striking extensions formed thereon, and an inwardly directed substantially V-shaped window formed therein, and an arrow head positioned in said V-shaped window adjacent the deepest part thereof for indicating scoring indicia on said disk-like dial when said disk-like rotor is spun by finger action against said tapered striking extension.

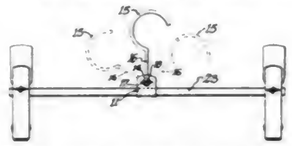
2,454,480
AIR CONTROL DEVICE
David Rossman, Long Beach, Calif.
Application May 21, 1946, Serial No. 671,224
1 Claim. (Cl. 137—152)



An air control device comprising, a body having a cylindrical cavity closed at one end and having an outlet near said closed end adapted to be connected to an intake manifold of an internal combustion engine; a partition member having orifices therethrough disposed within said cavity, and having an axial pin extending toward the open end of said cavity, said orifices being arranged to be closed by a moveable actuator plate; an actuator plate having an axial hole and adapted to slide on said pin, said plate being smaller in diameter than said cavity to provide an annular passageway for air around its edges, said plate having substantial thickness in the range from about one-fourth to one-eighth of the diameter of said cavity; spring means adapted to hold said actuator plate at times out of contact with said partition member; closure means in the open end of said body cavity having orifices therethrough distributed over its area; and spring means adapted to hold said actuator plate out of contact with said closure means; the air conduits through said closure means, through said partition member, and in the annular space around said actuator plate being of approximately equal cross-sectional areas.

2,454,481
LIFTING MECHANISM FOR DUMP BODIES
George Mackenzie Rumsby, Toronto, Ontario, Canada
Application February 12, 1947, Serial No. 728,157
9 Claims. (Cl. 298—22)

1. In a lift mechanism for a dump body pivotally mounted on the rear end of a frame, a fluid cylinder pivotally mounted at its rear end on said frame to extend approximately in horizontal direction but forwardly of the pivot of the dump body, said cylinder including a piston rod for movement outwardly of the forward end thereof, a lift plate extending longitudinally of said frame for movement in a vertical plane and having a base portion substantially horizontally disposed in the lowered position of the dump body to terminate in a forward end and a rearward end, means pivotally connecting the lift plate to said piston rod at a point above said base portion, a link pivotally connecting said lift plate at its forward end to the dump body, a second link connecting said lift plate to the dump body, said second link being pivoted to said rear end of the lift plate and being pivoted to the dump body above the pivotal mounting thereof, and means providing an inclined face on said frame sloping upwardly and rearwardly from said rear corner of the lift plate and on which this end portion is adapted to slide, the arrangement being such that said second link forms a fulcrum for the lift plate to cause it to swing upwardly in the initial dumping movement and then permit it to ascend said inclined face.

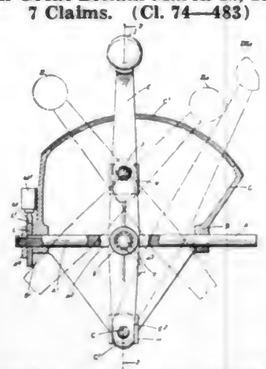


2,454,482
DISK PLOW
Alvah E. Rutter, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis., a corporation
Application September 30, 1943, Serial No. 504,427
6 Claims. (Cl. 97—53)

2. In a disk plow having a beam, a front truck, a front supporting wheel and raising mechanism, a land wheel, a crank axle therefor, and a power lift clutch for raising and lowering the plow relatively to the land wheel and crank axle, the com-

bination of a connection from said crank axle to said raising mechanism including a rock shaft having an arm, a link connection from said arm to said crank axle, and an arm actuating said raising mechanism, said rock shaft extending in a generally fore-and-aft direction substantially at right angles to said beam.

2,454,483
SWIVEL CONNECTION OR JOINT
Walter J. Rysick, Fort Wayne, Ind.
Application May 2, 1947, Serial No. 745,524
9 Claims. (Cl. 287—91)

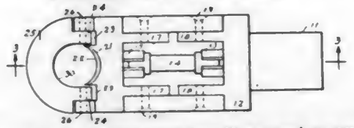


1. A swivel unit including two members, one of which has parallel, spaced wings containing openings opposite each other, a trunnion device, divided lengthwise into two parts, extending transversely of said wings through and journalled in said openings, each trunnion part having at one end a head engaged with the outer side of the adjacent wing, the heads being at opposite ends of the trunnion device, said trunnion device having at the middle a transverse hole that passes through both parts thereof, and the second of said members having a part extending through said hole and having thereon a shoulder to prevent withdrawal of such part through the said hole, the axis of said second part extending perpendicularly to the axis of the trunnion device.

2,454,484
SHAKER CONVEYER
William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application October 4, 1945, Serial No. 620,362
11 Claims. (Cl. 198—220)

1. In a feeding mechanism for shaker conveyers, two reciprocating troughs, one of which is extensible with respect to the other, a carrier member, a link connecting one end of said carrier member with one of said troughs, friction grip means mounted on said carrier member for engagement with the other of said toughs, a transverse shaft, said link being rectilinearly movable with respect to said shaft, a hand lever for operating said shaft, a holding cam freely mounted on said shaft and adapted to engage said link and hold it from rectilinear movement with respect to said shaft, and yieldable means adapted to move said holding cam into position to drop into engagement with and to hold said link from rectilinear movement with respect to said shaft, upon reversal of movement of the conveyer and the positioning of said hand lever in the desired operative position, to cause said link to exert a force on said carrier member in a direction to grip said grip blocks with their respective trough during alternate strokes of the conveyer and move one of said troughs with respect to the other of said troughs.

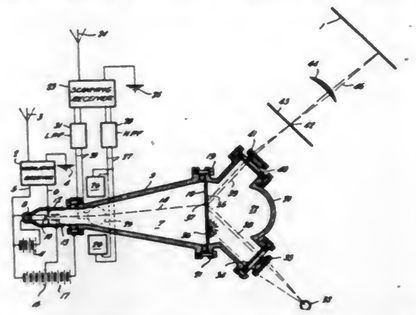
2,454,485
CONTROL LEVER MECHANISM
Leonard Stanley Snell, Bedfont, Feltham, England, assignor to D. Napier & Son Limited, London, England, a company of Great Britain
Application March 1, 1948, Serial No. 12,255
In Great Britain March 12, 1947
7 Claims. (Cl. 74—483)



1. Control lever mechanism comprising in combination a framing, a rod member mounted in the framing so that it can be reciprocated and also rotated about its axis, a rocking lever, a pivot connection between the rod member and the rocking lever this connection being at a point intermediate in the length of the lever and the connection being such that when the lever is rocked the rod member will be reciprocated and if the lever is swung laterally the rod member will be rotated about its axis, two sockets on the said framing spaced apart in the direction of the length of the said lever, two lateral projections on the said lever placed on opposite sides of the said pivot connection between the lever and the rod member, and both spaced apart from that pivot connection each projection being adapted to engage one of the said sockets on the framing when the lever is swung laterally about the axis of the rod member, each projection when engaged with a socket functioning as a fulcrum for the said lever so that when rocked the lever will turn about that fulcrum and slide the rod member in a direction which will be determined by the fulcrum projection which is engaged with its socket as the lever is then rocked, and a slotted plate mounted on the said framing and constituting a gate through which the said lever passes and by which it is guided as it is rocked and when swung laterally to engage one fulcrum projection or the other with its corresponding socket on the framing.

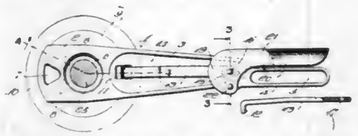
2,454,486
VULCANIZABLE MIXTURE OF THERMOPLASTIC INTERPOLYMERS
George William Stanton and Charles Everett Lowry, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application July 28, 1947, Serial No. 764,242
4 Claims. (Cl. 260—45.5)

1. A vulcanizate of a mixture of (A) from 10 to 67 per cent by weight of the thermoplastic interpolymer produced by polymerizing styrene while in aqueous emulsion, at a temperature above 50° C. and then adding monomeric butadiene to the emulsion of substantially fully polymerized styrene and polymerizing the butadiene while dispersed in the emulsion at a temperature above 50° C., in proportions such that the final interpolymer contains from 20 to 80 per cent of styrene interpolymerized with from 80 to 20 per cent of butadiene, and (B) correspondingly from 90 to 33 per cent by weight of the interpolymer of (1) from 25 to 85 per cent of vinylidene chloride, (2) from 15 to 50 per cent of butadiene, and (3) up to 60 per cent of a compound copolymerizable with the vinylidene chloride and butadiene, containing a single ethylenic double bond in its monomeric molecule and capable of forming by itself a thermoplastic polymer.



2,454,487
BATTERY CONNECTOR AND FUSE
Clarence Edward Storck, Jr., Lutherville, Md.
Application April 24, 1945, Serial No. 590,033
1 Claim. (Cl. 200—115.5)

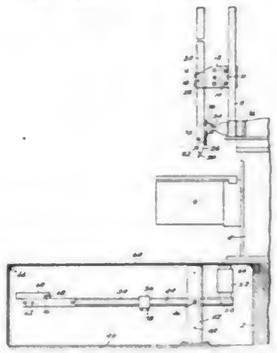
A combination fuse and binding post connector comprising in combination, a lug element including a fuse connection coupled thereto, a split socket including an extension part having a predetermined surface arranged for electrical coupling to a binding post by being similarly conformed on one portion thereof and a cap piece hinged at an upper portion to the upper portion of said extension part so the socket can open up underneath and formed to fit around another portion of said binding post, said extension part also including another fuse connection mechanically symmetrical with the first mentioned fuse connection whereby said connections can hold a fuse connectable between them, insulating blocks removably attached to the said element and bridging over to said extension part to electrically and mechanically separate each from the other while at the same time holding them in rigid physical alignment with each other, and forming assembled a fuse holder, and flat springs attached to said extension part and cap piece and joining the split socket together without obstructing the operation of the hinge to position the lug element and extension part at an angle to said cap piece when normally the latter is not attached to said binding post and being subject to straight line alignment when placed on said binding post and the said holder including the extension parts swung on said hinge with an edge of the holder fulcrumed on a portion of the binding post, whereby leverage pressure on the holder will draw the cap piece and extension part of the holder in closer contact with said binding post and electrically couple the lug element through the fuse and connections, said extension part and cap piece to provide a fused coupling between the binding post and the lug element, with said springs holding them rigidly in a position encompassing the binding post when in said straight line alignment after being forced therein and until said holder is forcibly tilted back to its angular unloosened position again.



2,454,488
LIGHT MODULATION BY VARIABLE TRANSMISSIVITY RECEIVER SCREEN
Thomas W. Sukumlyn, Los Angeles, Calif.
Original application April 2, 1938, Serial No. 199,667. Divided and this application February 2, 1942, Serial No. 429,146
14 Claims. (Cl. 178—7.5)

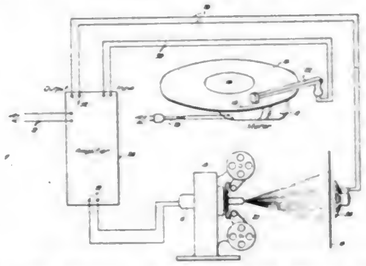
10. A television picture reproducing device comprising a source of light, means for projecting an image of said source, control means including an element having a variable light dispersing characteristic adapted to be altered by application of heat thereto, disposed in the projection path of said light to permit its passage therethrough, means disposed adjacent said control

means for reflecting said projected light through said element, said last-named means adapted to be heated by electron bombardment, and means for bombarding said last-named means point by point with a beam of electrons modulated in accordance with a television picture signal.



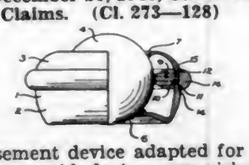
2,454,489
SPANNER WRENCH WITH MEANS TO GRIP THE INNER SURFACE OF PULLEY RIMS
Jerry J. Sullivan, Huntington Park, Calif.
Application May 31, 1946, Serial No. 673,308
5 Claims. (Cl. 81—90)

1. A wrench comprising a body having a head at its front end and a shank extending rearwardly from the head and terminating in a rigid handle, the head being formed with an opening and the shank with a longitudinally extending recess, there being an opening formed adjacent the front end of the recess and a longitudinally extending arcuate slot near its rear end, said shank being formed near its rear end with an opening spaced transversely from the arcuate slot, lugs extending downwardly from the head forwardly of its opening and extending radially thereof and having their front ends beveled from opposite side faces to form sharpened front ends for the lugs, a movable handle U-shaped in cross section straddling the shank and the rigid handle and having front ends of its side flanges enlarged, a pin passing through the opening at the rear end of the shank and through side portions of the enlarged front end portion of the movable handle and pivotally mounting the movable handle, a strip extending longitudinally in the recess of the shank and having its front end portion bent to form a finger passing through the opening at the front end of the shank, the rear end of said strip fitting under the enlarged front end portion of one flange of the pivoted handle, and a pin passing through the slot of the shank and through aligned openings formed through the rear end of the strip and side portions of the front ends of the flanges of the pivoted handle to pivotally connect the strip with



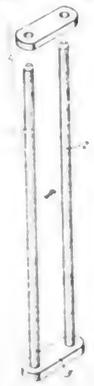
the pivoted handle and cause the strip to be shifted longitudinally and its tooth moved towards and away from the lugs when the pivoted handle is moved.

2,454,490
MACHINE TOOL SHAPER ATTACHMENT
James R. Tackett and Val G. Evans, Olive Hill, Ky.
Original application June 12, 1945, Serial No. 599,074. Divided and this application October 23, 1946, Serial No. 705,092
4 Claims. (Cl. 90—38)



1. A shaper attachment for shaper rams comprising a pair of vertically-disposed spaced parallel support, a cross head mounted for vertical sliding movement mounted in the supports, a block pivoted in the cross head, a rocking arm adjustably mounted in the block, a swivel link connecting the lower end of the arm with the shaper ram, and a tool holder on the lower end of the arm.

2,454,491
METHOD OF REPRODUCING SOUND MOTION PICTURES IN SYNCHRONISM WITH THE PICTURE AND SOUND ON SEPARATE MEDIA
Lloyd Thompson, Kansas City, Mo.
Application November 19, 1945, Serial No. 629,569
3 Claims. (Cl. 88—16.2)

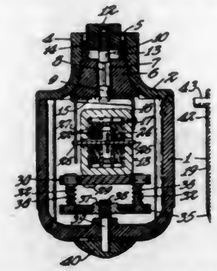


2. The method of reproducing sound motion pictures originally produced with the pictures and sound on a film of one size through use of a projector capable only of projection of films of a smaller size, which method comprises the steps of re-recording the sound from said film on a phonograph record; creating an impulse of predetermined frequency on said record as the sound is re-recorded; reproducing the pictures from said film on a film of said smaller size; playing said record at the rate of twenty-four frames per second; and simultaneously projecting the pictures through use of said projector at the rate of sixteen frames per second as the latter is started by said impulse.

2,454,492
CURLING STONE
William James Turnbull, West Vancouver, British Columbia, Canada
Application December 26, 1946, Serial No. 718,494
3 Claims. (Cl. 273—128)

3. An amusement device adapted for use on a playing surface, said device comprising a thin walled cup shaped lower section of moulded material having a bottom opening, a concavo convex upper section having an opening and a depending wall, both of said openings being concentric with the vertical axis of the casing, a bearing connecting the lower and upper sections and extending inwardly therefrom, a heavy ball freely journalled in the bearing, said ball being adapted to project through the bottom section opening to bear upon the playing surface when the casing is in contact with said surface.

2,454,493
CROCHET FRAME
Verla E. Upstill, Minneapolis, Minn.
Application November 18, 1946, Serial No. 710,533
1 Claim. (Cl. 66—1)

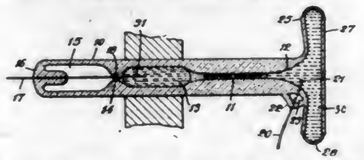


In a crochet frame, a pair of elongated spaced parallel work rods, a permanent spacer link connecting one end of each work rod to a like end of the other thereof, and a detachable spacer link on the opposite ends of said rods, said detachable spacer link having a pair of spaced openings adapted to snugly receive the free ends of said rods.

2,454,494
BONE CONDUCTION RECEIVER
Leland A. Watson and Paul C. Heijn, Minneapolis, Minn., assignors to the Maico Company, Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application May 27, 1946, Serial No. 672,672
2 Claims. (Cl. 179—107)

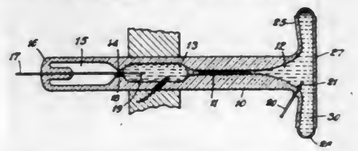
1. An audiometric device for determining bone conduction acuity comprising a casing having a

head-engaging portion, a plunger mounted for limited reciprocating movements in said head-engaging portion and normally projecting outwardly therefrom, a magnetic reproducer having a vibratory element mounted for reciprocation within said casing, means rigidly connecting the plunger to the vibratory element on the reproducer, a thrust plate in said casing, yielding



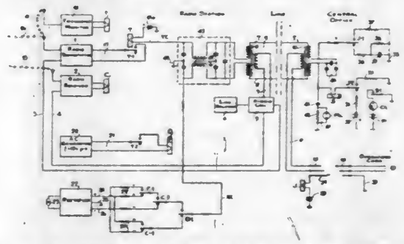
biasing means interposed between the thrust plate and the magnetic reproducer, and means for imparting movements to the thrust plate whereby to vary the pressure exerted by the yielding biasing means against the reproducer and plunger, said last-mentioned means terminating in a manually operatable knob exterior of the casing and remote from said plunger.

2,454,495
ALDEHYDE CONDENSATION PRODUCTS OF AMINOTRIAZINES AND THE MANUFACTURE THEREOF
Gustave Widmer and Theodor Sutter, Basel, Willi Fisch, Binningen, and Ernst Hochuli, Basel, Switzerland, assignors, by mesne assignments, to Ciba Products Corporation, Dover, Del.
No Drawing. Application June 12, 1940, Serial No. 340,176. In Switzerland July 1, 1939
16 Claims. (Cl. 260—21)



1. As new articles of manufacture the substantially neutralized polymeric condensation products obtained by condensing aldehydes with aminotriazines, and with compounds containing at least one alcoholic hydroxy group, at temperatures below 50° C., in presence of a proportion of an acid catalyst amounting to from about ⅓ to about 2 mols per mol of aminotriazine, said products being characterized by a high degree of etherification, by a comparatively low degree of condensation, by high solubility, and by a high stability to storing.

2,454,496
TRANSDUCER
Howard W. Ashton, South Ardmore, Pa., assignor to O. W. Storey & Associates, Chicago, Ill., a partnership
Application April 9, 1947, Serial No. 740,419
7 Claims. (Cl. 171—330)

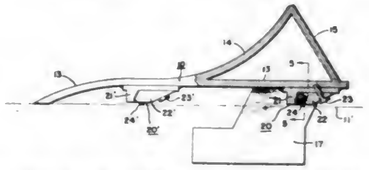


1. A transducer comprising a tubular insulating member having a capillary bore and enlarged regions at opposite ends of said bore, capillary electrometer interface-forming liquids within said member and forming at least one interface within said bore, conducting liquids in said regions, said tubular member having a flaring portion at one end thereof and having an end wall sealing said tubular member at the flared portion, said flaring portion forming part of one of said enlarged regions and having a weakened, annular flexing zone, and leads to the liquids on opposite sides of the capillary.

2,454,497
ELECTRICAL APPARATUS
Howard W. Ashton, Havertown, Pa., assignor to Oliver W. Storey, Chicago, Ill., as trustee for the partnership of O. W. Storey & Associates, Chicago, Ill.
Application August 8, 1947, Serial No. 767,507
10 Claims. (Cl. 171—330)

1. A capillary electrometer transducer comprising an insulating container having two chambers therein connected by a capillary channel, interface-forming liquids in said capillary channel providing at least one interface in said channel, conducting liquids in said chambers for providing electrical connections to said interface-forming liquids, said container having a third chamber connected to one of said two chambers by a restricted channel with the liquid in said one chamber extending at least partly into said restricted channel, wire leads extending from the exterior of the capillary system to the liquid-filled chambers, one of said wires having a portion disposed in said third chamber, said one wire extending through said restricted channel into the liquid in said one chamber.

2,454,498
SIGNALING AND CONTROL SYSTEM FOR CARRIER TELEPHONE TRUNK CIRCUITS
Everhard H. B. Bartelink, Bronxville, N. Y., assignor to General Telephone Corporation, New York, N. Y., a corporation of New York
Application February 29, 1947, Serial No. 729,829
7 Claims. (Cl. 250—6)

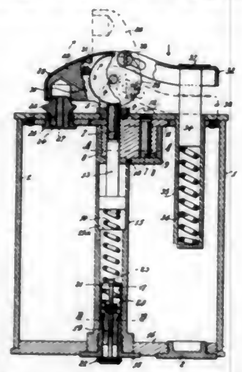


1. In a communication system: a carrier current transmitter and receiver; a two-conductor circuit connecting the same to a central office; a carrier relay responsive to carrier current incoming to said receiver; a transmitter relay for switching on carrier current outgoing from said transmitter; a supervising relay at the central

office; means including said carrier relay and one conductor of said two-conductor circuit, for energizing said supervising relay in response to incoming carrier; and means including the remaining conductor of said two-conductor circuit and switching means at the central office for energizing said transmitter relay to switch on the outgoing carrier.

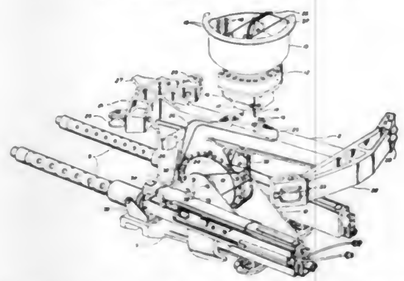
2,454,499
X-RAY SCREEN
William H. Byler, Morris Plains, and Clayton C. Carroll, Madison, N. J., assignors to United States Radium Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 21, 1944, Serial No. 564,549
1 Claim. (Cl. 117—33.5)

An X-ray screen coated with a luminous material composed of zinc sulfide, cadmium sulfide, with a trace of silver, the cadmium sulfide content being above 38%, the silver content being not more than one part in 3000, and the balance being substantially all zinc sulfide, the dominant wave length of the fluorescent color of the luminous material being in the range of 559 to 618 millimicrons.



2,454,500
CAR-RAIL STOP
John L. Bowen, Sr., Morgantown, W. Va.
Application September 25, 1946, Serial No. 699,109
10 Claims. (Cl. 104—257)

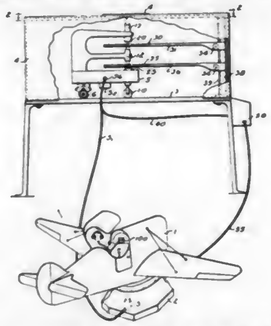
1. A non-slidable rail stop device that is constructed to translate force exerted by a car wheel into a proportionate rail-biting force which comprises, a body portion having a wheel-receiving part constructed and arranged at its front end to rest upon a rail and to guide the car wheel on the device, said wheel-receiving part being sloped upwardly from the front end thereof toward a rear end thereof for receiving the car wheel thereon, a key part projecting from beneath said body portion into engagement with the rail, said key part being located in a backwardly-spaced wheel-supporting relationship with respect to the front end of said wheel-receiving part, said key part having a rail-engaging edge that is positioned with a backward bias with respect to the device and with respect to the direction of movement of the wheel on the device.



2,454,501
PYROPHORIC LIGHTER
Frederick James Camm, London, England
Application May 16, 1946, Serial No. 670,056
In Great Britain January 25, 1946
1 Claim. (Cl. 67—7.1)

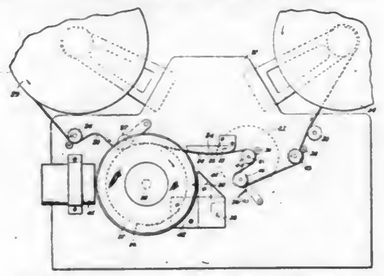
A pyrophoric lighter comprising a suitably shaped closed receptacle adapted to contain absorbent material saturated with inflammable liquid, a closable liquid filling orifice in said receptacle, an abrasive "flint" wheel mounted in bearings on the outside of the receptacle, a wick nipple carried adjacently to the "flint" wheel, a channel shaped lever pivoted to the axis of the "flint" wheel and forming a guard therefor, a block carried within one end of the lever to form a snuffer for the wick and formed with a tangential surface contiguous to the periphery of the "flint" wheel, a roller (or ball) interposed between such surface and the periphery of the "flint" wheel to form therewith a one way clutch, a bifurcated finger operable arm aligned with said lever and slotted to receive headed studs screwed into the sides of said lever, a spring controlled

rectilinearly moving plunger depending from said arm, a magazine for a plurality of "flints" consisting of a series of concentrically and vertically arranged pockets, one for each "flint," formed in a barrel rotatably carried within a casing fixed within the upper part of the receptacle, a "flint" nipple carried on the top plate of the receptacle beneath the periphery of the "flint" wheel and the bore of said nipple communicating with one of said pockets and an adjustable spring operated from outside the receptacle for impelling the positioned "flint" on to the "flint" wheel, as set forth.



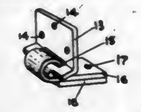
2,454,502
GUN SUPPORTING MECHANISM
John C. Christian, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application June 30, 1945, Serial No. 602,533
6 Claims. (Cl. 89—37.5)

1. Gun supporting mechanism comprising a stationary housing having a substantially circular opening therein, a carriage received within said housing opening and including a beam extending substantially diametrically above said housing opening and having arms extending transversely of said beam at opposite ends thereof projecting beyond opposite sides of said beam,



roller means interengaged between said arms and said housing and operable to support said carriage from said housing, a frame beneath and supported by said beam, adapted to carry a gun, and means operable to swing said frame relative to said carriage, and to rotate said carriage relative to said housing, for effecting aiming movement of the gun carried by said frame.

2,454,503
AUTOMATIC AURAL-VISUAL SIGNAL TRANSMITTER FOR AVIATION GROUND TRAINERS
Carl J. Crane, Dayton, Ohio
Application March 30, 1940, Serial No. 327,003
20 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

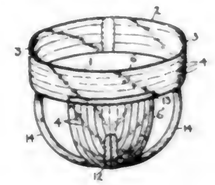


18. The combination with an aviation ground trainer for simulating the flight of an aircraft, of a remotely located position recording carriage movable responsive to operation of the ground trainer by a student, of a light source for transmitting light relative to the area over which said carriage is movable, photoelectric means attached to said carriage and means cooperating with said light source and photoelectric means for varying the light received by said photoelectric means in accordance with a predetermined intensity pattern corelated to the area over which said carriage is movable to thereby produce an electric current of a strength depending on the intensity of light received by said photoelectric means and signal means operated by said electric current.

2,454,504
NONINTERMITTENT CINEMATOGRAPHIC PROJECTOR
Franz F. Ehrenhaft, Forest Hills, N. Y.
Application January 29, 1946, Serial No. 644,105
11 Claims. (Cl. 88—16.8)

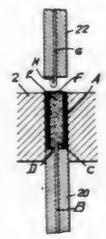
1. In a cinematographic projector, in combination a light source emitting a projecting light beam; a film gate arranged in the path of said light beam and adapted to guide a film during movement of said film through said film gate so that said light beam emitted by said light source is impinging on one side of said film; a sprocket arranged in the plane of said movement of said film through said film gate immediately adjacent to one end of the same in such a manner as to engage the other side of said film before passing through said film gate; a compensating prism arranged co-axially with said sprocket having a diameter being larger than the diameter of said sprocket; means carrying both said sprocket and said compensating prism rotatably about a common axis which is normal to said plane of movement of said film through said film gate; light reflecting means arranged in said path of said light beam after the same has passed through said film gate reflecting said light beam through said compensating prism; film transporting means arranged in the path of said film after the same has passed through said film gate; and fly wheel means arranged immediately adjacent to the other end of said film gate between the same and said film transporting means and constructed in such a manner as to engage said film immediately after the same has passed through said film gate and to be rotated by the same.

2,454,505
DOOR HOLDER
Edward L. Evans, Wilmington, N. C.
Application August 23, 1946, Serial No. 692,648
1 Claim. (Cl. 292—76)



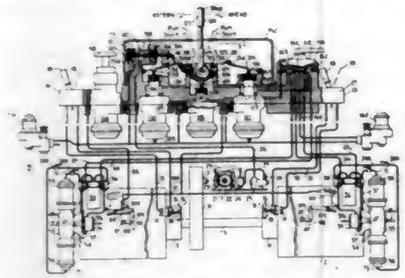
A door holder, comprising a plate adapted to be rigidly secured to a vertical surface of a door frame adjacent the opening therein, an integral lateral portion of said plate extending laterally therefrom substantially at right angles thereto in a plane substantially parallel to the edge of a closed door, said portion being formed with an elongated slot therein, said portion including a free edge formed with an integral extension comprising a tongue of reduced diameter, said tongue being formed to provide a coil spring including a turn extending through said slot, said tongue terminating in a straight portion extending inwardly of said opening of said frame at an acute angle to said lateral portion of said plate whereby to resiliently engage and hold an edge of a closed door.

2,454,506
COMPOSITION OF RUBBERLIKE QUALITIES
Albert C. Fischer, Chicago, Ill.
No Drawing. Application January 6, 1943, Serial No. 471,503
5 Claims. (Cl. 260—758)



1. A combined bituminous and rubber composition formed of a batch compounded of a minor proportion of rubber, not less than 3½%, 35 to 40% of an asphaltic material having a melting point of about 170° F. to 180° F., ½ to 1% of a plasticizing agent, 35 to 40% of an asphaltic material of a different grade having a flow point of about 90° F., 5 to 10% of a mineral filler, and 1 to 3% of a flow retarding agent, forming a homogeneous composition characterized by a high degre of yieldability, elasticity, cohesiveness and adhesive tenacity.

2,454,507
ATHLETIC SUPPORTER
Charles J. Flaherty, New York, N. Y.
Application September 14, 1944, Serial No. 554,001
4 Claims. (Cl. 66—190)

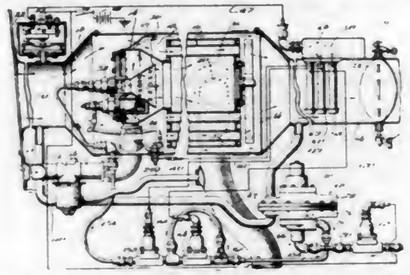


1. An athletic supporter comprising a waistband made of elastic knitted webbing having a single elastic element constituted by a plurality of rubber strands extending lengthwise at spaced intervals in the webbing, the spaces between the strands being filled with an elastic knitting fully enclosing the strands, the rubber strands being turned around at the ends of the webbing in a continuous zig-zag pattern, the ends of the webbing being stitched together edgewise by a flat-lock stitching; and a pouch made of an elastic knitted material attached to the lower edge of the waistband by a stitching.

2,454,508
RESISTOR AND METHOD OF MAKING THE SAME
George G. Herrick, Benzinger Township, Elk County, and Hugh N. Veley, St. Marys, Pa., assignors to Speer Resistor Corporation, St. Marys, Pa., a corporation of Pennsylvania
Application December 13, 1940, Serial No. 370,010
2 Claims. (Cl. 201—63)

1. The method of making a molded resistor comprising compressing, in an opening in a die and about a pin extending centrally through said opening, loose insulating material to form a cylinder thereof, withdrawing the pin while leaving the cylinder in said opening, closing the lower end of the cylinder by means of pressure applying member carrying a projecting lead wire, filling into the cylinder and about a projecting portion of the lead wire loose resistance material, and applying to both the cylinder and contained resistance material pressure by means of said member and a second opposing member also carrying a projecting lead wire, thereby to form a resistor having the lead wires embedded in the resistance material thereof.

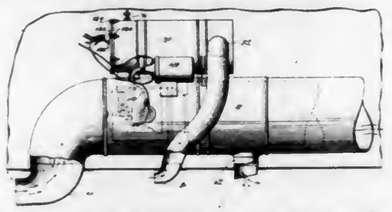
2,454,509
CONTROL APPARATUS
Ellis E. Hewitt, Edgewood, and Arthur G. Larson, Forest Hills, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application September 3, 1943, Serial No. 501,062
9 Claims. (Cl. 60—97)



1. An apparatus for controlling operation of a control means for a reversible prime mover which control means is selectively operable to condition said prime mover for operation in either one direction or in the reverse direction and for also controlling the positioning of a control member for said prime mover which control member has a first position, a prime mover starting position, and a third position intermediate said first and starting position for effecting operation of said control means, said apparatus comprising in combination, mechanism operable to move said member from said first position to said starting position, an operator's control device operable upon movement to a start position to effect operation of said mechanism to move said member from its first position to its starting position, stop means operable to limit movement of said member to its intermediate position upon movement of said operator's control device to its start position, and means controlled by said control means operable to render said stop means effective during operation of said control means and ineffective upon conditioning of said prime mover for operation.

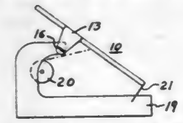
2,454,510
METHOD OF FORMING A COFFEE CONCENTRATE
Wilbert A. Heyman, New York, N. Y.
No Drawing. Application October 14, 1944, Serial No. 558,733
11 Claims. (Cl. 99—71)

1. The method of forming a coffee concentrate which comprises heating coffee to a roasting temperature, quenching the hot roasted coffee with a solution comprising corn syrup so that the volatile coffee constituents given off during this quenching are retained by the corn syrup, and separating the solid, insoluble residual coffee from the liquid solution containing the volatile flavors.



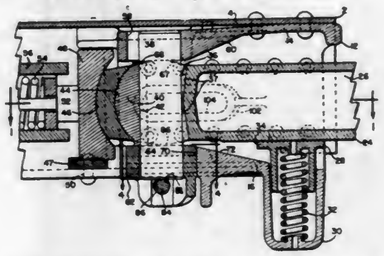
2,454,511
COMBUSTION AIR HEATER HAVING VARIABLE OUTPUT WITH CONSTANT TEMPERATURE
Seymour E. Heymann, Evanston, and William A. Marshall, Jr., Chicago, Ill., assignors to Stewart-Warner Corporation, a corporation of Virginia
Application April 13, 1944, Serial No. 530,788
2 Claims. (Cl. 126—110)

1. A heating apparatus of the class described, comprising a heater having a combustion chamber and a heat exchanger, said heat exchanger having inlet and outlet ventilating air connections, a ram which supplies ventilating air to said heat exchanger inlet at a variable rate and at variable pressure, a nozzle for supplying fuel to said combustion chamber, a source of fuel under constant pressure, fuel regulating means connecting said source with said nozzle to increase or decrease the flow of fuel to said combustion chamber in proportion to increases or decreases in the pressure drop of the ventilating air across said heat exchanger, said regulating means in-



cluding a sealed diaphragm chamber, diaphragm means in said chamber, means forming static pressure connections at the inlet and outlet connections of said heat exchanger, and conduit means connected for establishing communication between the space in said chamber on opposite sides of said diaphragm and the inlet and outlet static pressure connections of said heat exchanger, and valve means located at the outlet end of the heat exchanger and adjustable at will to vary the flow of ventilating air through said heat exchanger.

2,454,512
AIRCRAFT HEATER, INCLUDING MEANS TO PREVENT FUEL CONTAMINATION OF THE VENTILATING AIR
Seymour E. Heymann, Evanston, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 17, 1945, Serial No. 610,978
5 Claims. (Cl. 126—116)



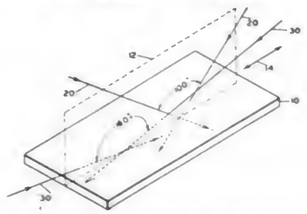
2. An aircraft heater comprising a spray-type liquid fuel burner, a combustion chamber and a heat exchanger associated with said burner, a ventilating air case enclosing said heat exchanger and supporting the latter, said spray-type burner including a fuel nozzle and a fuel line passing through said air case and connected to said nozzle and means forming a jacket enclosing said connection, an air pipe for supplying combustion air to said burner, said air pipe being connected to said jacket and enclosing said fuel line so that fuel leaking from the connection will be carried into said burner along with the combustion air, a pressure-tight container, means securing said container to said casing so that said container is supported from said casing, said container having a pressure-tight closure member, fuel control means located in said container and connected to said fuel line, means connecting said air pipe to the bottom of said container, said pipe acting as means for conducting combustion air to said burner, an inlet combustion air connection for said container, and a fuel supply fitting passing through the wall of said container in air-tight relationship thereto, said fitting being connected to said fuel control means.

2,454,513
SHIELD FOR DENTAL LATHES
John P. Honey, Danville, Ill.
Application June 21, 1945, Serial No. 600,818
4 Claims. (Cl. 51—272)

1. A dental shield comprising a rectangular frame, having upright sides and a ledge disposed at right angles to the sides, means disposed on the sides of the frame near the midpoint but slightly nearer one end than the other, including members for adjustably attaching the frame to a dental splash box, and a transparent shield resting unsecured upon the above mentioned ledge within the frame.

2,454,514
COUPLER ATTACHMENT
Frank H. Kayler, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application December 6, 1946, Serial No. 714,436
20 Claims. (Cl. 213—12)

1. In a device of the class described, a car body underframe including a center sill, a hollow member encased within said center sill and comprising a striking casting and coupler support, a coupler shank projecting into said member, spaced guides in said member embracing the inner end of said shank therebetween, arcuate surfaces on said inner end of said shank engaging said guides, and slidable universal coupling means securing said shank to said member and permitting angling of said shank in both vertical and horizontal directions, and allowing said shank to reciprocate within said member, said means comprising a vertically disposed pivot pin extending through an opening in said shank and having the opposite ends thereof received within vertically aligned slots in said guides, said slots being elongated in the direction of the length of said shank and permitting said pin to slide therein upon reciprocal movement of said shank



in a direction inwardly and outwardly of said member, yieldable means abutting the inner end of said shank and limiting the inward movement thereof, a bushing sleeved over at least one end of said pin and received in the associated slot and slidable with said pin therein, and securing means extending through said bushing and seated against the adjacent end of said pin.

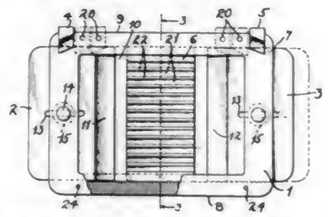
2,454,515

LIGHT-POLARIZING SHEET OF MOLECULARLY ORIENTED TRANSPARENT LINEAR HIGH POLYMER DYED WITH DICHROIC SUBSTANCE AND PROCESS OF MANUFACTURE

Edwin H. Land, Boston, Mass., assignor to Polaroid Corporation, Dover, Del., a corporation of Delaware

Application October 29, 1938, Serial No. 237,783
20 Claims. (Cl. 88—65)

1. The process of making a light polarizer, comprising rendering rubber-elastic a sheet of a transparent, linear, high polymeric plastic material, extending said sheet substantially to the limit of extension of its rubber-elastic state, setting said sheet in said extended condition, and rendering said sheet dichroic by dyeing said sheet with a dichroic stain at one stage of said process.



12. A plane polarizing film having a high degree of transparency for polarized light and comprising a light-polarizing substance dispersed throughout light-transmitting, high molecular weight synthetic linear polymer which has been extended under stress in the solid unoriented state with the polarizing substance contained in the solid polymer to a state of permanent high linear extension and molecular orientation of the polymer and of the polarizing substance in the direction of the stress, said plane polarizing film exhibiting a high degree of permanent orientation up to temperatures approaching the melting point of the polymer.

2,454,516

ADJUSTABLE MULTIPLE PLATE HOLDER

Fred R. Laureyns, Middle Village, N. Y.

Application May 9, 1947, Serial No. 747,079
5 Claims. (Cl. 211—41)

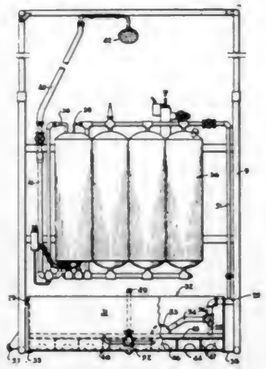
1. A plate holder for supporting a plurality of plates thereon in a vertical position comprised of a frame member formed with a flat top portion having a central opening therethrough, a pair of block members having sliding engagement with said frame member and having beveled plate supporting inner ends, means for adjustably positioning the block members with respect to said frame member so that their inner ends are adapted to support different sized plates, a pair of plate rest arms removably mounted on said frame member, and grooved plate supporting means made of resilient material positioned in the holder between the beveled ends of said block members.

2,454,517

NAPKIN HOLDER

Walter J. Lisek, Chicago, Ill.

Application December 19, 1944, Serial No. 568,870
3 Claims. (Cl. 24—81)



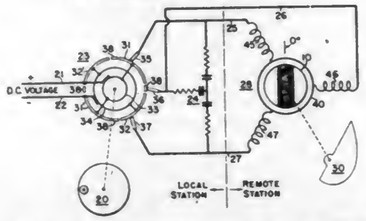
1. A napkin holder adapted to be attached to an article of apparel on a wearer and capable of supporting a napkin therefrom comprising a pair of T-shaped members, the said members fastened one behind the other along one edge and spaced apart a determined distance, a pair of bulges in the forward face of the back T-member extending to the back of the front T-member, and a clip secured to the face of said front T-member.

2,454,518

PORTABLE SHOWER UNIT

Gordon McCann, Oakland, Calif.

Application November 13, 1944, Serial No. 563,250
4 Claims. (Cl. 4—146)



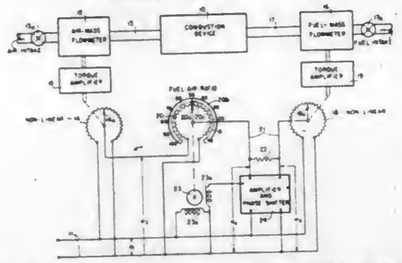
1. In a shower unit of the character described, a frame comprising relatively spaced vertical members at the front and at the rear thereof, means between the rear members securing same together in fixed spaced relation, a tray pivotally secured to the rear members for horizontal positioning adjacent the bottom of the frame and for vertical positioning substantially parallel to the rear members, arms secured to corresponding front and rear members and pivotally secured together to hold the corresponding members in operative spaced relation or permit the front members to be swung relatively inwardly against and overlying the tray when the latter is vertically disposed, and means releasably securing the front members in outwardly extended position.

2,454,519

COMBINATION STEP-BY-STEP AND INDUCTION MOTOR

Joseph T. McNaney, Baltimore, Md., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware

Application September 26, 1946, Serial No. 699,460
10 Claims. (Cl. 318—27)



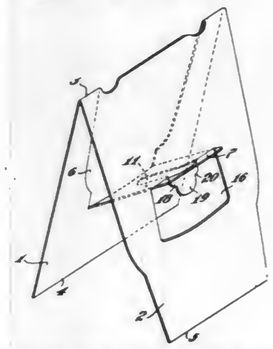
10. Means for remotely tuning a receiver comprising a motor, said motor comprising a hollow stator, a cylindrical rotor mounted for rotation within said stator, said rotor comprising a laminated core of highly permeable metal and a cylindrical core supporting member surrounding said core, said core extending diametrically through said member, said member being formed of material of lower electrical resistivity and higher magnetic reluctance than the material of said core, a tuning element for said receiver, means driving said element in proportion to the movement of said rotor, and means for providing a magnetic field rotating in a stepwise fashion within said stator, the last named means comprising a source of control voltage, means applying said voltage to said stator in a manner to create a magnetic field in the space occupied by said rotor, and remotely located means for varying the application of said voltage to said stator in a manner to rotate said magnetic field.

2,454,520

RATIO-MEASURING SYSTEM

David W. Moore, Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation, a corporation of Delaware

Application March 23, 1945, Serial No. 584,465
7 Claims. (Cl. 177—351)



5. A system for continuously measuring the ratio of two variable quantities comprising, an electric supply circuit, a pair of voltage dividers coupled to said supply circuit each including an adjustable contact, means for adjusting the contact of one of said dividers in accordance with variations of a first of said quantities, means for adjusting the contact of the other of said dividers in accordance with variations of the other of said quantities, a third voltage divider connected across the portion of one of said pair of dividers selected by its contact, a comparison circuit including the contacts of said third divider and the other of said pair of dividers, means controlled by said comparison circuit for adjusting the contact of said third divider to balance said comparison circuit, and ratio-indicating means associated with said third divider and including a pointer adjusted in accordance with adjustment of the contact thereof.

2,454,521

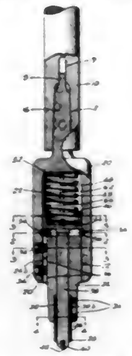
EASEL BACK

Gordon E. Nichols, Middleboro, Mass., assignor to Winthrop-Atkins Co., Inc., Middleboro, Mass., a corporation of Massachusetts

Application March 9, 1946, Serial No. 653,338
15 Claims. (Cl. 248—35)

4. A foldable easel back comprising a stiff panel having a leg and a brace connected thereto, the leg and brace having complemental interlocking parts operative when engaged to hold the leg in downwardly divergent position of use relatively to the panel, the lower end of the brace being united to the panel, the leg being hinged at its upper end to the panel and having an aperture through which the brace projects, the leg having a downwardly directed tongue at the upper edge of its aperture, the tongue comprising a base portion and a relatively narrow central tab projecting from the lower end of the base portion, the tongue having substantially horizontal shoulders where the tab protrudes from the base, the brace having a substantially T-shaped slot comprising an elongate guide portion having parallel edges and of a width just sufficient to accommodate said tab with a free sliding fit, the edge of the guide portion merging with upwardly divergent edges defining the bottom of the crossbar of the T-slot, the maximum width of said crossbar portion of the slot being sufficient to accommodate the base of the tongue.

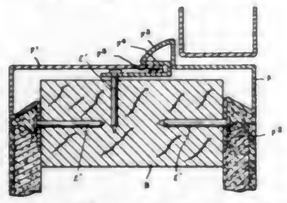
2,454,522



TUBULAR SAW CHUCK

Rufus N. Palmer, Pittsburgh, Pa., assignor to American Pearl Button Co., Washington, Iowa, a corporation of Iowa

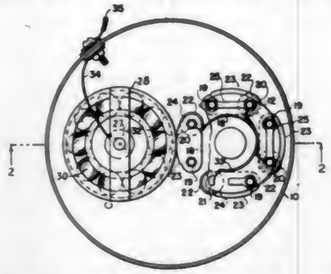
Application December 26, 1944, Serial No. 569,750
4 Claims. (Cl. 79—16)



1. In a chuck for tubular saws, a hollow body, a saw sleeve therein, a tubular saw in said sleeve, an annular interior groove in said body, an arcu-

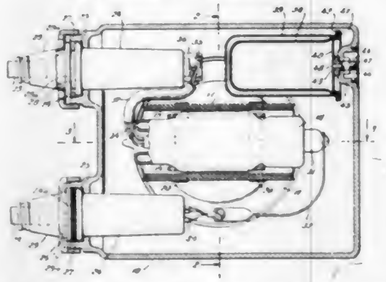
ate stop element therein and having a stop portion projecting sufficiently far into the bore of said body to be engaged by said sleeve, an expeller rod having a head of sufficient size to be

engageable with the inner surface of said arcuate stop element, and a spring within said body and biasing said head toward said stop element, said arcuate stop element limiting the inward movement of said sleeve in the bore of said body.



2,454,523
DOOR CASEMENT AND METHOD OF FORMING THE SAME
George Philip, Detroit, Mich.
Application June 11, 1945, Serial No. 598,815
3 Claims. (Cl. 189—46)

1. A casement for door frames comprising a pair of complementary strips each of a cross section having a portion forming a lining for the door opening and a portion for attachment to the door frame, the door lining portion of one of said strips having an open return bend therein with the under portion thereof extending beyond the upper portion and the lining portion of the other strip telescopically engaging said open return bend to provide for adjustment to different widths of door frames and means engaging the projection on said under portion for securing it to said door frame being concealed by the overlying strip.

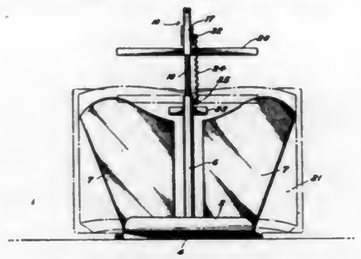


2,454,524
TIMER SWITCH FOR INTERNAL-COMBUSTION ENGINES
Henry Fred. Carl Rietschel, Nassau County, N. Y.
Application August 27, 1946, Serial No. 693,219
5 Claims. (Cl. 200—26)

1. A contact maker for gas engines or the like comprising in combination, a rotary shaft adapted to be rotated in synchronism with the engine, a head carried by said shaft having a plurality of circumferentially extending members disposed about its periphery each pivoted to said head at its forward end and constrained in its outward movement about said pivot, a rotary circular electrode mounted adjacent to said head in position to be contacted by said circumferential members, said electrode being insulated from said

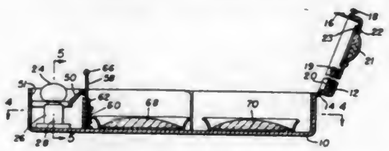
head, and a terminal connected to one of said rotatory members.

2,454,525
X-RAY APPARATUS
Thomas H. Rogers, New Canaan, and William W. Fengler, Glenbrook, Conn., assignors to Machlett Laboratories Incorporated, Springdale, Conn., a corporation of Connecticut
Application October 9, 1946, Serial No. 702,138
5 Claims. (Cl. 250—89)



5. A shockproof X-ray unit which comprises a housing containing insulating fluid, an X-ray tube mounted within the housing with its longitudinal axis generally parallel to the side walls of the housing, the tube having terminals at its opposite ends, a pair of cable terminal members mounted within the housing at one end and extending generally parallel to the longitudinal axis of the tube on opposite sides of said axis and at least in part on opposite sides of the tube, the longitudinal axes of the cable terminal members lying in a horizontal plane offset from a horizontal plane through the longitudinal axis of the tube.

2,454,526
READING STAND
Antonio Savastano, Mount Vernon, N. Y.
Application April 1, 1947, Serial No. 738,691
7 Claims. (Cl. 45—57)



1. A book rack comprising a base, supporting plates rising from the forward portion of said base at a rearward incline and having inner side edges spaced from each other transversely of the plate to provide space for receiving the binding of a book set upright upon the base and resting against the plates, a tubular post rising from the base back of the space between the plates and open at its upper end, a rod slidable vertically in said post through the upper end thereof, a spring in said post urging the rod upwardly to a raised position, a block at the upper end of said rod, a

strip of resilient material bent intermediate its length to form a bridge mounted upon said block in straddling relation thereto and front and rear arms, the front arm extending forwardly and downwardly from the block in forwardly spaced relation to the rod for overlapping the upper portion of a book resting against the plates and carrying at its lower end a cross bar for bearing against pages of an opened book, a sleeve extending longitudinally of the post against the rear portion thereof and having its rear portion

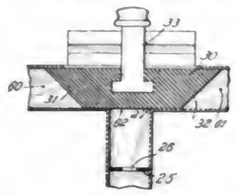
formed with longitudinally spaced notches, a stem depending from the block and passing through the sleeve, the rear arm having a forwardly projecting bill at its lower end for engaging the notches of the sleeve and releasably holding the rod depressed, a strip mounted across the lower portion of the rear arm and constituting a finger engaging member for shifting the rear arm out of engagement with the notches, and a chain secured at its ends to the block and the upper end of the post to limit upward movement of the rod.

2,454,527
COMBINED COMPACT AND FLASHLIGHT
Marc Aurèle Taschereau, Port Alice, British Columbia, Canada
Application May 14, 1947, Serial No. 747,902
1 Claim. (Cl. 240—6.45)

A compact comprising a casing having hinged upper and lower sections, a mirror in the upper section, cosmetic containers in the lower section, an electric battery with an electric lamp and a switch connected in series in said lower section, means to reflect light upwardly and outwardly from said lamp, said lamp being disposed at the end of said lower section remote from the hinge connecting the sections, and said means comprising three obliquely disposed plane reflecting surface members, one on either side of the lamp and one disposed toward said hinge, and a deflector plate on said lower section between said lamp and the hinge to prevent reflection onto said mirror, said plate being slidably mounted for vertical movement when the lower section is in horizontal position, said plate having a layer of deformable material on its upper edge, and said plate being spring biased upwardly and depressible by the upper section when the compact is closed.

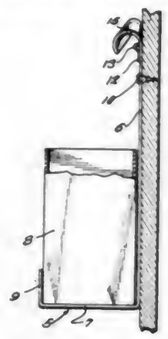
2,454,528
CABLE CUTTER
Robert Temple, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del., a corporation of Delaware
Original application February 11, 1944, Serial No. 522,022, now Patent No. 2,411,909, December 3, 1946. Divided and this application September 5, 1946, Serial No. 694,973
8 Claims. (Cl. 164—47)

1. In a cable cutter provided with a barrel and a cable cutting member slidably mounted at the rear end of the barrel, means for supporting an explosive charge behind the cutting member, a firing pin for exploding the charge to drive the cutting member through the barrel, a spring for causing an inertia effect on the pin to throw it forward to said means, a cocking lever extending transversely of the firing pin and operably connected to it, means for pivotally supporting one end of said lever beside said pin, and manually operable means for engaging the opposite end of the cocking lever and swinging it rearwardly to retract the firing pin, whereby upon release of the retracted lever said spring will move the firing pin forward to explode said charge.



2,454,529
REAR GRIP FOR FISHING ROD HANDLES
Richard A. Thompson and Erik E. Eriksson, Detroit, and Joseph Carlson, Grosse Pointe Farms, Mich.; said Eriksson and said Thompson assignors to Orchard Industries, Inc., Detroit, Mich., a corporation of Michigan; said Joseph Carlson assignor, by decree of court, to Marie E. H. W. Carlson
Application October 17, 1946, Serial No. 703,846
1 Claim. (Cl. 43—23)

A rear grip for a fishing rod handle, comprising a rearwardly projecting shank on the handle, a grip surrounding said shank and comprising two molded plastic tubular members positioned in axial alignment, each of said two members being of progressively increasing internal and external diameters from one end to the other, said two members having their smaller ends pointing toward each other, a third plastic tubular member of substantially cylindrical configuration fitted on said shank intermediate said first two members and of an outside diameter equal to the smaller ends of said two members, means for supporting the small ends of said two members in coaxial relation with respect to said shank, the portion of said shank extending forwardly from adjacent the rear end of the forward member for a major portion of the length of the forward member being of substantially smaller diameter than the portion of the forward member which surrounds the same, a shoulder formed at the forward end of the shank and supporting the forward end of the forward member in coaxial relation with respect to the shank, the portion of said shank extending rearwardly from adjacent the forward end of the rearward member being of substantially smaller diameter than the portion of the rearward tubular member which surrounds the same,



and a member removably fitted on the shank adapted to engage the inner surface of the rear end of the rearward tubular member and support the same in axial alignment with the shank.

2,454,530
PHASE ADJUSTER FOR FIXED-BRANCH WAVE GUIDE
John W. Tiley, Philadelphia, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application October 13, 1944, Serial No. 558,494
3 Claims. (Cl. 178—44)

1. In a device of the character described, a hollow main conducting conduit having an input and an output for transmission of high frequency electric energy, a branch conduit coupled to said main conduit for diverting at least part of the electric energy transmitted, a solid dielectric member extending along said main conduit and filling substantially the entire cross-section thereof, said solid dielectric member being disposed in said main conduit at the junction with said branch conduit, said solid dielectric member having a length of at least a substantial portion of one wave length and means for adjusting said solid dielectric member along said main conduit to vary its position with respect to the branch conduit whereby the phase of the electric field diverted into said branch conduit may be varied while maintaining the over-all phase relationship between input and output constant.

2,454,531
BOTTLE CAP REMOVER
Ralph Van Trine, Durham, N. C., assignor of thirty per cent to Leona T. Van Trine and thirty per cent to Marion Van Trine Davis, both of Durham, N. C.
Application March 1, 1946, Serial No. 651,052
4 Claims. (Cl. 81—3.46)

4. A bottle cap remover embodying a plate, the central portion of the upper edge portion of said plate being struck out to provide a clearance notch and tongue, said tongue being bent laterally and outwardly and then down-bent with its free end portion in contact with the adjacent body portion of the plate, thus providing a fulcrum, the upper edge portions of the plate on opposite sides of said notch and fulcrumming tongue bent bent upon themselves and rolled to form hook-like cap removers, the adjacent inner ends of said removers being in close proximity and in opposed registery with said notch, and said removers being of inwardly tapered formation with the tapers of the respective removers converging, said plate being substantially flat and rectangular in form.

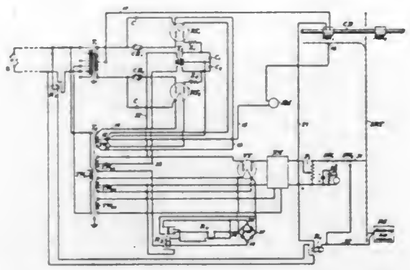
2,454,532
PROCESS FOR DEFIBERING LIGNOCELLULOSE WHILE SUBJECTED TO STEAM AND A DIGESTIVE CHEMICAL
Henry E. Walter, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application August 3, 1940, Serial No. 351,239
9 Claims. (Cl. 92—6)

1. The method of treating lignocellulose which comprises heating lignocellulose in the absence of suspending liquid and in an atmosphere of steam at an elevated temperature above 212° F. at which the lignacellulose is rendered plastic, and simultaneously defibering the plastic lignocellulose and incorporating substantially uniformly throughout the lignocellulose chemical reagent reactive therewith, whereby to produce chemically treated fibers without substantial loss of constituents of the original lignocellulose.

2,454,533
MANUFACTURE OF FIBROUS PRODUCTS DERIVING FROM LIGNOCELLULOSE
Henry E. Walter, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application August 3, 1940, Serial No. 351,238
22 Claims. (Cl. 92—6)

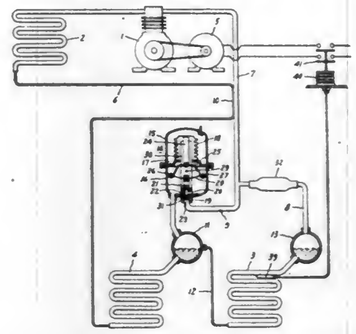
1. The method of treating lignocellulose which comprises heating lignocellulose in the absence of suspending liquid and in an atmosphere of steam at an elevated temperature above 212° F. at which the lignocellulose is rendered plastic, and simultaneously defibering the plastic lignocellulose and incorporating substantially uniformly throughout the lignocellulose chemical reagent reactive therewith and containing sulfur dioxide in salt-form, whereby to produce chemically treated fibers without substantial loss of constituents of the original lignocellulose.

2,454,534
PROCESS FOR DEFIBERING LIGNOCELLULOSE WHILE SUBJECTED TO STEAM AND ALKALI-METAL HYDROXIDE
Henry E. Walter, Cloquet, Minn., assignor to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware
No Drawing. Application August 3, 1940, Serial No. 351,240
9 Claims. (Cl. 92—6)



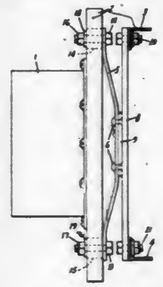
1. The method of treating lignocellulose which comprises heating lignocellulose in the absence of suspending liquid and in an atmosphere of steam at an elevated temperature above 212° F. at which the lignocellulose is rendered plastic, and simultaneously defibering the plastic lignocellulose and incorporating alkali-metal hydroxide substantially uniformly throughout the lignocellulose, whereby to produce chemically treated fibers without substantial loss of constituents of the original lignocellulose.

2,454,535
BREAST SHIELD
Mary W. Warner, Fairfield, Conn.
Application June 28, 1947, Serial No. 757,737
7 Claims. (Cl. 2—267)



1. As a new article of manufacture, a breast shield having a size and conical shape such that it will fit and may be placed in position between a breast and the pointed cup of a brassière while the latter is being worn, to be wholly contained in said cup, said shield comprising an outer substantially stiff, cone-shaped sheet disposed for engagement with the brassière and adapted to shape the latter; and a soft relatively thick cushion located inside and against said cone-shaped sheet for engagement with the breast and having a recess to receive the nipple of the breast, said cushion having a soft forward wall portion at the bottom of the recess to prevent the nipple from touching the said cone-shaped sheet.

2,454,536
CONTROL APPARATUS FOR FORCED DRAINAGE
Daniel Ralph Werner, Omaha, Nebr., assignor to American Telephone and Telegraph Company, a corporation of New York
Application May 11, 1944, Serial No. 535,187
4 Claims. (Cl. 171—316)



4. Apparatus for preventing corrosion of an underground cable sheath which is exposed to currents from a grounded power circuit, comprising a rectifier, a circuit including said rectifier for transmitting rectified current through the ground over a path between said power circuit and said cable sheath, means for regulating the magnitude of the rectified current in accordance with the changes in voltage between said cable sheath and said power circuit, and means for interrupting said rectified current when the potential of said cable sheath becomes negative with respect to said grounded power circuit.

2,454,537
TWO-TEMPERATURE REFRIGERATING SYSTEM
Leonard W. Atchison, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application May 5, 1947, Serial No. 745,940
4 Claims. (Cl. 62—3)

1. In a refrigerating system, a plurality of evaporators adapted to operate at different temperatures, means for supplying refrigerant to said evaporators, means for withdrawing refrigerant from said evaporators, means responsive to the pressure in one of said evaporators for controlling the flow of vaporized refrigerant from said one of said evaporators to said withdrawing means, and means for controlling the flow of vaporized refrigerant from the other of said evaporators to said withdrawing means, said last-named means being effective on the blocking of flow of vaporized refrigerant from said one of said evaporators to provide for flow of vaporized refrigerant from said other of said evaporators.

2,454,538
SHOCKPROOF SUPPORT
Carl E. Bazley, Schenectady, and Charles Bangert, Jr., Ballston Spa, N. Y., assignors to General Electric Company, a corporation of New York
Application July 17, 1944, Serial No. 545,274
3 Claims. (Cl. 248—20)

1. A shockmount for preventing damage from high impact shock comprising a supporting mem-

ber subject to vibration under shock, a supported member, an elongated normally rigid connecting bar having a first portion rigidly secured to one of said members, said bar being formed of material incapable of withstanding said high impact shock without exceeding its elastic limit, and clamping means securing a second portion of said bar tightly in flatwise sliding engagement with the other of said members, whereby said bar provides dissipation of shock energy in sliding friction between said second portion and said other member and in heat generated by repeated oscillatory deformation of said bar beyond its elastic limit.

2,454,539

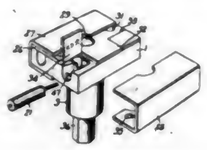
METHOD OF PREPARING RESINOUS LINEAR POLYESTERS IN CRUMBLIKE FORM

Ellington M. Beavers, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application November 23, 1945, Serial No. 630,560

8 Claims. (Cl. 260—75)

1. A process of preparing millable, moldable, crumblike, curable thermoplastic material which comprises simultaneously mechanically working in a power mixer of the kneading type and heating, at 50° C. to 150° C. until a crumb is formed, a mixture of a peroxidic curing catalyst and a linear, unsaturated, thermoplastic non-crystalline polyester of molecular weight of 5000 to 50,000, said ester being the product of condensing by heating together a saturated unsubstituted glycol, a saturated unsubstituted dicarboxylic acid containing a minimum of four carbon atoms, and an unsubstituted α,β-unsaturated dicarboxylic acid, said unsaturated acid being present in an amount from 1% to 20% of the total acids on a molar basis, one of said glycol and said saturated acid containing a branched chain, and said peroxidic curing catalyst being present in an amount from 0.055% to 0.0025%, based on said polyester, and being inversely proportional to the percentage of said unsaturated acid used.



2,454,540

ELECTRIC SWITCH

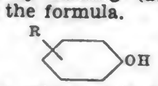
George B. Benander, Oaklawn, R. I., assignor to Monowatt Incorporated, a corporation of Connecticut

Application May 7, 1946, Serial No. 667,818

10 Claims. (Cl. 200—168)

1. A switch or the like comprising a base having a cavity, stationary contacts positioned in the cavity having conductor connecting portions, a cover plate for the cavity having door means positioned to give access to said conductor connecting portions, and a plurality of separately removable clamp means for holding the cover plate on the base and said door means closed, said clamp means having grips sufficient that when one clamp means is removed to give access to contacts for wiring the switch, other of said clamp means will hold the cover plate in position on the base.

2,454,541



POLYMERIC DETERGENTS

Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application September 9, 1944, Serial No. 553,476

6 Claims. (Cl. 260—53)

1. Water-soluble, ploymeric detergents formed by condensing by heating (*a*) one mol of a phenol having the formula.

in which R is a saturated hydrocarbon substituent containing eight to eighteen carbon atoms, and (*b*) from 0.5 to 1.0 mol of formaldehyde, and then reacting therewith (c) from eight to sixty mols of an alkylene oxide from the class consisting of ethylene oxide, propylene oxide, and butylene oxide.

2,454,542

POLYMERIC DETERGENTS

Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application September 9, 1944, Serial No. 553,477

6 Claims. (Cl. 260—49)

1. Water-soluble polymeric detergents formed by condensing by heating (*a*) one mole of a phenol from the class consisting of ortho-substituted and para-substituted phenols, said phenol having the formula

in which R′ is a saturated hydrocarbon substituent containing eight to eighteen carbon atoms and (*b*) from 0.5 to 1.0 mole of formaldehyde, then reacting therewith (c) from one to twenty-one moles of an alkylene oxide from the class consisting of ethylene oxide, propylene oxide, and butylene oxide, then (*d*) esterifying the resultant alcohol with one mole of a polybasic acid from the class consisting of sulfuric and phosphoric acids, and finally (*e*) neutralizing the product of esterification to form therefrom a salt of a metal from the class consisting of alkali and alkaline earth metals.

2,454,543

POLYMERIC DETERGENTS

Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application September 9, 1944, Serial No. 553,478

10 Claims. (Cl. 260—49)

1. A modified phenol-formaldehyde condensation product having detergent properties wherein the phenol-formaldehyde condensate is an oily to brittle resinous condensation product of from 0.5 to 1.0 mol of formaldehyde and one mol of a phenol from the class consisting of ortho-substituted and para-substituted phenols, said phenol having the formula

in which R′ is a saturated hydrocarbon substitu-

ent containing four to eighteen carbon atoms, and wherein the modification of said condensation product consists of the group

$$-(RO)_y-R-SO_3M$$

replacing the original phenolic hydrogen atoms and being attached to each phenol nucleus in said condensate through the phenolic oxygen atom thereof, wherein R in both occurrences is the same saturated alkylene group containing two to four carbon atoms, y has a value of 0 to 19 inclusive, and M is a metal from the class consisting of alkali and alkaline earth metals.

2,454,544

POLYMERIC DETERGENTS COMPRISING WATER-SOLUBLE SALTS OF THE HALF-ESTERS OF DICARBOXYLIC ACIDS AND THE FORMALDEHYDE CONDENSATES OF HYDROCARBON-SUBSTITUTED PHENOXY-POLYALKOXY ALKANOLS

Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application September 9, 1944, Serial No. 553,479

5 Claims. (Cl. 260—53)

1. A modified phenol-formaldehyde condensation product having detergent properties wherein the phenol-formaldehyde condensate is an oily to brittle resinous condensation product of from 0.5 to 1.0 mole of formaldehyde and one mole of a phenol from the class consisting of ortho-substituted and para-substituted phenols, said phenol having the formula

in which R′ is a saturated hydrocarbon substituent containing eight to eighteen carbon atoms and wherein the modification of said condensation product consists of the group

$$-(RO)_y-R-OCO-R''-(COOM)_z$$

replacing the original phenolic hydrogen atoms and being attached to each phenol nucleus in said condensate through the phenolic oxygen atom thereof, wherein R in both occurrences is the same saturated alkylene group containing two to four carbon atoms, R″ is a saturated hydrocarbon radical, containing one to seven carbon atoms, from the class consisting of alkylene and arylene radicals, *y* has a value of 0 to 20, M is a metal from the class consisting of alkali and alkaline earth metals, and *z* has a value of 1 to 2.

2,454,545

HYDROCARBON-SUBSTITUTED PHENOL-FORMALDEHYDE CONDENSATES MODIFIED IN THE PHENOLIC HYDROXYL

Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application September 9, 1944, Serial No. 553,480

9 Claims. (Cl. 260—53)

1. A modified phenol-formaldehyde condensation product having surface-active properties wherein the phenol-formaldehyde condensate is a condensation product of from 0.5 to 1.0 mol of formaldehyde and one mol of a phenol from the class consisting of ortho-substituted and para-substituted phenols, said phenol having the formula

in which R′ is a saturated hydrocarbon substituent containing four to eighteen carbon atoms and being attached to each phenol nucleus in said condensate through the phenolic oxygen atom thereof, wherein R in both occurrences is the same saturated alkylene group containing two to four carbon atoms, *y* has a value of 0 to 20 inclusive, and M is a metal from the class consisting of alkali and alkaline earth metals.

2,454,546

SURFACE-ACTIVE LINEAR POLYESTERS

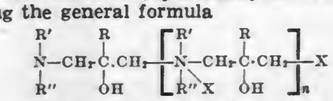
Louis H. Bock, Huntingdon Valley, and James L. Rainey, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application June 15, 1945, Serial No. 599,750

5 Claims. (Cl. 260—75)

1. The process of preparing linear, water-soluble, polymeric, surface-active polyesters which comprises preparing a resinous linear polyester by esterifying an alkane-diol containing six to eighteen carbon atoms and an equivalent amount of maleic acid at a temperature between about 150° and 200° C. and thereafter reacting by heating said linear polyester with a water-soluble bisulfite in the ratio of 0.5 to 1 mol of said sulfite per mol of esterified maleic acid at the double bond of the maleic acid.

2,454,547



POLYMERIC QUATERNARY AMMONIUM SALTS

Louis H. Bock, Huntingdon Valley, Pa., and Alva L. Houk, San Luis Obispo, Calif., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

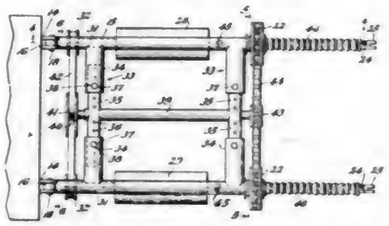
No Drawing. Application October 15, 1946, Serial No. 703,290

6 Claims. (Cl. 260—567.6)

1. A surface-active quaternary ammonium salt having the general formula

in which *n* is an integer which has a value of three to eleven, R in both occurrences is the same member of the class consisting of hydrogen and methyl groups, R′ in both occurrences is the same alkyl group from the class consisting of methyl and ethyl groups, R″ contains eight to eighteen carbon atoms and in both occurrences is the same hydrocarbon group from the class consisting of alkyl groups and aralkyl groups, and X is a member of the group consisting of chlorine and bromine.

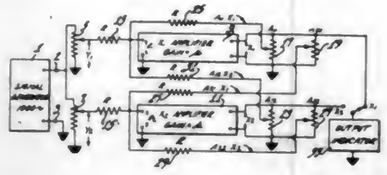
5. A process for preparing surface-active quaternary ammonium salts which comprises reacting at a temperature from 90° C. to 150° C. equimolar amounts of an epihalohydrin of the general formula



in which R is a member of the class consisting

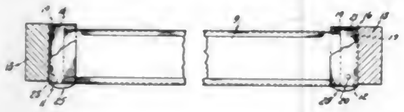
of hydrogen and methyl groups and X is a member of the group consisting of chlorine and bromine, and a secondary amine having the general formula

in which R′ is a member of the group consisting of methyl and ethyl groups and R″ contains eight to eighteen carbon atoms and is a hydrocarbon group from the class consisting of alkyl groups and aralkyl groups, and continuing the heating to form said quaternary ammonium salt containing an average of four to twelve combined molecules of both the epihalohydrin and the amine as evidenced by molecular weight determinations.



2,454,548
LIFTING DEVICE
Edward J. Brinkert, Hartley, Iowa
Application July 5, 1947, Serial No. 759,136
4 Claims. (Cl. 74—424.8)

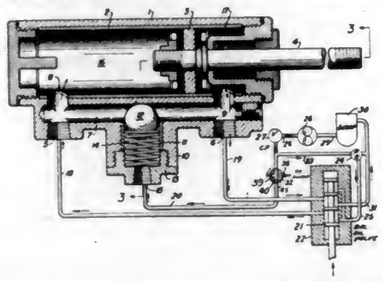
1. In combination with a device having a front wall and having a member pivoted to said front wall and extending outward therefrom, a pair of spaced parallel tubular housings, cross-members mounted between said housings, pivotal means securing one end of each of said housings to said front wall below the pivotal mounting of said member, the other ends of said housings having sprockets rotatably mounted thereon, a third shaft rotatably mounted in said cross-members parallel with said housings and having a sprocket on one end in the same plane as said first-named sprockets, an electric motor secured to each of said housings, said motor on one of said housings being adapted to be energized to rotate in one direction and said motor on the other of said housings being adapted to be energized to rotate in the opposite direction, said motors having shafts extending parallel with said housings, said motor shafts having pulleys thereon, said third shaft having a pulley thereon lying in the same plane as said motor shaft pulleys, a belt trained about said three pulleys, a sprocket chain trained about said three sprockets, collars on said sprockets extending beyond the free ends of said housings, said collars being internally threaded and having worms extending threadably therethrough into said housings, the free ends of said worms which extend out of said housings being pivotally mounted on said pivoted member.



2,454,549
ELECTRONIC EQUATION SOLVER
George W. Brown, Cranbury, and Edwin A. Goldberg, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application August 16, 1946, Serial No. 690,865
3 Claims. (Cl. 235—61)

1. A simultaneous equation solver including means providing a first group of constant frequency voltages each of which has an amplitude proportional to the value of the constant term of a different one of said equations and has a phase of 0 or 180 electrical degrees depending on the sign of said value, separate amplifiers each having applied to its input circuit a different one of the voltages of said first group, a matrix connected to the output circuits of said amplifiers for providing other voltages representative of the product of each coefficient and its associated unknown in said equations, means connected be-

tween said matrix and the inputs of said amplifiers for combining with each constant term representing voltage the ones of said other voltages which represent the product of each coefficient and its associate unknown in the equation containing that constant, and filter means interconnected with each of said amplifiers to maintain the phase of the input voltage of said amplifiers at 0 or 180 electrical degrees for said constant frequency and within a phase margin of ±90 electrical degrees for other frequencies at which the gain of said amplifier is greater than unity.



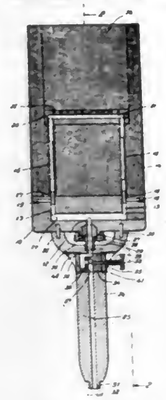
2,454,550
VENETIAN BLIND HEAD BOX
Fred J. Burns, Saginaw, Mich., assignor to The Columbia Mills, Inc., New York, N. Y.
Application August 13, 1945, Serial No. 610,552
3 Claims. (Cl. 248—264)

1. In a Venetian blind including a substantially U-shaped headbox, spaced-apart supporting brackets on which said headbox is mounted, a plurality of horizontally spaced, projecting ribs provided on the back wall of one of said brackets and projecting inwardly towards the headbox, and a turned, laterally projecting lip on the back wall of said headbox and engageable between certain of said ribs for securing the headbox against longitudinal movement on said brackets.

2,454,551
SERVO UNIT
Bert G. Carlson, Gates Mills, Ohio, assignor to William R. Jack, Cleveland, Ohio
Application March 2, 1945, Serial No. 580,608
4 Claims. (Cl. 121—38)

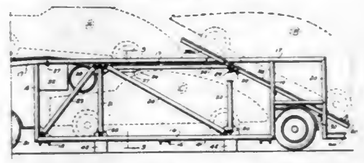
1. In a servomotor unit, a power cylinder and a piston reciprocally mounted therein, a source of hydraulic pressure with leads to said unit and through cylinder ports to cylinder chambers on either side of said piston, a by-pass between said pressure leads, an intermediate lead in said unit from said hydraulic pressure source, a ball valve slidably mounted in said lead and extending into said by-pass in a fluid tight relationship with said by-pass, said intermediate lead being of greater cross-sectional area than that of said by-pass to permit the exertion of a relatively greater over-

all hydraulic pressure to maintain said ball valve closed, said ball valve being adapted to be opened upon the existence of an abnormal pressure in said by-pass in excess of that in said intermediate lead.



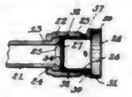
2,454,552
TEMPERATURE RESPONSIVE DEVICE
Richard W. Cobean, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 8, 1944, Serial No. 530,209
2 Claims. (Cl. 297—16)

1. In a temperature responsive device, a bimetallic strip thermostat wound substantially edgewise into a helix with said strip extending radially at an angle with the axis of said helix of greater than 45 degrees but at least a few degrees less than 90 degrees so that said strip twists in response to changes in temperature and thereby coils and uncoils in accordance with a nonlinear function of such changes in temperature.



2,454,553
BRUSH
Robert S. Eisner, Red Bank, N. J., and Daniel Schoenholz, New York, N. Y.; said Schoenholz assignor to said Eisner
Application May 31, 1947, Serial No. 751,538
8 Claims. (Cl. 15—128)

1. In a fountain, liquid-applying brush, the combination of a base, a body of bristles mounted at one end on the base and having the bristles thereof extending from the base in a generally parallel group, a passage through the base through which liquid may pass, said passage having an outlet within the body of bristles, an elongated chamber within said body of bristles, said chamber extending transversely of said body of bristles inwardly of the free end thereof, the chamber having a plurality of outlets in the wall thereof toward the outer ends of said body of bristles, a relatively wide, thin body of bristles mounted at one end on the chamber about the outlets therefrom, the bristles of said thin body of bristles extending parallel to and substantially to the free ends of the bristles mounted on the base, the two bodies of bristles together constituting the liquid-applying means of the brush, and flexible conduit means connecting the outlet from the passage in the base to the chamber, whereby liquid passed through the passage in the base

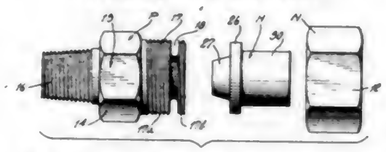


will be conducted by said flexible conduit means to the chamber and pass outwardly therefrom into the body of bristles mounted on the chamber and toward the free ends of both bodies of bristles.

2,454,554
AUTOMOBILE TRANSPORTING TRUCK
Edward V. Garnett, Denver, Colo.
Application July 27, 1946, Serial No. 686,749
2 Claims. (Cl. 296—1)

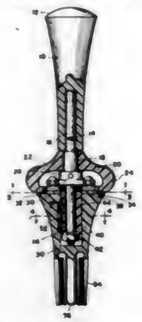
1. An automobile transporting truck comprising: a chassis; front wheels supporting the front end of said chassis; rear wheels supporting the rear end of said chassis; a first automobile-supporting track extending substantially horizontally between said front and back wheels to carry a first automobile; a second automobile-supporting track positioned above said first track to carry a second automobile above the first automobile, said second track extending substantially horizontally from a position over said front wheels and forwardly of the forward extremity of said first track and terminating at its rear extremity forward of the rear extremity of said first track; a third automobile-supporting track extending rearwardly and downwardly, from a position in the plane of, and rearward of, said second automobile-supporting track, to a point behind said rear wheels and below the plane of the tops of said wheels; a movable track portion; means for securing said latter portion between the rear extremity of the second automobile supporting track and the forward extremity of the third automobile supporting track to form one continuous track for loading purposes; and means for supporting said movable track portion in alignment with and in front of said third automobile supporting track to carry the forward portion of a third automobile above the rearward portion of the second automobile when travelling.

2,454,555
COMBINATION CAP AND PLUG
Harold P. Henderson and Philip Kaplan, Buffalo, N. Y., assignors to Clover Industries Inc., Buffalo, N. Y., a corporation of New York
Application August 30, 1944, Serial No. 551,914
2 Claims. (Cl. 138—89)



1. A closure constructed of sheet metal formed into a cylindrical shell closed at one end and open at its other end and being diametrically-enlarged at its open end to internally enlarge the shell and provide a gripping flange and a shoulder connecting the parts of the shell of different diametrical dimensions, said shell having external means to engage and lock the same in an opening, and a gasket bearing against said shoulder and adapted to engage an object having an opening therein so as to seal the opening when said shell is locked therein.

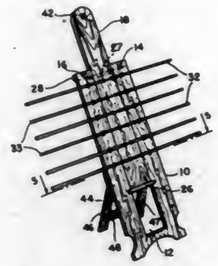
2,454,556
DISK HANDLING APPARATUS
Franklin G. Hirst, Philadelphia, Pa.
Application December 28, 1946, Serial No. 718,965
10 Claims. (Cl. 271—1)



1. Disk handling apparatus useful in connection with printing means or the like, comprising an element with upstanding impaling stud projections for supporting multiple piles of apertured disks or the like of thin sheet material in definitely spaced relation; a primary transfer element with holes to clear the studs of the supporting element, operative at each actuation when applied from above to remove the topmost disks from the piles and deposit them likewise in definitely spaced relation upon a printing platen to receive an imprint upon their upper faces; and a secondary transfer element operative at each actuation to remove the disks from the printing platen in definite separation as before and to deposit them in the same relation upon a surface for drying without incidentally contacting the wet printed surfaces of said disks.

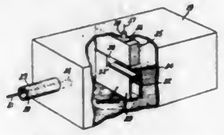
2,454,557
NO-TWIST SELF-LOCKING COUPLING
Franz Jacobson, New York, N. Y.
Application January 12, 1944, Serial No. 517,954
8 Claims. (Cl. 285—122)

1. In a device of the character described, a first connector member, a second connector member and a nut for securing said members together, means on each connector member for attaching it to piping, interengaging means on the said two connector members for preventing rotation of one with respect to the other while said nut is tightened to secure the connectors together, and deformable means on one of said connectors adapted to be deformed in the axial direction of the connectors by the tightening of said nut member into its tightened condition, and means to effect such deformation whereby to effect locking of said nut member in said tightened condition.



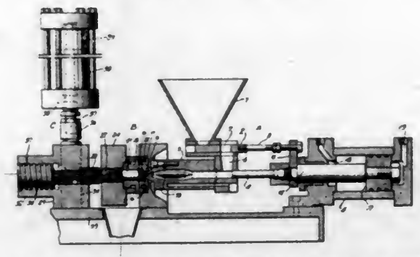
2,454,558
TIGHT CURL FORMING DEVICE
Ben Kleinsmith, Seattle, Wash.
Application September 13, 1947, Serial No. 773,786
4 Claims. (Cl. 132—34)

1. A hair-curling device, consisting of: a central handle adapted to seat in the palm of the hand and having a reducing diameter from the point of contact to the end of said handle; a shaft co-axial with said handle and fixedly secured thereto; an enlarged journal on said shaft; an internal gear member disposed for free rotation upon said journal, said internal gear having a top surface which is knurled and sloped downwardly from the top of said gear member to a point near its periphery where a gradual curve joins the sloping sides with the bottom of the gear; a planet gear spider secured to said shaft; a planet gear secured to said spider and revolvably mounted thereon; a central pinion disposed upon said shaft in co-axial relationship and free to revolve upon said shaft; restraining and positioning means for said pinion; said pinion having below its gear teeth a cylindrical bearing portion; a keyway formed within said cylindrical portion; a circular comb formed with its teeth in parallel relationship with the axis of said shaft and having an upper portion with a central counterbore adapted to seat upon the cylindrical portion of said pinion; a resilient securing and keying device formed as part of said upward extension of said comb; and an axially positioned stop member disposed within the circle of said teeth and having substantially the same downward extent as said teeth.



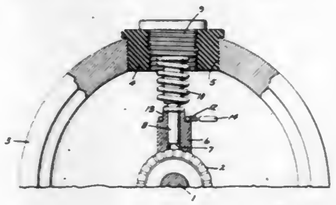
2,454,559
PORTABLE DRYING RACK
Henry F. Kuehn, Seattle, Wash.
Application July 1, 1947, Serial No. 758,445
4 Claims. (Cl. 211—178)

2. A portable drying rack, comprising: a main frame having connected parallel side members; a slidable tongue disposed for limited reciprocation between said side members; guide means adapted to position said tongue between said side members; pairs of oppositely positioned hanger rods; pivot means adapted to pivotably secure the inner ends of said rods to said slidable tongue; pairs of transversely disposed pivot members pivotably secured to said side members and adapted



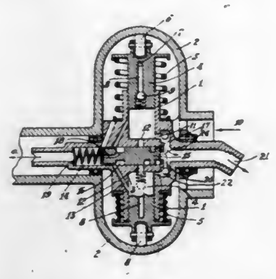
to slidably engage said hanger bars and means for supporting said rack in a substantially vertical position.

2,454,560
ULTRA HIGH FREQUENCY ELECTRIC DISCHARGE DEVICE
James M. Lafferty, Colonie, N. Y., assignor to General Electric Company, a corporation of New York
Application October 2, 1942, Serial No. 460,523
52 Claims. (Cl. 315—6)



9. A cavity resonator, energizing means coupled to said cavity resonator for establishing electromagnetic waves therein, a second resonator within said cavity resonator for effecting a concentration of the electric field incident to said waves, and electric discharge means within said cavity resonator coupled to said second resonator.

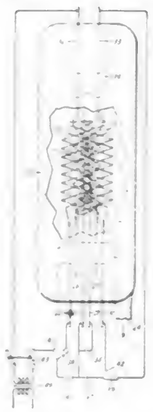
2,454,561
MOLDING MACHINE
William M. Lester, Mountainside, N. J.
Application February 21, 1945, Serial No. 579,041
2 Claims. (Cl. 18—30)



1. In a machine of the kind described, the combination comprising a stationary die having a mold cavity therein and a sprue opening to the cavity for the injection of thermo-plastic material into the mold cavity, a movable die movable into contact with and away from the stationary die, a rotatably and longitudinally mounted core movable into and out of the mold cavity and having a thread on the portion thereof which extends into the mold cavity, said core including a rod extending through said movable die and having a thread adjacent the end thereof, a stationary element having an internal thread therein in engagement with the thread adjacent the end of the rod, means for rotating the rod, and cooperating threads on the rod and movable die for effecting movement of the movable die upon rotation of the rod, the threads on the stationary element, core rod and movable die being related to the thread of the core to effect a withdrawal of the molded article from the mold cavity upon movement of the movable die and to retain the molded article in contact with the movable die during the withdrawal of the core therefrom.

2,454,562
CURRENT COLLECTOR BRUSH MECHANISM
Ernest A. Linke, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application October 17, 1946, Serial No. 703,873
13 Claims. (Cl. 171—323)

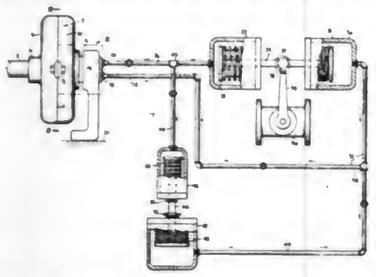
2. A current collector brush mechanism for use with a rotable current collector, said brush mechanism comprising a stationary guide member of electrically conductive material, a brush of electrically conductive material with an opening therein forming a sliding fit around said guide member, and spring means engaging the end of said brush away from said rotatable current collector for resiliently biasing said brush toward the rotatable current collector for electrical contact therewith.



2,454,563
PUMP OUTPUT REGULATOR
Jean Mercier, New York, N. Y.
Application June 18, 1943, Serial No. 491,279
7 Claims. (Cl. 103—42)

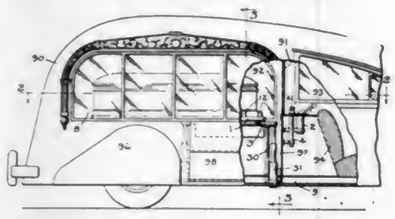
1. A pump which comprises a pump casing, a plurality of cylinders inside said casing, a check valve ported piston associated with each said cylinder, means to cause said pistons to recipro-

cate in sequence within said cylinders without themselves rotating, means to admit fluid through the center of said pistons to said cylinders, a collecting chamber communicating with all said cylinders and with a principal delivery port within said casing, means to conduct fluid delivered by said cylinders into said chamber, fluid receiving means within said casing, valve means within said chamber responsive to the fluid pressure within said principal delivery port, said valve means being adapted to divert fluid from said chamber into said receiving means whenever the pressure in said principal delivery port exceeds a predetermined value.



2,454,564
IONIZATION-TYPE VACUUM GAUGE
Richard B. Nelson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 8, 1947, Serial No. 740,201
12 Claims. (Cl. 315—369)

1. An electrical discharge device for use in determining a property of a gas by establishing ionization currents therein comprising, an envelope having an orifice through which a sample of a gas to be examined is introduced, a plurality of electrodes in said envelope including a cathode, a pair of anodes spaced at different distances from said cathode, an ion-collector electrode between said anodes, and lead-in conductors connected to said electrodes for imposing with respect to said cathode a positive potental on said anodes and a relatively negative potential on said collector electrode.



2,454,565
GOVERNOR (SPEED RESPONSIVE TYPE)
William W. Peterson, Mankato, Minn.
Application November 13, 1944, Serial No. 563,142
4 Claims. (Cl. 264—19)

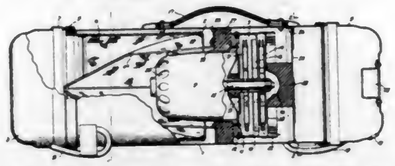
1. A speed responsive control device, comprising a means for setting a body of fluid into rotary movement within a confined cylindrical space whereby the action of centrifugal force will result in a variation in pressure in the fluid directly indicative of the speed of rotation, means for tapping off fluid from the body of a variable amount proportional to the pressure, control means operated by the fluid tapped off from the rotating body thereof, and means operated by the pressure of the fluid thus tapped off for replacing fluid in the rotating body of a quantity equal to that

tapped off to maintain a constant volume of fluid in the rotating body thereof.

2,454,566
HEARSE
William H. Pfeiffer, Seattle, Wash.
Application June 11, 1945, Serial No. 598,715
12 Claims. (Cl. 214—83.24)

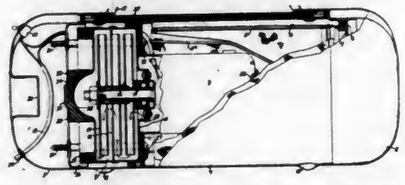
1. A hearse comprising a bier table, means supporting the same for pivotal movement about a fixed vertical axis from an upraised lengthwise transporting position into an outwardly swung position, and from such upraised to a lowered unloading position, and control means prohibiting lowering movement until completion of the outswinging movement, and reversely, prohibiting inswinging movement until completion of the raising movement.

2,454,567
RADIO SHIELDING SEALING GASKET
Adrian A. Pierson, Jr., Cooperstown, N. Y.
Application August 2, 1944, Serial No. 547,746
1 Claim. (Cl. 174—35)



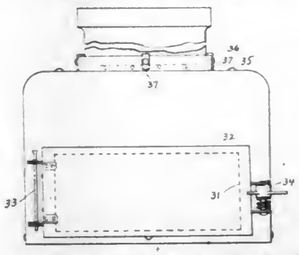
A radio shielding sealing gasket comprising a centrally disposed metal element having portions of substantial area exposed throughout the top and bottom, respectively, of said gasket, a yieldable portion electrically connecting said exposed portions and adapted to give slightly under compressive stress applied to the top and bottom of said gasket, and a resilient, homogeneous substance secured to the opposite sides of said metal element and coextensive therewith adapted to form an air and water tight seal between two spaced elements when said gasket is compressed therebetween.

2,454,568
THIOGLYCOL ESTERS
Maxwell A. Pollack, Denville, N. J., assignor to E. F. Drew & Co. Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 14, 1945, Serial No. 605,199
6 Claims. (Cl. 260—399)



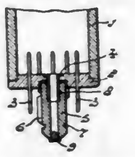
1. An ester of a thioglycol having at least one sulphhydryl group with a higher fatty acid having from 12 to 18 carbon atoms.

2,454,569
MOTOR AND FAN UNIT MOUNTING FOR VACUUM CLEANERS
Paul C. Rector, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application August 14, 1947, Serial No. 768,662
4 Claims. (Cl. 230—117)



1. In a vacuum cleaner, an outer casing, an inwardly projecting casing flange which divides the casing into a bag chamber and a fan chamber, a motor and fan unit in the casing comprising a motor having a flange and a fan having a casing connected to such flange, said motor flange and fan casing being of less diameter than said outer casing, said unit being positioned in the outer casing in spaced relation to the outer casing wall with the motor projecting beyond said casing flange into the bag chamber, a resilient ring positioned between said flanges engaging the motor casing and the outer casing to position the unit transversely in the outer casing, a locking flange in the outer casing spaced from the outer end of the fan casing, a locking disk held by said locking flange, and a resilient member held under compression between the end of fan casing and said locking disk for positioning the unit axially between said casing flange and said locking flange.

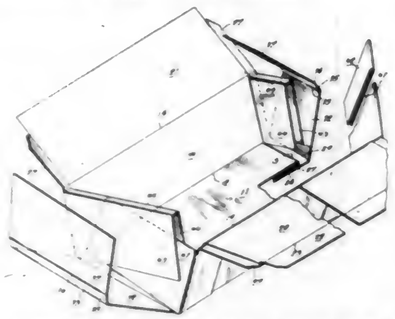
2,454,570
MOTOR AND FAN UNIT MOUNTING FOR VACUUM CLEANERS
Paul C. Rector, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application August 14, 1947, Serial No. 768,663
5 Claims. (Cl. 230—117)



1. In a vacuum cleaner, an outer casing, an end cap having a cross piece, an inwardly projecting flange in the casing spaced from the end of the outer casing on which the end cap fits, a motor and fan unit in the outer casing of less diameter than said outer casing, said unit being positioned in the outer casing in spaced relation to the outer casing wall, a resilient member positioned between said flange and a wall of said unit, a resilient member positioned between said cross piece and a wall of said unit opposite to said first referred to unit wall, and bolts which connect the flange and end cap together to hold the end cap on the casing and the unit in the casing compressed between said resilient members.

2,454,571
CULINARY OVEN WITH HEAT DIVERTING MEANS
Palmer W. Rom, Cudahy, Wis.
Application September 3, 1946, Serial No. 694,449
5 Claims. (Cl. 126—275)

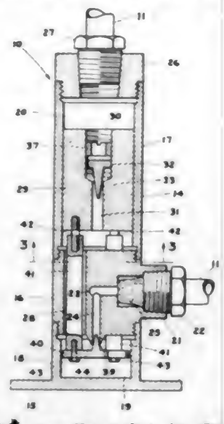
1. An oven having a base provided with a large central burner opening and a plurality of peripherally disposed openings radially of the burner opening, a hood above said base including an inner heat insulated metal wall having a top deflector wall portion forming an opening adapted to be closed, a baffle mounted in said hood below said deflector wall portion having a central opening and side openings adjacent the wall, said side openings in said baffle and said peripheral openings in said base permitting gases passing upwardly through said central openings to pass downwardly along the inner wall of said hood.



2,454,572
ELECTRIC DISCHARGE TUBE
Wilhelmus Antonius Roovers, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application November 22, 1946, Serial No. 711,657
In the Netherlands October 12, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires October 12, 1965
4 Claims. (Cl. 250—27.5)

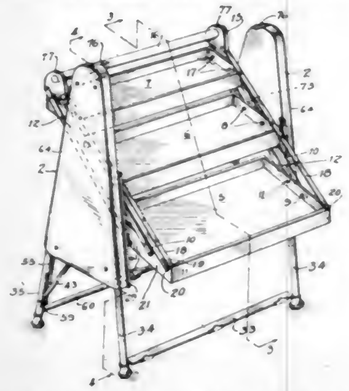
1. An electric discharge tube base assembly comprising a glass base portion provided with a central aperture, an envelope portion hermetically sealed to the periphery of said base portion, a plurality of electric contact pin members concentric to said aperture and extending from the inner and outer sides of said base portion, and a metal member centrally positioned with respect to said contact pins and having a given portion thereof hermetically sealed to said base portion and an end portion thereof integrally united to said given portion and extending beyond the outer end of said contact pin members, said metal member being provided with a central bore

coincident to the aperture of said base portion and open to the inner side of said base portion, and the end portion of said metal member comprising a longitudinally extending location lug member on the peripheral surface thereof and means to hermetically seal said central bore.



2,454,573
FOLDING BOX
Joseph Scher, New York, N. Y.
Application August 3, 1945, Serial No. 608,729
1 Claim. (Cl. 229—34)

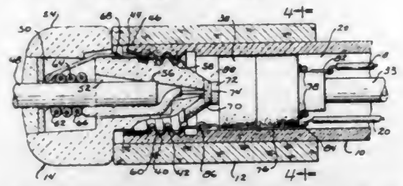
A folding box including a base, inner and outer end walls, intermediate end walls, side walls, upper walls forming closure flaps, and integrally-formed reinforcing bands extending around the box at each end thereof, the box being formed from a single blank of sheet material having a plurality of intersecting fold lines defining such base and walls, the inner and outer end walls being disposed longitudinally of the base, the intermediate end walls being disposed longitudinally of the side walls, and the remaining walls being disposed laterally thereof and being defined at opposite ends thereof by a pair of spaced, transverse fold lines, each reinforcing band comprising a pair of adjacent strips of unequal width separated by a fold line and lying transversely of the blank between one of said transverse fold lines and adjacent the end wall portions the outer strip of each pair being wider than the inner strip, which strips are folded back in overlapping relation on the outer surface of the box, and forming an external fold line extending around the box at a point spaced from the end thereof, and an internal fold line extending around the box between the external fold line and such end, the internal fold line providing an internal abutment which is engaged by the inner end wall for retaining the latter in position.



2,454,574
FLOW REGULATOR
David P. Shoemaker, Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application March 26, 1946, Serial No. 657,179
1 Claim. (Cl. 137—152.5)

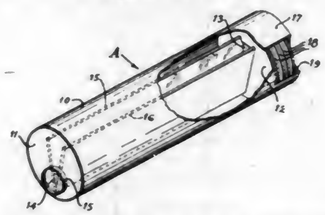
A flow regulator adapted to be connected in a fluid line including, a body, a chamber in the lower portion of the body, said body having a port adapted to establish communication between the chamber and the inlet end of a fluid line, a needle valve in the port for controlling flow therethrough, a cylinder in the upper portion of said body and adapted to establish communication between a passage in communication with said chamber and the outlet end of a fluid line, a piston slidably mounted in the cylinder and responsive to the flow thereinto, the piston having a bore permitting flow therethrough, an adjustable needle valve in the bore for controlling flow therethrough, means adjustably mounted in said bore for maintaining

the adjustable needle valve in fixed positions, and adjustable means connecting said piston to the port needle valve whereby the adjustment of the latter is controlled by the position of said piston as varied by the position of said adjustable needle valve.



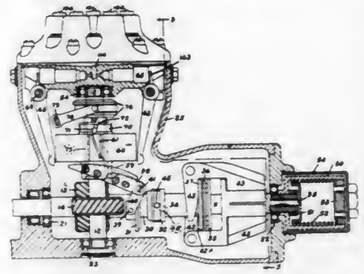
2,454,575
SALESMAN'S FOLDING SAMPLE CASE
Rudolph Arvid Silene, Los Angeles, Calif.
Application March 9, 1944, Serial No. 525,741
4 Claims. (Cl. 190—17)

1. A display device comprising a frame, a series of display shelves, two parallel bars each pivotally mounted at about the same point in its length for substantially parallel movement on said frame, said parallel bars pivotally carrying one of said shelves on their upper, and another on their lower paired ends, a centrally disposed shelf immovably secured to said frame, the movement of said shelf supporting bars to display position oscillating said upper and lower shelves around and into offset positions relative to said fixed shelf, and the reverse movement of said bars carrying said movable shelves to a position within the confines of said frame with the shelves arranged



one above the other, a supplementary brace bar pivotally connected at one extremity to the upper portion of a said parallel bar and at the other extremity to said lower shelf to help support a load of heavy material in said lower shelf.

2,454,576
MODELING TOOL
William H. Slack, Houghton, Mich.
Application May 1, 1946, Serial No. 666,234
3 Claims. (Cl. 219—21)

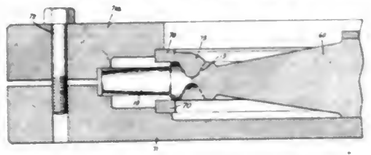


1. A modeling instrument comprising a cylindrical body, a working portion at one end of the body, a modeling tool having its shank extending into the working portion, a heating element in the working portion in heat exchange relation with the shank of the modeling tool, a thermostat in the body adjacent the working portion, an adjusting knob at the end of the body remote from the working portion, a shaft extending from the knob to actuate the thermostat, cooperating indicia lines carried by the knob and body to indicate modeling tool temperatures, and a gripping portion having low heat transmitting characteristics and a high friction gripping surface carried by the body adjacent the working portion.

2,454,577
KALEIDOSCOPE
Desmond E. Smith, Toronto, Ontario, Canada
Application March 15, 1946, Serial No. 654,733
1 Claim. (Cl. 88—15)

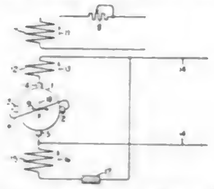
In a kaleidoscope of the class described, a body adapted to remain stationary during use, said body having a viewing opening at its forward end and an aligned object opening adjacent its rearward end, inclined reflecting surfaces extending along said body between said aligned openings and adapted to cause multiple reflections of objects beyond the rearward opening when viewed through said aligned openings, whereby to create a symmetrical pattern, said viewing opening being located adjacent the apex of said inclined reflecting surfaces, transparent means rearwardly of said rearward opening carrying pattern pieces and movable relative to the body to display through said rearward opening a part of a pattern, said transparent pattern piece carrying means being exposable to the light to create said reflection in said inclined reflecting surfaces, said body being held stationary and said transparent means being rotatable to create pattern changes, said transparent means comprising discs rotatable relatively to each other and each having an exposed edge engageable by a digit of the hand for frictionally rotating said discs, said reflecting surfaces having an inclined upper edge extending forwardly and downwardly from the top of the rearward opening to the top of the forward opening.

2,454,578
CONTROLLING MECHANISM
Merton J. Smith, Cleveland, Ohio, assignor of twenty-five per cent to Paul B. Shannon, Chicago, Ill., twenty-five per cent to John P. Geiger, Cleveland, Ohio, and twenty-five per cent to Robert W. Wilson, Rocky River, Ohio
Application May 26, 1942, Serial No. 444,605
19 Claims. (Cl. 123—140)



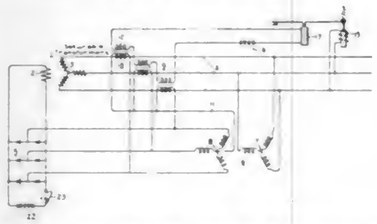
4. In a fuel distributor for an internal combustion engine, a vertical shaft, a cam carried thereby in rotation, a horizontal shaft, and driving connections therefrom to said vertical shaft, said connections comprising mutually-engaging gears on each shaft, and a sleeve on said horizontal shaft by which one of said gears is carried in rotation, a transverse pin passing through said horizontal shaft and having its ends fixed in said sleeve, a transverse opening of substantial axial length through said horizontal shaft through which said pin passes, cam surfaces defining said opening, and having both axial and circumferential components, speed-responsive means effective to move said sleeve along its shaft, and means for driving one of said shafts from the engine.

2,454,579
CARBON BRUSH ELEMENT
Lynn H. Stauffer, Pattersonville, N. Y., assignor to General Electric Company, a corporation of New York
Application August 17, 1946, Serial No. 691,243
3 Claims. (Cl. 171—326)



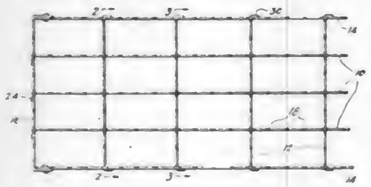
2. A contact brush of carbonaceous material having a portion adapted to be electrically connected to a shunt, a layer of copper adherently deposited on said portion of said brush, and a metallic shunt bonded to said layer of copper on said brush by an alloy of tin and copper characterized by having a melting point substantially in excess of the melting point of tin.

2,454,580
METHOD OF MANUFACTURING BLADED ROTORS
Rudolf H. Thielemann, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 18, 1943, Serial No. 479,549
5 Claims. (Cl. 29—156.8)



1. The method of manufacturing a bladed rotor having a disk and a circumferential row of buckets which consists in clamping the disk to a base plate, assembling a complete circumferential row of buckets around the rim of the disk with the bucket bases and the disk rim forming continuous annular weld preparation grooves on opposite sides of the buckets and disk and at a common radius from the center of the disk, clamping the buckets rigidly to the base plate in radially and circumferentially fixed relation to said rim by means of an annular dam member engaging the side of the buckets remote from the base plate and in heat transfer relation with the bucket bases and radially beyond the weld preparation groove on said remote side of the disk, adding to said last-named groove fused metal forming a continuous annular weld, releasing the disk and buckets from the base plate and inverting the same and clamping the disk to the base plate in said inverted position with a second dam member engaging the unwelded side of the bucket bases remote from the base plate, adding to the second groove fused metal forming a continuous annular weld, said annular welds securing the bucket bases to each other and to the rim of the disk and to the dam members whereby the dams reinforce the welds during the welding and cooling process, and machining said dam members and excess weld metal to form a desired contour.

2,454,581
DYNAMOELECTRIC MACHINE
Charles A. Thomas, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application September 28, 1946, Serial No. 700,152
10 Claims. (Cl. 322—92)

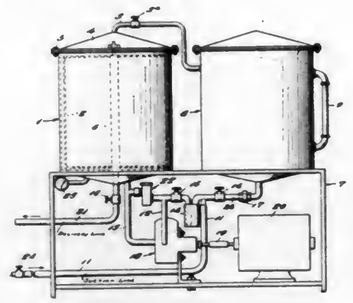


10. A dynamoelectric machine having a rotatable member with a winding and a commutator connected thereto, a set of primary brushes and a set of secondary brushes displaced about said commutator from said primary brushes for providing a primary circuit and a secondary circuit respectively through said rotatable member winding, a field exciting winding arranged to provide a component of excitation along the secondary commutating axis of said machine, means including a second field exciting winding for providing a component of excitation along the secondary commutating axis of said machine for substantially neutralizing the secondary armature reaction of said machine, means including a third field exciting winding for providing a component of excitation to said machine for inducing a cumulative component of voltage to that resulting from said first-mentioned field exciting winding excitation and arranged to be energized in response to the voltage of said secondary circuit, and means including a nonlinear negative voltage-resistance characteristic resistance connected in series with said third field exciting winding for inherently and nonlinearly varying the resistance of the circuit of said third field exciting winding in the same sense as variations in the secondary voltage of said machine, whereby the response and sensitivity of said dynamoelectric machine is increased.

2,454,582
EXCITATION SYSTEM FOR ALTERNATING CURRENT DYNAMOELECTRIC MACHINES
Louis W. Thompson, Schenectady, and Frederick E. Crever, Scotia, N. Y., assignors to General Electric Company, a corporation of New York
Application August 27, 1946, Serial No. 693,222
11 Claims. (Cl. 322—25)

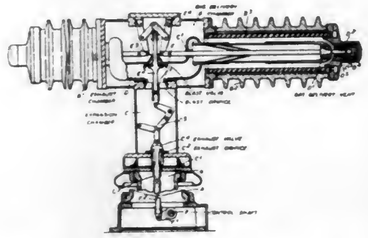
1. A regulating system for an alternating current dynamo-electric machine comprising, an armature circuit, a field winding, a rectifier for supplying direct current to said field winding, means for supplying alternating current energy from said armature circuit to said rectifier, said means including a current transformer having a direct current saturating winding for supplying alternating current energy to said rectifier proportional to the current of said armature circuit, direct current supply means for said direct current saturating winding, and means responsive to armature circuit voltage for varying said direct current supplied to said saturating winding.

2,454,583
GRATING STRUCTURE
Robert Wisely, Chicago, Ill.
Application June 21, 1945, Serial No. 600,821
3 Claims. (Cl. 189—82)



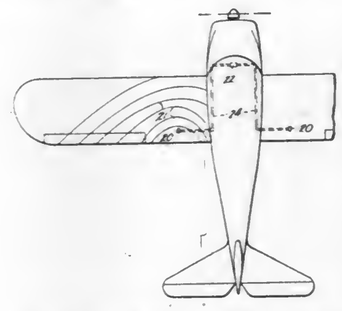
1. A grating structure comprising spaced longitudinal bars and spaced cross bars, said longitudinal bars having spaced notches in their upper edges and spaced apertures below said notches, said cross bars having spaced lateral elongate slots each substantially twice as wide as the thickness of a longitudinal bar through their major lengths, a single longitudinal bounding edge of each of the said slots in each cross bar being provided with a lug extending part way across the slot, to leave an open space in each slot between the straight edge thereof and the end of the facing lug, at least as great as the thickness of a longitudinal bar, the assembled bars being interlocked with the upper extremities of said slots in nested relation with said notches and with said lugs in nested relation with said apertures, all the lugs of a plurality of the assembled cross bars facing in one direction and all the lugs of the remaining cross bars facing in the opposite direction.

2,454,584
HYGROMETER
Placido W. Zingaro, Hartsdale, N. Y., assignor to Square D Company, Detroit, Mich., a corporation of Michigan
Application October 2, 1944, Serial No. 556,795
11 Claims. (Cl. 201—63)



11. In an electrical hygrometer, spaced electrodes, a hygroscopic mixture between said electrodes including a hydroxide of a metal of the group potassium, sodium, lithium, and a coating of platinum black on said electrodes for absorbing gases evolved at the electrodes.

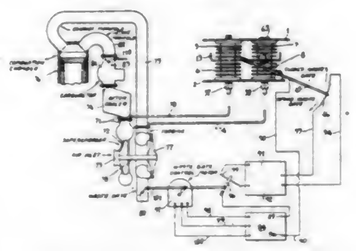
2,454,585
FLUSHING DEVICE FOR ENGINE LUBRICATING SYSTEMS
Elbert N. Alderman, El Dorado, Kans.
Application February 13, 1945, Serial No. 577,682
5 Claims. (Cl. 134—13)



5. A method of cleansing an engine crankcase comprising, supplying cleaning fluid to said crankcase, continuously withdrawing fluid from said crankcase while returning cleansed fluid thereto at a sufficient rate to maintain a constant quantity of fluid in said crankcase, promoting turbulence in said fluid in said crankcase by operating said engine and cleansing said withdrawn fluid preparatory to its return to said crankcase and intermittently releasing entrapped oil from said circulatory cleaning fluid.

2,454,586
GAS-BLAST ELECTRIC CIRCUIT BREAKER
Donald Foster Amer, Newcastle-on-Tyne, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a company of Great Britain
Application December 6, 1946, Serial No. 714,598
In Great Britain December 18, 1945
20 Claims. (Cl. 200—148)

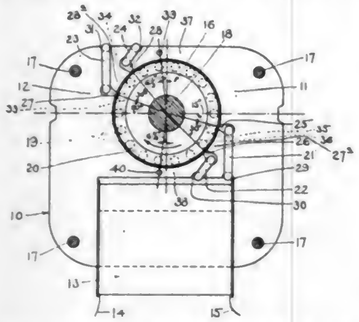
1. A gas-blast electric circuit-breaker comprising a pressure-gas reservoir communicating with a gas delivery vent, two relatively movable main contacts cooperating at said vent, an exhaust chamber on the outlet side of the vent, said exhaust chamber having an outlet or blast orifice therein, a blast valve controlling the blast orifice, opening of the blast valve thus causing a blast of deionising gas to flow from the reservoir and through the vent into the exhaust chamber, thereby assisting to extinguish an arc initiated between the main contacts, a passage communicating with said exhaust chamber through the blast orifice and having an outlet or exhaust orifice therein, an exhaust valve controlling said exhaust orifice, the blast valve and exhaust valve being thus disposed in tandem, and a single control device whereby the main contacts, blast valve and exhaust valve are sequentially controlled, operation of said control device to open the contacts causing the blast valve to be opened before the exhaust valve is closed, whereas operation of said device to close the contacts causes the exhaust valve to be opened before the blast valve is closed.



2,454,587
STALL INDICATING WARNING SIGNAL FOR AIRPLANES
Gordon H. Arnold, Flint, Mich.
Application April 12, 1946, Serial No. 661,601
4 Claims. (Cl. 177—311)

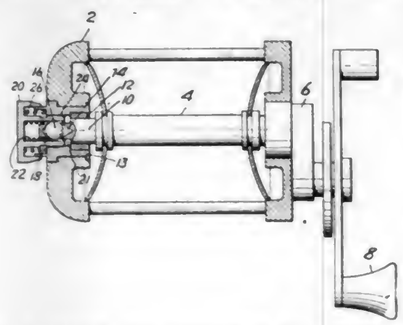
1. A warning indicator for airplanes comprising, in combination, an electrical circuit, a warning signal in said circuit, switch mechanism in

said circuit, a detector unit mounted upon the upper trailing surface of a wing of the plane provided with a Venturi passageway extending fore and aft of the plane and disposed above the upper surface of the wing at such a distance as to be outside of the boundary layer of air over the wing during normal flight of the plane but to be within said boundary layer of air when the plane is approaching a stall, pressure responsive mechanism communicating with the restriction through the Venturi passageway to respond to a predetermined variation in the rate of air flow therethrough operable to actuate said switch mechanism.



2,454,588
CONTROL APPARATUS
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 23, 1943, Serial No. 484,226
8 Claims. (Cl. 230—5)

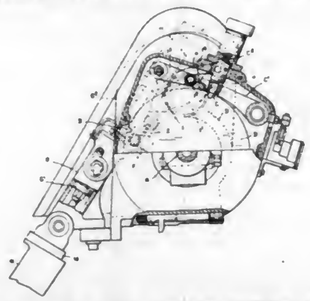
1. A device of the character described, comprising, in combination, a pivotally mounted U-shaped lever, actuating means for moving said U-shaped lever, a pivotally mounted second lever, a connecting pin pivotally mounted between said U-shaped lever and said second lever, biasing means for pivoting said second lever so as to hold said pin in engaging relation with said U-shaped lever and said second lever, whereby upon positioning said U-shaped lever in a predetermined neutral position in relation to said pin said biasing means has no biasing effect upon said U-shaped lever, but when said U-shaped lever is pivotally positioned to either side of said neutral position by said actuating means said pin is positioned in such a manner as to cause said U-shaped lever to be increasingly biased away from said neutral position under force of said biasing means, and means operatively connected to said U-shaped lever and positioned thereby.



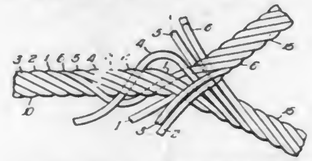
2,454,589
SHADED POLE MOTOR AND THE LIKE
Earle W. Ballentine, Wilmette, Ill., assignor to Russell Electric Company, Chicago, Ill., a corporation of Illinois
Application August 2, 1945, Serial No. 608,419
13 Claims. (Cl. 172—278)

1. A shaded pole single-phase motor of the induction type, having its rotor provided with slots or tunnels even in number and conductors located therein, and having the poles of its stator provided with slots or tunnels for shading coils, and conductors located therein, said stator slots or tunnels in each pole of said stator being separated by the same amount as those of the other poles so as to define in each pole a stator tooth said stator tooth of one pole being asymmetrically disposed relative to the stator tooth of another pole, the spacing between the stator slots in each

pole being different from the spacings of the rotor slots or tunnels.



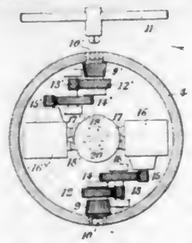
2,454,590
CONTINUOUS SHAFT BRAKE FOR FISHING REELS
Bernard E. Berlinger, Elkins Park, Pa., assignor to Quaker City Gear Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application November 17, 1944, Serial No. 563,832
10 Claims. (Cl. 188—83)



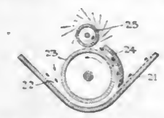
2. A fishing reel comprising a spool shaft, a bearing for each end of said shaft, the shaft at one end having an axially centered conical socket therein, a ball seated in said socket, a member in axial alignment with said ball and said socket and having a conical socket seated on said ball, a spring axially urging said member against said ball, means for adjusting the axial force exerted by said spring, and a second spring maintaining the adjustment of said spring adjusting means.

2,454,591
INDEXING MECHANISM
Samuel G. Brady and John L. King, Royal Oak, Mich., assignors to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application March 5, 1945, Serial No. 581,136
4 Claims. (Cl. 90—57)

1. In an indexing mechanism provided with a hydraulic motor for actuating the same between successive positions in a cycle and a stop for limiting the length of each actuating movement of said motor, a hydraulic motor for moving said stop alternately from one to another of two positions, a valve controlling said last mentioned hydraulic motor and means automatically operated at a predetermined point in said cycle for actuating said valve thereby quickly shifting said stop to change the length of said actuating movement.

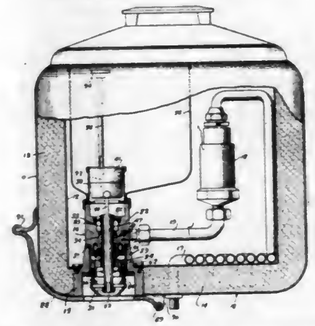


2,454,592
CABLE EYE AND METHOD OF SPLICING THE SAME
Joseph Budzinski, Kenosha, Wis.
Application January 31, 1948, Serial No. 5,651
8 Claims. (Cl. 57—142)



6. In a cable, an eye composed of two component integral bundles, each containing a plurality of strands, said bundles being overlapped on each other and intertwined with each other, the bases of said bundles in conjunction with the body of the cable forming a crotch, a number of strands of one bundle being commingled with a number of strands in the other bundle on each side of the crotch, the commingled group of strands on each side of the crotch being spliced to the strands in the body of the cable.

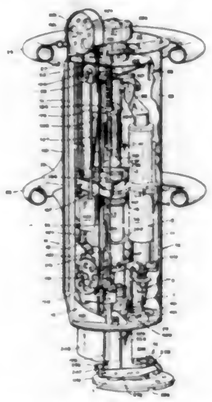
2,454,593
PNEUMATIC CHUCK
Gabriel Chalicarne, Meudon, France, assignor to Societe Anonyme: Forges & Ateliers De Meudon, Meudon, France
Application August 9, 1945, Serial No. 609,863
In France February 21, 1941.
Section 1, Public Law 690, August 8, 1946
Patent expires February 21, 1961
7 Claims. (Cl. 279—116)



3. In a chuck for machine-tools, the combination of a chuck body, radial guiding grooves formed in said chuck body, jaws housed in said radial grooves, and in the rear face of which teeth are provided, a circular plate concentric with the axis of said chuck body and rotatively mounted within said chuck body, and on one face of which are formed spiral grooves arranged to come in engagement with the teeth of said jaws and on the other face of which are provided peripheral bevel pinion teeth, toothed bevel pinions having radial axes peripherally and rotatively mounted in said chuck body and constantly in mesh with the teeth of said plate, a distinct rotary engine for each of said toothed bevel pinions and a gearing-down device for coupling each engine housed in the chuck body and secured directly thereto to one of said toothed bevel pinions.

2,454,594
METHOD AND APPARATUS FOR SPRAYING
Niels C. Christensen, Salt Lake City, Utah
Application September 17, 1943, Serial No. 502,820
5 Claims. (Cl. 299—63)

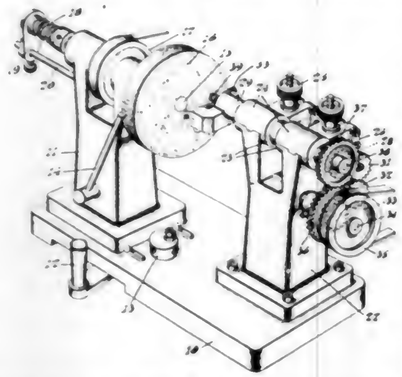
5. In an apparatus for spraying liquids, the combination of a cylinder mounted to rotate about its axis, said axis being substantially horizontal, a support having a surface approximately coextensive with the length of the cylinder opposed to the cylinder at the bottom thereof, said surface being parallel with the cylinder, and spaced a short distance therefrom to form throughout substantially the entire length of the cylinder a slender throat, said surface having a supply area in front of the throat arranged to guide liquid sustained thereby to the throat and having, behind the throat, a discharge area so formed that liquid tends to flow over it by gravity out of and away from the throat; means for forming on said supply area a layer of liquid moving towards said throat and of a depth not less than, and not materially more than, the height of the throat, and means for varying the thickness of said layer within said limits.



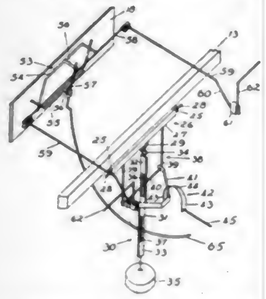
2,454,595
DRINK DISPENSER
William F. Cramer, Jr., Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application March 2, 1945, Serial No. 580,671
11 Claims. (Cl. 225—21)

1. A device for mixing and dispensing two liquids comprising a storage reservoir for one liquid,

a second reservoir below said first reservoir and communicating therewith, a discharge head, an elongated passageway extending from said second reservoir to said discharge head, the capacity of said second reservoir and said elongated passageway together being substantially equal to the amount of the first liquid which is to be mixed with the second liquid, valve means at the lower end of said elongated passageway for controlling the flow of said one liquid to said discharge head, a liquid supply conduit for conducting the second liquid to said discharge head, valve means for controlling the flow of said second liquid to said discharge head, and means for interrupting the flow of said one liquid from said first reservoir to said second reservoir when said first valve means is open.



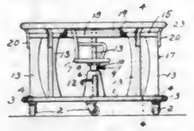
2,454,596
PORTABLE RIVETING MACHINE
Charles A. Dawson, South Pasadena, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application January 26, 1944, Serial No. 519,738
3 Claims. (Cl. 29—34)



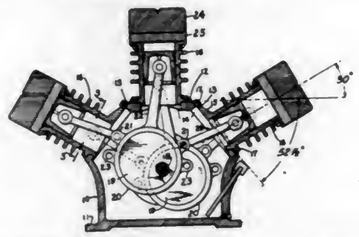
1. A portable drilling and riveting tool comprising a case, a turnable carriage in the case, drilling means and riveting means supported by the carriage to turn therewith and for independent axial movement toward and away from the work assembly, fluid pressure actuated means for clamping the tool against the work assembly, a second fluid pressure actuated means for turning the carriage to alternately position the drilling and riveting means in alignment with a given point on the work assembly, a third fluid pressure actuated means for advancing the drilling means axially toward the work assembly, when aligned with said point, to drill an opening in the work and for advancing the riveting means toward the work assembly, when the same is aligned with said point, and automatic control means for the three fluid pressure actuated means.

2,454,597
GRINDING AND POLISHING MACHINE
Charles Delafontaine, Arlington, and Frank W. Kotler, Watertown, Mass.
Application August 22, 1945, Serial No. 611,936
8 Claims. (Cl. 51—133)

1. A diamond polishing machine for forming a continuous circumferential girdle about a diamond, including in its structure a lapping wheel rotatable about a fixed axis and spring means for holding the wheel in operative position, in combination with a pair of telescopically arranged shafts rotatable about an axis parallel to but eccentric with respect to the axis of the lapping wheel, a diamond holder carried by the said shafts and rotatable about an axis at right angles to that of the lapping wheel and also rotatable about a fixed axis eccentric with respect to that of said wheel, and a single common means for driving the holder about both of said axes.

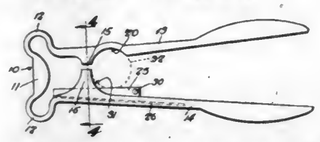


2,454,598
STABILIZING CONTROL MECHANISM FOR MODEL AIRPLANES
Irvin H. Doyle, Phoenix, Ariz.
Application June 26, 1946, Serial No. 679,326
10 Claims. (Cl. 46—76)



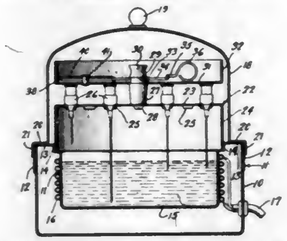
1. In combination with a model aeroplane having a fuselage defining a compartment, wings, two normally horizontally-disposed, spaced-apart supports, one extending transversely across said compartment and the other carried by said wings, and ailerons for said wings; a stabilizing control mechanism for said aeroplane including a pendulum means having a weight-suporting arm provided with a longitudinally-extending slot, means suspending said arm from one of said supports for oscillation of the arm, an elongated control lever with one end portion thereof disposed within said slot, means supporting said lever at the other end portion thereof for swinging movement transversely of said compartment, while within said slot, including a substantially vertically-disposed pivot, operatively carried by the other of said supports, and means operatively connecting said pivot and ailerons, operatively connected with said lever and arm, for operation of said ailerons upon tilting of said supports out of their horizontal positions.

2,454,599
BABY DINING-PLAY TABLE
William M. Dunson, Welaka, Fla.
Application November 1, 1946, Serial No. 707,245
3 Claims. (Cl. 155—123)



2. In an infant's portable play-dining apparatus comprising a circular base member, supporting means for said member, and a centrally supported chair, and having a flat circular table top member supported by standards affixed to said base member, and said table top member having a central opening formed therethrough above and around the area occupied by said chair, said table top member comprising a flat horizontally disposed one piece play-dining surface and an outer periphery considerably smaller than the outer periphery of said base member, and being unencumbered and free of any objects, crevices and food obstructions on said surface, an annularly disposed tread surface comprising the outer periphery of said base member, and an annulus having a tread surface of equal outer periphery supported well above and outside of the outer periphery of said table top member, thereby comprising a wide open annular sanitary space therebetween, means disposed between said annulus and the outer edge of said table top member to firmly support said annulus, said annulus supporting means comprising angularly formed brackets integrally connected with said annulus and with said table member at spaced distances therearound.

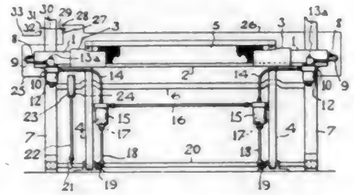
2,454,600
COMPRESSOR
William V. Fischer, Akron, Ohio, assignor to The Air-Flo Compressor Company, Akron, Ohio, a corporation of Ohio
Application October 4, 1944, Serial No. 557,161
8 Claims. (Cl. 230—172)



1. A compressor embodying cylinders, pistons therein, mechanism for reciprocating said pistons, a housing having one face substantially horizontal, two oblique faces adjacent thereto disposed at 52½ degree angles to the horizontal, said oblique faces having transversely elongated openings therein, cylinders having mounting flanges thereon inclined at 7½ degree angles from planes normal to their medial axes for mounting said cylinders on said oblique faces at either 30 or 45 degree angles to the horizontal, said substantially horizontal face having openings therein, beveled surfaces adjacent said openings for mounting cylinders thereon, the cylinders being mounted on the housing, connecting links coupled with said pistons, and means in said reciprocating mechanism for mounting said connecting links to form an operative two cylinder compressor when cylinders are mounted on the substantially horizontal surface, a four cylinder compressor when cylinders are mounted on the oblique faces at 45 degree angles, or a six cylinder compressor when cylinders are mounted on the substantially horizontal face and on the oblique faces at 30 degree angles to the horizontal face.

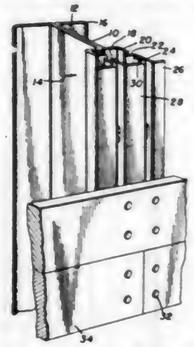
2,454,601
NUTCRACKER WITH AN ADJUSTABLE SLIDING JAW
William M. Gallagher, Oklahoma City, Okla.
Application April 12, 1945, Serial No. 587,871
2 Claims. (Cl. 146—16)

2. A nut cracker comprising resiliently connected arms, a nut jaw formed on the inner side of one of the arms, the other arm having on its inner face a guideway undercut at its lateral edges and extending at each side of the area of the aforementioned jaw, a wedge shaped member slidably mounted in the guideway and forming a second nut jaw cooperating with the first mentioned jaw to accommodate nuts of various diameters, and lugs on the respective arms for limiting the closing movement of the arms positioned between the inner edges of said jaws and the connected ends of the arms and forming portions of each of said jaws.



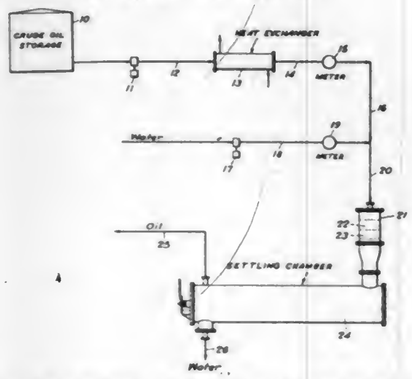
2,454,602
NEEDLE HOLDER AND STERILIZER
Frederick F. Gunther, Chicago, Ill., assignor to Helmco, Inc., Chicago, Ill., a corporation of Illinois
Application June 30, 1944, Serial No. 542,956
7 Claims. (Cl. 21—91)

1. In a holder and dispenser for hypodermic needles or the like, an apertured dispensing member for receiving the shanks of needles loosely therethrough and for supporting them by the enlarged heads thereof; a removable cover member for overlying the ends of the enlarged heads remote from the needle shanks; said dispensing member and said cover member having co-operating clamping means for removably hold-



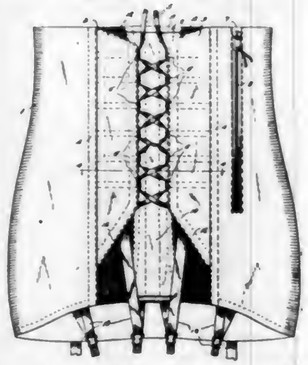
ing the cover member in spaced relation to the dispensing member a distance sufficient to accommodate the portions of the needles extending above the dispensing member and retain the needles in the apertures against longitudinal movement, head first, outwardly therefrom until the cover is removed.

2,454,603
PICKING MOTION FOR LOOMS
John Heaton, Riddlesden, Keighley, England, assignor to Electro-Pneumatic Looms Limited, Bradford, England, a British company
Application November 26, 1945, Serial No. 630,892
In Great Britain January 10, 1945
6 Claims. (Cl. 139—144)



1. Picking apparatus for driving a loom shuttle back and forth across a sley board comprising, a tubular shuttle box at each side of the sley board adapted to snugly receive the shuttle, a source of compressed air, means including alternately actuated valves for delivering compressed air alternately to the shuttle boxes to directly propel the shuttle back and forth, and back air pressure relieving means associated with each shuttle box, each such means being adjustable to thereby vary the arresting effect of the air cushion built up in each shuttle box by back air pressure upon a return of the shuttle to the box.

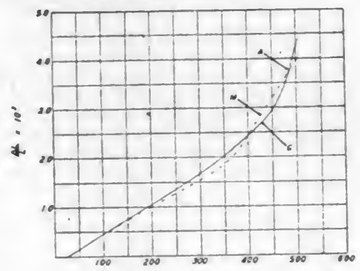
2,454,604
JOIST AND GIRDER CONSTRUCTION
Edward A. Heim, Lisbon, Ohio
Application February 26, 1947, Serial No. 730,943
2 Claims. (Cl. 189—37)



1. A structural member adapted to withstand variously applied stresses and to receive and to clinch nails driven thereinto, comprising channel members with portions of the web portions thereof secured together in back-to-back relation and with outer portions of the web portions in spaced relation, the corresponding sides of said channel members being in co-planar relation, and an elongated nail-guiding member secured to the channel members between and spaced from said outer portions, said guide member being disposed longitudinally of said channel members and comprising a channel member having flanges substantially parallel to said outer portions, and said outer portions having longitudinally extending arcuate portions adjacent the inner edges of the nail-guiding member, the said flanges terminating short of the arcuate portions.

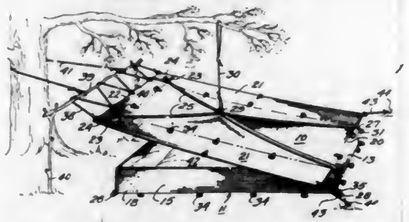
2,454,605
DESALTING CRUDE OIL
Chalmer G. Kirkbride, College Station, and Mark C. Hopkins, Texas City, Tex., assignors to Pan American Refining Corporation, New York, N. Y., a corporation of Delaware
Application October 4, 1945, Serial No. 620,342
9 Claims. (Cl. 252—324)

1. The method of desalting brine-containing oleaginous liquids comprising passing a brine-containing oleaginous liquid through a bed of fiber glass, said bed having a density of from about 10 pounds to about 20 pounds per cubic foot and an interfiber distance, based on such bed densities, of from about 0.0042 inch to about 0.0084 inch.



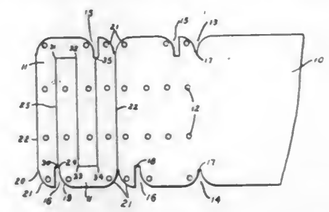
2,454,606
VENTILATED CORSET
Joseph J. Kispert, Mount Carmel, Conn.
Application October 25, 1946, Serial No. 705,567
3 Claims. (Cl. 2—34)

1. A corset comprising a body having a vest, said vest having a narrow vertically extending center panel midway its width and side panels at opposite sides of the center panel extending the full depth of the vest and sewed along outer



side edges to the body and along inner side edges to opposite side edges of the center panel, the center panel being formed of non-elastic fabric and reinforced by vertically extending stay, the side panels being formed of thin elastic fabric having an open weave and constituting ventilating sections for the vest stretchable transversely of the vest, and closure flaps mounted along edges of the body and disposed against the outer face of the vest in overlapping relation thereof when closed.

2,454,607
GLASS COMPOSITION
Charles E. Leberknight and Eugene C. Ostrander, Edgewood, Pa., assignors to Kopp Glass, Inc., Swissvale, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 19, 1946, Serial No. 691,470
2 Claims. (Cl. 106—54)

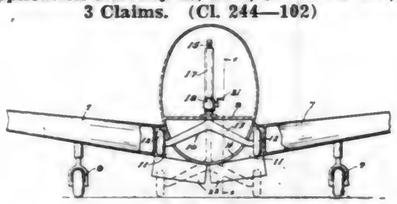


1. A metal sealing glass consisting of 20% to 24% B_2O_3; 3% to 6% Al_2O_3; 2% to 5% TiO_2; .5% to 1.5% ZrO_2; the sum of Na_2O, K_2O and Li_2O; 7% to 12% with not less than 2% of each of these alkali metal oxides; and 56% to 68% SiO_2; calculated from the batch composition.

2,454,608
LUGGAGE CARRIER AND PROTECTOR
Clarence E. Meyerdick, Fair Oaks, Calif.
Application November 25, 1946, Serial No. 712,192
7 Claims. (Cl. 224—42.1)

1. A duffle bag for luggage to be carried on the top of an automobile comprising, connected top and bottom sections composed of a rectangular fabric strip forming a rectangular bag for the bottom section, said top section extending from an upper edge of said bottom section, the remote end of said top section having slide fastening elements secured thereto from points within the body of the top section adjacent to the corners thereof and diverging outwardly to the side and end edges defining square sections at the corners, said corners being foldable upon themselves inwardly upon the closure of the slide fastening elements to provide a closed end cover bag element with depending side portions and an end portion of the top section.

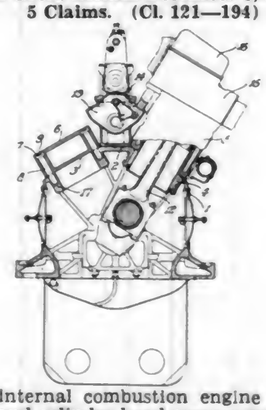
2,454,609
METHOD OF MAKING LAMINATIONS
Edward A. Miller, Cuba, N. Y., assignor, by mesne assignments, to Acme Electric Corporation, a corporation of New York
Application February 21, 1945, Serial No. 579,127
1 Claim. (Cl. 164—18)



The method of constructing U-shaped laminations from a strip of material, said laminations having a base with rounded outer corners and having side arms of unequal length with the longer of said arms having a step on the inside corner and a rounded outer corner, said method comprising the successive steps of, punching a somewhat V-shaped notch in each side edge of the strip with each notch defining a first edge parallel to the side edge of the strip and also defining first corner edge portions meeting the ends of the first edge and curving into the side edge of the strip, punching somewhat rectangular shaped notches in each side edge of the strip with each somewhat rectangular shaped notch defining a first step edge parallel to the side edge of the strip, a second step edge extending between one end of the first step edge and the side edge, and a second corner edge portion extending from the other end of said first step edge and curving into the side edge of the strip, and blanking the U-shaped lamination from the strip with a part of the first edge, and the respective first corner edge portion of the V-shaped notch on one side of the strip forming a rounded corner on the base of the lamination, with a part of the first edge and the respective first corner edge portion of the V-shaped notch in the opposite side edge of the strip forming a rounded outside corner on the longer arm, with a part of the first step edge and the second corner edge portion of the somewhat rectangular shaped notch in one side edge of the strip forming the other rounded corner on the base of the lamination, and with a part of the first step edge and the second step edge of the somewhat rectangular shaped notch in the other side edge of the strip forming the step on the inside corner of the longer of said arms.

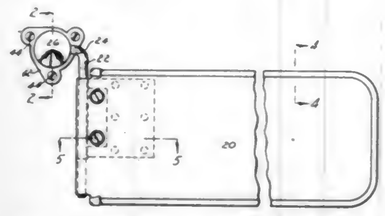
2,454,610
METHOD FOR METALIZATION ON NONCONDUCTORS
Harold Narcus, Worcester, Mass.
No Drawing. Application August 13, 1946, Serial No. 690,333
5 Claims. (Cl. 117—47)

4. Method af applying a conductive copper film to the surface of an electricity non-conducting article comprising activating the surface to produce nuclei of reductive ions in the pores thereof by application of an acidic solution containing titanium oxide, immersing the article in a solution containing an aqueous acidic chloride salt solution of a metal selected from a group consisting of copper, gold, palladium and platinum and then directly immersing in a solution con-



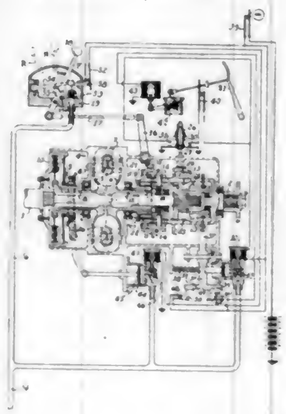
taining copper fluoborate and a fluoborate solution of a metal selected from a group consisting of cobalt, nickel, zinc and iron, the last named solution also containing a copper reducing agent.

2,454,611
RETRACTABLE AUXILIARY LANDING GEAR FOR AIRCRAFT
Louis Paraskevas, New Orleans, La.
Application January 26, 1944, Serial No. 519,806
3 Claims. (Cl. 244—102)



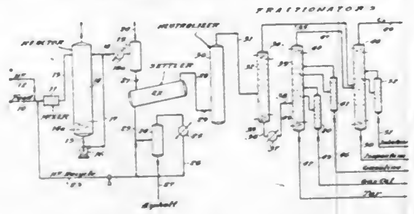
1. In combination, an aircraft including a fuselage with wings having pockets and a service landing gear; an auxiliary landing gear operative independent of the service landing gear comprising a frame operative through the bottom of the fuselage, wheels attached to said frame receivable into the pockets, a rack attached to said frame, a guide mounted in said fuselage with said rack slidably mounted therein, a housing attached to said guide and a manually operative pinion journaled therein engaging said rack, and means secured to said housing for preventing rotation of said pinion in a preselected direction.

2,454,612
CONSTRUCTION OF INTERNAL-COMBUSTION ENGINES
Edward Philip Paxman, Colchester, England
Application June 20, 1946, Serial No. 678,011
In Great Britain December 8, 1944
5 Claims. (Cl. 121—194)



1. An internal combustion engine comprising cylinder and cylinder head components superimposed upon a crank case formed on its upper surface with a central horizontal joint face and a pair of joint faces inclined from the respective sides of said central joint face and merging therewith at their longitudinal edges, one of the inclined joint faces providing means for mounting a row of cylinders thereon, the central horizontal joint face providing means for supporting a cam box assembly thereon, and the second inclined joint face providing a seat for a platform designed to support auxiliaries of the engine.

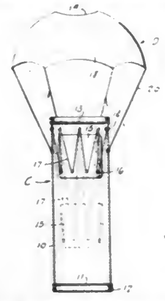
2,454,613
SUN VISOR
Walter J. Peltier and Alton J. Diroff, Monroe, Mich., assignors to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application March 26, 1945, Serial No. 584,794
7 Claims. (Cl. 296—97)



1. Sun visor mechanism comprising, in combination, a bracket base, a rod support pivoted upon the base substantially perpendicular to the plane of the base for rotatable adjustment to a plurality of positions with respect to the base, an angular visor blade supporting rod having one end pivoted upon the rod support for rotatable adjustment about an axis substantially perpendicular to the axis of the pivot mounting of the rod support upon the base, spring means exerting pressure upon the rod tending to hold it at adjusted positions of rotation with respect to the rod support and tending to hold the rod support at adjusted positions of rotation with respect to the base and a visor blade pivotally mounted upon the opposite end of the rod for rotation about an axis perpendicular to the axis of the pivot mounting of the rod upon the rod support.

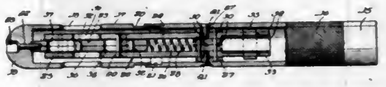
2,454,614
CONTROL SYSTEM FOR TRANSMISSION MECHANISMS
Carl D. Peterson and Albert H. Deimel, Toledo, Ohio, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application October 25, 1945, Serial No. 624,525
9 Claims. (Cl. 192—.01)

1. A control system for transmission mechanisms which include an engine actuated drive shaft, a driven shaft, a low speed direct drive and a high speed direct drive and also low and high speed in indirect drive between the drive and driven shafts, the low and high speed indirect drives including a hydraulic torque converter, a normally-disengaged, self-disengaging shiftable direct drive clutch member operable to connect the direct drive to the driven shaft, and power means for shifting and holding in the direct drive clutch member, the system including an engine throttle and operating mechanism therefor, a governor operated by the driven shaft, successively operable control members normally in inoperative position and operable to active position by the governor, means controlled by the control members for controlling the operation of the power means to engage the direct drive clutch at different speeds, and means operated by the throttle operating mechanism for rendering inoperative the control member first closed by the governor when the throttle has been opened a predetermined amount.



2,454,615
CATALYTIC CRACKING OF HYDROCARBONS
John A. Ridgway, Jr., Texas City, Tex., and Philip Hill, Hammond, Ind., assignors to Pan American Refining Corporation, New York, N. Y., a corporation of Delaware
Application November 12, 1943, Serial No. 509,974
12 Claims. (Cl. 196—52)

1. The process of cracking hydrocarbon oils heavier than gasoline to form gas and gasoline components including low boiling isoparaffinic hydrocarbons while simultaneously forming tar, which comprises subjecting said oils to the action of a catalyst consisting of hydrofluoric acid in an amount at least equal to the weight of oil treated, maintaining the temperature of the reaction zone within the range of about 100 to 250° C., maintaining sufficient pressure in the reaction zone to keep the catalyst in liquid phase, maintaining the hydrofluoric acid in intimate contact with said oils in said reaction zone for a time of contact sufficient to effect cracking as the predominant reaction, removing the hydrocarbon products from the reaction zone, removing dissolved catalyst therefrom by distillation and returning it to the reaction zone and recovering isobutane, isopentane and other hydrocarbons of the gasoline boiling range from the hydrocarbon products.

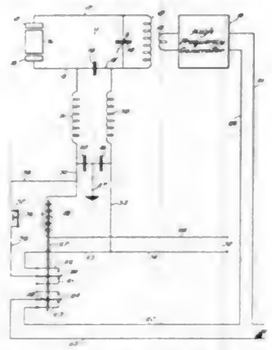


2,454,616
AIR DELIVERY CONTAINER
Arthur B. Schultz, Wilmington, Del., assignor to All American Airways, Inc., a corporation of Delaware
Application April 23, 1945, Serial No. 589,813
8 Claims. (Cl. 244—138)

1. In delivery equipment of the character described, a container for delicate cargo comprising an outer casing, an inner casing adapted for movement within said outer casing, and an undrawn synthetic plastic filament having the ability to absorb energy as it is being drawn,

suspending said inner casing in the upper portion of said outer casing.

2,454,617
WELDING ELECTRODE HOLDER
Eric Siemers, Kalamazoo, Mich., assignor, by mesne assignments, to Lacey-Webber Co., Kalamazoo, Mich., a corporation of Michigan
Application January 21, 1944, Serial No. 519,122
1 Claim. (Cl. 219—8)

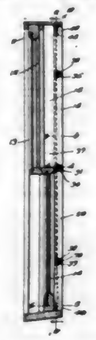


A welding electrode holder, in combination, elongated metal top and bottom members having side members secured thereto to form a hollow body member of susbtantially square cross section, a metal plunger located within said body member and adapted to reciprocate therein, resilient means within the hollow body member for maintaining the plunger in a forward position with its forward end protruding, means limiting the extent of reciprocating movement of the plunger, the top and bottom members adjacent the forward end of the body member having aligned openings for receiving an electrode, said plunger also having an opening therein for receiving the electrode whereby the body member and plunger comprise gripping jaws, said opening in the plunger being so positioned that the same does not coincide with the openings in the body member except when the plunger is retracted against the tension of the resilient means, and tubular covers of insulating material for completely insulating the metal body member, one of said covers having securement to the body member and the other cover being secured to the protruding end of the plunger.

2,454,618
PROTECTIVE CIRCUITS FOR ELECTRONIC EQUIPMENT
John McWilliams Stone, St. Charles, Ill., assignor to Operadio Manufacturing Co., St. Charles, Ill., a corporation of Illinois
Application February 19, 1945, Serial No. 578,677
14 Claims. (Cl. 250—36)

1. In combination, a high frequency oscillator including a primary circuit, a tank circuit and output electrodes deriving energy from said tank circuit, means for controlling the operation of said oscillator comprising a relay having a pair of contacts in said primary circuit, an operating coil for said relay which when energized disen-

gages said contacts and shuts down the oscillator, a blocking condenser inserted in series with one electrode and the tank circuit presenting negligible impedance to the flow of high frequency current but blocking the flow of low frequency alternating current, a circuit for energizing said relay coil comprising a source of low frequency alternating control current, a connection between said source and said oscillator at one side of said blocking condenser, a connection from the other side of said source to one end of said coil and a connection from the other end of said coil to said



oscillator on the other side of said blocking condenser, radio frequency chokes in said connections to the opposite sides of said blocking condenser, by-pass condensers connected between the ends of said radio frequency chokes remote from the oscillator, the circuit through the relay operating coil being completed upon an arc discharge between the electrodes of the high frequency circuit which arc discharge provides a conducting path between the electrodes for the low frequency current and causes energization of the relay and shuts down the oscillator.

2,454,619

WINDOW SASH CONTROL

Jonas A. Swenson, Springfield, S. Dak.

Application December 8, 1945, Serial No. 633,884
2 Claims. (Cl. 20—54)

1. The described device comprising a window frame, a parting strip therein and a movable retainer strip for a sash, said retainer strip having countersunk cups embedded therein, slots in said cups and disposed transversely of said retainer strip, screws inserted through said slots and into said frame so that said retainer strip may move toward said sash, a longitudinal spring for urging the retainer strip against the sash, said spring being substantially coextensive in length with and carried within the retainer, the ends of the spring being secured to said retainer strip and intermediate portions of said spring contacting said screws so that the spring is stressed, and means for limiting the movement of the retainer.

2,454,620

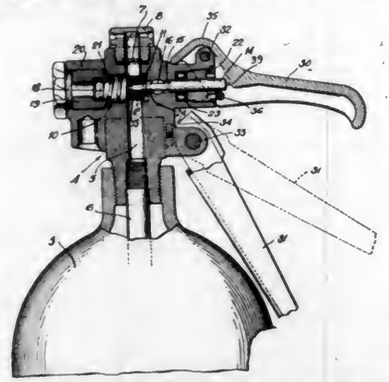
VIBRATOR FOR USE IN CONNECTION WITH CONCRETE

Robert L. Wilde, Englewood, Colo.

Application January 6, 1947, Serial No. 720,455
2 Claims. (Cl. 259—1)

1. A mechanical vibrator comprising, an elongated housing having one end closed, an elongated eccentric vibrator positioned in the housing, each end of the vibrator having an antifriction bearing supported by the inner surface of the housing, one of said bearings being spaced from the closed end forming an oil reservoir, said last mentioned bearing having an opening communicating the reservoir with the space between the bearings, whereby oil from the reservoir will flow into the space between the bearings when the vibrator is positioned in a horizontal plane, and return to the reservoir when the vibrator is in a vertical position with the reservoir at the bottom.

2,454,621



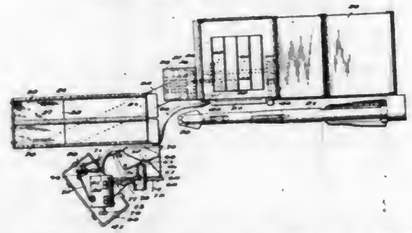
SQUEEZE GRIP FOR PORTABLE FIRE EXTINGUISHERS

Frank B. Allen, Verona, N. J., assignor to C-O-Two Fire Equipment Company, Newark, N. J., a corporation of Delaware

Continuation of application Serial No. 464,686, November 5, 1942. This application May 13, 1948, Serial No. 26,811
5 Claims. (Cl. 222—400)

1. A combination discharge head and squeeze-grip handle for a fire extinguisher including a container for fire extinguishing fluid comprising, a discharge head for the container adapted to be secured to the top thereof, the discharge head having fluid passage means providing an outlet for fluid in the container, valve means to close the fluid passage means, a valve operating member operatively engaging the valve means and extending outwardly from one side of the discharge head, a lower grip handle on the discharge head on the said one side thereof under the valve operating member, pivotal mounting means on the said one side of the discharge head, and an upper grip handle member carried by the

pivotal mounting means and extending above the valve operating member, the upper grip handle member having on its lower surface a downwardly directed portion positioned on the outward side of the pivotal mounting, the downward-



ly directed portion adapted to operatively engage the valve operating member to cause lateral movement thereof, whereby when the grip handle members are squeezed together the valve operating member is actuated laterally to cause the release of the fire extinguishing fluid.

2,454,622

HOSIERY HANDLING AND INSPECTING APPARATUS

Edward R. Ammon, Reading, Pa.

Application May 21, 1946, Serial No. 671,221
16 Claims. (Cl. 223—77)

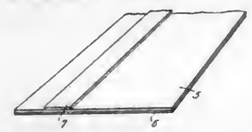
16. Stocking handling and inspecting apparatus comprising a supporting frame, a hosiery inspecting form having a toe end and mounted horizontally in fixed position on and spaced from the supporting frame, means for supplying stockings to the form for inspection and for bagging stockings after inspection including an elongated stocking holding supply tray having an open discharge end and having a horizontal bottom portion and spaced opposite side portions adapted to hold a stack of flat horizontally extending stockings with their welt ends at the discharge end of the supply tray, means mounting the supply tray lengthwise of the form for vertical movement relatively to the form in spaced outward relation to the toe end of the form, stocking bagging means mounted outwardly of the toe end of the form independently of the supply tray and including a pair of power-driven coacting stocking feed rolls mounted for rotation about vertical axes on a fixed level substantially on the horizontal level of the form and laterally offset from the form and the supply tray adapted to discharge horizontally stockings received from the form, a baffle spaced outwardly of and opposite the discharge end of the form for deflecting stockings downwardly and means below the feed rolls for delivering the stockings into a bag.

2,454,623

TEXTILE CHROME-PRINTING COMPOSITIONS AND A PROCESS FOR THEIR MANUFACTURE

Charles Babey, Willi Thommen, and Emil Stocker, Basel, Switzerland, assignors to J. R. Geigy A.-G., Basel, Switzerland, a Swiss firm

No Drawing. Application June 30, 1945, Serial No. 602,678. In Switzerland July 28, 1944
12 Claims. (Cl. 8—72)



1. Process for the manufacture of textile chrome-printing pastes containing hexavalent chromium, chromable dyestuff and gum of vegetable origin, comprising adding to a printing composition which contains chromable dyestuff and gum of vegetable origin water-soluble chromates containing at least one metal forming colorless cation selected from the group consisting of di- and trivalent cations.

2,454,624

METHOD OF PRODUCING RADIATOR TUBES

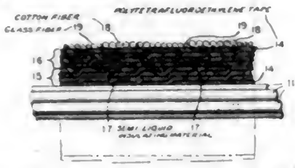
Martin G. Boerger, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin

Original application January 21, 1944, Serial No. 519,139. Divided and this application October 5, 1944, Serial No. 557,247
6 Claims. (Cl. 113—118)

1. The method of producing a radiator tube which consists in applying a ribbon of solder to one side of a metal strip throughout its length, rolling the prepared strip into a flat tube with the side edges of the strip overlapping each other along an arc of a circle at one edge of the tube to form a lap joint with the inner overlapped portion offset inwardly a distance substantially equal to the thickness of the metal strip, with the outer edge of the outer overlapping part disposed in alignment with the outer face of the flat tube, setting the tube in a position with its overlapped joint at the lowermost point, and heating the rolled tube to the fusing point of the solder, causing the melted solder, when set, to unite the overlapping edge portions of the rolled strip.

2,454,625

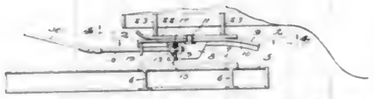
INSULATED ELECTRICAL CONDUCTOR AND METHOD OF FABRICATING THE SAME



Lewis A. Bondon, Arlington, N. J.

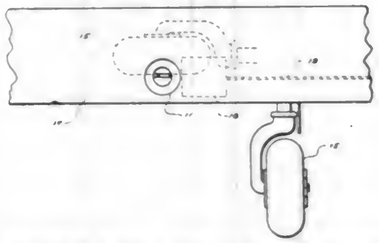
Application April 9, 1947, Serial No. 740,310
7 Claims. (Cl. 174—120)

1. An insulated electrical conductor comprising a metallic conductor element insulated by a surrounding layer of laminated polytetrafluoroethylene having a film of dielectric lubricant interposed between the contacting surfaces of the laminated polytetrafluoroethylene.



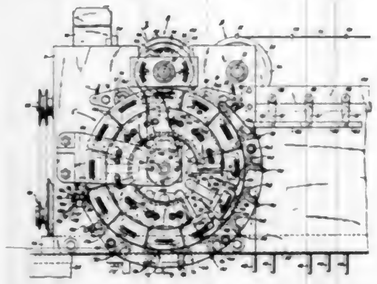
7. A process of fabricating insulated electrical conductors or the like, characterized by helically wrapping. a thin, flexible, unreinforced and initially unstressed tape in the form of a film of

polytetrafluoroethylene about a conductor element under sufficient tension to cause each convolution of the tape to tightly conform to the surface about which it is wrapped and with each convolution of the tape overlapping the preceding convolution by at least three-fourths of its width to form a laminated dielectric core; coating the



outer surface of the conductor element and said tape with an organo-silicone semi-liquid prior to wrapping said tape thereon to prevent any air from being entrapped within the dielectric core and to lubricate the overlapping convolutions; braiding a reinforcing, physically confining outer jacket on said core; and subjecting the complete assembly to sufficient heat to stress relieve the laminated core.

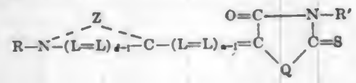
2,454,626
FIFTH WHEEL COUPLING FOR TRAILERS
John Borzell, Pittston, Pa.
Application February 26, 1947, Serial No. 730,916
2 Claims. (Cl. 280—33.05)



1. In combination with the fifth wheel of a tractor and the fifth wheel plate of a trailer, the fifth wheel plate of the trailer having spaced openings, said fifth wheel having openings, cylindrical housings supported under the fifth wheel directly under the openings of the fifth wheel, stop pins disposed within the cylindrical housings and extended through the openings of the fifth wheel, springs within the housings adapted to normally urge the pins upwardly, said pins adapted to move into the openings of the fifth wheel plate of the trailer preventing angular movement of the trailer with respect to the tractor beyond a predetermined point, and means for moving the pins to their inactive positions.

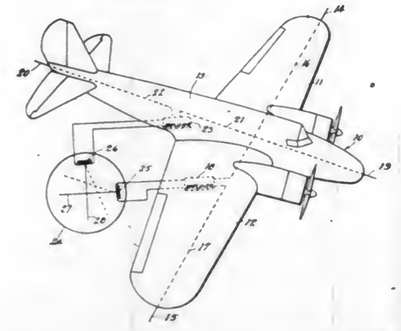
2,454,627
WHEEL OPERATING MEANS FOR AIRPLANES
Otho A. Brandt, St. Paul, and Florence G. Ellingsen, Minneapolis, Minn.
Application November 27, 1944, Serial No. 565,270
2 Claims. (Cl. 244—103)

1. Airplane wheels upon which an airplane is adapted to land, in combination with retracting means for lifting said wheels into the body of the airplane, air vanes radially extending from the axis of said wheels, air inlet and exhaust passageways leading to said vanes on said wheels formed in the airplane, a shutter for controlling said air inlet passageways, whereby the landing wheels of an airplane can be caused to rotate by a current of air passing over the same to minimize the frictional contact with the ground on the said wheels in landing the airplane.



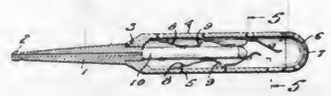
2,454,628
PUNCHED CARD SORTING MACHINE
Karl J. Braun, Merrick, N. Y., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 25, 1944, Serial No. 565,108
22 Claims. (Cl. 209—110)

1. In a sorter, a sensing means, a plurality of pockets into which cards are selectively deposited in conformity with the analysis of the cards by said sensing means, a rotary timing unit common to said pockets, said unit including a plurality of actuating members having operative association with said sensing means for selection thereby and each individual to one of said pockets and to an index point of the cards being sensed, a shaft about which said unit rotates, oscillatory members each individual to one of said pockets and supported upon and movable about said shaft as an axis, each of said oscillatory members having operative connection with one of said actuating members, and means connecting each oscillatory member with its pocket so as to open the same when said member is operated by a selected one of said actuating members.



2,454,629
POLYMETHINE DYES
Leslie G. S. Brooker, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application January 27, 1940, Serial No. 316,002
5 Claims. (Cl. 260—240)

1. A process for preparing a dye comprising heating, in nitrobenzene, an alkyl salt with a merocyanine dye characterized by the following general formula:

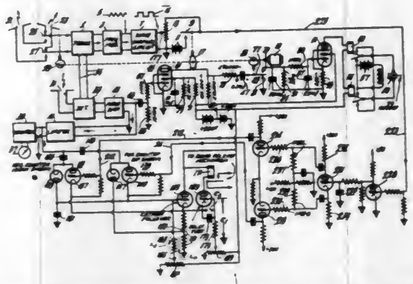


wherein *d* represents a positive integer of from one to two, *n* represents a positive integer of from one to three, L represents a methine group, Q represents a group selected from the group consisting of oxygen, sulfur, alkylimino groups and arylimino groups, R represents an alkyl group, R′ represents a group selected from the group consisting of alkyl and aryl groups, and Z represents the non-metallic atoms necessary to complete a heterocyclic organic nucleus.

2,454,630
METHOD AND APPARATUS FOR INDICATING POTENTIAL GRADIENTS
Elmer P. Buckthal, Brookfield, Ill., assignor to United Air Lines, Inc., Chicago, Ill., a corporation of Delaware
Application January 8, 1945, Serial No. 571,919
4 Claims. (Cl. 177—311)

1. Apparatus for determining the intensity and direction of an electrostatic field comprising two sets of selectively spaced charge collectors, the axes of said sets of charge collectors lying across each other at a predetermined angle, conductors connecting said charge collectors in each set to conduct current flow therebetween, and indicating means responsive to the current flow between said charge collectors, said indicating means including a plurality of independently movable pointers and an instrument dial divided into areas for indicating intensity in any direction, said pointers being respectively responsive to the current flow in said conductors of said two sets of charge collectors, said pointers and said dial being correlated to the spacing of said charge collectors to indicate directly both intensity and direction of an electrostatic field.

2,454,631
HOLDER FOR CIGARS AND CIGARETTES
Zalman Chneerson and Adolph Razdowitz, New York, N. Y.
Application June 5, 1947, Serial No. 752,680
2 Claims. (Cl. 131—175)



1. In a holder for combustible articles, a mouth piece, a hollow cylinder, means for attaching said mouthpiece to said hollow cylinder, said cylinder provided with a plurality of perforations in order to provide air access into said cylinder, a plurality of rows of springs angularly spaced apart, the rear ends of said springs being secured to the inner surface of the cylinder each adjacent one of said perforations, and extending for a predetermined length close to said perforation sufficient to prevent substantially the clogging up of the latter, whereas the forward ends terminate at about the axis of the cylinder in their normal inoperative position and press against the combustible article in their holding operative position.

2,454,632
EDUCATIONAL DEVICE
Howard R. Cohn, Brooklyn, N. Y.
Application February 19, 1946, Serial No. 648,657
5 Claims. (Cl. 35—35)

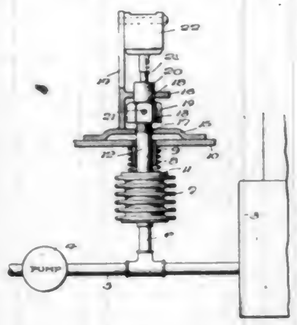
5. An educational device comprising a series of individual letter blocks each of substantial thickness with margins corresponding to the form of the letter and provided midway between such margins with a slot of V-shaped cross-section to enable the letter to be traced by a pencil on a sheet of paper underneath the block and a board with raised letters arranged thereon in alphabetical order, the upstanding ridges forming the letters each having the same configuration as and having a width slightly less than that of the bottom of the slot in the corresponding individual block whereby each block may be brought into register with its corresponding letter on the board and retained in place while the other blocks are being similarly positioned.

2,454,633
FREQUENCY MODULATED RADAR APPARATUS
Ben R. Cole, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 10, 1945, Serial No. 627,949
5 Claims. (Cl. 343—8)

1. In a radio control system including radio transmitter means and radio receiver means whereby signals are radiated to and received from a reflecting object, said control system including a pair of directive antennas having angularly displaced directive radiation patterns, means for frequency modulating said transmitter by a triangular wave and switching means for cyclically changing the directive response of said antenna system from one to the other of two alternate overlapping directive patterns whereby switching transients are unavoidably produced, means for

comparing the amplitude of the output of said receiver means during periods of operation with one of said directive patterns with the amplitude of the output of said receiver means during periods of operation with the other of said directive patterns, means for supplying the output of said amplitude comparison circuit to a utilization circuit, a pair of frequency counters having a common storage capacitor, one of said counters being a negative counter and the other being a positive counter whereby the voltage across said capacitor is a measure of the difference in the outputs of said counters, and means for making one of the counters active only during the upsweep of said triangular wave and for making the other counter active only during the downsweep of said triangular wave and for making both of said counters inactive during the presence of said switching transients.

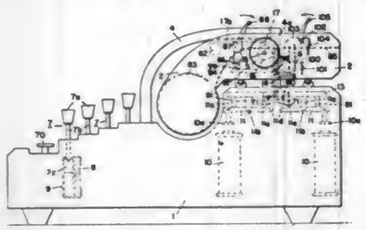
2,454,634
ELECTROMAGNETIC CIRCUIT
George D. Craig, II, Flushing, N. Y.
Application August 9, 1945, Serial No. 609,893
6 Claims. (Cl. 172—281)



1. A device for producing an electrical current, the characteristics of which vary in accordance with the passage of time in a fixed recurring, non-sinusoidal pattern that comprises at least two inductances connected in series, means for producing an electromagnetic field, means for producing relative cyclical movement between said field and one of said inductances so that said inductance is cyclically acted upon by said field and means for producing a second electromagnetic field independent of the first and applying said second electromagnetic field to another of said inductances.

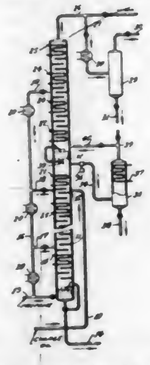
2,454,635
MANUFACTURE OF RUBBERLIKE MATERIALS
Cecil Albert Curtis, Manchester, and Douglas Sandford Stephens, Cheadle, England
No Drawing. Application August 15, 1947, Serial No. 768,934. In Great Britain September 4, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 14, 1964
9 Claims. (Cl. 260—67)

1. A process for making rubber-like materials which comprises reacting an aliphatic thfoaldehyde with a quantity of elementary sulphur ranging from ¼ to 12 atomic proportions per atomic proportion of combined sulphur in the thioaldehyde in an aqueous medium at a temperature ranging from 80° C. to the boiling point while maintaining the aqueous medium at a pH value ranging from 1.5 to 10 throughout the reaction.



2,454,636
DEVICE FOR PREVENTING OVERTRAVEL OF OPERATING MECHANISMS
Alan C. Davis, East Haddam, Conn.
Application March 9, 1945, Serial No. 581,864
2 Claims. (Cl. 137—156.5)

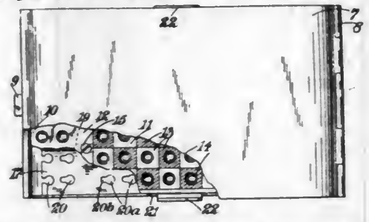
1. In a pressure or temperature responsive device, parallel abutments, a threaded shaft and a nut, the threaded shaft extending through one of the abutments and engaged with the nut, an end of the nut being extended and engaged



through the other abutment, and mechanism engaged with the extended end of the nut and operable upon movement of the latter.

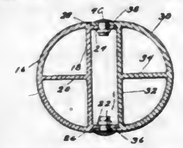
2,454,637
ELECTRIC MACHINE FOR TYPING IN THE BRAILLE AND ABREU SYSTEMS
Juan de la Fuente Tejedo, Madrid, Spain
Application February 19, 1945, Serial No. 578,653
In Spain January 15, 1944
3 Claims. (Cl. 197—6.1)

1. In an electrically operated code embossing machine of the typewriter class, the combination with a source of electric energy; a group of embossing members; and means, including electro-responsive devices in circuit with the source of energy, for operating said embossing members singly; of a keyboard including keys; individual key housings traversed by their respective keys, and in circuit with the source of energy; a contact travelling with each key, and in electrical engagement with its key housing during depression of its key; contact point supports adjacent the several key housings; relatively insulated contact points mounted in said supports and positioned in the paths of the respective travelling contacts for engagement thereby during depression of said keys, said contact points being individual to, and in circuit with their respective electro-responsive devices, said contact points being arranged singly and in groups relatively to their respective travelling contacts according to a predetermined code system; and resilient means to restore the keys to their home positions to disconnect the travelling contacts from their associated contact points to open the circuits.



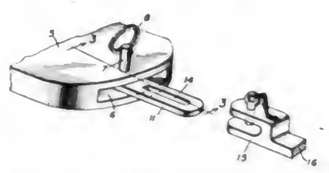
2,454,638
FRACTIONATION OF FATS
John T. Dickinson, Basking Ridge, N. J., and Oliver Morfit, Scarsdale, and Leo J. Van Orden, Olean, N. Y., assignors to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application January 20, 1945, Serial No. 573,754
11 Claims. (Cl. 260—428.5)

1. In the fractionation of fatty oils the method which comprises contacting a fatty oil with a low boiling solvent whose critical temperature is not substantially higher than 450° F. under conditions of temperature and pressure effective to maintain said solvent in a liquid condition and dissolve at least a portion of said oil in said solvent, continuously introducing the solution thus obtained into one end of an elongated rectification zone maintained under pressure effective to keep the solution liquefied and in the temperature range in which the solubility of the dissolved oil in the solvent decreases with rising temperature, flowing said solution through said rectification zone to the opposite end thereof in intimate contact with an oppositely flowing separate oil phase comprising a mixture of the oil and solvent in a substantially lower ratio of solvent to oil than exists in said first-mentioned solution or solvent phase, continuously withdrawing said solvent phase from said rectification zone at said opposite end thereof, treating said solvent phase in said rectification zone to separate therefrom a portion of the oil component thereof as a component of said separate oil phase, flowing said oil phase in intimate contact with said solution toward the end of said zone at which the first-mentioned solution is introduced, withdrawing said oil phase from said zone at a point adjacent the end at which said first-mentioned solution is introduced, and continuously withdrawing as a side stream a portion of one of said counterflowing phases from said rectification zone at a point intermediate the ends thereof to obtain a fraction of said fatty oil of intermediate characteristics.



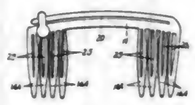
2,454,639
PORTABLE CHESS OR CHECKERBOARD WITH GAME PIECE RETAINING MEANS
Raymond William Edwards, Mangotsfield, England
Application April 2, 1946, Serial No. 658,971
In Great Britain December 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires December 16, 1964
2 Claims. (Cl. 273—136)

1. A device for playing a checker or the like game comprising a base, a game board having positions of play with openings therethrough, a slide plate having a plurality of key-hole slots consisting of larger and smaller width openings therethrough, a plurality of narrow horizontally spaced apart runners carried by the base of said slide plate and spaced between the key-hole slots in said slide plate, said runners raising said slide support above said base and providing a space between said slide plate and base and between adjacent runners, support means rigid with said base and said game board for securing said game board against movement, a plurality of checker or chess game pieces, pins extending downwardly from the base of said game pieces the diameter of said pins being slightly less than the smaller width openings of said key-hole slots and said pins having flanges at their free ends the diameter of which is materially in excess of the smaller width openings of said key-hole slots, said game pieces adapted to be placed on said board with said pins and



flanges receivable through said openings in said game board and through the larger diameter openings of said slide plate, and a hand hold for shifting said slide plate for placing the larger diameter openings of the key-hole slots in said slide plate in registry with the openings in said board to permit passage of the pins and flanges of said game pieces therethrough upon movement in one direction and for locking said game pieces to said board and retaining the flanges beneath the smaller width openings of said slide plate in said space upon movement in an opposite direction, said base being in the form of a receptacle having a bottom and upstanding side walls with a hinged cover having downwardly depending side walls, one complemental pair of side walls being partially cut away to receive, when the cover is in the operative position, the hand hold and that said hand hold forms a lug, one end of which is attached to said slide plate and the other end of which is free for hand operation.

2,454,640
MAST FOR MARINE CRAFT
Ferdinand R. Eichner, Pontiac, Mich., assignor to Trail-A-Boat Company, Pontiac, Mich.
Application June 30, 1945, Serial No. 602,503
4 Claims. (Cl. 114—90)



1. A mast for marine craft comprising substantially alike semi-cylindrical members, webs for strengthening the members both longitudinally and transversely, longitudinally extended flanges on each of the members, the flanges on one of the members being biased and fitted on the flanges of the other member, and means for securing the flanges of one member to the flanges of the other member.

2,454,641
SAFETY HITCH FOR VEHICLES
Michael J. Figmick, Cairnbrook, Pa.
Application May 5, 1947, Serial No. 746,015
3 Claims. (Cl. 213—75)

1. A vehicle hitch comprising a first member and a second member, a substantially horizontal slot provided in the first member, a substantially vertically disposed pin journaled in the first member and extending through the slot, said pin having a threaded portion intermediate its ends, a tongue having a threaded opening for engaging the threaded portion of the pin for swinging movement of tongue in the slot, hand gripping means carried by the pin for raising and rotating the same, spring means positioned in the lower plane of the slot for normally holding the tongue against swinging movement when the tongue is in a lowered position, said tongue being raisable with the pin to clear the spring for swinging movement of the former, and means carried by the second member for lockably engaging the tongue.

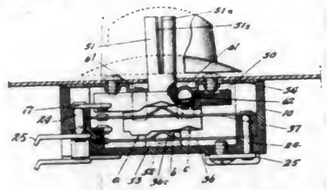
2,454,642
COMB
Marian L. Finman, Minneapolis, Minn.
Application June 21, 1946, Serial No. 678,380
6 Claims. (Cl. 132—21)

2. An upsweep hair styling comb comprising a comb frame curved to fit generally the head contour, a similarly curved hair clamping bar flexibly mounted on the comb frame for movement toward and from clamping position in respect to said frame for attaching the comb to a lock of hair, said hair clamping bar being integral with the comb frame at one end thereof and extending generally parallel to the top of the comb frame, and comb teeth on the frame for affixing the comb in place with the lock of hair attached thereto.

2,454,643
GELATINE BLASTING EXPLOSIVE COMPOSITIONS CONTAINING WATER-SOLUBLE SALTS
Stanley Fordham, Saltcoats, Scotland, and John L. Moilliet, Styal, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 18, 1945, Serial No. 605,843. In Great Britain October 25, 1944
6 Claims. (Cl. 52—13)

3. An explosive composition comprising at least sixty per cent by weight of water soluble explosive inorganic oxidizing salts, a less proportion of an explosive liquid nitric ester, a small amount of nitrocellulose dissolved therein, from 0.02 to 0.5 per cent by weight of polyethylene glycol ethers of at least eight carbon atoms joined together and of at least two ethenoxy groups joined together, and from 0.1 to 0.25 per cent by weight of the entire composition of moisture.

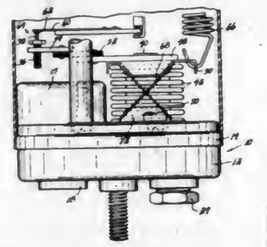
2,454,644
PURIFICATION OF GUANIDINE NITRATE
Charles E. Funk, Jr., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application October 13, 1942, Serial No. 461,849
1 Claim. (Cl. 260—564)



In a method of fusing ammonium nitrate and dicyandiamide, dissolving the melt in water, aerating the solution to convert ferrous iron to ferric iron, precipitating the iron with ammonia, removing the insoluble impurities, and recrystallizing guanidine nitrate from the substantially iron free solution separating out the nitro guanidine crystals from the mother liquor, the improvement in purifying the thus produced mother liquor from the guanidine nitrate crystallization which includes adjusting the pH thereof to 3.6 or below with nitric acid and removing the precipitated impurities and recycling the thus purified mother liquor containing ammonium nitrate to a point in the process to dissolve the said melt.

2,454,645
PRODUCTION OF ALKYL CHLORIDES
Eugen Gottfried Galitzenstein and Cyril Woolf, London, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland, a British company
No Drawing. Application April 24, 1945, Serial No. 590,127. In Great Britain April 12, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 12, 1964
3 Claims. (Cl. 260—652)

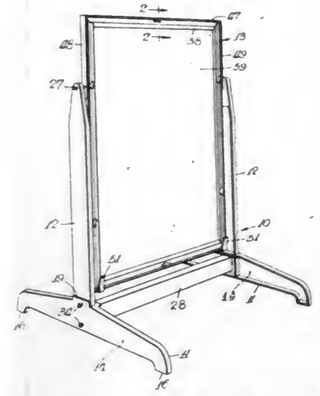
1. A process for the manufacture of alkyl chlorides comprising a number of cycles each consisting of a first stage of passing an acylic aliphatic olefine containing not less than three carbon atoms into sulphuric acid containing not less than 8% by weight and not more than 20% by weight of water to produce a reaction mixture containing the corresponding alkyl sulphuric esters and free sulphuric acid and a second stage consisting of passing gaseous hydrogen chloride into said reaction mixture at a temperature between room temperature and 60° C., separating the resultant alkyl chloride-containing upper layer and recovering the alkyl chloride therefrom, and returning the sulphuric acid to the first stage of the succeeding cycle.



2,454,646
ELECTRIC RANGE SWITCH
Frederic P. Gates, Toronto, Ontario, Canada, assignor to The Arrow-Hart & Hegeman Electric Co., Hartford, Conn., a corporation of Connecticut
Application April 29, 1944, Serial No. 533,355
15 Claims. (Cl. 200—6)

1. A rotary electric switch, comprising fixed and movable contacts, a rotary member for moving said movable contacts in directions parallel to the axis of rotation of said member, said rotary member having a plurality of cam tracks concentrically arranged at different distances from the axis of rotation, and all facing in one axial direction, certain of said tracks being located on one surface of said member and other of said

tracks being located on another surface spaced axially from said first surface.



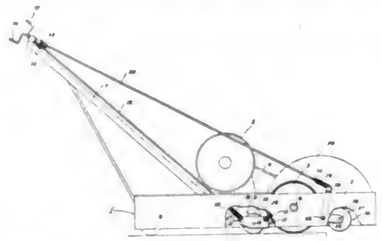
2,454,647
PRESSURE SWITCH
Willis H. Gille, St. Paul, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 5, 1944, Serial No. 534,189
24 Claims. (Cl. 200—81.5)

1. In a switch of the class described comprising in combination, switching means, condition responsive means controlling the operation of the switching means, a sealed housing providing a chamber surrounding the condition responsive means so that differential pressures may be employed for actuating the switching means, the housing having an opening, a bellows means for sealing the opening in the housing, a lever assembly, and crossed reed pivot means connected with the lever assembly, the lever assembly connected to the bellows through the opening in the housing, the responsive means responsive to a change in the condition for causing rotation of the lever assembly about the crossed reed pivot means and the bellows for actuating said switching means.

2,454,648
SIGN STAND FOR DISPLAYING POSTERS
Herman Green, Garden City, N. Y., assignor to City Tank Corporation, Corona, Long Island, N. Y., a corporation of New York
Application June 11, 1946, Serial No. 675,947
4 Claims. (Cl. 40—125)

1. In a sign, a frame assembly for displaying and mechanically holding on opposite faces thereof sheets of paper having advertising matter comprising an external frame element formed of a pair of symmetrical frame elements, each frame element being formed of angle sections, one branch of said angle sections forming the periphery of the frame element, the other branch being inwardly directed contiguous to the cooperating frame element and united thereto, holding therebetween a backing plate, symmetrical locking plates, each nested within the frame defined by the first pair of frame elements and resilient locking means engaging said inwardly directed branches, said locking frames comprising angular sectional elements, one branch of which is arranged to lie in parallelism with the peripheral branch of the first frame

element, the other branch of said locking frame section including a locking head cooperating with said first frame element to tauten the sheeting material against the backing plate.



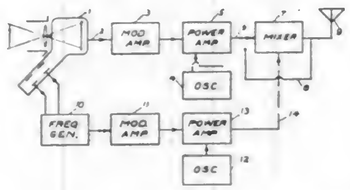
2,454,649
PYROLIGNEOUS LIQUORS FOR PRESERVING FOOD PRODUCTS AND METHOD OF PREPARING THE SAME
Henri Martin Guinot, Versailles, France, assignor to Les Usines De Melle (Societe Anonyme), Saint-Leger-les-Melle, France, a company of France
No Drawing. Application March 17, 1945, Serial No. 583,372. In France March 3, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 3, 1962
8 Claims. (Cl. 99—222)

1. In a process for the production of a foodstuff cure from a pyroligneous liquor, the steps of extracting said liquor by means of a solvent for the tarry components of the liquor, thereby obtaining an extract containing a large proportion of said tarry components and a small proportion of acids, de-acidifying said extract at a temperature below the point of incipient distillation of said tarry components in said extract, in the presence of no more water than about the volume of said extract; and dissolving the de-acidified extract in a substantially neutral aqueous medium; in combination with the step of removing said solvent from said extract at a stage after the said extraction step.

2,454,650
SANDING MACHINE
Forist Harris, Merced, Calif.
Application May 10, 1946, Serial No. 668,861
6 Claims. (Cl. 51—176)

1. A floor sanding machine comprising a frame, a power driven sanding drum mounted transversely on the frame adjacent its forward end, a transversely spaced pair of rear roller units mounted on the frame adjacent its rear end, a transversely spaced pair of forward roller units mounted on the frame adjacent its forward end, and a transversely spaced pair of intermediate roller units mounted on the frame intermediate said forward and rear pairs of roller units; the

forward and intermediate pairs of units being independently vertically adjustable and disposed



ahead and to the rear, respectively, of the sanding drum.

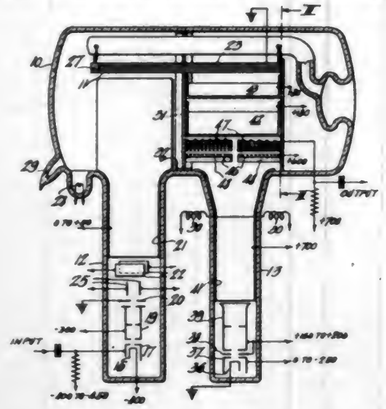
2,454,651

SYNCHRONIZING SYSTEM

John H. Homrighous, Oak Park, Ill.

Original application August 3, 1940, Serial No. 350,758, now Patent No. 2,369,783, February 20, 1945. Divided and this application April 26, 1943, Serial No. 484,570
13 Claims. (Cl. 178—69.5)

1. In a system of distant control, a cathode ray tube having an image screen, said tube provided with suitable networks for producing images in different discreet areas on its associated screen from received picture signals, a pair of electric motors, a source of current supply, a plurality of photo-electric devices for each of the said motors, each of the said devices sensitive to different intensities of light from a different one of said image areas, and means controlled by said devices for electrically connecting the said source of current supply to either one of the said motors to rotate it at different speeds in the same direction.



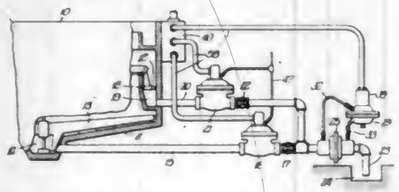
2,454,652

CATHODE-RAY STORAGE TUBE

Harley Iams, Albert Rose, and Gardner L. Krieger, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware

Application June 26, 1943, Serial No. 492,658
9 Claims. (Cl. 250—150)

1. A signal storage tube that comprises a storage screen comprising a multiplicity of discrete parallel conducting strips which have a secondary emissive ratio greater than unity when scanned by a high velocity beam, means for scanning transversely across said strips by a high velocity electron beam, means for collecting secondary electrons released by said beam; means for scanning transversely across said strips by a low velocity beam with the electrons striking said strips with a velocity so low that the ratio of secondary electrons to beam electrons is less than unity, means for modulating one of said beams by an input signal whereby it is stored on said screen, and means



for collecting the signal removed from the screen by the other beam.

2,454,653

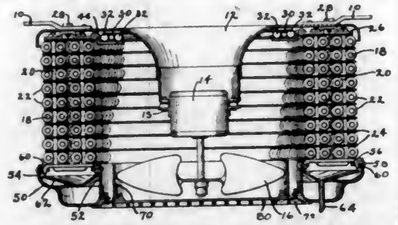
METHOD OF AND APPARATUS FOR THE REMOVAL OF SOLIDS FROM LIQUIDS, WITH A CONTROL OPERATING IN RESPONSE TO VISCOSITY OR PRESSURE

Ewald A. Kamp, Chicago, Ill., assignor to Graver Tank & Mfg. Co., Inc., a corporation of Delaware

Application November 27, 1944, Serial No. 565,362
4 Claims. (Cl. 210—55)

1. Method of removing solid particles from a liquid, comprising the steps of continuously collecting in a lower portion of a tank a viscous but fluid sludge containing the solid particles to be removed; establishing a flow of the sludge from said portion of the tank; measuring the viscosity of the sludge in said flow; and applying a control tending to terminate said flow in response to a predetermined reduction of the viscosity measured, whereby the amount of sludge removed from the tank by such flow is substantially proportional to the amount of sludge collected in the tank, regardless of variations in the quantity and character of liquid treated and in the quantity and character of solid particles in such liquid.

2,454,654



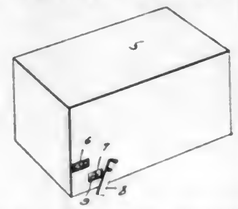
AIR COOLING APPARATUS

Daniel L. Kaufman, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application January 22, 1947, Serial No. 723,589
3 Claims. (Cl. 62—140)

1. In a heat exchange unit, bracket means for suspendingly supporting said unit, a top plate secured to said bracket means, circular air cooling

coils, means for suspending said coils from said bracket means, fan means for circulating air to be conditioned in thermal exchange with said cooling coils, a circular substantially U-shaped in cross-section bottom housing, insulating means for securing the upper edge portion of one leg of said housing to said coil suspending means, a circular drip tray disposed within said housing, means for securing said drip tray to the upper



edge portion of one of the legs of said housing so as to support the tray in spaced relationship to the other leg of said housing and to the bottom wall thereof, and a collar-like member surrounding said fan means and extending substantially throughout the height of the inner leg of said housing in spaced relation thereto for shielding the same from incoming air circulated by said fan means.

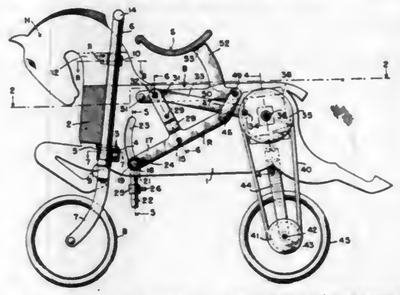
2,454,655

EDUCATIONAL DEVICE

Abe F. Kirschbaum, Greenbelt, Md., assignor to Henry M. Grubola, Washington, D. C., and Edward F. Grubola, Long Island City, N. Y.

Application November 22, 1946, Serial No. 711,772
2 Claims. (Cl. 35—9)

1. An educational device comprising a rectangular hollow body portion having a pair of sight openings arranged adjacent to one end thereof, a rectangular block positioned within the body portion and adapted to move in a tumbling fashion within the body portion and come to rest in front of said sight openings, and said block having a combination of numbers depicting a mathematical problem thereon visible through one of the sight openings, and said block also having numbers visible through the adjacent opening representing the answer to the mathematical problem appearing in the first opening.



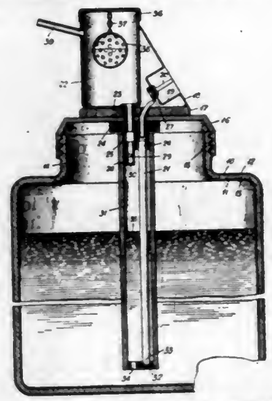
2,454,656

MECHANICAL GALLOPING HORSE

Alexander A. Kollman, Los Angeles, Calif.

Application August 6, 1946, Serial No. 688,764
6 Claims. (Cl. 280—1.19)

1. A vehicle of the character described, comprising a body having two vertical, spaced walls, ground-engaging supporting wheels operatively connected with the body, a crank element rotatably supported between the walls, a driving connection between the crank element and certain of the supporting wheels, a relatively long rock member pivotally supported intermediate its ends between the walls for oscillation on an axis extending transversely of the body, the rock member being of a width substantially equal to the width of the space between the walls and having upstanding side flanges, an arm connected with said flanges intermediate the ends of the rock member and extending upwardly at one side of the longitudinal center of the space between the walls, a link pivotally connected at one end with the upper end of said arm and having its other end pivotally connected with said crank element whereby rocking movement of the rocking member will impart rotatory movement to the

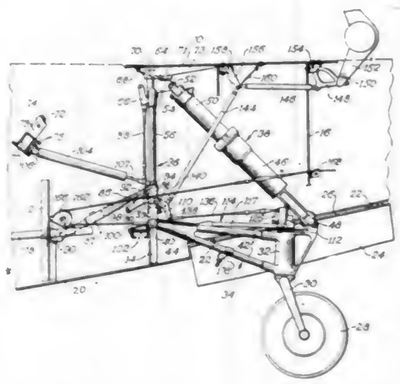


crank element, a pivot extending transversely between the flanges of the rocking member at one end thereof, a relatively long lever disposed between said walls and pivotally connected at an end remote from the pivot element with the walls for vertical movement on an axis extending transversely of the space between the walls, a relatively short link pivotally connected at one end with the rocking element carrying pivot and having its other end pivotally connected with the other end of the lever, a seat member, means connecting the seat member with the end of the lever adjacent to the said short link, and pedal elements secured to the other end of the rocking member and supported therefrom.

2,454,657

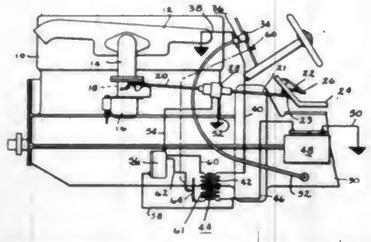
VAPORIZER

Walter R. Kuzmin, Nutley, and Samuel J. Levine, Newark, N. J.



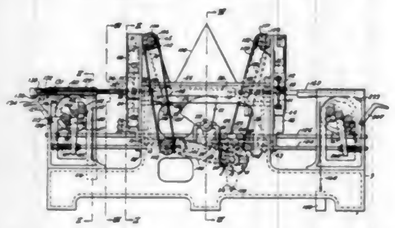
Application October 2, 1947, Serial No. 777,418
9 Claims. (Cl. 219—38)

7. A vaporizer of the class described comprising a large fluid container, a cap detachable with



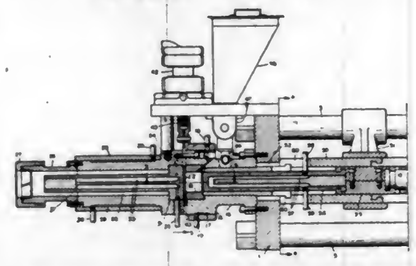
said container, means comprising an elongated tube mounted centrally of the cap and extending into said container forming an elongated restricted fluid chamber in said container, means on the cap and extending into said tube for electrically heating fluid in said chamber to generate vapors in the upper portion thereof, means on the cap forming a vapor chamber above said restricted chamber, and means comprising a perforated thimble placing the upper portion of the restricted chamber in communication with said vapor chamber.

2,454,658
TAIL WHEEL MECHANISM
Donald M. Leitch, Los Angeles, Calif., assignor to North American Aviation, Inc.
Application December 26, 1944, Serial No. 569,810
9 Claims. (Cl. 244—109)



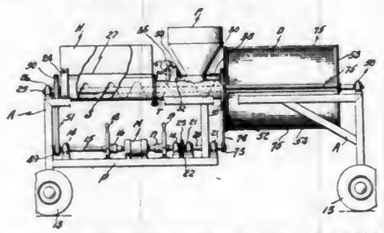
1. Tail wheel mechanism for aircraft having a fuselage; comprising a chassis formed at one end with a fork housing, a tail wheel fork journaled in said housing, a truss pivoted to the other end of said chassis, a shock strut pivoted at one end to the other end of said truss and at the other end to the chassis near said housing, thereby to provide a triangular assembly which is pivoted, near the pivot between said chassis and truss, for bodily swinging movement from an extended position in which the chassis is substantially horizontal to a raised, retracted position, means for establishing a latching connection between said assembly and said fuselage in the extended position in such a manner as to take the loads of ground operation, and means for establishing a latching connection between said assembly and said fuselage in the retracted position including a latch bolt slidably mounted in the upper end of said truss, coacting latch devices secured to the fuselage at spaced points and including means for automatically depressing said bolt as said assembly approaches each of its latched positions, an arm pivoted to the lower end of said truss, and operative connection between said arm and said bolt for retracting the bolt, and fixed means adapted to be engaged by said arm as said assembly swings from the projected to the retracted position, and to move said arm to bolt projecting position.

2,454,659
ELECTRICALLY CONTROLLED GOVERNOR
Charles A. Leonard, Cincinnati, Ohio
Application January 10, 1945, Serial No. 572,233
25 Claims. (Cl. 180—82.1)



1. A governor for a power plant having a source of activating energy comprising means for making and breaking an electric circuit at a rate proportional to the speed of said power plant, and means operable in response to the said making and breaking for controlling the supply of activating energy to said power plant thereby to control the speed thereof, the said means being in one operative position for all rates of said making and breaking less than a predetermined rate and in another operative position for all rates of said making and breaking exceeding said predetermined rate.

2,454,660
NUT-SHELLING MACHINE
Everett P. Leonard, Fort Worth, Tex.
Application May 11, 1945, Serial No. 593,265
11 Claims. (Cl. 146—12)



1. In a nut-shelling machine, in combination, a mounting frame, a first plunger having depressions at each end for receiving the end of an elongated nut at each end, a pair of retracting plungers aligned with the first plunger and designed to receive the other ends of the respective nuts that may be placed at the nut receiving ends thereof, radial cutters having their cutting edges spaced a lesser distance apart than the smaller diameter of a nut disposed adjacent and surrounding each nut receiving end of the retracting plungers, means for aligning a nut between one retracting plunger and one end of the first plunger, means for moving the first plunger a given distance through the space between the cutters toward one retracting plunger, whereby the nutshell is cut into strips, and the nut moves said one retracting plunger, means for substantially instantly arresting the movement of the said one retracting plunger when the first plunger is in a given position with reference to the mounting frame but is yet just short of the given distance of movement of the first plunger, whereby the strips of nutshell are broken into a plurality of pieces, means for aligning a nut between the other retracting plunger and the other end of the first plunger at the moment the first plunger has travelled its said given distance in the direction of the first retracting plunger, said means for moving the first plunger being operable to move it back the same given distance to its starting position whereby the second retracting plunger is similarly moved and a second nut is thus moved past the cutters adjacent the second plunger and the nutshell is cut into strips, means for substantially instantly arresting the movement of the said second retracting plunger when the first plunger is in a given position with reference to the mounting frame but is yet just a short given distance of return movement of the first plunger, whereby the strips of the shell of the second nut are broken into a plurality of pieces.

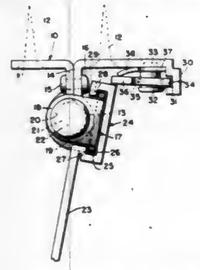
EXTRUSION MACHINE FOR PLASTIC MATERIAL
Nathan Lester, Shaker Heights, and William H. Schwartz, Cleveland, Ohio, assignors to Lester Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application May 17, 1945, Serial No. 594,184
10 Claims. (Cl. 18—30)

1. In mechanism of the character described, the combination of an injection cylinder having a bore for the reception of plastic material, a gate controlling discharge of such material from such bore, a solid plunger reciprocable in such bore, and a tubular plunger surrounding said solid plunger and reciprocable in said cylinder towards and from such bore, said solid plunger in retracted position leaving an annular space through which plastic material may be supplied to such bore by reciprocation of said tubular plunger, such bore including a vent duct for permitting escape of gas from the material supplied to such bore.

2,454,662
DEVICE FOR MIXING FERTILIZER WITH SOIL AND SCREENING
James Marsh, Bay City, Mich.
Application September 14, 1945, Serial No. 616,279
10 Claims. (Cl. 209—236)

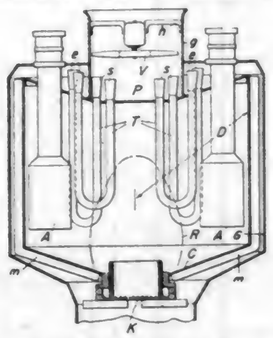


1. In a screening device of the character described, a mobile frame, a soil hopper mounted thereon, a screw conveyor in said hopper, a sifter drum in substantially horizontal alignment with the conveyor and into which said conveyor discharges, a fertilizer hopper interposed between the soil hopper and the drum, means operable by the conveyor flight for discharging predetermined quantities of fertilizer into said conveyor at predetermined intervals, a power plant, and independent driving means for drivingly connecting said screw conveyor and/or said sifter drum with the power plant, and driven means in said drum and rotatable in a direction opposite to the rotation of the drum for agitating and fluffing the soil as the mechanism is driven.

2,454,663
FLUORODIHALO ESTERS
Lawrence McGinty, Frodsham, Nr. Warrington, Cheshire, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 5, 1946, Serial No. 659,860
In Great Britain April 9, 1945
2 Claims. (Cl. 260—487)

1. New chemical compounds of the general formula $CH_2X'{\cdot}CX''F{\cdot}COOCH_3$ wherein X' and X'' are radicals from the group consisting of bromine and chlorine.

2,454,664
TAKEDOWN TYPE SWING-OUT-OF-THE-WAY WALL BRACKET
Robert E. McLean, Fort Benning, Ga.
Application November 6, 1946, Serial No. 708,169
8 Claims. (Cl. 248—289)

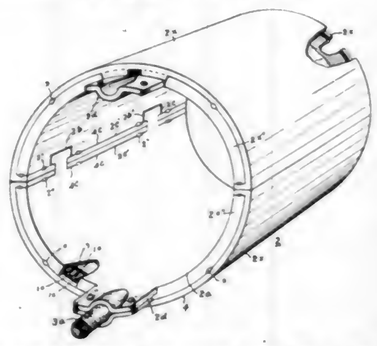


1. A support comprising a mounting plate, a member pivotally coupled with the plate and including a part having two parallel edges paralleling the pivot axis for said member, an arm, means at one end of the arm for slidably receiving said edges whereby the arm may swing with the member to a position in which is it perpendicular to the plate, means for locking the arm against movement longitudinally of said parallel edges when the arm is swung to the said position perpendicular to the plate, and means for securing the arm against swinging movement from the position in which it is perpendicular to the plate.

2,454,665
FLUID-COOLED CURRENT CONVERTER
Herman Mees, Lodelinsart, Belgium, assignor to Ateliers de Constructions Electriques de Charleroi, Brussels, Belgium
Application July 9, 1946, Serial No. 682,259
In France July 11, 1945
9 Claims. (Cl. 250—27.5)

1. In a high-power mercury vapor current converter, a metallic tank, a cathode at the bottom

of said tank, whereby a zone of high mercury vapor pressure tends to be established above said cathode, an anode-carrying lid on said tank having the anodes arranged circularly thereon air



cooling means freely suspended from said lid located within said anodes and extending downwardly into the said zone whereby the tendency to build up high pressure in said zone is minimized.

2,454,666

APPARATUS FOR VULCANIZING FLEXIBLE TUBES

Howard I. Morris, San Marcos, Calif., assignor to The Yoder Company, Cleveland, Ohio, a corporation of Ohio

Application September 21, 1945, Serial No. 617,807
1 Claim. (Cl. 18—18)
